COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

MOBILIZATION AND DEMOBILIZATION PROBLEMS

WEDNESDAY, APRIL 26, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE
OF THE COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met at 10:30 a. m., pursuant to adjournment, in room 357, Senate Office Building, Senator James E. Murray (chairman of the subcommittee) presiding.

Present: Senators Murray (chairman of the subcommittee) and George.

Also present: B. M. Gross, staff director, subcommittee.

Senator MURRAY. Gentlemen, the hearing will come to order. We are expecting other Senators; but they may be delayed. We have a long program this morning and I think we ought to get started now.

I have a brief statement for the record.

During the previous 3 weeks our War Contracts Subcommittee, assisted by members of Senator George's Post-War Planning Committee and of the House Judiciary Committee, has been hearing detailed testimony on the two post-war adjustment bills before the committee, S. 1730 and S. 1823.

These hearings have brought out, in a very striking fashion, the fact that many basic national policies governing the conduct of the war and the transition from war to peace are completely unsettled. The result is confusion among the executive agencies of Government and uncertainty on the part of business, labor, and agriculture.

Today, there is no clear policy on war production cut-backs. There is no adequate policy on the allocation of materials for civilian production. There are no settled policies on the disposal or utilization of surplus war property.

Other hearings and investigations conducted by the committee have brought out the fact that there is no adequate policy or program on the control of costs under war contracts, whether cost-plus-fixed-fee or fixed price. This is a question of fundamental importance to our plans for post-war employment. Curtailing wasteful practices in war production will lead toward more efficiency in conversion to peace and toward the low price levels that are essential to peacetime prosperity.

It is evident, therefore, that the Congress must soon provide clear policies for the guidance of the executive agencies on matters of war-production cut-backs, allocation of materials, surplus-property utilization, and the curtailment of wasteful practices under war

contracts. S. 1718, the contract termination bill, proposes to settle basic problems of policy with regard to contract termination, and many witnesses are recommending similar congressional action in those other fields.

With regard to the organizational aspects of the legislation proposed in S. 1730 and S. 1823, a large variety of suggestions are now before the committee. These include (1) An Office of Demobilization which would operate under the Office of War Mobilization for the duration of the emergency and be independent thereafter; (2) an Office of War Mobilization and Post-War Adjustment, which would supplant the present Office of War Mobilization; and (3) a Peacetime Production and Employment Board, which would be independent of the Office of War Mobilization and concentrate on programs for post-war production and employment.

Varying proposals have also been received on the scope and powers of this new agency. On the one hand, it has been suggested that the agency should have limited scope and little power. Such limitations are necessary, it has been contended, in order to prevent the overcentralization of Government power and to preserve the proper functions of established executive agencies. On the other hand, some witnesses have proposed that the scope of the agency's interest be as broad as our country's economic problems and include such fields as taxation, public works, and housing. Some have proposed that within these broad fields the new agency be given strong power to decide policies and initiate programs.

We have also heard conflicting points of view with regard to the question of representation for various economic groups on a top policy board and the question of whether such a board should advise the director or whether the director should be responsible to the board.

During this week and the week to follow, we shall hear from many leading citizens who will unquestionably aid us in arriving at proper conclusions on matters of both national policy and administrative structure.

Today, we will receive testimony from two outstanding leaders of American labor, the president of the Congress of Industrial Organizations and the president of the United Automobile Workers Union.

Mr. Philip Murray will be our first witness.

STATEMENT OF PHILIP E. MURRAY, PRESIDENT, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. MURRAY. I have a prepared statement I wish to follow. Before reading the prepared statement, I should like, with your indulgence, to present to the committee just a few matters that do not appear in the written paper. They have to do with full employment after the war.

I fully understand that most of the responsible groups in public life today are sincerely applying themselves to the task of preparing plans designed to provide full employment at the end of the war and each one of those groups, I assume, is performing its own particular task with due regard to the national welfare.

Whatever I may have to say, therefore, with regard to that matter is predicated wholly upon a common belief in the ranks of the labor

organizations that I am privileged to represent, that our union, and I speak now of the C. I. O., in the submission of proposals designed to provide full employment has in mind only one thing and that is the national well-being.

I think that we all agree that the victory will not necessarily be confined to defeating our common enemies on the global battlefields but that necessarily the energies of the Nation should be applied to obtaining victory here at home. Hence, the hope and desire on the part of the representatives and members of our organization is to make whatever constructive contributions we can in defining methods that should be pursued with reference to building up the largest possible maximum income obtainable during the post-war period. Our organization, therefore, lends wholesome support to the suggestions that have been offered the committee by Senator Murray and by the proponents of the other pieces of legislation now before this committee.

With that thought in mind, I believe it is well that we should give consideration to the development of practical plans, plans that are easy of understanding, plans that will meet with the approval of the people, all of which are calculated to provide full employment during the post-war period.

It may have been suggested to the committee in the course of its hearings that there is a definite danger of tremendous mass unemployment in the new war industries at the end of hostilities, that being particularly applicable to the aircraft industry and yet, it seems to me, that common sense should lead the leaders of industry and labor and also our leaders in the field of statecraft to the belief that the aircraft industry, as such, is in its infancy and that there are splendid opportunities for the development of that gigantic industry at the end of the war providing suitable plans of design, calculated to increase the output of commercial and private airplane construction, be made.

It is within the realm of possibility that with a combination of private investment and Government loans, plus the building of thousands of local airfields throughout the Nation, this air-minded country of ours can proceed now toward the perfection of planes designed to keep the aircraft industry going at full swing immediately after the war ends.

Senator MURRAY. Do you mean it could be kept at its present rate of production?

Mr. MURRAY. Undoubtedly so, and I believe it could not only be kept at its present rate of production, but it can exceed that rate of production, providing the ingenuities of the leaders of industry, together with Government, are utilized to build the engines and the planes necessary to keep the wheels of that industry in motion.

I am conscious of the fact that it may become necessary for the aircraft industry to produce the cheaper type of plane, designed to meet the needs of the private citizen and that there will be an immediate response on the part of millions of our young men to the crying need of purchasing transportation of that description, just as they did the cheaper automobile in the old days.

I have no particular degree of apprehension concerning the fate of the aircraft industry, providing the ingenuities of our Government, industry, and labor are fully utilized to develop that kind of an enterprise at the end of the war, thereby continuing for that industry the fullest amount of employment.

Senator MURRAY. Does the management of that industry now share your views?

Mr. MURRAY. I cannot say, sir; I do not know.

Senator MURRAY. I can conceive of a vast expansion of the airplane industry in connection with commercial transportation, both of a passenger and freight nature, of course. I believe, also, as you have stated, there could be a very considerable expansion in the production of private planes for private use.

Mr. MURRAY. Unquestionably so, and I believe that that is just as inevitable as the rising and setting of the sun.

We are living in an air-minded world. The end of the war will find millions of these young men grasping for opportunities to utilize the advantages of this newer mode of travel and purchase a type of plane that might be manufactured at something like approximately $1,000 for their own personal use in traveling throughout the Nation.

That is an idea. It necessarily has to be defined and people who manifest interest in the promotion of post-war planning must not confine themselves to the slogan of full employment without accompanying that suggestion with some constructive, creative idea designed to provide full employment.

It is well and good to dwell in the realm of preparation of charts, and so forth, but unless there is a creative idea behind it, an idea that the people will respond to, a popular idea, a practical idea calculated to provide the thing that the people want, and that is employment, full employment, then the plan of itself will fall of its own weight.

Another matter that attracts the attention of the representatives of our own organization is this question of housing, which of itself is tremendously important. I do not think that the ideas of business with reference to the construction of new homes should necessarily be confined to the building of the old type of house. Newer ideas with reference to home construction must come out of this situation to expand our economy and to provide the fullest degree of employment.

Our organization has at the moment under consideration some well-defined plans on national housing, not necessarily public housing, but a combination, let us say, of both private and public housing.

To undertake a comprehensive system of private housing, it is absolutely essential that wages be maintained during the post-war period at the highest possible level to enable people to purchase homes, put down their installment, and pay off their obligations regularly.

As to other modes of transportation, particularly the railroads, one can readily see there the greatest opportunities imaginable for expansion in our railroad systems.

True, there must be new equipment, there must be more modern equipment, there must be the type of equipment that will reduce the cost incident to transportation. It is estimated that approximately 50 percent of all the track, all of the freight cars now in use on American railroads are over 25 years of age. That type of equipment is completely outmoded.

It is interesting to note the post-war planning already undertaken by railroads like the Union Pacific, which proposes to modernize its entire railroad system. If other railroads follow that pattern throughout the Nation, with proper governmental assistance where it may be necessary, the older equipment which is now in use can be made available to other countries more backward than we are in that

regard. Those countries need this type of equipment and need it badly and this outmoded equipment which we are now using in the United States could very well be utilized by many of those other countries for their immediate post-war needs and their immediate programs of economic rehabilitation.

These are concrete suggestions that I do not believe entail too much planning. They merely encompass the need of getting the interested groups together and effecting, with the assistance of a committee such as this, the promotion in a legislative way of the ideas that our C. I. O. movement is trying to inculcate here for full employment and post-war planning.

There is another point to which I should like to make reference that is not included in the paper, and that is the C. I. O. plan with reference to the maintenance of the highest possible wage level.

Unfortunately, material in the public prints would create or attempt to create the impression in the public mind that the take-home pay of war workers during the war period has reached such a large height that no consideration should be given to the equation governing the life of the individual who is now receiving the larger take-home earnings. It must be borne in mind, and I believe rightly so, that the man who is working 48 hours to 54 and 55 and 60 hours a week today is going to have a shorter life than the fellow who ordinarily works 40 hours per week. We will reach the industrial scrap heap a few years sooner than he ordinarily would.

The Congress of the United States, in giving consideration to the needs of American industry, have already made provision in certain legislation and enactments to protect the interests of the industrialists or manufacturers, whose machinery has deteriorated due to overuse. Money is provided to take care of that sort of a situation. No special consideration has been given to the human machine by the Congress of the United States, where that machine inevitably breaks down due to overuse and the terrific strains incident to the greater work that he has to perform to meet the requirements of his country during a period of war.

Senator MURRAY. And that in its turn has its effect upon industry.

Mr. MURRAY. Unquestionably so. It affects industry from the standpoint of its efficiency. It ofttimes constitutes a drag, not only upon the human machine, but upon industry as well.

I shall endeavor in the course of this paper—while reading this paper—to point out a few of those factors in order that your committee may have a greater appreciation of the problems that the average citizen has to contend with in his struggle to live during a war.

Above and beyond all of our domestic problems today is the problem of maintaining full production and full employment at current high levels of production. We must do this to back the invasion, to win the war, and to win the peace.

As cut-backs increase we shall need an established national policy to prevent disruption of war production. Such a program must be carried out by a central office, an office of war mobilization and adjustment, if our returning servicemen and our war workers released by cut-backs are to have expanding job opportunities.

The situation already developing is a challenge to the whole country, but especially to our "free enterprise" economy. The right of a man to a job at adequate wages must be recognized by American industry.

595356—44—2

The individual and his home and his family must be protected from the miseries which trail in the wake of unemployment.

Only so long as American industry recognizes its responsibility to the American people can it expect to enjoy its special benefits and privileges. The C. I. O. is on record as supporting the "free enterprise" economy. But in our definition such an economy is not a tool to be used merely to serve the special interests of the owners and managers.

Business is privileged to enjoy reasonable profits to be derived from serving the needs of the people. It has an obligation today to provide them with full employment. We are willing to cooperate with American industry in their attempt to derive reasonable profit, provided they live up to their obligations, but we propose that the responsibility shall be placed where it belongs. If industry fails, the American people will give expression to their protest. Let industrialists either deliver the goods with America's gigantic war-born productive capacity or be prepared to give others a chance to use it.

The American people expect that the workers in war industries, the workers throughout our economy today, and the returning servicemen will be able to maintain themselves after the war at constantly increasing levels of income.

We deplore all efforts to return this country to an economy of scarcity such as limited our efforts before the war. We believe, moreover, that any attempt to return to a scarcity economy will produce the most serious effects within this country. It cannot be done and it must not be attempted.

There are within the American business community important elements capable of running an expanding economy with the cooperation and assistance of representatives of the entire American people. These elements must be given an opportunity to demonstrate the productivity of which they are capable. If we arise to this occasion America in the post-war period will lead the way to the entire world and generate a new period of prosperity throughout the world such as none of us could have imagined before this terrible war began.

To make this job possible, we need the passage now by Congress of a bill which creates an administration directed to seek full production, full employment and full consumption, on a rising standard of living.

The necessary legislation is embodied in Senator Kilgore's war mobilization and post-war adjustment bill S. 1823 whose passage we urge as part of a single bill embodying it and the Murray-George contract termination bill S. 1718. I shall discuss this in more detail later in my remarks.

Senator MURRAY. At this point, Mr. Murray, Senator Kilgore has handed me, through one of his secretaries, a committee print of a proposed bill to revise titles I and II of Senate bill 1823. I will ask that it be incorporated in the record following your remarks.

To lay down and direct the execution of general policies to achieve these objectives of war mobilization and adjustment we need a national board, representative of labor, business large and small, and agriculture. Such a board should have the maximum of authority compatible with execution of the job. An executive director will be needed to centralize the work of the several agencies charged with the work of manpower demobilization, disposition of war plants and property, direction of war production, and allocations and priorities on materials.

But the final authority must rest with the board on general policies governing:

(1) The establishment of voluntary goals for maximum production, employment, and capital investment in the transition and post-war periods.

(2) The termination of war contracts.

(3) The utilization or disposition of war property.

To make the task of the national board possible, a bureau for the formulation of programs is needed to supply technical information to the board and the executive director. This bureau would act as a central clearinghouse to bring together all available information from public and private agencies, Federal, State, and local.

From this bureau the board would derive the information on which to formulate voluntary goals for maximum production. During and after the war, American business must be encouraged to set itself the objective of expanding output as rapidly as possible, industry by industry.

At the start of the war we failed to control the program of war production by means of a centralized agency and a planned national program. We arrived at the notion of a centralized agency only piecemeal by halting steps during the war effort. The result of this delay was the waste of manpower, the waste of facilities, the waste of resources and the overwhelming costs of these various wastes, not only to the Government but to the economy as a whole.

Labor early supported a program for a central agency for war mobilization.

Now, as we enter the period of cut-backs, the detailed programing of the return to peacetime production should be carefully worked out by one central agency. That means that cut-backs must be planned in relation to manpower needs, the extraordinary emergencies of further war production, the problems of small business, the essential needs of civilian workers and perhaps above all—as a promise for the future—in relation to the increased needs of our foreign requirements and foreign trade. Programing of cut-backs is an exercise of our will to keep the economy going at full production, and I think that the lessons that we learn in this will carry over into the post-war period. Industry by industry we must prepare to match cut-backs with expansion of production.

To make such expansion possible we shall need to join together with the board and the bureau of programs a system of industry councils in each of the basic industries. These should include management, labor, and wherever appropriate agriculture should also be represented. From such councils should come comprehensive programs for achieving voluntary production goals.

The national board will stand or fall on its use of certain powers which must be included in any bill if labor is to lend its support. These powers include the right of every member of the board of full access to any information gathered by the several production agencies, the right to an adequate staff for each board member so that he may keep himself fully informed, and the power to call officials of the office and its constituent agencies before the board.

Among the problems to which the board must devote its early attention are the relations of termination of war contracts, the making of cut-backs, and the disposition of war properties to the general program for an orderly transition to a post-war economy. All of these operations which are primarily concerned with property relationships have the utmost importance not only for owners and managers but for the community as a whole.

We are well aware of the importance of carrying out these operations on behalf of property with the utmost dispatch. We must point out, however, that if these operations are too narrowly conceived they will result in the recreation of a scarcity economy after the war. These measures can only be justified as a means of clearing the decks for an expanded economy.

The acceptance by labor and other groups in the community of a "free enterprise" economy cannot extend to the strengthening of a scarcity economy. We will do everything that is compatible with our role in the community to assist those elements in business who desire an expanding economy. The C. I. O. has already gone on record as favoring speedy contract settlement, adequate provision of reconversion credit, speedy removal of war goods and materials from the plants of war producers.

We especially recognize the needs of the small subcontractors, and urge this committee to pay particular attention to the needs of those small businesses which have contributed to the war effort. They need to have their position strengthened by legislation, and where necessary and possible, they should have a chance to appeal against alleged unfair treatment or delays by their prime contractors. And some will need quick financial settlement of their claims in part or whole where they cannot get it from their prime contractors. Probably these smaller businesses also need access to Government guaranteed credit or even direct financial assistance for reconversion. We congratulate Senator Murray on the provisions in S. 1718 which protect small business in its contract terminations.

Side by side with provisions for demobilizing the firms and corporations which have had the contracts for war production, we need to prepare for demobilizing our manpower and woman power, not only from the armed forces but from war industry.

It may be worth while at this point to pause to reflect once more upon the magnitude of the job ahead of us as we go down the road from war to peace. We shall benefit from a better realization of what the war has done for the United States: In 1939 there were 40.9 millions gainfully employed including the armed forces. In 1943 there were 57.4 millions gainfully employed, including the armed forces (B. L. S. figures, excluding self-employed, proprietors, domestic servants and casual workers).

In 1939, we produced 52,799,000 net tons of steel; in 1943, 88,837,000. In 1939, we produced 2,141 military planes; in 1943, 85,920. In 1939, we produced 341,219 dead-weight tons of merchant shipping; in 1943, 19,296,000. In 1939, our railroads carried 364.7 billion ton-miles; in 1943, 772.4 billion. In 1939, we had a gross national product of 88.6 billion dollars; in 1943, 186.8 billion dollars.

In 1939, the steel industry employed 388,400; in 1943, 516,000; (includes blast furnaces, steel works, and rolling mills). In 1939, the aircraft industry employed, excluding engine makers, 40,000; in 1943, 720,000. In 1939, the ship-building industry employed 70,000; in 1943, 1,040,000. (All employment figures are the B. L. S. monthly averages for the years involved.)

In short, we cannot consider what we have today as full employment. We must regard those in the armed services as additional workers in need of jobs, as indeed they are. If we do that, we shall realize that we need to provide millions of new jobs, after the war. Our productive economy must run at high levels indeed if we are to have an orderly transition to an expanding post-war economy. Moreover, it will take time to shift more of our people into service jobs and professional employment, and properly to organize our educational and training programs to prepare them for the new economy.

Clearly, this will take the best efforts of our whole people, working together. A measure of statesmanship is called for, not only by the representatives of the American people but by the people themselves, such as we have never had to display in any period of our recent history.

I do not think it is too much to say that we face today, economically, a situation which is comparable in its breadth and depth to that which faced the Founding Fathers at the time of the Constitution of the United States.

Unless we arrive at solutions in our economic life as effective as those achieved politically by the Constitutional Convention of 1787 I hesitate to say what perils seem to me to lie ahead. I am not an alarmist. I have the utmost confidence in America, its institutions and its people. It is my studied judgment that we will emerge with a wholesome solution to the problems now confronting us. We cannot do so, however, especially now in the midst of the greatest war in history, without a unity which exceeds anything seen since the war began.

We find today growing pools of unemployment at the same time that we find alleged labor shortage areas. The representatives of various C. I. O. unions will appear before this subcommittee to portray the situation in their respective industries. They will demonstrate, I know, that industry by industry the lack of any adequate program for interconnected cut-backs and expanded war production programs is hampering war production and rapidly creating local crises which need never have arisen.

These developing manpower problems are not new, but they threaten to become more unmanageable if we do not tighten up the relationship of the various parts of our production program. Hitherto we have had the cushion of expanding war production.

To cushion the effects of a transition from war to peacetime operation, there is no substitute for high level production. But even at its most efficient this activity must be supplemented by adequate emergency unemployment benefits and educational opportunities for returning servicemen and dismissed war workers. It also calls for the continuation of a Federal system of employment exchanges, and the constant improvement of their operations to meet an increasing load.

Even when there is a job at the end of the journey, millions of our workers and their families will need transportation allowances, if they are to get a new start in a city far from their war job. Many of the members of the C. I. O. also are covered by contracts under which

their employers are obliged to pay dismissal wages, and it is necessary that any legislation on contract termination permit the payment of such contractual obligations.

It is of the utmost importance that we have increased emergency unemployment benefits for the period immediately ahead, the transition to peacetime operations. These benefits should provide minimum maintenance, full duration for the period of unemployment, and complete coverage of the working population. Title V of the Kilgore bill provides the minimum standards which we would endorse. Labor does not consider unemployment benefits any substitute for jobs, but in the period ahead there will be temporary unemployment of those transferring from war jobs to peacetime employment even at high production levels. We repudiate any proposals for dropping the American war worker or serviceman into the relief brackets, and insist on adequate benefit payments.

The Senate has already passed legislation to provide service men and women with emergency unemployment compensation benefits, which are to be provided by Federal payments which represent increases in most States of the sums ordinarily available for workers. The duration of benefits is also greatly extended. Because of the emergency character of post-war unemployment it is only proper that the Federal Government should supplement State benefit payments for a stated period during and after the end of hostilities. If this is done, Federal standards should be included in the emergency legislation. (The C. I. O. is already on record as supporting the Wagner-Murray-Dingell bill, but we feel that a section should be included in this bill to provide emergency unemployment compensation.)

No difference in unemployment compensation benefits should be permitted between civilians and service men and women. Moreover, these payments should be administered by the same agency, as I understand General Hines has already declared.

The C. I. O. has proposed an additional measure to cushion the transition and to establish a floor under community living wherever our members are organized. The United Steelworkers have taken the lead in this demand for a guaranteed weekly and annual wage. This is their contribution to economic security through full employment.

Such a demand can be met if the industry will produce on a regularly planned basis during peacetime as it is doing in the war. Moreover, in the case of the steel industry and indeed of practically all the larger firms in America today, refundable Federal taxes provide a backlog to make such guaranteed wages possible.

It is not necessary to elaborate here upon the benefits to the steel communities which would flow from an orderly payment of income to the workers in that industry. The whole community would be established on a new, firm footing, shopkeepers, small businessmen, professional groups, as well as the wage earners themselves.

We do not propose here that the annual wage be enacted into law. That is not our object. We believe it can be secured now in certain industries by collective bargaining, and the Steelworkers' Brief to the War Labor Board Panel includes that demand. We urge it to this committee merely as an example of the approach which Government and industry should accept and encourage as a means of solving our problems of transition.

Only an orderly program, largely voluntary in character, will carry us safely through the transition period. The guaranteed weekly and annual wage is one part of such a program. Congress should endorse it for various reasons, among others because of the public benefit deriving from elimination of unproductive direct relief payments.

The principle which the legislation now before this committee and especially S. 1823, recognizes is the need for sustained economic activity at the highest possible levels. This in turn depends upon placing the Government squarely behind such sustained levels of activity. Indeed, the more the Government succeeds in achieving its goal by merely acting as the intermediary for bringing the various groups in the community together for cooperative action, the less will actual Government intervention be needed.

The less successful the cooperative undertaking, on the other hand, the more will Government have to intervene. This means that heavy unemployment benefit payments, large scale make-work projects and the like will be a confession of failure, not of the Government necessarily, but especially on the part of the dominant industries.

We must recognize now that because of the magnitude of the task ahead, the production-employment board must be prepared with a broader program than is called for at any other moment of time. America's unfilled post-war needs are enormous. Many of them cannot be supplied by the activities of any one corporation or group of corporations, operating for profit. They are essentially needs of the whole community and the program must prepare to supply them as such.

These will include reforestation, soil and water conservation, prevention of stream pollution, regional flood control and power projects, highway construction, airport, and other projects. Our communities likewise call for a comprehensive program of urban decentralization, rehousing, and reconstruction to provide good shelter in pleasant environment for all groups. Private firms have their place in both planning and executing these programs but the major responsibility is public.

To accomplish these and other tasks which lie ahead we shall need a fiscal policy which will strengthen our full employment program. This means promoting the constant circulation of purchasing power. Only by such means can we relieve the burden of servicing our war debt. The higher the national income, the lighter the debt burden.

The war has seen the underwriting by the Government of extension of credit to war producers. The role of the banks has actually increased during the war, because of this underwriting. There are certainly lessons to be learned from this during the post-war period, especially in the field of foreign trade.

We cannot expect Uncle Sam, however, to prolong the demand for war goods, and in fact the decline in Government spending has already begun. For 4 years the effective demand from the Federal Government for all that war industry could produce has sustained an enormous boom, and brought us to our current unprecedented levels of production.

In the transition period ahead we shall need an effective substitute, and to carry this load we propose the passage of a comprehensive bill to create a production-employment board in an office of war mobilization and adjustment. We would also suggest modifying S. 1823

(Kilgore) to incorporate S. 1718, Senator Murray's contract termination bill, and include provision of a section on industry councils. I will not comment on the titles on disposition of surplus property now found in both S. 1823 and S. 1730 (George), since I understand that these are both being given further study and will be revised extensively.

If Senator Murray sees fit to introduce such a comprehensive bill as I have described, we shall be pleased to support him and those colleagues who join with him in sponsoring it.

In closing, I want to add that we of organized labor are keenly aware that the maintenance of prosperity wage levels requires the resolute protection of the right to organize and bargain collectively. Real wages, moreover, require price control until such time as an abundance of goods becomes available. For many in the community all of the foregoing measures will not suffice. Insofar as the program I have presented fails to make all Americans continuously self-supporting, there must be a comprehensive system of social security and public assistance, to protect everyone against the major hazards of life and to assure a steady flow of purchasing power from the beneficiaries.

I do not want to seem to suggest that all of these tasks must be accomplished by the legislation now before this committee. But I did want to try to convey to this committee our view that any legislation which may be passed here ought to be drafted with the larger problems of transition to the post-war world in mind.

Ours is a gigantic opportunity, and one which we can ill afford to let slip. There does not need to be a post-war slump in a world demanding such widespread reconstruction. The horizon of new building and equipment amounts to a new frontier, for a decade ahead. If we use that decade wisely we shall have a chance to consolidate our country firmly in an economy of abundance such as we did not imagine possible before the war.

To make good use of our opportunity we shall need the cooperative organization I have described. A production-employment board, a system of industry councils, and a bureau of programs will go far toward creating the machinery needed to do the job. The time to begin is now. There is no simple solution to our problem. It must be worked out by trial and error, in the day by day effort to maintain maximum war production while balancing up our employment and productivity by a transition to essential civilian production.

The members of this committee have a great opportunity to give the lead to Congress and the country by passage of legislation adequate to meet this enormous new problem. Organized labor pledges itself to support such a program vigorously and believes that it represents the demand of the overwhelming majority of Americans. The men and women in the armed forces, the workers in the war factories, the housewife who is maintaining the home front in these trying times all have their eyes fixed on the great new promise of America after the war. They ask only for the means to create a new post-war world. They know it is possible and they know the time to begin is now. The knowledge that it is in the making will strengthen our whole war effort.

(By direction of Chairman Murray the committee print of Senator Kilgore's proposed bill to revise titles I and II of S. 1823 is inserted in the record at this place:)

PROPOSED REVISIONS OF TITLES I AND II OF S. 1823

A BILL To establish an Office of War Mobilization and Adjustment

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "War Mobilization and Post-War Adjustment Act."

TITLE I

DEVELOPMENT AND EXECUTION OF WAR MOBILIZATION AND POST-WAR ADJUSTMENT PROGRAMS

SEC. 101. The Congress hereby declares that the objectives of this Act are—

(a) to achieve the necessary war production which is indispensable to the speediest victory through the maximum mobilization and utilization of the Nation's natural and industrial resources and of the manpower not in the armed forces, and through the wartime stabilization of the civilian economy;

(b) to insure that the great momentum of the war mobilization which is bringing victory to our arms will not be lost, but will be reconverted into a peacetime transition program providing for full production, full employment at adequate wages, and full consumption in a steadily expanding civilian economy with rising standards of living for all;

(c) to provide for the development of a unified program to secure the foregoing objectives, and the necessary coordination of the activities of the Federal agencies engaged in or concerned with production, procurement, distribution, or transportation of military or civilian supplies, materials, and products; economic stabilization; war production cut-backs; settlement of claims under terminated war contracts; disposition of surplus war property; resumption and expansion of civilian goods production; the training and placement of returning servicemen and civilian workers in war and peacetime industry and agriculture; and other programs affecting war mobilization and peacetime production and employment.

SEC. 102 (a) There is hereby established the Office of War Mobilization and Adjustment (hereinafter called the Office), at the head of which shall be the Director of War Mobilization and Adjustment. The Director shall be appointed by the President, with the advice and consent of the Senate, and shall receive compensation at the rate of $15,000 per annum.

(b) There is hereby established in the Office a Bureau of Programs headed by a Chief, who shall be appointed by the President, with the advice and consent of the Senate, and shall receive compensation at the rate of $12,000 per annum.

(c) The following administrations are hereby created within the Office of War Mobilization: (1) The Surplus Property Administration; (2) the Contract Termination Administration; (3) the Reemployment and Placement Administration. Each of these Administrations shall be headed by an Administrator, each of whom shall be appointed by the President, with the advice and consent of the Senate, and shall receive compensation at the rate of $12,000 per annum.

(d) The Director, the Chief of the Bureau of Programs, and the several Administrators, except as herein otherwise provided, may employ and fix the compensation and define the authority and duties of such officers and members, and may make such expenditures for supplies, facilities, and services as may be necessary to carry out the provisions of this Act. All appointments shall be made in accordance with the provisions of civil-service laws and regulations, and Classification Act of 1923, as amended, except that expert technical and professional personnel may be employed without regard to these laws and regulations where deemed desirable by the Director, the Assistant Director, and the several Administrators.

595356—44——3

SEC. 103. (a) It shall be the function of the Director, subject to the direction and control of the President—

(1) to unify the programs and activities of Federal agencies engaged in or concerned with production, procurement, distribution, or transportation of military or civilian supplies, materials, and products; economic stabilization; war production cut-backs; settlement of claims under terminated war contracts; disposition of surplus war property; resumption and expansion of civilian goods production; the training and placement of returning servicemen and civilian workers in war and peacetime industry and agriculture; and other programs affecting war mobilization and peacetime production and employment;

(2) to issue such directives on program, policy, and operations to the Federal agencies as may be necessary to carry out the programs developed and the policies established by the Office under this Act. It shall be the duty of all such agencies and departments to execute such directives, and to supply such data and make such progress reports to the Office as the Office may require.

(b) The Office may perform the functions, exercise the powers, authority, and discretion conferred on it by this Act through such officials and such agencies and in such manner as the Director may determine.

SEC. 104. It shall be the function of the Chief of the Program Bureau, subject to direction and control of the Director—

(1) to review the programs of the several Federal agencies which are subject to the direction of the Office and to recommend to the Director such modifications as are deemed necessary to assure fulfillment of the objectives of this Act;

(2) to make periodic progress reports to the Director which shall assess current performance on approved programs;

(3) to require Government agencies performing functions under this Act to prepare such data and reports as are necessary to permit the review of the programs and the making of the progress reports required in this section;

(4) to evaluate and report on current and projected public and private activities affecting war mobilization and peacetime full production and employment, and survey continuously the necessity for additional programs or legislation as will achieve the objectives of this Act. The surveys shall include (without being limited thereto) programs and measures for public works, housing, taxation, industrial and regional development, expansion of foreign trade, social security, and the maintenance of competitive enterprise;

(5) to consult and cooperate with State and local governments, industrial, labor, agricultural, and other groups (national and local) concerning the fulfillment of the objctives of the Act.

(b) The Office shall transmit to the Senate and House of Representatives within three months after the approval of this Act and thereafter at intervals not exceeding three months a summary of the progress reports, program reviews, surveys, and legislative and other recommendations prepared by the Bureau.

SEC. 105. (a) There is hereby created within the Office a National Production-Employment Board (hereinafter called the Board) consisting of three representatives of industry, three representatives of labor, three representatives of agriculture, and three representatives of the consuming public, who shall be appointed by the President: *Provided*, That each member of the Board may designate an alternate to sit and act for him. The Board shall elect a Chairman among its own members and shall by a majority vote of its members, determine its rules of procedure, except as otherwise defined by this Act, and the powers conferred on the Board by this section may be exercised by a majority vote.

(b) It shall be the general function of the Board, and each member individually, to endeavor to secure maximum cooperation and participation of the American people in the war mobilization and post-war adjustment, and to provide the Office with such advice and guidance as it deems will promote the objectives of this Act. The Board and each individual member thereof shall have full access to all information of the Office bearing on the effectiveness and adequacy of the operation of the Office.

(c) The Chief of the Bureau of Programs shall serve as the executive secretary of the Board. He shall prepare, under the direction of the Board, such reviews of programs, reports, and studies as the Board may request, and for these purposes shall exercise on behalf of the Board the full facilities of the Office and the powers conferred on the Office by this Act. The Board may make to the Congress, to the

Director, the several Administrators of the Office, and to other Federal officials performing functions subject to the direction of this Office, such recommendations relating to legislation, policy, and operations as it may deem necessary to fulfill the purposes of this Act. All such recommendations and all reports and studies issued by the Board shall be supplemented by such statements or comments as any individual member may wish included.

(d) The Director, the several Administrators of the Office, the Chairman of the War Production Board, and such other Federal officials performing functions subject to direction by the Office and as shall be designated by the Board, shall meet with it at least once a month and shall consult and advise with it on all basic policies and programs which are subject to direction by the Office; furthermore, they and their subordinates, with respect to the policies, programs, and operations affecting particularly industrial segments and areas, shall consult and advise with appropriate joint councils representative, for the particular area or industrial segment, of industry, large and small, labor, and wherever appropriate, agriculture. All such industrial segment or area joint councils shall be appointed by the Director, with the advice and consent of the Board.

(e) All appointments of members or alternates to the Board and of members of the area and industry joint advisory councils, may be made without regard to any of the provisions of law with respect to the appointment and compensation of employees of the United States. Members and alternates of the Board and of the joint advisory councils shall serve without remuneration, except for per diem allowance not to exceed $25 each day spent in the actual performance of duty, plus traveling and other expenses incurred while so engaged.

(f) The Office shall provide for the Board an adequate technical and clerical staff which shall serve under its immediate supervision. The Director shall appoint, with the advice and consent of the consumer representatives, a consumer's counsel who shall, together with such staff as he may need, serve under the supervision of the consumer representatives in providing the Board with full information on the effect of current and projected programs and policies on consumer interests.

Senator MURRAY. Would you care to ask Mr. Murray any questions, Senator George?

Senator GEORGE. I was not here when Mr. Murray commenced with his statement. I was very glad to hear what I have heard up to now.

Senator MURRAY. I think it is a splendid statement.

Of course, we all agree that the great task ahead of us is this problem of maintaining full employment. I note you made some reference in your prepared statement to the possibility of a guaranteed weekly and annual wage.

To what extent do you think that could be carried out in the post-war period? Do you think the basic industries of the United States could, if they desired, plan their production in such a fashion as to enable them to introduce a system of annual wages?

Mr. MURRAY. I do, Senator Murray. Of course, we do not want compulsory legislation to that effect. We are asking the Congress——

Senator MURRAY. You do recognize it is a most desirable thing?

Mr. MURRAY. That is right.

Senator MURRAY. And you believe it is something that is possible to accomplish.

I understand that there are a great many industries in the country that have adopted that system and are now maintaining annual payments, annual employment for their workers. I believe there are something like 30 or 40 corporations in the country that are on that basis.

It seems to me that if it were possible for the basic industries of the country to follow that system it would constitute a tremendous force in preventing the development of unemployment and depressions in the country.

Mr. MURRAY. Well, Mr. Chairman, I believe that we have the type of economy here in the United States that makes possible the attainment of the guaranteed weekly and annual income. It is a problem of planning.

I might, with your indulgence, endeavor to explain our chief reason, and I now refer to the steel workers particularly who have advanced the idea in the steel industry which is now before the members of the National War Labor Board in our steel case.

The annual wage is not new, it is not unique, it is not original here. It has been adopted in other countries. Only a few weeks ago the British Government in collaboration with the owners of the coal-mining industry perfected an arrangement to guarantee a weekly and annual income to the coal miners of Great Britain over a 4-year period.

There are a few corporations in the United States, small, not large, who have advanced the idea and who have been experimenting with it with a considerable degree of success.

Senator MURRAY. I recall we had some hearings back in 1938, at which there were a number of witnesses and among them labor representatives who presented this question.

Mr. MURRAY. Our own Congress, in recognition of the needs of the American farmers, has constructed the legislation and has developed procedures out of this legislation which give to the farmers of the United States guaranties, beginning with the present guaranty of parity plus and the further guaranty under the provisions of the Emergency Price Control Act, that their standards shall never drop below the so-called 90 percent of parity.

I suppose Senator George is more familiar with what has been done to assist American industry through our present tax legislation than I am. But I have taken advantage of the opportunity to glance into the methods employed with reference to the protecting of the interests of American industry in the so-called carry-back and carry-forward provisions of the present tax laws. It is extremely illuminating to note that the corporate interests of the United States are entitled to refunds from the Federal Treasury to protect the financial stability of their corporate structure against all possible danger that may confront them during any 2-year period, either during the war or at the end of the war.

I could best illustrate how the interest of American business is protected under that arrangement by offering an example as to how the present tax laws operate to give a guaranteed income to American business and enterprise. To do so I will resort to the use of our steel brief, which is now before the National War Labor Board. I am only putting this into the record for the purposes of illustration so that the committee itself might understand that there is nothing new or unique in the demands of labor that it be given a guaranteed income because the principle has been already established, partially, at least, as it applies to farmers, and very substantially as it applies to the corporate interests of the United States under our 1942 tax law.

Let us say, for example, that we take an outstanding corporation such as the United States Steel, and that its average net earnings after taxes for the period 1936 to 1939—and that was the peacetime period—let us say the net earnings were $44,732,000, which they actually were.

Let us follow through and see how the tax laws operate to protect the interests of that corporation, when it operates below the so-called break-even level or even at the break-even level. Now, we begin with a peacetime net earning of $44,732,000, that is as it applies to this corporation. Let us assume that this corporation breaks even in 1944, which means they had then been operating at less than 50 percent capacity. If they just break even, they will be entitled to a check from the United States Government—now get this—of $49,200,000, refundable under the carry-back provisions of the present tax laws.

Now, let us continue to provide more examples as to how these guaranteed incomes are set out. In the event the United States Steel Corporation incurs a loss of 1944 equal to its loss in 1938, and its loss in 1938 was very substantial when its annual operations were 40 percent, it will then, according to the regulations established to govern carry-forward and carry-back, receive a check from the United States Treasury of $55,451,000. That is the amount they would be entitled to.

Now, we could follow through and I could provide any number of examples that are set forth here.

The principle of the guaranteed income is therefore already established by the Federal Congress insofar as corporate business is concerned, or the average business. That is defined and set forth and is prepared to be put in operation.

There is an organization of businessmen here in the United States that provides current factual information concerning tax measures, primarily to business enterprises throughout the United States. This firm is known as Prentice-Hall, Inc. In its attempt to describe the operation of this carry-back carry-forward provision of the tax law, it disseminates a considerable amount of material among the various business enterprises throughout the United States of America.

On the date of January 31, 1944, Prentice-Hall, Inc., in the issuance of a document known as volume 6, No. 33, pointed out to the clientele the benefits that they would derive from the operation of the carry-back, carry-forward provisions of our present tax law. It had this to say:

> A machine tool builder, discouraged by the post-war outlook, had decided he would close the damn shop forever—

and I am quoting from Prentice-Hall—

> when he receives the notice of the termination of his last war contract. His accountant completely revised his decision by explaining to him the carry-back, carry-forward provisions of the tax laws. By the use of these provisions he could start in a new field (in this example, if he were a tool builder), a durable household item with little risk.

Only a relatively small investment in this machinery will be necessary, according to Prentice-Hall. The much larger item of machinery expenses for launching the new venture, 81 percent will be paid by refunds from the wartime tax payments.

Here is how, according to Prentice-Hall, this tax law works:

> Under the 1942 tax law, a net operating loss may be carried back and set off against the income of the two preceding years. If the loss still is not absorbed, the remainder may be carried forward and set off against the income of the two succeeding years.

Nor is that all, according to Mr. Prentice-Hall. Supposing during the first or second post-war years, the concern will show a profit less than normal, meaning less than the peacetime profit, as here defined

for excess profits tax proposes, under the carry-back or unused profit credits, they get a substantial refund.

The widespread expansion which will be stimulated by carry-back and carry-forward has tremendous social values.

Now, I want to get you to the importance of the social values.

It should make possible the employment of millions of war workers and returning soldiers. It is a nonpolitical way to expand employment in the new war industry regions which otherwise might become ghost areas. By increasing America's capacity to produce civilian goods, a higher standard of living will follow.

Following then Prentice-Hall offers some suggestions to these corporations and business houses as to how they ought to put this thing in motion.

He says:

1. Send copies of this letter to your board of directors.

This is the letter I am reading to the committee now.

2. Submit your expansion plans, with an itemization of the estimated expenses, to your tax consultant. He will distinguish between capital items which in most cases will not be deductible for the purposes discussed here and expenses which are so deductible.

3. Write your Congressman that expansion plans you are contemplating depend upon carry-back and carry-forward. Remind him you are relying upon their continuation.

Now, obviously, one to read the statement accredited to Prentice-Hall, Inc., would get the belief that the carry-back, carry-forward refund, to which business enterprises are entitled under existing tax laws, would be used exclusively for expanding employment. Well, that would not be true under all situations.

That would become applicable to given situations where reconversion was necessary but a very substantial segment of our war production emanates from industries where there will be no reconversion. In the case of the steel industry, of which I have cited an example, the Steel Corporation and companies will be entitled to these refundable carry-backs and carry-forwards when their business drops below a break-even level, despite the fact that there cannot be, under the greatest stretch of the imagination, any reconversion in the steel industry. That would apply to oil, that would apply to coal and metal mining, it would apply to textiles, it might very well apply to the manufacture of rubber, steel, and kindred things, and I believe also in the manufacture of automobiles, generally speaking, because all that is necessary there is retooling and expenses incident to retooling. That will be a very small item to the over-all expenses incident to the operation of a gigantic industry such as the motor industry.

The point I want to make is this, that the Congress of the United States, by virtue of the 1942 tax law, has given to the American business enterprises a guaranteed income for any 2-year period following the war or during the war, that their business drops down to a certain level that does not permit the corporate enterprise to make its so-called peacetime earnings. When it falls below the break-even point or at the break-even point, and is not making its peacetime earnings, it can then take recourse to the Federal Treasury to the amounts I have mentioned, as I have demonstrated here in the example as to the case of the steel industry.

Now, I do not point any finger of criticism in the direction of our Federal legislators for the enactment of this legislation. All I say is that the interests of the farmer have been substantially protected under the present laws. I am prepared to prove that the interests of American business are more substantially protected in the nature of an annual guarantee on its income than even the farmer.

Now, I come before the committee, representing a group of people who have no investments in anything excepting in sweat and blood and work, I do not ask the Federal Congress to pass an act guaranteeing these people their income, no. I do say that if the farmer has been given these guarantees and if business has been given a guaranteed income of some description under these Federal tax laws for a given 2-year period, then why in the name of common sense cannot the Congress of the United States, through a declaration of national policy, encourage the institution of a guaranteed weekly and annual income to American wage earners to protect their interests and the interests of their children against all of the misery that trails in the wake of unemployment, trails in the wake of staggered employment, part-time employment.

In advancing an argument in support of the establishment of that practice, I do it in good faith, believing that it is economically possible. I believe that the guaranteed income will provide the needed purchasing power to stimulate production, production of civilian goods, production of whatever goods the country may need.

Hence, I present the idea to the members of this committee in the full belief that you will give it your most earnest consideration.

Senator MURRAY. As I understand it then, Mr. Murray, you do not criticize this tax policy, which has a tendency to stabilize American industry, but you feel that while you do not demand legislation immediately, you do feel that it is a subject to consider seriously and put into effect, if it is possible, at the earliest possible time so that we can stabilize the annual earnings for labor as a method of preventing depressions and unemployment?

Mr. MURRAY. That is correct.

Senator MURRAY. The very serious problem in the future will be the need to maintain low prices for industry and at the same time keep up wages for the workers in order to prevent any possibility of a decline in production in the post-war period.

Do you feel that there is any danger that the big, basic corporations of the country might engage in price raising activities at the close of the war, in view of the great demand that will be upon us for products?

Mr. MURRAY. I do not believe that will be possible, if systems of control are maintained to prevent the possibility of gouging in the price field. I believe it is going to be necessary during the period of post-war emergency to maintain certain regulatory controls of a nature designed to prevent the country from getting into an uncontrollable inflationary situation.

Senator MURRAY. In other words, you advocate the continuation of price control during the emergency period?

Mr. MURRAY. As long as it may be necessary, Mr. Chairman.

Senator GEORGE. Until you get into full production, civilian production?

Mr. MURRAY. I think when we get into full production the restoration of competition will of itself at that moment tend to control the price structure, once we have reached that level.

I think an abundant supply of materials is a pretty important factor in controlling the price equations.

Senator GEORGE. I want to discuss this matter a little with Mr. Murray.

Mr. Murray, you have made reference to the steps taken, at least by the Senate, in an effort to meet some of the pressing problems of the transition period to the men in the armed services.

I would like to point out one of the difficulties we had in that legislation, so far as that is concerned, and how it was overcome in the Senate.

I personally believe that the men in the United States Maritime Service should have been included and put on the same basis as the men in the military service, but we ran into this practical legislative problem. Many of the veterans of World War I and perhaps some of the returned veterans of World War II, the present war, felt that they did not want their agency, to wit, the Veterans' Administration, to expand into fields other than the field of the veteran problem.

I call that to your attention to point out to you some of the difficulties we have in trying to get through a comprehensive bill and one that would cover a great many phases of this problem and must be covered by legislation at this time. They are simply practical legislative difficulties.

At the committee hearing we went so far as to suggest to one of the Senators who was interested in the men in the maritime service to draw a separate bill and my committee is committed to favorable consideration of that measure.

You are quite right in saying we have taken some steps that will prevent a collapse of agriculture, at least below a certain point. We have done it definitely on the theory that you advance here, that it was in the interests not merely of the farmer as an individual, but in the interests of the general economy, that is, prices should not be allowed to fall below 90 percent of what we call parity. Of course, there will always be some dispute as to what parity should include and what it should exclude, but once having arrived at that, we have said for 2 years farm prices would be supported at 90 percent of parity, that is, the staple crops.

That, I believe, is necessary to prevent a collapse of agriculture, which would result in disaster to the farmer and disaster to the general economy. We had that experience after the last war.

You are quite right in saying the philosophy back of the loss carry-forward and loss carry-back provisions of the tax law are in principle the thought that you have advanced here, because we were confronted by this plea from all the industries of the country. They said, we are now called on to vastly expand, to accumulate vast inventories, to spend large sums of money. At the end of the war, or some period, we will come back to the breaking point or perhaps fall into the red unless we have recourse or refunds for taxes paid by us during the 2 preceding years and if that does not help us, then that loss shall be carried forward, as you have explained.

That did contemplate that industry would be in a better position, with that assurance, to safeguard its rapidly declining inventories, rapid depreciation of inventories and consequent loss, and would be able with greater assurance to maintain a rather high level if it were not able to expand its production in peacetime fields.

You are quite right in saying that all industry cannot expand but the rule being universal, of course, they are given that degree of protection and I personally feel that the principle for which you are contending might well be declared in our earliest legislation, even if we cannot in one single legislative measure do it, because of parliamentary and political difficulties involved.

I am sure you have in mind what I have in mind, that you do not want weekly or annually guaranteed wages to become a top ceiling upon the possibility of the American workers but you do want it as a floor, beyond which and below which there cannot be a decline of wages.

Mr. MURRAY. Quite right, Senator. I ask it as a minimum guarantee.

Senator GEORGE. That is right. I am always hesitant if what we do might become a ceiling as well as a protective floor, but I have no difficulty myself in coming straight to the broad general principle that what we have tried to do in some of our agricultural legislation and in our tax legislation, is quite capable of application to the wage earner, to the laborer.

I want to give you this assurance, that whether we have to deal with this problem in piece-meal or whether we can enlarge legislation into a more comprehensive form, that I think that the principle for which you are contending is one we must recognize, that wages can not be allowed to fall below a level in this immediate post-war period because it would result in the most impossible and greatest disaster to the whole economy.

Mr. MURRAY. Well, you have substantially expressed my own point of view, Senator George.

I believe if we are going to give consideration to an all-over program designed to protect the interests of the community as a whole, that at this time if there came from the Congress of the United States a declaration of policy to encourage American industry and American labor to react through the exercise of their collective bargaining processes, to arrive at a minimum guaranteed standard, the Government would save much money, the taxpayers would save a great deal of money. It would stimulate production, it would stimulate the ingenuities of industrialists to provide the fullest measure of employment attainable and they would not under those circumstances have to resort to the payment of too much money for the guaranteed income, that is, if they provided full employment.

Senator GEORGE. I think that is correct.

Senator MURRAY. I think, Mr. Murray, that we are all agreed on the great importance of enacting as quickly as possible—establishing as quickly as possible—an over-all agency to handle the problems in the reconversion period.

The difficulty is in preparation, and in working out the details in such fashion that we shall not be overlooking anything or making any mistakes. We are being greatly urged to proceed with Senate bills 1718, which is the contract termination bill, which is being worked out completely, and is entirely satisfactory to small business and big business, and I believe satisfactory to labor also, since it is designed to aid us in quickly settling these contracts and thus enable business to return to civilian production.

Now, I have every confidence that the Congress intends to enact the over-all legislation as quickly as possible, and to enact it in such a form as to carry out the ideas that you have in mind; at least that is what I have in mind, but I do feel it is of the greatest importance that Senate bill 1718, which contains the contract termination provisions, be enacted now, since it is ready.

I would like to have you submit to us a further statement, at your leisure, with reference to what should be incorporated in the over-all legislation.

Mr. MURRAY. I shall be delighted to do so.

Senator MURRAY. Particularly with reference to annual wages or unemployment compensation.

You spoke in your statement of the nationalization of unemployment compensation.

Mr. MURRAY. That is correct.

Senator MURRAY. We would run into a terrific fight on that. We are being fought by labor itself in certain sections of the country. In my State of Montana, some of the labor leaders out there are utterly opposed to it and are standing in with the unemployment compensation directors in their effort to discredit and refute everything that I have to say or do in that connection. Therefore, you see it is not as simple a problem as it would appear.

Mr. MURRAY. Well, it displays there that even labor is not all together or always together.

Senator MURRAY. We thank you for your very able statement, Mr. Murray. We appreciate it very much. I think it will be very helpful to us.

The next witness is R. J. Thomas, president, United Automobile, Aircraft, Agricultural Implement Workers of America.

Have you a prepared statement.

STATEMENT OF R. J. THOMAS, PRESIDENT, UNITED AUTOMOBILE, AIRCRAFT, AGRICULTURAL IMPLEMENT WORKERS OF AMERICA

Mr. THOMAS. Yes.

Senator MURRAY. We shall be glad to hear from you this morning.

Mr. THOMAS. I am R. J. Thomas, president of the United Automobile, Aircraft, Agricultural Implement Workers of America, and our headquarters is in Detroit.

Senator Murray, it is a pleasure to testify before a committee of which you are chairman. Your well-known breadth of vision insures that any measure before your committee will be considered from the standpoint of the public interest. Your outstanding championship of small business and your leadership in labor's fight for the Murray-Wagner-Dingell bill, have won for you labor's confidence. Now, pioneering on contract termination, you are taking the broad view, which we support, that contract termination alone is not sufficient. You recognize labor's stake in reconversion.

The burden of my testimony today is in support of the position taken in your committee's recent report on "Contract termination," that contract termination is but one aspect of the whole reconversion problem, and that other aspects are equally deserving of attention. I believe we need an over-all approach to the whole problem. Both

S. 1823 and S. 1730 recognize in some measure this need for an omnibus bill. We hope your committee, in cooperation with Senator George's Post-war Committee and Senator Kilgore's Subcommittee on War Mobilization may be able to work out a jointly sponsored bill which will include all the features necessary to deal intelligently with the whole problem.

My union, the U. A. W.-C. I. O., represents one and a quarter million workers employed in war jobs. In addition, we have 200,000 or more in the armed services. No organization in the country has more at stake in reconversion than ours. I am submitting for the record several pamphlets, published by the union, which present our approach to problems of reconversion and the post-war world. Some of these I shall refer to later in my testimony.

1. The United Automobile Workers-Congress of Industrial Organizations post-war plan: This is a general popular outline of our whole approach.
2. Wage stabilization and post-war security: This is a portion of the union's brief submitted to the War Labor Board in the *General Motors wage case*. It contains our program for a guaranteed workweek or a guaranteed wage, and for a post-war employment security fund.
3. An analysis and factual approach to aircraft problems—wage, reconversion post-war security: This is a report by Richard T. Frankensteen, vice president and national director of aircraft organization, submitted to our first national air craft conference, held in Chicago this last February.
4. Memorandum on post-war urban housing: This is a detailed program for post-war housing.

(The various data referred to by the witness have been filed with the committee.)

These documents demonstrate our active concern with the problems which confront this committee.

MAGNITUDE OF THE RECONVERSION PROBLEM

At the risk of boring you, I want to run over a few figures which demonstrate the magnitude of the problems facing us during the reconversion period.

Gross national production, under forced draft because of Government contracts, has risen from a level of $98,000,000,000 in 1940 to an annual rate of about $194,000,000,000 now, according to figures contained in your committee's recent report on contract termination. Converting this figure of $194,000,000,000 to 1940 prices, we get a figure of around $165,000,000,000 for the present rate of output. Thus physical output has risen approximately 70 percent during the war period. This figure checks closely with the rise shown by the Federal Reserve Board Index of Industrial Production.

About half the goods and services now turned out are being purchased by the Federal Government, most of them for war purposes. The central problem—and it's a staggering one—is to develop governmental policies which will insure the present level, high as it is, will be surpassed by enough to insure full employment of our resources, including our manpower, when more than 11,000,000 persons in the services have been mustered out, and when Government purchases have dwindled to a small proportion of the current level. War expenditures, now running at a daily rate of about $300,000,000, have about reached their peak. From here on out they will likely decline. It is high time we undertook some basic planning.

A complicating factor is the rapid growth in labor productivity. In war industries the increase in productivity has been phenomenal. For west coast plane plants as a whole, the average output per worker has risen 514 percent in the past 3 years. Take the case of the Douglas A–20, a new version of which was put into battle over Europe last week by the Ninth Air Force Bomber Command. In September 1940 it took 16 man-hours to produce one airframe pound of this plane, today it takes only one man-hour.

It is true that experts differ on the extent to which such changes in productivity in war industries are transferable to peacetime production. Our feeling is that both in the aircraft industry and the auto industry, the transferability is very high. New plants and new machine tools will make the post-war worker very productive. This fact is a challenge and a menace. It emphasizes the need for a thoroughgoing attack on the whole problem. We cannot return to a pre-war situation; the problem is much greater than that phraseology implies. We have to break new ground.

Your committee very wisely recognizes the magnitude of the issues involved and the basic nature of the solution needed, when you say that, "It is clear that the only thing to take the place of the war contracts is the purchasing power of the American people and of our fellow nations throughout the world." Reconversion must be so planned as to maintain and to raise purchasing power. There is no question whatever about the technical possibilities of raising the volume of output and of purchasing power to the levels necessary to maintain full employment. The only question is: Are we willing to take the steps needed? Your committee has a great opportunity and a great responsibility.

The whole issue of reconversion breaks down into four principal problems: (1) Reconversion in the limited engineering sense; (2) disposition or utilization of war property; (3) contract termination; and (4) demobilization or what some call the "human side." I shall discuss these four phases, as well as the more general problem of the governmental set-up necessary to deal with all these segments as parts of a single whole.

1. RECONVERSION

There is, first, reconversion in the somewhat limited sense of getting back into civilian production the facilities which are now engaged in war production. In the case of the auto industry, it is estimated within the industry that 75 percent of its pre-war facilities have been converted to war uses. For industry as a whole, according to the Department of Commerce, reconversion back to civilian production will cost in the neighborhood of $4,000,000,000.

How are we going to handle the job? Are we going to have an orderly return to civilian production, or is it to be a mad scramble? Is big business going to gobble up small business? Are pricing policies going to promote abundance or restriction?

At present, there is no adequate machinery for answering these basic questions. The War Production Board is supposed to be doing so—in cooperation with the O. P. A. on price questions—but it has set up no machinery for the purpose. Here and there, without any general program, it is relaxing materials controls; and the business advisory committees are actively pushing for steps advantageous to their industries. Mr. Nelson's recently announced Citizens' Committee on Return to Civilian Production is a first step in the right direction, but so far, without an organization to advise, it is operating in a vacuum.

It is clear that legislative action is necessary to give basic direction to W. P. B. Title III of S. 1823 takes care of this phase of the problem. I call attention particularly to section 301 of S. 1823, which instructs the W. P. B. to—

(*a*) Review the military production programs of several Federal procurement agencies for the purpose of coordinating such programs and synchronizing curtailments with the resumption of civilian goods production.

(*b*) Establish unified policies and programs for the expansion, transfer, and curtailment of military production and for the resumption of civilian production covering specific products, firms, industry segments, and geographical areas.

(*c*) Develop programs for the curtailment of military production and industrial reconversion based upon assumed military developments on stated dates.

The objectives outlined in section 304 are equally noteworthy:

(*a*) Necessary war production shall be maintained without impairment or delay.

(*b*) Curtailments of war production shall be programed so as to permit the utilization without delay of the released manpower and facilities in the production of other war products or civilian goods.

(*c*) Subject to the overriding requirements of war production, fair consideration shall be given to the relative competitive positions of the industrial segments, areas, and concerns affected by curtailment and reconversion programs. The small business contractor shall not be discriminated against * * *. Resumption of civilian goods programs shall give particular consideration to smaller business concerns. * * *

These objectives, which the U. A. W. supports, are similar to the proposals in the Baruch-Hancock report for "X" day.

As far as practicable—

this report says—

this "X" day plan should seek to estimate cancelations in advance, the industries affected, and the resources likely to be released; make tentative selections of the industries and plants to be freed, weighing how these selections can be guided to improve war efficiency and to make for the speediest resumption of civilian production and the smoothest transition to peace.

We believe this approach is sound. It recognizes, as Baruch-Hancock point out elsewhere, that—

at the present stage of the war, preparations for demobilization are inseparable from the actual conduct of the war.

The War and Navy Departments are certainly correct in emphasizing that nothing should be done now which would in any way hamper war production.

Senator MURRAY. Mr. Thomas, Senator George would like to make a statement at this point.

Senator GEORGE. Mr. Thomas, I have been called away from the committee this morning. I do not want you to assume or think for a moment I am not sincerely and deeply interested in your statement and I am going to read it just as you are presenting it to Senator Murray and to the committee.

Mr. THOMAS. Thank you, Senator.

With an offensive in western Europe close ahead of us no other position is thinkable.

We do not think, however, that the careful programing of reconversion need interfere with war output. On the contrary, uncertainty about procedure and policy for resumption of civilian production is at present a factor in causing an unnecessary case of jitters. A carefully worked-out program, as part of an over-all approach, under the direction of the same agency which is responsible for war production, would actually allay post-war fears on the part both of business and labor.

Such a program, too, would prevent individual businesses from going ahead with their post-war plans without regard to either war production or full employment in the post-war production. As it is, drafting rooms in aircraft plants are laying out post-war planes, and auto plants are working away at parts for post-war automobiles. You have seen in the newspapers the controversy over who named the "jeep." This species of post-war planning I call "jeep planning." An over-all program is necessary in order to substitute a broad planning in the interests of abundant total production, for this partial and restrictive planning.

UTILIZATION OF WAR PROPERTY

The second phase of the whole reconversion problem concerns the utilization of war property. Two of the bills before this committee, S. 1730 and S. 1823, contain titles dealing with what is commonly called the "disposal of surplus property"—including Government-owned plants and equipment and materials in all degrees of fabrication, from overcoats to gyroscopes and shells.

We protest against the use of the words "disposal" and "surplus." "Disposal" and "surplus" as commonly used, suggest the wastebasket and the garbage can. Why not say "disposition," or even better, "utilization," in order to emphasize the productive value of these things from the standpoint of the whole economy?

Senator MURRAY. We are using both words, Mr. Thomas, in order not to have any misunderstanding on that. I think your point is well taken.

Mr. THOMAS. The public press is not using both words. And why not drop the word "surplus" entirely? What is "surplus" from one standpoint may be extremely valuable from another. It is true that Government-owned machine tools will become surplus from the standpoint of the Government's war needs, but talking about "disposal of surpluses" suggests that the tools should be tossed out of Government inventories in the most rapid fashion possible and regardless of social usefulness.

The stake of the auto workers in war-property utilization is enormous. Nearly half—61,000 out of 130,000—of the machine tools now in the possession of General Motors, are Government owned. Government-owned facilities in the aircraft industry are valued at $3,150,000,000. Facilities for combat transportation and other motorized vehicles account for another $425,000,000. Facilities for the production of guns, ammunition, shells, explosives, and so forth, account for $3,941,000,000 more. Of this total of more than $7,000,000,000, the value of plants in industries represented by the U. A. W.-C. I. O. probably amounts to between $4,000,000,000 and $5,000,000,000. A large proportion of these are convertible to peacetime production.

The magnitude of the utilization problem with respect to wartime inventories is suggested by the fact that General Motors alone reports having on hand some $500,000,000 worth, mostly work in process and raw materials. The total held by war induteies has been estimated at from $11,000,000,000 to $13,000,000,000.

Because of the magnitude of the problem of handling these immense properties, and because of the extreme importance of their proper handling for the post-war period, we urge that your committee give the very fullest attention to the problem. It is our feeling that any bill dealing with the disposition of war property must be drafted with primary emphasis upon securing full production and full employment. Mr. Baruch, as you remember, urged, as one rule to be followed by the Surplus Administrator, that he should "sell as in a goldfish bowl, with records always open to public inspection." The same principle applies to the development of legislation in this field. There should be the fullest possible public discussion.

While we are not yet prepared to testify in detail on the utilization of war property, there are several principles which the auto workers are convinced should be incorporated in any legislation:

1. Administration should be under the general direction of the same agency responsible for reconversion as a whole. The provision of the Kilgore bill in this connection is satisfactory.

2. War property should be so utilized as to promote full production and full employment. We are unalterably opposed to plowing under or scrapping whether it takes place openly or covertly. Senator Kilgore, we are glad to note, has publicly taken the position, since the introduction of his bill, that no war property should be destroyed. On this point we have reached a parting of the ways. In one direction is a scarcity economy operating for the benefit of a few at the expense of the many; in the other direction is an economy of growing abundance operating for the benefit of everyone. I cannot be too emphatic on this point.

3. Small business must be protected. Accomplishment of this objective will be particularly difficult in the case of the disposition of Government-owned plants in view of the fact recently pointed out by Mr. Byrnes that 70 percent of the Government's total plant investment is in projects costing more than $10,000,000 each. As Mr. Byrnes says:

> The Surplus Property Administrator must be authorized to lease as well as sell these plants if independent and local enterprises are to be given an opportunity to take over any of the larger plants. And where possible, we must subdivide the larger units.

On this point, Senator Murray, I am sure we can rely on your interest in small business to insure inclusion of the proper safeguards.

CONTRACT TERMINATION

Thirdly, there is the contract-termination problem to which your committee has largely devoted itself over the past several months. The magnitude of this issue is demonstrated by the data presented by your committee in its March report. Besides the $178,000,000,000 in prime war contracts which must eventually be terminated, there are millions of subcontracts. Your bill, S. 1718, is notable for the protection which it affords the subcontractor. For this reason, and

because we believe in general that orderly machinery for terminating contracts must be set up, we are supporting S. 1718.

The position of the U. A. W., like that of the C. I. O. and of the A. F. L., however, is that contract termination cannot properly be considered by itself. It is only one segment of a larger whole. Along with it we believe that you must deal with the establishment of an agency which would handle contract terminations, as wlel as the disposition of war property, and the establishment of reconversion policy. In addition, the U. A. W. takes the position that workers need certain safeguards during the reconversion period to match those applying to business and to farmers. These should be written into an over-all bill.

I should like to devote the remainder of my testimony to considering the need for provisions safeguarding labor, and the need for an omnibus approach to the whole problem. As an introduction, I want to describe what is happening in Evansville, Ind., where contract termination has already occurred on a sizable scale and where considerable unemployment has developed. The situation there presents on a small scale the whole group of interrelated problems which we are facing as the war-production program begins to close down.

CUT-BACKS IN EVANSVILLE

According to information from our local unions, some 12,500 workers have been laid off at the Chrysler and Sunbeam ordnance plants in Evansville since peak employment in August. The area has been reclassified from a group I area to a group III area in consequence. Though Republic Aviation will expand somewhat and a big inland shipyard—now employing 12,000—will continue to add new workers, there is no prospect that all the laid-off workers will be reabsorbed in the locality. Opportunities for women are especially restricted. Morover, if the shipbuilding program were cut back the situation would become extremely serious.

Evansville is fortunately not typical of what has happened so far. Most of the cut-backs have been relatively small, and most of them have been in areas where alternative job opportunities were available. But Evansville poses the problem sharply. If the machinery for dealing with Evansville is inadequate, it will be increasingly inadequate as cut-backs increase.

The War Manpower Commission is trying to step up the employment of women and is making every effort to recruit shipbuilding workers from local sources rather than by importation. It is making welders out of some of those laid off in the ordnance plants. But these measures are obviously inadequate. Our union is trying to have larger orders placed in other plants, but so far the results have not been great.

What is to become of these workers and of these productive facilities? The question of the facilities is, in this instance, settled: The plants are to be kept as stand-by equipment. But that fact only poses the problem of the workers more sharply. If they become welders at the shipyard, as some are doing; if they move back home to other jobs; or if they drop out of the labor market—in all these cases they will be unavailable when production of shells is resumed. Perhaps stand-by wages are needed to hold the labor supply.

Suppose a situation where the services indicate no further use of the facilities. What program do we now have for making use of the facilities? Has any agency examined the plants from the standpoint of other war production or of civilian production? With respect to the workers is there any adequate procedure for financing the movement of workers to other jobs outside the area? How adequate are unemployment compensation benefits? And will they last until workers find other employment? What happens to benefits payable in one State when a worker moves into another State to look for work?

I have here some additional information on cut-backs affecting the U. A. W., which I will give to the committee.

Senator MURRAY. You wish it incorporated at this point in your testimony?

Mr. THOMAS. Yes.

Senator MURRAY. It may be so incorporated.

(The statement referred to follows:)

RESEARCH DEPARTMENT, UNITED AUTOMOBILE WORKERS-
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Detroit, April 25, 1944.

EMPLOYMENT AND PRODUCTION

Ford-Rouge.—Has been cut-back in jobs in aircraft building but employees have been reabsorbed within unit on other types of work. New steel foundry lay-off of 220–250 people about 2 weeks ago. Employees transferred to other parts of Rouge and Highland Park plants. Magnesium foundry shut down about 2 months ago; 500 laid off but reabsorbed in other sections of the plant.

Murray.—550 women laid off last November. Production steady since then.

Ternstedt.—Due to increased efficiency in other plants throughout the country working on compass and gyro instrument jobs, Ternstedt production went to back original schedule resulting in lay-off of over 1,000 women between middle of December and about 1 month ago. Maintenance men are being laid off, a few at a time. About 15 or 20 so far. Men going into armed forces take care of other lay-offs which may have taken place.

Briggs, 212.—Mack Plant: About 2 months ago 1,500 laid off. Cut Vought-Sikorsky fighter job from 30 to 22 wings a day. This was only lay-off since peak war employment. Eight Mile Road: Steel 75 millimeter shell job eliminated resulting in lay-off of 1,000 about 5 months ago. Peak was 1,500; 500 working now. Vernor plant: Cut in production of parts for Flying Fortress about 4 months ago resulted in lay-off of 700. Peak employment 1,000; 300 now.

Briggs, 742.—No cut in production. Few still being hired. About 50–60 people were transferred to Hupp plant recently taken over by Briggs.

Packard.—No cut in production, no lay-offs.

Bohn.—Plant 3, magnesium foundry division—1,000 laid off in last 60 days. Closing this division, which had peak employment of 1,100, so 100 still to be laid off. Reason: 30 percent cut-back in magnesium production for all Bohn plants, so remainder of Detroit production transferred to Adrian plants.

THE NEED FOR PLANNING AND COORDINATION

Mr. THOMAS. This story of what is happening in Evansville makes it obvious that we are confronted by a problem far larger than contract termination. Assuring the enterprises in question that they will be speedily reimbursed for completed or uncompleted portions of their contracts, and affording them loans to carry them during a transition period—these are essentials of an orderly procedure, but they do nothing to meet other problems created by such a situation: How can cut-backs be minimized? What alternative production, for war or for civilian use, can be substituted? What can be done to

move the workers elsewhere or to give them financial assistance until they find other employment?

It is disheartening that we continue to muddle along without adequate coordination or planning despite the obvious lessons of the war. It has been clear for a long time—to cite but one outstanding example of the point I am making—that early errors in the placement of war contracts, greatly and unnecessarily burdened our war mobilization. Contracts were concentrated in a few areas and in a few companies. The utilization of other areas and of smaller plants was hit or miss. In consequence, we have had unprecedented migration to war centers, causing overcrowding, housing problems, health problems, and transportation problems. And on top of that, we did irreparable injury to small business in many lines.

If we don't want to repeat errors of this kind, in the process of what Mr. Baruch calls "unwinding" the war economy, we must consider carefully some of the lessons taught us by the experience of war mobilization. We should know by now that early mistakes have continuing and often cumulative effects. The unduly high concentration of defense and war contracts, which I have just mentioned, is one example. Another is the failure of the civilian production agencies to take control over procurement. From these two major mistakes have flowed many of the serious difficulties of war production, particularly in the manpower field.

In the same way, and perhaps even more important, our decisions now are determining the post-war world. If we botch up contract terminations so that working capital is unnecessarily tied up, we will reduce the future level of production and employment. If we scrap Government-owned property which could be productively used, we cut down to that extent our production potential. If we let workers drift out of the labor force because alternative jobs are not available when cut-backs occur—if we let them return to unproductive farms or to idleness—we are harming war production now, and post-war production later on. Isn't it obvious that we need coordination and planning to prevent such dissipation of our resources?

The Baruch-Hancock report points this out very clearly. I quote:

> Failure to make the necessary decisions promptly will make later decisions more difficult. On the other hand, by keeping the programs in constant balance—inventory and planned acquisition on one side and prospective demands on the other—we will be able to carry the economy through the transition period with successively higher utilizations of our resources.

Another lesson from war experience is that belated attempts to solve by emergency measures the muddles which result from lack of planning and coordination are often worse than the muddles themselves. Consider the hopeless tangle arising out of the conflicting manpower demands of the services, of industry, and of agriculture. Failure to grapple with these demands from the single standpoint of the best utilization of manpower for war mobilization has resulted in such confusion that thousands of workers still do not know whether they are contributing most effectively to the war, and may actually be doing less than they readily might, simply because they are in the wrong spot.

The latest result of this confusion is a renewed demand for national-service legislation. Early basic errors in manpower policy, in contract placement, and in wage policy, have resulted in shortages in certain

low-wage industries and in high turn-over and absentee rates even in some relatively high wage industries. From time to time these situations, which no doubt have hindered war production, have been offered as the excuse for the passage of the Austin-Wadsworth bill or other legislation equally obnoxious to both labor and industry. Now, at a time when pools of unemployment are beginning to appear, as cut-backs—like those in Evansville—take place without adequate advance planning, it is again proposed in all seriousness that Congress should pass national-service legislation. Compulsion is being urged while voluntary measures have not been given a real opportunity to demonstrate their effectiveness.

Obviously, compulsion is offered as a substitute for a real program. Let us beware lest we fall into the same trap in connection with reconversion. Over in the House, I understand, there is a strong pressure for the passage of a contract-termination bill without waiting to consider together all the interrelated parts of a satisfactory reconversion program. I hope this committee will not take such a shortsighted view.

If there is any truth in the position that speedy action on contract-termination legislation is needed in order to prevent a piling up of unsettled contracts, it arises out of a condition in which cancelations are decided upon without full knowledge of all the circumstances. The planned and programed termination of contracts would minimize terminations and prevent the furor now allegedly arising because of lack of legislation. A central agency, one branch of which dealt with terminations, would be in a position to plan them in relation to the needs of all branches of the services, of lend-lease, of domestic civilian production, and of rehabilitation of occupied areas. Instead of that, terminations now take place in a largely decentralized fashion, without even one branch of a service knowing where and how much the others are cutting down. This sort of things, I repeat, injures war production and jeopardizes our chances for full employment in the post-war period. A contract-termination bill, by itself, no matter how good it is, does nothing to correct the basic trouble.

Your committee, in its recent report, makes this point very clearly. I quote:

> There is the question of the extent to which out-backs in specific programs, as well as the ensuing contract terminations, can be avoided by the proper pooling of requirements. There is no advantage to the Government in one contracting agency's terminating production of articles that are still needed, and not completely contracted for, by another contracting agency. It would be much more logical for the first agency to allow the contract to be completed and then to have the articles delivered to the second agency, or for the second agency to take over the contract officially. Your subcommittee feels there is a distinct place for such pooling not only within the war program itself but also in connection with the closely associated program of foreign relief and rehabilitation.

Besides the need for planning and coordination, the war has taught us that labor participation is an essential to the orderly conduct of a production program. I hardly need to argue this point before this committee, but I do want to emphasize it. Any legislation to be satisfactory to labor, must make provision for labor representation and labor participation at all policy-making levels.

Among the bills now before this committee, the Kilgore bill alone contains provisions which embody these lessons learned from war-mobilization experience. The principles embodied in this bill to which

the U. A. W.-C. I. O. gives its wholehearted support, include the following:

1. The basic need to continue war production. In its preliminary statement of objectives, section 101 (a), the bill declares it to be the intent of Congress—

> to achieve the necessary war production which is indispensable to the speediest victory through the maximum mobilization and utilization of the Nation's natural and industrial resources and of the manpower not in the armed forces, and through the stabilization of the civilian economy.

The bill provides for the governmental machinery necessary to carry out this objective. It sets up in the first place a central Office of War Mobilization and Adjustment, in effect giving legislative sanction to the present Office of War Mobilization and clothing it with authority over war production as well as over production in the transition period. The Director is to be appointed by the President and is to have adequate compensation. He is to act in consultation with a National Production-Employment Board, likewise appointed by the President, and representative of industry, labor, and agriculture. This proposal, for an over-all agency with labor representation, is essentially similar to that made sometime ago by the U. A. W. for a Peace Production Board.

In the second place, the War Production Board, acting under the general supervision of the Office of War Mobilization and Adjustment, and advising and consulting with a production program and reconversion committee which includes representatives of the services, is to direct war production and industrial reconversion.

This coordinated set-up insures that "Necessary war production shall be maintained without impairment or delay," as provided in section 304.

2. The determination to keep in the forefront the goal of expanded production and employment. A second objective of the bill, as stated in section 101 (b), is

> To insure that the great momentum of the war mobilization which is bringing victory to our arms will not be lost, but will be reconverted into a peacetime transition program providing for the fullest possible production and employment in private industry in a stabilized civilian economy.

To achieve this objective, the bill sets up, in addition to the machinery already discussed, a very significant agency, the Bureau of Programs. This Bureau, within the Office of Mobilization and Adjustment, would not be a brain trust dealing with the far off and unobtainable; it would be a research and statistical arm of the Director collecting and analyzing the information necessary for taking the next steps. The Director will inevitably be hacking his way through an unexplored jungle, in much the same way that our troops are hacking their way through New Guinea. The instrument needed is not the telescope of the visionary, because it will not be possible to see that far ahead, but a telephone system by which different parts of our forces, advancing together through the unexplored jungle, can keep in close touch with each other.

The Bureau of Programs is assured of independence by the provision that its head shall be appointed by the President.

3. Recognition of the importance of labor-industry-government cooperation. No one who has watched the operation of the National War Labor Board, of the Office of Price Administration, of the War Manpower Commission, and of the War Production Board, can doubt the value of labor representation and participation, and of the desirability of labor-industry-government cooperation. It is a major defect of some other agencies—notably the Office of War Mobilization and the Office of Economic Stabilization—that they do not have provision for regular consultation with labor on policy matters. The U. A. W. has been fighting for labor representation and along with the C. I. O. has been advocating "the establishment of national industry-wide councils with equal labor participation to work out reconversion schedules." I have already submitted a copy of the pamphlet, The U. A. W.-C. I. O. Post-War Plan to the committee.

Senator MURRAY. Mr. Thomas, at this point I should like to call to your attention the fact that Senator Kilgore has presented a revised bill, Senate bill 1823. We will make it available to you. I think it changes many of these things that you have referred to in your statement. I should like to have you send us your comments on it at your leisure.

Mr. THOMAS. That will be fine. I will certainly do it.

The U. A. W. is, therefore, gratified to note that S. 1823, recognizing the valuable contributions which labor has made to the production program during the war, has provided fully for labor representation. The Office of Mobilization and Adjustment, as already noted, is flanked by a National Production-Employment Board, consisting of representatives of labor, industry, and agriculture. The Production Program and Reconversion Committee, set up to work with the War Production Board, is to include the W. P. B. Vice Chairman for Labor Production and Manpower Requirements. Finally, the Chairman of the War Production Board is instructed to consult with "joint advisory boards, fairly representative of industry, large and small, and labor." We are very much interested in this proposal for joint advisory boards. We believe they will become very important parts of the reconversion machinery, besides, if adopted quickly, helping immediately with war production.

4. Recognition of the need for protecting small business. The Kilgore bill, as in the section just quoted, makes special provision for safeguarding small business. This need is widely recognized and scarcely needs any particular emphasis on my part, particularly in testimony before Senator Murray. I am glad to observe that Mr. Fennelly, testifying before this committee on behalf of the Committee for Economic Development (the C. E. D.) made it clear that his organization, likewise, sees the need to protect small business. Quoting from their recently issued pamphlet, Small Business After the War, he pointed out that:

> The conversion of industry to war production involved severe handicaps for many small businesses. Such handicaps should be minimized during the period of reconversion.

THE "HUMAN SIDE" OF RECONVERSION

In turning now to the distinctly labor aspects of reconversion, I cannot do better than quote a passage from the Baruch-Hancock report:

> The war has brought abnormal conditions of employment which have given rise to human problems which become reflected in every situation requiring administrative or legislative decision. These problems cannot be separated from the others. They will be greater or smaller directly according to the way in which

such programs as contract termination, surplus disposal, the mustering out from the armed forces, public works, social security, education and benefitx for veterans, and international agreements are handled. There is no way of isolating problems of human interests from others. But there is no necessity for losing sight of the personal element in any of the fields of adjustment—and there will be no excuse for ignoring it.

These problems, as the report says, "cannot be separated from the others". They are a part of a logical whole. Just as manpower mobilization was an integral part of the war-production program, so demobilization is an integral part of reconversion.

And it is going to be a big problem. There are about 11.3 million persons in the armed services, most of them drawn from the labor force, and most of them expecting to return not only to the labor force but to jobs. There are now about 9.3 million workers—men and women—in munitions industries, a large proportion of whom will have to shift into other industries as war production declines. And there are about 7.5 million workers now employed who are newcomers to the labor market. Out studies show that most of these recent accessions would prefer to stay at work if jobs are available.

In the case of the aircraft industry, which is now employing more than 2,000,000 workers, at the very least 1,000,000, and at the worst a million and three-quarters workers, will have to shift into other industries. The automobile industry, now employing 1,200,000 workers, according to the Automotive Council for War Production, cannot hope to exceed 1,000,000 after reconversion, a level 40 percent above that of 1941. Our stake in the "human side" is obvious. In recognition of the importance of this problem to the U. A. W.-C. I. O. we recently held a national aircraft conference (February 28–29, 1944, in Chicago) at which the post-war problems of the industry were discussed. I have already submitted to the committee the report of Vice President Frankensteen to this conference.

Not only will there be tremendous manpower shifts from industry to industry, but there will certainly be a big return flow of workers out of the now congested war areas. According to a recent analysis by the Census Bureau, a minimum figure for the net migration from one county to another during the period April 1940 to November 1943, was just under 5,000,000. The gross movement, if I may hazard a guess, was more than twice as large. During this period New York State lost a million people, and California gained a million. Last summer, workers were coming into Detroit at a rate of over 12,000 per month, and now the numbr of out-migrants is around 5,000 per month.

I do not mean that none are coming in. I think the amounts coming in and going out are just about equal at the moment.

Existing machinery for handling these shifts—industrial, occupational, and geographical—are very inadequate. The U. S. Employment Service has been hamstrung by inadequate appropriations and by the policy of extreme decentralization adopted by the War Manpower Commission. There is no legislative provision for financing the transfer of workers from one area to another. Training facilities are hopelessly inadequate to handle the wholesale readjustments which will be necessary both for returned servicemen and for civilian workers. And State unemployment compensation laws provide inadequate coverage and benefits to help tide workers over the transition period. We must be vigilant to prevent our workers, who

answered their country's call by entering the armed services or by taking war jobs, from becoming depression "Joads." Workers want jobs first. But lacking jobs they must have security.

Mr. Byrnes, Director of the Office of War Mobilization, in his speech 2 weeks ago before the Academy of Political Science in New York, recognized that, "In the national interest the Government also has a duty to help labor tide over the transition from war to peace." He had been emphasizing the measures necessary to protect business, and pointing out that under the Stabilization Act of October 2, 1942, Congress has provided for the post-war protection of farmers by authorizing the Commodity Credit Corporation to make loans on basic crops at the rate of 90 percent of parity for 2 full crop years after the formal termination of hostilities.

For the workers, Mr. Byrnes advocated Federal legislation "to supplement existing State unemployment benefits." This proposal is similar to that embodied in title V of S. 1823, section 506. We support the general principle of Federal supplements to State benefits, and urge that any legislation to be recommended by this committee should include provision for the establishment of minimum standards with regard to the amount and duration of benefits, the length of the waiting period and the extent of coverage.

I should like to say, too, that we would look upon unemployment compensation as a necessary war emergency step, but not in any sense as a substitute for the Murray-Wagner-Dingell bill. Also, I should like to point out that satisfactory legislation must provide returned servicemen and the workers who have been serving on the home front, alike with jobs or proper unemployment benefits. Despite the efforts of reactionaries to create differences between them, both these groups are workers. It is a great virtue of the Kilgore bill that it recognizes this fact.

I wish to emphasize the necessity of providing minimum standards substantially equivalent to those in S. 1823. A level of benefits ranging from $20 for single persons to $35 for married persons with three or more dependents, is none too high. Provision must be made for the payment of benefits, if necessary, over a period of up to 2 years. And coverage must be practically 100 percent. Anything short of standards of this sort is a slap in the face for our returned soldiers and for workers who have made alll sorts of wartime sacrifices. There must be no return to W. P. A. days and to relief standards. Our great country—which has demonstrated during the war its enormous productivity—can ill afford to take its cue from Representative Rankin. Those days are over.

A second safeguard for labor during the conversion period would be dismissal wages. We are not asking at present that dismissal wages be provided by law. We are asking, however, that any contract termination legislation include a provision calling upon the contracting services to recognize dismissal wages, if included in a union contract, as a valid disbursement, reimbursable by the Federal Government. It is necessary, too, that the War Labor Board be instructed to approve contracts which provide for dismissal wages. At the present time it is not clear precisely what is the status of dismissal wage clauses in union contracts, particularly in the case of contracts not yet negotiated.

Thirdly, as provided in section 505 of S. 1823, the manpower authorities should be authorized to pay the cost of transportation of workers, their dependents and their household effects, as it becomes necessary for them to shift from one job to another.

Finally, the Federal Government will have to move into the field of industrial training and retraining, helping to finance the worker or the ex-serviceman as he learns how to fit himself into a new industrial and occupational pattern. These provisions, I insist, must be part of any orderly reconversion program. Moreover, their early adoption would give labor a much needed sense of security which would go a long way toward solving the remaining manpower problems.

Perhaps, before this committee, I do not need to go into the question of the justice of labor's claim to safeguards of this sort. Nevertheless, in concluding my testimony, I should like to cite a few figures to indicate how well industry is doing:

According to a recent study by the National Income Unit of the Department of Commerce, business enterprises will have available between forty-seven and fifty-eight billion dollars during the transition period (Survey of Current Business, February 1944, p. 10). Against this, they will have an estimated maximum of charges amounting to $36,000,000,000. Thus, according to the authors of this survey, they will have in the aggregate a "minimum of ten to twenty billion dollars available from wartime accumulations for expansion purposes." The lower of these two amounts, 10 billions, is equal to the amount available to industry for expansion of facilities and inventories in 1941, the year of largest expansion in any 1 year during the past two decades.

These findings suggest that business is, on the average, in pretty good shape. It can take care of itself during the reconversion period. Workers are not so well off, despite daily publicity for the fabulous earnings which our members are alleged to be getting. In this connection, I want to call to your attention a survey recently published by the United Steelworkers of America, the Steelworkers in 1943. I quote, page 15:

> Contrary to popular belief, steelworkers' families are not now able to save money to provide a reserve for post-war emergencies. Instead, they are going into debt to the extent of 79 cents a week in spite of the bonds purchased and small bank savings.

As another indication of how well manufacturers have been able to take care of their post-war position, I want to leave with you for inclusion in the record, a table compiled by our research department, which shows for 26 auto companies a comparison between their position in 1943 compared to 1939, with respect to net sales, profits before taxes, profits after taxes, and post-war reserves.

In general it is the smaller companies that show the highest increase in the rate of profit, whether before or after taxes. To cite a few examples of big increases:

Profits after taxes	*Present increases 1939–43*
Edward G. Budd Co.	1,442.9
Packard Motor Co.	1,132.2
Garwood Corporation	547.7
Mack Trucks	423.2

Some of the larger companies had much smaller increases:

Profits after taxes	*Present increase 1939–43*
Studebaker Corporation	48.3
Chrysler Corporation	11.8

Senator MURRAY. Are those profits after taxes and before renegotiation?

Mr. THOMAS. They are.

Senator MURRAY. Therefore, upon renegotiation, of course, a large part of that profit would be taken away?

Mr. THOMAS. That is correct, if it is taken away. This includes also post-war reserves for which separate figures have been introduced.

And General Motors showed a decline of 4.8.

These figures, of course, don't tell the whole story. The larger companies typically had higher rates of profit in the base period, 1939. General Motors, for example, reported an 18.6 percent return on net worth in 1939.

Post-war reserves in many instances are at high levels—high enough so that, with tax funds recoverable from the United States Treasury, the companies should be well able to finance their reconversion. Chrysler had an $18,000,000 post-war reserve in 1943. General Motors had one of 35 millions. Commonly these reserves are deducted from net income before profit figures are made public. This type of bookkeeping is misleading to the public, for the headlines announcing reduced net profits do not mention the fact that wartime profits include these reserves.

In citing these facts and figures regarding profits and reserves I am not saying that post-war reserves are undesirable. On the contrary, I feel that they are essential to speedy reconversion with a minimum of unemployment. What I am pointing out is that industry in general seems to be in a financial position to tide itself over the reconversion period without too much trouble. I might note that the aircraft industry, which has expanded to its present extraordinary levels from almost nowhere, is an exception to the general rule. It will need special assistance.

All labor is asking for is a consideration of our reconversion problems comparable to that already being given to the problems faced by farmers and by business.

CONCLUSION

In conclusion I should like to express again the hope that a jointly sponsored Murray-Kilgore-George bill may be the outcome of the consideration of these matters by your committee, and that it may be an omnibus bill with the good features of S. 1718, S. 1730, and S. 1823, and embodying the principles which I have discussed today. The U. A. W.-C. I. O. would be happy to support such a bill.

Indeed, I believe such a bill would attract support on a very broad front. Labor would unite behind it. Small business would favor a bill under sponsorship of the Murray committee. The C. E. D. has already expressed itself as favoring an over-all agency and protection for small business. And industry, generally, is beginning to see the advantage of such an approach. Even on the question of an extension of unemployment compensation, I believe industry might

at least privately favor it. As Mr. Byrnes pointed out in his recent address:

> The proposal gives to private enterprise the assurance that its efforts to expand after the war will not be frustrated and stalled at the outset by unemployment and falling purchasing power.

Planning the next step toward reconversion is a job that can only be done successfully by the united cooperative effort of industry, labor, and the Government—and then only if all parties are willing to take a thoroughly constructive and broad-gage approach to what will be one of the biggest challenges that has ever faced our country.

Senator MURRAY. I wish to thank you for your very able and comprehensive statement, Mr. Thomas.

I had prepared a number of questions I intended to ask you but I note that you have covered them in your prepared statement.

I should like to ask your judgment on the question, as to what extent do you think we might be able to use the large war plants that have been created in the different war industries in the post-war period?

Mr. THOMAS. Well, of course, that is a pretty hard question to answer in a few words.

Senator MURRAY. In the automobile and aircraft industries.

Mr. THOMAS. I will say this: The large plants that will need consideration, such as you suggest, will be mainly in the aviation industry, in my opinion; there will be some in the automobile industry, not as much, because we have had in the automobile industry before the war started a lot of obsolete plants that were very old.

However, in these other plants in our post-war program, the way we contemplate it can be worked out, if there can be some program of full employment put into effect, it will increase the economy of the country to such an extent that these plants can be used to build other necessities for the people, such as, well, as has been mentioned, refrigerators, portable housing, radios, things that are needed by the families throughout the country, which we consider necessities today.

Senator MURRAY. Are you asking for an industry council in the automobile industry?

Mr. THOMAS. Yes; we are.

Senator MURRAY. Just how would that be set up?

Mr. THOMAS. Well, we believe the way it should be set up, there should be a top council, with representatives from industry, representatives from labor organizations, and also representatives of Government on that industry council as a whole. Then going down from that there should be regional councils set up and then going on a further level there should be, as we have advocated ever since the war started, councils with plants, labor-management committees, and so forth.

Senator MURRAY. They already have such committees in some of the plants of the country?

Mr. THOMAS. In some of the plants, yes. As a whole, they have not been very effective because in most of our companies they have only been giving lip service to the plan.

Senator MURRAY. In some small industries they have such industry committees and I understand they have worked satisfactorily.

Mr. THOMAS. Oh, yes; there are many industries where they are working very satisfactorily. In some parts of our industry they are working very satisfactorily, too.

Senator MURRAY. What policy does your organization advocate in reference to cut-backs, that is, in reference as to how the cut-backs should be handled, what control over that should be maintained?

Mr. THOMAS. Well, I thought I brought that out in my testimony here.

The first thing that bothers us to a great extent today is that cut-backs are occurring in various portions of the industry without labor, and I think many times, management not knowing anything about what is going to happen in the next few days. That sort of springs a surprise on both industry and labor and makes the situation much worse. There is no plan what to do with these workers after the cut-back occurs.

I think labor, industry, and management should be given a longer notice.

I think there should be some plan where jobs would be available for these workers, somewhat along the same line that they have been worked out. As I said here, I think transportation should be taken care of. I might say in England that has already been done.

There should be some plan as to what to do with the plant facilities and what to do with the labor supply when the cut-back occurs.

Senator MURRAY. With proper study on the part of the procurement agencies you do not believe that would be a difficult thing for them to do?

Mr. THOMAS. No; I do not.

Senator MURRAY. You believe they could give advance notice of cut-backs so that industry and labor would be able to protect themselves?

Mr. THOMAS. I think that it can be done very easily.

Senator MURRAY. I think that is all I desire to ask.

I appreciate your appearance here this morning, Mr. Thomas, and I am furnishing you with a copy of the revised Senate bill 1823, introduced by Senator Kilgore. I will ask you to make some comments on it.

Mr. THOMAS. I appreciate that very much.

Senator MURRAY. That concludes the hearing today.

We will meet again tomorrow at 10:30 o'clock a. m. when we shall hear Mr. LaGuardia, mayor of New York City; A. H. Hinrichs, Acting Commissioner, Bureau of Labor Statistics; and Julius Luhrsen, Railway Labor Executives Association.

(Whereupon, at 1:30 o'clock p. m., the committee adjourned until 10:30 o'clock a. m., Thursday, April 27, 1944.)

Statement on post-war plans for maritime industry, resolution, No. 17	87

It is perfectly obvious that the first demobilization problems—in the order in which they shall arise—is contract termination and plant clearance. Those are the matters effectively covered by S. 1718 (now pending before your subcommittee) which has been urgently recommended for immediate passage by the special Senate Committee on Post-war Economic Policy and Planning. Let me say again that I completely agree with those who rightly insist that the disposal of surplus property is inextricably linked with contract termination and plant clearance. We have only commenced to meet the problem of demobilization and reconversion when we deal with these two latter phases. But when we do deal affirmatively and conclusively with contract termination and plant clearance, we have at least started to answer this critical national problem. We shall have cleared the track to this extent. We shall then be able to immediately concentrate upon the final problems of surplus disposal.

It is my observation—based on the work of the Post-war Economic Policy and Planning Committee—that there still remains substantial controversy in respect to "surplus disposal." In my view there has ceased to be any substantial controversy in respect to contract termination and plant clearance as contemplated in S. 1718. I repeat that I have been driven to the reluctant conclusion that we dare not any longer proceed on the "all or nothing" theory. I respectfully urge that we should start this legislative process in respect to contract termination and plant clearance so that our national economy may have this much reassurance immediately.

I come from one of the great industrial war production centers of the country. Indeed, it is the No. 1 area. Therefore, it is also the No. 1 area in respect to the tragic hazard which will confront this country if this war terminates (either wholly or in part) before Congress has laid down dependable statutory rules and regulations to govern swift effective and conclusive contract termination and plant clearance—and then surplus disposal.

In my view, the situation is already critical. In my view, Congress should act, so far as it can, without any further delay. Otherwise, it will be Congress and not private industry which will have to take responsibility for what happens. We have been holding "hearings" on all of these related subjects for many months before many different committees of the House and Senate. Your committee—like the special Senate committee of which I am a member—has faithfully explored the field. I would not cut off any citizen from his right to be heard. But I respectfully submit that the time has come for action—immediate action—action before it is too late—action which will reassure American industry that Congress intends to act as well as to listen and to talk. If you can produce over-all action without further delay, I favor it and I want to help. But I am convinced that the need for speed in initiating this process is so great that the legislative covering contract termination and plant clearance should be given the immediate "go" sign. This cannot possibly interfere with further and immediate attention to the equal need for legislation dealing with surplus disposal. It simply takes these related problems in the order of their imminence. It seems to me that we ought to be able to get S. 1718 (in whatever form is satisfactory to your committee) on to the Senate floor next week for action next week. If this could be done, I think it would be the greatest possible reassurance we can give to our hundreds of thousands of war contractors (upon whom in turn millions of workers depend for their jobs) that we intend to protect and facilitate the demobilization and reconversion process upon which our total national economic life absolutely depends.

We cannot hold private enterprise responsible for reconversion results unless we permit private enterprise to function in behalf of reconversion; and private enterprise cannot even start upon dependable plans until Congress writes the laws under which it shall proceed.

I speak with deep feeling on this subject because I know at first hand what it means in the great war-production area which I in part represent.

I shall appreciate it if this letter may be entered in the records of your committee hearings.

I thank you again for your courtesy in notifying me in detail respecting your current continuation of hearings.

With warm personal regards and best wishes,

Cordially and faithfully,

A. G. VANDENBERG.

STATEMENT OF A. F. HINRICHS, ACTING COMMISSIONER, BUREAU OF LABOR STATISTICS

Senator MURRAY. Mr. Hinrichs, will you please give your full name and official position to the reporter?

Mr. HINRICHS. A. F. Hinrichs, Acting Commissioner of Labor Statistics, United States Department of Labor.

Senator MURRAY. You may proceed with your statement.

Mr. HINRICHS. I was asked to describe briefly, Senator, the work that the Bureau of Labor Statistics is doing in the post-war field.

For a period of 2 years, we have been working with an appropriation directly from our Appropriations Committee in Congress, to determine the character of the post-war labor problems that will arise out of the wartime dislocations.

Our primary work involves an analysis of employment trends and the dislocations of employment that have occurred, indicating in those studies the areas in which the dislocations have been greatest and the character of the industrial distribution of that employment.

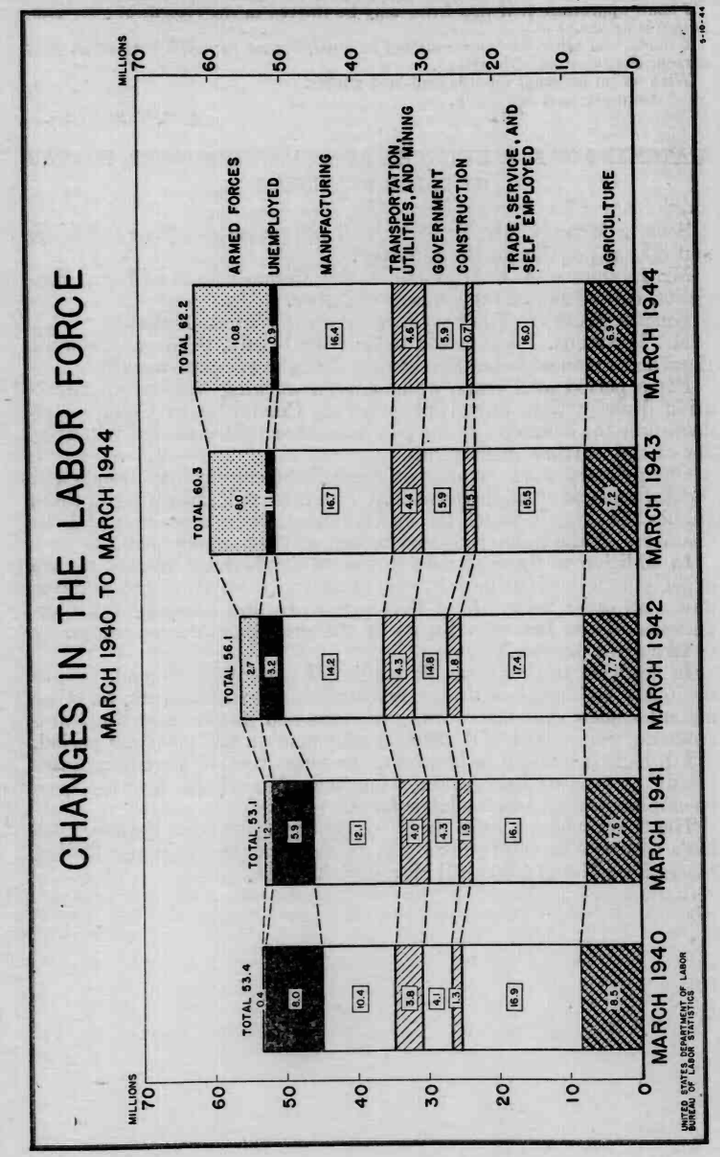
In addition to those specific studies of employment trends, we are experience following the last war, involving research in the archives and with other materials of that period, to find what light the experience of the last war throws on the problems that we are going to face after this one.

In addition to those specific studies of employment trend, we are obviously concerned with the relationship of employment to other measures such as public works programs and measures of fiscal and economic policy that will affect employment in the post-war period.

I think that it might be helpful to the committee if I were to indicate briefly by way of background what the effect of the war has been on employment and on the labor force.

The chart which I have here [indicating] shows the changes that have occurred in employment and in the labor force in the United States from March 1940 until March of this year.

(Chart I, referred to by witness, is as follows:)



Each one of those bars represents the situation in March of each year, 1940, 1941, 1942, 1943, and 1944.

The first thing to which attention should be directed is the change that has occurred in employment as such. In March of 1940, there were about 45,000,000 people employed in the United States.

By March of 1941 that number had risen to 46,000,000—not a very large increase. The sharpest increase in employment occurred in the year between March 1941 and March 1942.

In March 1942, we had over 50,000,000 people at work, an increase of 4,000,000 over the preceding year. A further increase of about 1,000,000 to March 1943, was followed, as between March of 1943 and the present time, by a small decline in employment.

The most marked increase, so far as employment is concerned, was in the manufacturing segment. Of the 45,000,000 people who had been employed back in March 1940, about 10½ million were engaged in manufacturing. At the present time the number is 15½ million, a 5 million increase—nearly as large an increase in manufacturing alone as has taken place in total employment.

The other large expansion in employment has been quite largely in the civilian personnel of the Army and the Navy, engaged in arsenals, navy yards and the operation of depots, bases, and so forth.

There has been on that account an increase of nearly 2 million in the number of people employed by Government. The other activities of the Federal Government, other than strictly wartime activities, have shown no increase in employment, nor has there been an increase in State and local governments since 1940.

Senator MURRAY. Haven't they decreased some?

Mr. HINRICHS. Some decrease. The change there is comparatively small.

Those represent the extraordinary expansions of the wartime period. They have been accompanied, of course, by a tremendous expansion of the number of individuals in the armed forces.

Back in 1940 we had less than half a million in the armed forces of the United States. At the present time there are in the order of 10½ million. So that you have had both an increase of employment of about 5½ million and an increase of something more than 10 million in the armed forces, a total increase of fifteen million or sixteen million people.

That has been made possible by two developments. The first was a sharp decrease in the number of people who were unemployed.

At the beginning of the war we had some 8,000,000 people who were unemployed. That number was reduced to a figure of about 6 million in March 1941 and cut to a little more than 3 million in March of 1942. It has been running at levels of about 1 million since March of 1943.

Mr. GWYNNE. When you speak of the number of unemployed, do you deduct those people who are unemployable for all practicable purposes?

Mr. HINRICHS. No; when I talk of the number who are unemployed, I am talking of the number of people who are actively seeking work at any time in the labor market whether there is a hope of their finding work or not.

595357—44——2

If I can digress for a moment to the concept of unemployable workers, I would like to say that experience has demonstrated that those who are truly unemployable comprise a comparatively small number. Normally, those people who are truly unemployable are not seeking work and hence are not counted in the labor force or as unemployed. A man who is ill or crippled in such a fashion that he cannot work, and is unemployable in that sense, is normally not seeking work.

The unemployables that we ordinarily refer to are a group of people—and I can only guess very roughly about their number—aggregating certainly a million and perhaps 2,000,000 individuals who find it difficult to secure a job and to hold a job for a long period of time. There is a constant churning of that so-called unemployable group into and out of jobs. Therefore, at any one time half a million or so of the group may be looking for work and counted among the unemployed.

They are not a significant factor in the total picture at the present time.

Mr. GWYNNE. What are the chief reasons for these people being unemployable?

Mr. HINRICHS. A variety of personal reasons, though the causes may be social. Bad work habits, completely inadequate training——

Mr. GWYNNE. Poor health?

Mr. HINRICHS. Poor health, psychiatric cases—a large variety of factors.

A certain number of people are normally made unemployable by prolonged periods of unemployment. That is, unemployment is so demoralizing an experience that you add to your list of unemployables immediately by virtue of the fact that you have had severe unemployment.

Mr. GWYNNE. Do you think because of the stress and strain of war, that after the war is over the percentage of unemployables will be increased?

Mr. HINRICHS. I think it is so completely negligible a factor that it ought not to enter into considerations of public policy with respect to the number of jobs we need to be able to fill. If you are referring to the problem of the rehabilitation of people who have been personally dislocated either by service in the armed forces or by industrial experience, it may be a problem. I think it is large enough to call for some remedial measures if that is the point of your question.

Mr. GWYNNE. Do you intend to make some comment on the situation so far as agricultural employment is concerned? There were fewer people employed there in 1944 than in 1940. Is that correct?

Mr. HINRICHS. There was some decrease in agricultural employment, a decrease that I believe was particularly marked at the end of 1942. I don't pose as an expert on agricultural employment, but there has been a slight decrease there.

The final point that I would like to note in connection with this chart is that we met this expansion in manufacturing and in the armed forces, first out of the decrease in the number of people who were unemployed, and second from a very substantial increase in the total number of people who are participating in the labor market.

In 1940 we had about 53½ million people in the labor force in the spring. In the spring of this year the number is about 62¼ million,

an increase of about 8¾ million people. Part of that increase represents merely the growth of the population of working age, about 2¾ million of it.

About 6 million represents people who are in the labor force today, or in the armed forces, who under normal conditions, would not have been in the labor force.

You have then about 6,000,000 workers who have been drawn into the labor market by virtue of wartime activity itself.

(Chart II, referred to by witness, appears on p. 48.)

Mr. GWYNNE. That includes women and older people who would not normally be employed?

Mr. HINRICHS. It does; yes. It includes about 3¼ million males; just under 3,000,000 females.

Looking at the story by age groups, about half of it represents participation in the labor force of young persons, who would normally be in school or college, under the impact both of selective service and of opportunity for wartime jobs.

(Chart III, referred to by witness, appears on p. 49.)

There has been on the whole a very small addition among males over 25 years of age. That is indicated by these bars showing in all about 1,000,000 extra men working in the age groups above 25. No more than half a million, and probably less than that are people who have been drawn back from retirement or have postponed retirement.

There has been an increase of about 1¼ million in the number of women 35 to 55 years of age. No significant additions occurred among women 25 to 35 years of age.

So that the picture of that 6 million of extra wartime workers may be described as consisting of about 3 million young persons out of school, about 1½ million women over 25 years of age, and about a million or slightly more males over 25 years of age, of whom about half a million are older folks who, under normal circumstances, would be retired.

The expansion that I was talking about in manufacturing employment has, of course, characteristically been in the heavy goods industries, in the manufacture of airplanes, ships, the fabrication of the machinery and the fabrication of the basic materials underlying them.

(Charts IV and V, referred to by witness, appear on pp. 50–51.)

In manufacturing, wage-earner employment in its entirety has risen since October of 1939 from about 8,800,000 to nearly 14,000,000 individuals, an increase of 5 million. This has almost all been in munitions. There has been very little change, contrasting the two terminal periods, in employment in nonmunitions manufacturing industries.

(Chart VI, referred to by witness, appears on p. 52.)

For the latter industries a decrease in the number of males has been offset by an increase in the number of females working.

In the munitions manufacturing industries you have had an increase from about 3,000,000 people, wage earners, in October of 1939, to 8 million in the fall of 1943. That represents essentially the wartime peak of munitions manufacturing employment.

About two-fifths of that increase in munitions manufacturing was made possible by the introduction of women into the labor force. The other three-fifths represented an increase in the number of males who are employed.

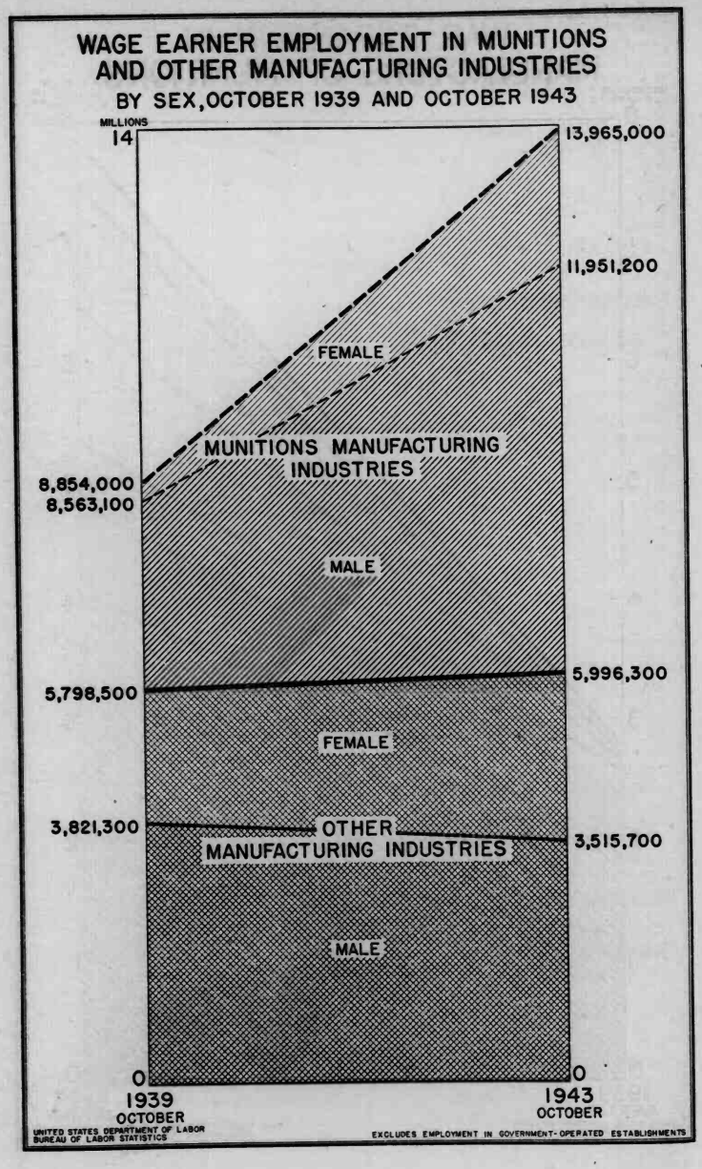
Note: EXCLUDES EMPLOYMENT IN GOVERNMENT-OPERATED ESTABLISHMENTS AND METAL MINING.



Senator MURRAY. The Government has invested something in the neighborhood of $15,000,000,000 in war plants. Have you got any separate figures regarding the number of workers employed in those Government-owned and privately operated plants?

Mr. HINRICHS. Yes. Those Government-owned and privately operated plants represent a total investment of about $8,000,000,000 of the $15,000,000,000 that you indicated. Four hundred such establishments scattered all over the country at present employ slightly more than 2,000,000 people.

Senator MURRAY. There will be a very difficult problem there of continuing the operation of those plants in the post-war period. Have you any idea with reference to the possibility of the utilization of those war plants for civilian production?

Mr. HINRICHS. I am sorry, I cannot speak as an expert on the subject. I would call attention to the fact that among those plants that are Government owned and Government operated, or Government owned and privately operated, the end product is ordinarily a product with special wartime uses. The privately financed expansion has been in those areas where there is an expectation of normal peacetime activities, but aircraft, ships, and ordnance items take a very high proportion of the funds invested.

(Chart VII, referred to by witness, appears on p. 54.)

The limitations on the operations of those plants are two. In some instances, the technical equipment of the plant is such that ia cannot be used for anything else. I am not sure that a powder plant can be used for anything except the manufacture of powder.

In other instances, it is a limitation on the volume of work to be done in a specialized industry as, for example, shipbuilding, where there has been an increase in employment from less than 100,000 at the outbreak of the war, to 1¾ million at the present time.

Senator MURRAY. Do you wish to ask any questions?

Mr. GROSS. Mr. Hinrichs, in making any estimates of the probable amount of unemployment after the war, many assumptions have to be considered, the rate of demobilization of soldiers from the armed forces, the extent to which women and under-age and over-age workers stay in the labor market, and so forth.

Suppose we assume that the war in Europe should stretch out somewhat longer than we expect and the war in Asia should end sooner, so there would be an entire end of the entire war and no substantial demobilizations between the two phases.

Assume also that the boys overseas will be brought home as rapidly as ships and planes could bring them home.

Let's assume that a substantial portion of the older people and younger people and women who have entered the labor market stay there.

On those assumptions, do you think the number of people trying to find jobs in that particular period of demobilization might run as high as 12 to 15 million?

Mr. HINRICHS. There are quite a number of hypotheses there. I will throw in one other, if I may, before I answer your question. Is public policy going to be pointed primarily to the creation of conditions of full employment, or are we going to do nothing in particular about it and drift?

The range that is introduced by that last hypothesis is so large that my answer is that I honestly cannot make an intelligent guess, but under all of the conditions that you have outlined a figure of 12,000,000 is not unreasonable.

I can illustrate, I think, a little more concretely, if I may, not with a series of hypothetical figures, but rather by contrasting the situation of the labor force as we know it, and as it is likely to be 2 or 3 years from now, with employment as it existed in 1941, which was a rather high level of employment at that time.

With employment totaling slightly more than 50,000,000 people, with a normal labor force of about 58,500,000, if you make assumptions with reference to the armed forces and say about 2,500,000 in the armed forces—and that is a purely hypothetical figure, so far as I am concerned—you are left with something like 5,000,000 people who would be unemployed if all of the extra workers that I have been talking about retired from the labor market.

Mr. GROSS. That is an optimistic assumption in many respects, is it not?

Mr. HINRICHS. That all of them will retire from the labor market?

Mr. GROSS. Yes.

Mr. HINRICHS. Yes; there ought to be some residue in any event. The amount of withdrawal is going to depend on a number of policy decisions.

First of all, how quickly are we going to be able to get the normal numbers of the population back into schools and colleges?

Secondly, are the women who are presently in the labor market going to assume that there is going to be severe unemployment ahead of them? If so, larger numbers would stay in the labor market than otherwise would. That is, if they are anticipating that their husbands are going to become unemployed, they will hang onto a job themselves, to the last day they possibly can. If, on the other hand, they have reason to believe that there is going to be opportunity for full employment, a large percentage of the women will retire.

In the third place, there has been discussion of liberalization of old-age retirement provisions, not as a war measure particularly, but as a general social measure. If that is timed to encourage withdrawal from the labor force, you would have larger withdrawals than otherwise would be the case.

I don't think, however, we can count on cutting back to a labor force of 58,500,000 people in 1947. If I had to guess, I would say there is likely to be a residue of about 1,000,000, or perhaps a million and a half workers staying in.

We have to think in terms of 58 to 60 million people who are going to be looking for employment.

Mr. GROSS. Other witnesses have suggested that if, after the war, we return to the 1940 level of national income, we would have an unemployed group of at least 19,000,000 people.

Do you have any comment on that figure, which has been presented to us?

Mr. HINRICHS. It takes into account, first of all, a greatly lower level of employment and armed forces than the one I have indicated here. It also makes allowance for large increases in productivity that have occurred.

I can't give you a sensible confirmation of the figure. All that I am prepared to say is that we will have a serious unemployment problem unless we have a much larger number of people employed than were employed in 1940 and an even greater increase in national income. We cannot possibly be satisfied to set as a goal the 1940 national income.

Bear in mind that in the first chart that I showed we started in 1940 with 8,000,000 unemployed. Since that time we have had at least 3,000,000 growth in size of the normal labor force—I think I said 2¾ million up to the present, but you need to consider also a continuing normal increase of nearly half a million every year. So that when you talk of a post-war labor force, you are talking of three to four million more people than were in the labor force in 1940.

On top of all that, there has been an increase of productivity. It is a perfectly normal phenomenon. It means we ought naturally, year by year, to produce more goods and use them to raise the standard of living of the people of the United States or for productive investment here or abroad. If we do not use that increased productivity to increase the production and consumption of goods, but use it as a substitute for work hours, we should reduce hours of work or you will increase your unemployment past the 8,000,000, plus the growth of the labor force. The time that would need to be spent to make an exact estimate is hardly justified. You know that the basic problem is there, even without being able to establish the fact in terms of a single figure.

Senator MURRAY. Mr. Hinrichs, in the early part of your statement, you mentioned a slight decrease in employment between 1943 and 1944. Have you got the exact figures of the extent of that decrease?

Mr HINRICHS. Yes; I would like to submit the figures for the record on a monthly basis. I am sorry that I do not have those with me. The decrease over this period was from 51.2 million to 50.5 million in March of 1944, 700,000 in that period.

(The figures referred to are as follows:)

Esimated civilian employment,[1] March 1943 to March 1944

[Thousands of persons 14 years of age and over] [1]

[1] Preliminary.
Source: U. S. Department of Commerce, Burea uof the Census.

Actually there was some further rise after March of 1943, so that the decline is timed a little bit later than I show here.

Senator MURRAY. That decrease was due to cut-backs in war production, was it not?

Mr. HINRICHS. It is due in part to cut-backs in war production. It is due in part to the disappearance from the labor force of a certain number of individuals, or to nonreplacement of individuals taken into the armed forces.

There has been a decline in employment, for example, in the textile industries, since 1943. That is not a cut-back. Cut-backs have come particularly since October, and more particularly November of 1943, as a significant phenomenon.

We have always been having cut-backs, but scattered and on a smaller scale than we have known them in the last few months.

Senator MURRAY. The committee has had some testimony to the effect that there was an improper or inefficient utilization of labor in many of the plants in the country, especially plants that were operated on the cost-plus-fixed-fee system. Do you know whether or not there has been an effort to reduce the number employed in those types of plants as a result of the criticisms that were made against them?

Mr. HINRICHS. I can't assign the cause, sir. Perhaps the Manpower Commission could.

There has been a reduction of employment in many lines where the physical volume of production is still increasing, as in the case of aircraft. The reduction of employment has come about not so much through lay-off or discharge, although there has been some of that, as by the nonreplacement of workers when they quit. Aircraft and shipbuilding have both shown declines in employment that I think in part reflect the situation which you describe.

Senator MURRAY. Have you any idea as to the extent of cut-backs that will take place in the coming months that would tend to increase the unemployment of workers in this plant?

Mr. HINRICHS. We anticipate some further decreases, but relatively moderate, up to the termination of hostilities with Germany. Following the termination of hostilities with Germany, we except cut-backs to increase.

In the meantime, they are localized phenomena, smaller in their total volume than the month-to-month changes in the size of the labor force. There has been no evidence, despite the cut-backs that have occurred so far, of any increase in the total number of people who are unemployed. There has rather been a disappearance from the labor market of at least as many people as have been laid off if you are talking in terms of national aggregates.

Senator MURRAY. Have you concluded your statement with reference to these charts that you have?

Mr. HINRICHS. Yes, sir.

Senator MURRAY. Have you any suggestions to make to the committee with reference to the basic post-war problems that should be considered by this committee?

Mr. HINRICHS. Well, in the first instance, I think I have already indicated in my testimony the extreme importance which I would attach to the development of public policy with reference to the need for full employment. It should be so firmly grounded that the policies of all agencies would automatically be geared to the job of creating conditions that are conducive to full employment in the post-war period, precisely as the agencies today are geared to the job of mobilizing for war.

If there is any doubt in anybody's mind with respect to what the task of the post-war period is, I think it might have very serious consequences. Whether an agency is primarily responsible for dealing with problem of fiscal policy, or of monopoly, or with any of a whole

range of economic questions, it should propose solutions that will increase employment. This is at least as important as specific programs for conversion, the demobilization of the military forces, and programs to encourage withdrawals from the labor force.

With reference to conversion, the Department of Labor has testified before this committee at an earlier date. So also, I think, with reference to the demobilization of the armed forces.

I have spoken today about the problems that surround the encouragement of withdrawals from the labor forces. It would seem to me there is need for development of a program for the launching of needed public works during the transition period and that that will involve the programing of work by municipalities and by the States. Whether any assistance may be needed from the Federal Government or not, is a question, I should think, for the States, the municipalities and the Congress to decide, but there are costs that are involved in getting a public works program ready to move.

I mentioned the role of the States and municipalities particularly because the unemployment that will arise in the transitional period is likely to arise rather sharply, and large public works of the sort which are typically Federal works—huge reclamation projects and things of that sort, reach a peak employment after many months. The small works that are characteristic of localities can be pushed to peak employment more quickly.

We are going to need a strong employment service. We must not let the Employment Service disintegrate as it did after the last war.

It is quite probable that the geographic shifts that are going to arise will raise problems of assistance to workers to transfer from expanded areas.

You are undoubtedly going to need facilities for training and, more especially for retraining, and finally, there is need certainly to examine the problems of unemployment due to conversion which may arise in this period and the adequacy of provisions for unemployment compensation.

Those, I think, would sumarize the outstanding immediate problems from the point of view of the people who are being displaced.

Mr. GWYNNE. You referred several times to the necessity of creating conditions conducive to full employment. Do you refer there to action to be taken by the Government?

Mr. HINRICHS. I should say that it involves Government policy and private policy. At all places we should avoid those actions that retard production and employment, and should encourage those things that will create employment. It may involve a program on the part of the Government which will involve the underwriting of the total level of employment, with the general assurance that we don't intend to allow our resources to rust in idleness and our men to become unemployable by sitting at home.

Mr. GWYNN. In order to give full employment, I presume it would be necessary to utilize all existing factories and probably from time to time build new ones.

Mr. HINRICHS. By all odds; yes.

Mr. GWYNNE. Do you know of any way of getting that done except to let it be known to private industry that the reasonable profits they make from that venture will be theirs?

Mr. HINRICHS. Well, there are other methods of doing the job, but that is the method I should expect the United States to pursue, and that I hope we do pursue.

Mr. GWYNNE. Doesn't it get down to this: That the only hope of full employment depends upon the private employer and not the Government in the long run?

Mr. HINRICHS. The bulk of employment is necessarily going to be private employment. I personally want no Government-made employment that is not badly wanted by the taxpayer. We do want schoolteachers; we do want postoffices. There is, therefore, going to be a certain amount of government-created employment.

If employment resulting from normal business does not total 53,000,000, 54,000,000, or 55,000,000, it is perfectly possible for the Government to place orders for goods which have use in peacetime, precisely as in places orders for goods which have use in wartime, to insure whatever level of employment it wants to have. The answer to your question then, in part, is that the Government can contribute to the job.

Now, I think that the knowledge that public policy is going to be aimed at the creation of continuous high levels of employment, approximating 53,000,000, 54,000,000, or 55,000,000 people would itself have a great deal to do with determining how much private employment there would be without extraordinary Government action. A textile manufacturer will have a very different attitude toward the building of a new mill if he anticipates high levels of employment and high levels of national income, and expects an active market, than if he anticipates a depression. In the latter event he will put off building his mill and will contribute to bringing on the depression he fears.

Mr. GWYNNE. Just one more question. Would you say that a Government policy which eliminated private monopoly and insisted on free competition, was a policy conducive to increased employment?

Mr. HINRICH. Yes.

Senator MURRAY. Thank you, Mr. Hinrichs, for your statement.

Now, Mayor LaGuardia will be the next witness.

STATEMENT OF HON. FIORELLA H. LaGUARDIA, MAYOR, NEW YORK, N. Y.

Senator MURRAY. Mayor LaGuardia, we are very glad to have you here today, and we are sure you will be able to give us a good statement in connection with the problems that we have before us.

Mayor LAGUARDIA. Senator, I am not so sure. Within a very short time I am quite certain that Washington and the country will be flooded by experts who know all about how to solve the post-war problems.

At the present time these experts are busy conducting the war or telling Washington what to do, and to conduct the war.

Soon they will reach the tablecloth stage, that is, every place where there is a white cloth and a soft pencil, and they will be figuring out just how to solve these problems.

Now, if charts and tables and diagrams and statistics were employment, we would have no problem. But we have a tough situation

confronting us, no question about that. And it is going to be costly, very costly, but not so costly and destructive as war, and not so costly as it will be if we fail to provide intelligently ahead of time.

Most of us here went through the terrible unemployment period and we know how costly that was.

I have here the two bills now before the committee. One criticism I would make is that before a new agency of the Government is created, Congress should abolish at least five that exist today. I have always felt that the existing executive committees of the Government should have taken care of all activities rather than create independent agencies.

For instance, O. P. A. belongs naturally in agriculture; Selective Service and Manpower belong in the War Department; W. P. B. belongs in Commerce; and the War Labor Board belongs in the Department of Labor.

As soon as we can tighten up and get these functional departments where they belong, I think the better it will be in transferring from war to peace.

Now, it is evident that we are going to have a difficult period. Avoiding it or refusing to recognize it will not help. I want to say this in all sincerity: Unless we do provide intelligently, we are going to have very serious trouble in our country, very serious trouble for which it will take us 50 years to clear up. None of us want that.

I would say that the full fiscal year following the last year of the was is going to cost us as much as the last war year; and then there will be a gradual tapering down. I do not think there is any way out of that.

Senator MURRAY. Mr. Mayor, don't you think with proper post-war planning, there should be an opportunity to expand employment greatly in this country—to make a tremendous expansion over that which existed previous to the war?

Mayor LAGUARDIA. Oh, we shall have to do that; there is no question about that.

Senator MURRAY. And that can be done, can it not, without the need of any great Government expenditure?

Mayor LAGUARDIA. The first year or 2 it is going to require large expenditures.

Senator MURRAY. Of course, in the immediate period when we are changing over, but that is a temporary condition.

Mayqor LAGUARDIA. Oh, certainly. I am coming to that.

Senator MURRAY. Don't you think it is most essential that industry should maintain a policy, during this period of low prices and good wages, in order to bring about a possibility of full employment?

Mayor LAGUARDIA. Yes; I agree; but good wages and low prices are pretty difficult to bring about. I would say good wages, fair prices, and reasonable profits only—no excess profits.

Senator MURRAY. That is it. We have witnessed in the depression period a situation where industry increased its prices in the midst of the depression when the Government was spending billions of dollars to bring about employment, and as a result of those increases in prices, a recession was brought on.

Now, in the post-war period, if industry would avoid that and cooperate in a program of maintaining low prices and good wages, we would be in a situation to come through this period of reconversion very satisfactorily.

Don't you think so?

Mayor LAGUARDIA. Yes; but the purchasing power must be there.

Now, if the committee is considering the bill S. 1823—may I take some of these provisions and then I will come to this sheet?

Senator MURRAY. Yes; you may.

Mayor LAGUARDIA. On page 3, section 103——

Senator MURRAY. That is 1823?

Mayor LAGUARDIA. Yes, sir. I submit that the Board is too large. This will require quick thinking and quick moving, and a large board just cannot do that.

Senator MURRAY. That is section 103 on page 3?

Mayor LAGUARDIA. Yes, sir. Now, in section 104 it simply refers as a function to the demobilization of the members of the armed forces, and I like the more explicit and detailed provision in S. 1730 much better. I will discuss that when we come to it.

Now, gentlemen, when we come to title II, right there we come to the multiple agency, and from my own experience—and I have had only 40 years of it in government—it is easier to exchange prisoners of war with an enemy nation than it is to get two departments of Government having close or overlapping jurisdiction to working together. That exists in every government.

Therefore, I would like to see a shrinking of war agency, and it must have power—and I use that word advisedly—in the post-war adjustment, where there can be no question of jurisdiction and no jurisdictional jealousies.

Now, the public work on page 6, under D, I believe all of that power, the surveys, and the decision should be left with Public Works, particularly pertaining to a Government Public Works program rather than to separate those.

Senator MURRAY. Your statement there, Mr. Mayor, seems to be in accord with the Administrator of the Federal Public Works Administration.

Mayor LAGUARDIA. Now, some place here there is a provision making a committee of Congress part of the board, and giving it the right to sit on hearings.

Senator MURRAY. That is S. 1730.

Mayor LAGUARDIA. Now, I am strongly advising against that from my own experience as a legislator, and my own experience as an administrator and an executive. That simply never works.

Let Congress define the policy and then place all of the administrative responsibility in an administrative department of Government. But when you seek to bind the two, it simply does not work and it causes a great deal of embarrassment to the legislators involved, as well as to the appointed officials.

Now, on the surplus property, there is something that requires very delicate treatment, gentlemen——

Senator MURRAY. Before you go to that, Mr. Mayor, those provisions were carefully studied and worked out by the Post-war Planning Committee under the chairmanship of Senator George, and it was deemed, I think, very important by them that such a committee should be set up in order to keep in touch with the Government agencies, and

to be informed on the policies that were being carried out by them, so that they could have something to say with reference to what those policies should be, where they changed from time to time, and to see that they were carried out in accordance with the mandate of Congress.

Mayor LaGuardia. I am strongly in favor of the Post-war Economic Committee, both the Senate and the House, so that all these very important and delicate problems would receive prompt attention without conflict with any of the standing committees, and that committee is of such importance that it should be formed immediately of appropriate members of Ways and Means, Interstate Commerce, Agriculture, and maybe Public Buildings and Grounds. I am naming the House committees because I am more familiar with them.

But I know that a blending of the administrative agencies never works and is never expected to work out.

I throw that out as a suggestion. But I would like to take up, if I may, Mr. Chairman, surplus property, demobilization, and post-war employment in its relations to urban centers.

On the question of surplus property, that is not as easy a problem as it seems. I followed very closely after the last war. As soon as I was demobilized, I went back into the House and the problem was treated rather lightly until industry realized that it might cause a great deal of embarrassment, and I would say that a good job was not done in the disposition of surplus supplies after the last war, and I think we are all in agreement with that fact.

Now, gentlemen, we are going to have an enormous amount of supplies of every kind, nature, and description. The more we have, the more it is indicative that the Army, the Navy, and the procurement divisions have done a good job. I hope the Army and Navy will not be criticized when this country realizes just how much material it has on hand.

A war was never lost because an army had too much. Many wars have been lost because an army did not have enough.

So we might as well know now and expect a quantity of surplus supplies that will be fantastic.

Now, I know that in both bills there is an inclination to dispose of the surplus supplies in this country, and perhaps abroad. I am quite sure, gentlemen, that you will find before long that you will have to go very, very slowly in disposing of this property through regular channels of trade because there will be so much of it.

Even if you give the States and counties and the municipalities all that they say they want, it will hardly make a dent in what you have. Therefore, I would throw every safeguard around disposition of this supply so that it does not defeat the very thing you are after in getting industry back to peacetime production.

It is just a part of the waste of war, and if you try to recoup from that, if you try to sell it, you are just going to get into serious grief.

I believe that what we give to U. N. R. R. A. or any of the relief agencies engaged in providing aid outside of the country, should be inventoried and valued, and that we should be given credit as to our contribution to the total fund.

But when it comes to disposition of the surplus property to States, counties, and municipalities, I think you will find that the municipalities will be able to absorb more because of the function of municipal government.

Now, there will be great need for trucks, motortrucks, light cars, coupes for police and fire equipment and hose, road-building machinery. Counties, municipalities, and States will have great need for them.

And also, such consumers' supplies as blankets, clothes, and shoes for institutions and all the medical and surgical supplies that you will have, but the demand in Europe will be so great—I don't know much about the Far East—that perhaps the medical supplies and surgical supplies will not really be one of your big problems.

Food, of course, is perishable. But I believe that when we cease firing in Europe, that the demand for the civilian population there will be so great as to not create a serious problem, and that is fortunate, too, because we do not want to curtail agriculture in any way.

Now, at the present time, I wish this committee would check me on this.

Although the disposition of surplus supplies is very limited, it is getting into the competitive field already, and it should be stopped. Within the last few days I heard from my colleague in Birmingham, Ala., that several thousand raincoats were sold at a ridiculously low price.

The purchasing agent of Los Angeles who was in the market for motorcycles for his police department was looking around and could not get any and lo and behold, he learned of a number of motorcycles having been sold to a department store in my city who now are offering them for sale.

Now, this should not get started, because if you once get started in getting the surplus supplies out through the regular channels of trade, you are going to get into a great deal of trouble and do a very great deal of damage.

Senator Murray. At the present time, of course, there is no legislation controlling the disposition of this property and it is the function of Mr. Clayton, appointed by Executive order, to handle the situation.

Mayor LaGuardia. The trouble is that the supplies I am talking about do not reach Mr. Clayton's division. If they are Army goods, they are sold by the Army.

I think Mr. Clayton only gets it if it is surplus before it is delivered to the agency, or if it is declared surplus and then turned back.

Senator Murray. He is limited then under the Executive order?

Mayor LaGuardia. That is my understanding. I would not disturb that agency. It is a sort of a holding company which will issue directives to the various holding agencies. I think that is a good plan. They should have legislation though, if it becomes necessary to withhold the disposition of certain property from the regular channels of trade.

Senator Murray. You do believe, though that there should be a policy of disposing of that surplus property as quickly as possible?

Mayor LaGuardia. As quickly as possible to agencies of Government, and I would like to have the definition clarified when you are speaking of disposition to agencies of Government. The definition should include "State, county, and municipal government."

Senator MURRAY. What page is that?

That is 1823 you are referring to?

Mayor LAGUARDIA. Yes, sir.

Senator MURRAY. Paragraph A on page 15 provides that the Bureau of the Budget has a right to acquire any surplus property for transfer to any Government agency which needs it. Such transfer shall be made upon such terms and with such charge to the—

Mayor LAGUARDIA. Isn't that limited to Federal Government?

Senator MURRAY. I believe it would be. "Government" means the Federal Government.

Mayor LAGUARDIA. With all due deference, I don't think the Budget Bureau is the proper agency. A budget bureau should not do anything but attend to the budget. I don't let my budget bureau do anything else. They like to butt in, but I do not let them.

I think Clayton's agency is the proper agency to tend to that.

Senator MURRAY. That bill, S. 1823, has been redrafted, and I believe probably some of the things you are urging have been taken care of in the redraft.

Mayor LAGUARDIA. Gentlemen, in disposing of surplus property to municipalities and State governments, I want to submit that we should be given notice that the supplies are available. We have already had conferences with the Surplus Supplies Administrator, Mr. Clayton, and his Board, and we should be given an opportunity to inspect it, and purchase it before it is thrown open to the trade and, I still strongly urge that we move very slowly on that. But I know it is not necessary for me to urge that.

As soon as the impact is felt you will have a pilgrimage here to Washington that will be something.

But we should be given an opportunity to utilize these supplies at a very encouraging price.

In the first place, most municipalities will have to get legislation to come here and purchase, because they are bound by State laws on competitive bidding, and advertising, and so on. And, in the second place, we are all working with limited equipment now, it is being run down, and our cost of operation has increased because of the run-down equipment and we should be given some opportunity to make up for that in the acquisition of these surplus supplies.

Senator MURRAY. The municipalities of the country would be in position to take up a tremendous amount of that surplus property?

Mayor LAGUARDIA. Yes; it will be a tremendous amount, but relative to what you will have on hand, it will still be very little.

Mr. GWYNNE. A great deal of this surplus will need to be disposed of to the people generally. Isn't that true? If it is not handled through the regular channels, how can it be handled?

Mayor LAGUARDIA. Look. You will have so much that if this gets out into the regular channels of trade, you will delay getting back to the production of consumer goods.

Mr. GWYNNE. That is true, but what are we going to do with the surplus? Would we destroy it? Of course, a lot of it can be used in the liberated countries of Europe.

Mayor LAGUARDIA. It sounds so wasteful and destructive to say, "Oh, yes; get rid of it," but that is war. And what you have in mind, which is far greater than disposition of surplus supply, is to

get people back to work and normal conditions, and let normal life start again, and you are going to have such a tremendous amount of these surplus supplies that it is going to retard.

I am warning, because I am so sure of that.

Gentlemen, our big thing here is employment. In the first place, it is going to take time to get industries back and retooled to normal production. Even our large automobile companies haven't any definite program today of the type of car that they are going to put out. I circularized the large manufacturers recently to get an idea of the chassis type in considering an application to amend our taxicab requirements, and none of them know definitely just what type car they are going to get out.

I heard some of the questions put to the preceding witness. Everybody is in agreement that the bulk of employment, of course, must be by private industry. No question about that. There is going to be that fateful time, that period in between, where work will have to be artificially created, and there are two phases to that.

One is public works, and the other is rehabilitation, deferred maintenance, and expansion of existing industry.

The public works program will have to come into the bargain, and we can keep that pace up for 5 years without building anything that isn't absolutely necessary.

First, we must have the Federal public-works program.

Now, I have heard opposition to that, gentlemen, and I have heard opposition to Federal grants for municipal, State, and county public works. But they were the same gentlemen who came here to Washington, hat in hand, crying for help in 1932 and 1933. I was here; I saw them, I knew them. Before, when some of us over in the House were pleading for aid for unemployed, and we saw this unemployment increase each year, they were scoffing at us, they were laughing at us, they were sneering and jeering. They didn't know what to do.

Relief helped industry and the banks of this country in 1933, 1934, 1935, and 1936 just as much, if not more than, it helped the individual who was out of a job.

Now, the same people are crying about this public works program, and, I say, without any reservation, and advisedly, they have not learned anything since the crisis of 1932.

The Federal works program, gentlemen, has not yet started. There are no plans at all. And that is the fault of Congress.

It takes at least a year or a year and a half to get the plans necessary to start a public works job. If you will remember when Congress appropriated for P. W. A.—not W. P. A.—but P. W. A., after appropriating Congress naturally expected that now we will get things going. It took a year before any job started.

Now, then, I recommend strongly an immediate authorization for a vast Federal works program to follow the war, with appropriations made immediately available for the necessary engineering plans and architectural plans, and in some instances, perhaps, the acquisition of land.

I think it is rather reasonable and certain there will be a post-war highway program that is well on its way and we are working very

industriously on that and that will provide, I understand, about $3,000,000,000 for the first year.

The Federal works program is No. 1, and No. 2 now is authorization for Federal grants to State, county, and municipal public works.

If it is not done now it will be done later and will cost more.

I know what I am talking about, and on this I have a right to talk.

I am planning in my city to meet this situation. There isn't a city in this country that can embark on a post-war public works program without Federal aid.

The advantage of having it ready now is that your orders go in immediately for the bricks, cement, wood, trimmings, and everything that goes into public works. And I repeat, it will take a year to prepare these plans.

I started a year ago, gentlemen, and I am spending $30,000,000—that is New York City—for plans alone. And I would be very proud and happy if you would visit our post-war public works exhibit that opens Sunday. There it is.

And back of every one of those exhibits the plans are either completed or in the course of completion, and money ready to pay for those plans, and they cost $30,000,000.

And that will cover about $1,300,000,000 of public works, and it is geared so that up to the second year it will reach its employment of 240,000 men on the spot.

Of course, you all know the number of men back of that.

Now, manifestly, I will not have the money to build that entire program, but I want to be ready if there is money available. Everyone of them includes a useful project, and the entire list is in the hearing before the House Committee on Grounds and Public Lands—Fritz Lanham's committee. That is why I didn't bring all the data down, but it can be put into the record if necessary.

Now, we have checked through the Conference of Mayors on all cities. They all have a list of desirable and necessary public works, but few of them have the funds or finances to get the necessary construction plans.

I don't mean just a sketch. I mean the plans so the minute war is over we can advertise and go to work and put men to work. In the authorization for Federal grants to municipalities, counties, States, and public works, there should be some money appropriated and immediately available for the payment of these plans or grants for the cost of engineering and architects' plans.

I don't believe that the Government should advance any money for the acquisition of sites at this time at all. I believe there should be a token that the municipality will really go through with it in some form of assurance that the money will be available through bond issue, or otherwise, to go through with the public works.

Now, in New York City we are ready to go with $1,300,000,000. I had my Department of Commerce make a survey of what business would do immediately following the war, on rehabilitation, expansion, and deferred maintenance. This was a survey conducted very carefully, and we had a corps of engineers, and we personally surveyed about 10 percent of industry and business in our city, and covered, of course, most of the large ones. We know now that business and

industry—that includes manufacturing, communication, and transportation in New York City—will be ready with $1,600,000,000 of work immediately following the war.

We also went into the finances. Most of them will be able to finance it, and others, of course, will require loans.

I think this is a good place to suggest that part of this post-war program should provide for insurance of loans up to 90 percent where a case can be made out of necessary rehabilitation, deferred maintenance, retooling, or expansion. It would not cost the Government very much and would solve that problem entirely.

I give these figures as an index to what is available throughout the country if it is properly and thoroughly approached.

The public-works program, along with the rehabilitation of industry and commerce, should keep our heavy industry going and provide employment that otherwise would be displaced very substantially during the first 3 years. It would then start to taper down, of course, but the other normal peacetime industry would be picking up at that time, and we can maintain the necessary level of employment.

Now, in both bills reference is made to demobilization of the armed forces. The provisions in Senate bill 1730 are more in detail. I strongly recommend two or three things at this time.

At the beginning of the war, or even before the war started, I recommended very strongly that all overtime pay in industry should be paid in the form of untransferable, nonnegotiable, nonattachable certificates, payable at a given period after the war, and at given periods as each matures. That would be storing up overtime that is now consumed and would be very helpful.

I also thought—I think I testified before the Committee on Military Affairs in the House, or one of these committees—that when we provided the increased pay for the armed forces, I thought $20 or $25 might have been deposited in the Postal Savings bank to the credit of each man after the war ended.

That is past now. I still urge that all overtime should be paid in these deferred certificates of the Government. That would be very helpful.

Gentlemen, you can't tell when the war will end. Personally, I think it will be a blow-up at the top in Germany when the Russians come further west and we come in from the east. They can't take it; they never could; they can dish it out, but they can't take it.

I think it will be a blow-up at the top and we must be prepared for all eventualities.

I believe on all contracts now a greater percentage should be paid for unemployment insurance in order to extend the time of payment of unemployment insurance. Every month we gain on that will be just that much gain. I think it is folly, when we know there is going to be a subdetermination of this employment, not to make provision at this time.

Some 2 years have been lost, but that could be picked up immediately with an additional substantial contribution to the unemployment fund and an extension of the payments of unemployment benefits.

Now, gentlemen, we must have more uniformity of labor laws throughout the country. I heard impressive figures of available man-

power after the war and the absorption of manpower in normal peacetime industry.

To absorb this, it will be necessary to have your system sufficiently flexible so as to create a greater spread of employment by a shorter day and a shorter week. The way the shorter week and the shorter day has been administered has not created any more work and I am talking about that period before the war.

The purpose of a shorter day and a shorter week is to create more employment, but it has worked out prior to the war that it creates only overtime for the fellow who has a job and not a job for the fellow who is out of a job.

That makes it more costly in the cost of production, but does not provide employment which is its real purpose.

I will give you an instance. Some 7 or 8 years ago we had a deadlock in the trucking situation in New York City. I sought to settle that strike. We started Saturday morning and went late into the night. They were in agreement as to a 40-hour week. A 40-hour week would put 2,500 men to work at the peak of unemployment.

The word came out and the 40 hours was spread through the entire week so that every man with a job got an hour or two overtime every day instead of putting on a new shift at the end of the day.

The gentleman preceding me spoke about old-age pensions. That's all right. But anyone who enjoys full retirement or old-age pension should not be permitted to take the job of the fellow who is out of work, and that is what happened. I have lost at least 2,000 police officers in New York City who retired after 20 years in middle life, the middle forties, to take other jobs.

Now, when the war is over, they can afford to work for less. They displace a man who depends entirely on his employment for a living.

The way to get at that, I should think, would be that old-age pensions and retirement pay should be tax-exempt, but if they take work they should lose the tax exemption. And the same with an employer. If he hires a retired or pensioned employee, he should not be able to deduct that amount.

And with compulsory education throughout the country, we will keep so many more away from the competitive labor market. And on demobilization, I hope that is done very intelligently and very gradually.

I prefer the plan where, when the veterans' organization arrives home, rather than to give him his severance bonus or his discharge money, he be given a 3 or 6 months' furlough. Let him go home during that period and if he finds employment, he can then apply for immediate discharge. I would have that period of 3 to 6 months before the discharge on a full and complete furlough.

I think that will be less costly and it will be more helpful.

In Senate bill 1730 provision is made for the education of veterans, and that is an excellent provision. And there, gentlemen, I want to suggest that you look up the history of veterans' rehabilitation after the last war.

In my city it was nothing short of a scandal. Mushroom schools sprang up and the school that had less requirements as to supervision was the school that got most of the students.

I don't know how many thousands were taking up sign painting. All they had to do was to register, they were not particular whether they attended at all, and the boys got their compensation, and when it ended, they didn't know much about sign painting.

We had schools of newspaper photography. Boys went to that. That was an easy school to go to.

We had one in automobile repairing and nobody ever attended classes.

I suggest that all schools should be certified before being qualified to take the veteran, and no private institution which has not been it ended, they didn't know much about sign painting.
should qualify as an institution to instruct veterans.

Senator MURRAY. Would they have facilities or capacity to handle the job?

Mayor LAGUARDIA. No; but they could expand. And also make provisions, please, because we can't stand it, where you have public-supported institutions to provide for payment for them. We cannot possibly expand. We have taken boys of 18 years of age and some enlisted younger, and we have a large number of boys who have not yet completed high school.

It is going to be difficult to get those boys back to school. We are preparing to have an academy, rather than school, attached to our public-school system, so the boys can go to an academy, rather than school.

It is a minor thing, but it is very important. Most boys have been interrupted in their college work and they should be given a full opportunity to complete their education. The more we can get there the better it will be.

Senator MURRAY. Those provisions with reference to free education and training for discharged servicemen are contained in Senate bill 1823. I believe you referred to them as being in 1730.

Mayor LAGUARDIA. Yes; 1730 has a provision also for the war worker—for rehabilitation. I think that is very necessary, too.

I think we have had some correspondence on the publicly supported schools and higher education and they should get the same allowance as a private school.

I think the Wage and Hour Administration ought to be tied in with this post-war agency in order to control the division of work and provide the division of work.

And now I am going to say something that I know will get me in bad with labor, but they will have to face the situation—that is, provision for annual pay rather than a per hour rate.

Labor opposes that—some labor does very bitterly.

Senator MURRAY. My understanding is that the C. I. O. and the A. F. of L. do not oppose it. In fact, they advocate it.

Phillip Murray was here the other day and he advocated it, not as a matter for immediate legislation but as a goal to aim for.

Mayor LAGUARDIA. I am glad to hear that. I have a great deal of trouble with that. There is a school of thought who believe that the high hourly rate without steady employment is better than steady employment.

For instance, take bridge painters in New York City. I think I have a couple of hundred of them. Their pay, I think, was $13.50 a

day. I may be wrong on that figure, but we will take that. They cannot work every day. They can work only in good weather, and they don't work on holidays, and so on.

I put them on annual pay. I started them off at $2,750, and now, with the cost-of-living bonus, they are getting $240 more.

Last year, when the weather was bad, they were picketing City Hall because I wanted to put them an annual pay and yet they bring home more money steadily every month than they ever did before.

We are having the same difficulty with the men who repair streets. It doesn't cost more and yet it increases the income of the worker.

And I also believe that seasonal work is susceptible to being spread out and adjusted. I have a plan for annual pay for building trades and I know I am going to meet with very bitter opposition.

Senator MURRAY. From the building trades?

Mayor LAGUARDIA. From the building trades.

Senator MURRAY. My experience has been that labor is in favor of a program of annual pay. We had hearings in 1938 and at that time representatives of unions appeared here and testified in favor of it.

Mayor LAGUARDIA. I know I have a great deal of trouble. With a plant such as the city of New York, we employ thousands of skilled and semiskilled workers, and my tendency is to put them an annual pay as much as we can, and we find resistance all the time.

In our enormous building program, we have at least $125,000,000 of low-cost housing not included here in that $1,300,000,000.

We have the money for it. We could reduce the cost of the construction of those houses and yet guarantee an annual income greater to the skilled worker than they get now.

That sounds paradoxical, but is true. The cost which is greater than the actual expenditure is what the contractor has to figure on for the overtime, and he naturally allows himself a reserve, and it makes the building more costly.

Senator MURRAY. I should think that would be a very tremendous advantage. It should stimulate construction.

Mayor LAGUARDIA. And of course the families are happier. When some of the wives of the painters wrote me and I told them of my plan, the men started coming back very rapidly and we have them now on an annual wage.

But all this, gentlemen, requires a great deal of detailed work and there is one thing I want to urge. That is, that the program be formulated with the least possible delay and necessary appropriations made and the machinery started.

Stability, of course, in business and industry is necessary. If industry and business could have an inkling of the taxation program for 4 or 5 years, it would be very helpful.

I see the difficulty in that because one Congress can't bind another Congress, but some sort of assurance as to just what that program will be for say 5 years, just so they can adjust themselves to it, will be very very helpful.

Senator MURRAY. I think that all of your recommendations will be recognized by the Post-War Planning Committee as extremely important and necessary, and I agree that the Public Works Program sould be planned now and have it all ready, ready to be put into effect only to the extent necessary to supplement private industry.

Mayor LAGUARDIA. We are all in agreement there.

Now, just one more thing and that is the migration of the workers now employed in war towns.

We are very much concerned about that because they will all gravitate to three or four or five or six large centers, and we will not be in a position to care for them.

If they all flock to Los Angeles and New York, and a few other centers, I think that is the responsibility of the Federal Government, and that the urban centers that will attract them ought to be relieved of that responsibility.

Surely they can't stay where they are because there is not the accommodation for permanent homes there and, therefore, in relocating those people, they should be advised and consulted and aided in going where employment would be reasonably certain.

Senator MURRAY. Mr. Mayor, before you leave the stand, you spoke about the municipalities having to wait for Federal legislation before getting their own State legislation in effect for the disposal of surplus property.

Mayor LAGUARDIA. There is nothing you can do to help there. They have to go through their own State legislatures.

Senator MURRAY. In order to formulate a State legislation, wouldn't you have to know what the Federal program of disposal of property is?

Mayor LAGUARDIA. Yes. We had a very satisfactory meeting with the surplus buyers. They will meet our situation as nearly as possible, but you can't expect them to enter competitive bids and, therefore, municipalities will have to get legislation from their own State in order to meet the requirements of the disposal agency of the Federal Government.

Mr. GROSS. Are the mayors adopting a standard bill to present to legislatures of all the States?

Mayor LAGUARDIA. Yes; in my case I can get exemption by applying to the board of estimates. But in the majority of States, they can't. That is because of abuses in the past, of course.

Mr. GROSS. When do you expect the State legislatures to act on these questions?

Mayor LAGUARDIA. I think they will act when they are in session where it is needed. The benefit is apparent, so I do not think there will be any hesitancy. It can be limited to that one source of supply.

Mr. GWYNNE. I think you are to be congratulated on the building program you have in mind for your city. I wish there were some way to encourage all cities and towns in the country to do likewise.

They may be thinking now of airports and sewage-disposal plants. Isn't that true?

Mayor LAGUARDIA. They haven't the money to plan.

Mr. GWYNNE. Does the planning take much money?

Mayor LAGUARDIA. Three percent of your cost.

When I say "Plan," I mean engineering or architectural plans, all the specifications, so when the war is over we can advertise. That is what happened in P. W. A.

As I said, my plans are costing $30,000.000 and my children will never hear the end of it if we can't go through with it.

It is a 5-year program and that does not include housing. That is $125,000,000. I have the money for that.

Now, if Congress will provide the grants so that the municipalities will know they will get 50 percent of the cost if approved, and then provide 60 percent of the cost of the plans applicable to the cost of the improvement, improved improvements, every city is ready to go. What they need in deferred maintenance is in and of itself, but it costs, it costs money.

Your Federal works planning alone, I think, what you can spend will be several million dollars in planning alone. The trouble was, gentlemen—maybe I should not say this—but when the planning board came here they were not practical. Very splendid gentlemen, but they were visualizing a remaking of cities, and they repulsed rather than encouraged interest and attention, and Congress became impatient and just wiped out the consideration of $100,000,000 for planning contained in one of the bills.

This was about 4 years ago, was it not?

That is not what I mean by planning. I mean the practical, necessary construction plans to go to work on necessary projects without rebuilding all of New York at one time.

I would love to do it, but it just isn't practical. You can't rebuild a city like that.

Senator MURRAY. That concludes your statement, Mr. Mayor?

Mayor LAGUARDIA. Yes.

Senator MURRAY. I wish to thank you on behalf of the committee for your valuable suggestions and the points that you have made. I think they are very well taken, and I appreciate your attendance here this morning.

Thank you.

Mayor LAGUARDIA. When I get my annual pay plan worked out may I send it to you?

Senator MURRAY. We will be very glad to have it. Thank you, very much.

Now, our next witness will be Mr. Luhrsen.

STATEMENT OF J. G. LUHRSEN, EXECUTIVE SECRETARY OF RAILWAY LABOR EXECUTIVES ASSOCIATION

Senator MURRAY. Mr. Luhrsen, you will first state your full name and your official position, please.

Mr. LUHRSEN. My name is J. G. Luhrsen. I am executive secretary of the Railway Labor Executives Association, Washington.

Mr. Chairman, I will hand the reporter a copy of our letterhead which shows the organizations which are represented, and I would like to have those shown in the record.

Senator MURRAY. Thank you. That will be incorporated in the record.

(The organizations listed are as follows:)

Brotherhood of Locomotive Firemen and Enginemen.
Order of Railway Conductors of America.
Switchmen's Union of North America.
Order of Railroad Telegraphers.
American Train Dispatchers' Association.
Railway Employees' Department of American Federation of Labor.
International Association of Machinists.

International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America.
International Brotherhood of Blacksmiths, Drop Forgers and Helpers.
Sheet Metal Workers International Association.
International Brotherhood of Electrical Workers.
Brotherhood Railway Carmen of America.
International Brotherhood of Firemen and Oilers.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.
Brotherhood of Maintenance of Way Employees.

Mr. LUHRSEN. Mr. Chairman, and members of the committee, the Railway Labor Executives Association, which I represent, emphatically endorses the principles and methods set forth in Senate bill 1823, introduced by Senator Kilgore, of West Virginia. We are impressed with the broad attitude toward reconversion taken by this bill and particularly by the bill's recognition that the kind of world we live in demands simultaneous and coordinated treatment of the problems of industry and labor.

Senator MURRAY. Mr. Luhrsen, have you seen the revision of that bill?

Mr. LUHRSEN. I received it just this morning, and I have not read it very carefully.

Senator MURRAY. You may complete your statement and if you wish you may submit a supplemental statement commenting on the bill as revised.

Mr. LUHRSEN. As I understand, this is more or less coordinating the related subjects as far as I have gathered so far. I have not read it thoroughly.

Senator MURRAY. Very well. If you desire, you may submit an additional statement.

Mr. LUHRSEN. Merging the Murray-George bill on contract termination with Senate bill 1823 would result in the first large-scale intelligent attack on the problem of reconversion. Before discussing certain charges I would recommend in S. 1823 to take care of the special problem of railroad labor, I want to summarize my own views toward reconversion.

One hundred and thirty million Americans have been thrust into a war not of their own choosing. We have joined with the peoples of the other United Nations, dedicated our lives and fortunes to the smashing of fascism and Fascist control of the earth.

Frankly, most of us have thought too little about the meaning of fascism and nazi-ism and understood even less the reasons they have come into being. We have not learned to hate these systems hard enough to want to do the things we must to pull them up by the roots.

Fascism and nazi-ism are built on fear, on insecurity, or starvation. They set race against race, religion against religion, class against class. And they set up a system of control by which a few at the top grind down millions enslaved at the bottom.

That is the system we are fighting to abolish. And as we fight it, we must understand the kind of fight we have been waging and what it means for the future of this country and perhaps of the world. We can never go back to the pre-war world of fear and insecurity and semistarvation, for if we do, we shall have lost the peace in winning the war.

It has taken the destructive purposes of war to show the American people—industry and labor and Government—what we can do.

By making destructive tools of war, we have learned what an enormous productive capacity we have. There has been waste in developing this giant production and, as we have urged in the past, we could have produced much more is less time if we had set about it in a more rational way. We have learned to tap new resources of labor—both men and women—and we have developed new techniques and we have raised out output per hour.

There has been waste and hoarding of labor too—we have by no means exhausted our reserves. And we have spent huge sums of money—billions more than we ever dreamed of—to turn out this vast product of destruction. We are spending more for war in 1 year than we spent in 10 years of the depression on our unemployed. And I think too, we have learned a little bit about cooperating intelligently and rationally to achieve common ends even though we make mistakes.

I say we cannot turn our back on these lessons of war. There are some people—yes, many people—who want to return to the "good old days." This would mean a return to curtailed production levels, to principles of scarcity and starvation, a return to bread lines and a vast pool of unemployment to drive down wages, a disregard of the basic human right to security in favor of the untrammeled right of a few to guaranteed profits. We should never return to that kind of world.

Consider, for a moment, the financial aspects of war and peace. At the outset, let me say that I lose patience with those who preach retrenchment and whose chief concern is the cost of demobilization.

We have spent tens of billions of dollars on the prosecution of the war; and we shall not hesitate one moment to spend even greater sums if they are required to achieve victory. Against a backdrop of such vast outlays, what meaning can there be to the argument for frugality?

We must realize that demobilization is inseparable from the prior phases of the war; it is an integral part of that mighty undertaking, and to carry it through to a successful conclusion demands a willingness to think in broad new concepts and to free ourselves from the trammels of pre-war budgetary ideas. Certainly the war should have changed our whole financial frame of references, our whole notion of what is costly and what is not.

Let us remember that the boys who are risking their lives on the battlefields are fighting for prosperity as well as for peace. These objectives will not yet be won when the enemy forces lay down their arms; that is only the first condition.

And we who have lived through the interim between two wars know that peace itself is a mirage in a world of half-starved nations. We have not stinted in our expenditures to bring the aggressor nations to terms, to achieve our immediate military aim. By what logic do we suddenly draw the purse strings tight, and seek to fulfill our broader

aims only to the extent that a miser's budget allows? Is this keeping faith with our men and women under arms? Are they measuring in teaspoonfuls the blood they are shedding to make possible a better world? In all conscience, when they have generously offered their lives, we can hardly stop short at any expenditure to create an America which is worthy of them.

We have spent money and lives on a vast scale to wage this war, to assure merely the preconditions of a lasting and prosperous peace. It would be criminal folly at this point to permit absorption with budget-balancing and related matters to hinder us from completing the job.

As a labor representative, I should like to make just one observation about the attitude toward expenditures. You and I both recall that every outlay for relief and for a work program during the thirties was met with insistent cries by a small but powerful group of people that we were unbalancing the Budget, that we were frightening business by heavy taxation, and that we were destroying the normal business incentive to invest. We were then talking only in millions. Today, however, when we are spending hundreds of billions of dollars for destruction, for goods which will have no value whatsoever within a short time after production, no one raises a voice of protest. I find it rather interesting that those who would not invest for peace are more than willing to invest for war.

Mr. Chairman, there has been considerable talk in the press and at some of these hearings of the necessity for passing a contract-termination bill alone before any other measure is passed to take care of the problems of reconversion.

I know that you and other Senators have had considerable interest in insuring prompt payment, particularly for subcontractors and small businessmen upon termination of their contracts. I think there can be no quarrel with the principle of speedy termination of contracts provided, however, that the Government and the people are given some protection against fraud. It is to be expected that in a program of this vast size there may be carelessness in drawing up contracts and renegotiations and in the termination of contracts. I would advocate that contracts be paid promptly upon termination, but that the Government retain the power to reinvestigate the contract and its termination.

However, we in the railway labor movement are thoroughly opposed to the notion that a contract-termination bill is the keystone of our reconversion program, as some business interests would have us believe. I note that some witnesses before your committee have indicated that we should first pass a contract-termination bill and then proceed to consider the so-called controversial measures.

With all due respect to those who advocate such a procedure, I must insist that it is completely unrealistic. In the first place, all but a very small fraction of American war contractors are in a thoroughly healthy position to meet the problems of transition to peace. War contractors have succeeded in obtaining the kind of favorable terms that will give them plenty of cushion for the reconversion and post-war period.

In the second place, industry as a whole has accumulated tremendous reserves. An article in the Survey of Current Business for February 1944 pointed out that during 1942 and 1943 business enterprises—

exclusive of banks and insurance companies, increased their holdings of cash and Government bonds by somewhere around $35,000,000,000.

In addition, many more billion dollars will become available to business upon the termination of contracts. This article further points out that as a matter of fact the real problem of reconversion will hit only those pre-war plants which are now producing a markedly different product during the war. It goes on to state—

> the preponderance of pre-war manufacturing facilities are being used to produce normal peacetime products or products so closely related to normal products that no significant reconversion of plant or equipment will be necessary at the end of the war.

In addition, war contractors have been most generously dealt with by our tax program. I listened attentively to Mr. Philip Murray's testimony before your committee on this matter yesterday. I might add that I agree with Mr. Murray's views on the subjects and furthermore on the need for maintaining a minimum floor for labor comparable to that established for industry and agriculture. The effect of the tax-carry-back is that many war contractors could considerably curtail their transitional and immediate post-war production and still be well taken care of. It may be interesting to inquire what, if any, incentive this kind of tax generosity provides to make business produce a larger output rather than a smaller one.

This brings me to a final conclusion. The Government, particularly the procurement agencies, have been most generous with business during the war in order to insure the greatest amount of war production. While I am in agreement with every effort to deal fairly and quickly with industry on contract termination, I completely disagree with the philosophy that providing funds for business is the chief stimulus for increasing production and employment.

As the carry-back provisions of the tax law might indicate, there may even be an incentive to reduce production by taking too good care of industry. But even more important than this, the basic philosophy of pouring money in at the top in order to achieve maximum production and employment has been completely discredited. This was the philosophy of our first efforts to deal with unemployment following the crash of 1929. It is the philosophy which I am sad to say a number of businessmen still believe in. Many firms earned profits even during the depths of the depression. That did in no way mean that they increased their employment. The facts were that they decreased employment and production.

I want to digress from that prepared statement and take as an illustration the railroads.

In 1920 we had employed on all railroads in the Nation 2,022,000; in 1933 this dropped to 1,031,000; and in 1933, for the year it was 970,000, but for 1 month during that year we were as low as 933,000.

Now, I want to say that we willingly—rather reluctantly, but willingly—did agree with railroad management for a 10-percent deduction—not a deduction in our basic wage—for the total of 2 years.

That total estimated now is perhaps $350,000,000. That was in 1932 when there were 1,032,000 employees.

We hoped the railroads would thereby give us more increased employment, but in 1933, it went down to 933,000 in 1 of 2 months.

In addition to that, the railroads borrowed from the R. F. C. in 1932, $284,000,000, using round figures; in 1933, $109,000,000; dropped down to $53,000,000 in 1934 and in 1935, 1936, 1937, it was around $35,000,000, but in 1938 it went back to $88,000,000.

Now, after I have shown you the picture you will see the putting-in of money at the top did very little good in increasing employment.

We, in the Railway Labor Executives are deeply concerned with this cut-cropping of a discredited method of dealing with the problem of unemployment. We see not justification for the attitude that providing guarantees for industry is a simple and safe piece of legislation, while providing security for human beings is "controversial" and there to be left to the last.

I should like to make one or two other comments about the general problem of reconversion and demobilization. I think it is imperative that we provide decent interim unemployment benefits both for our returned servicemen and women and for the millions of workers who will be left to shift for themselves when contract are terminated. I think it would be the greatest of all wastes—a waste of the human resources which are the most valuable resources we have—if we did not take care of these people.

None of us regard increased unemployment compensation and the possibility of retaining as anything but an interim stop-gap proposal. We are concerned with conserving and developing these human resources. They cannot be conserved or developed and the huge industrial potential which we have built may well topple if we do not plan for jobs as well as for unemployment compensation. As I stated earlier, one of the lessons we should have learned from our conduct of the war is the need for integrated planning and program.

There is a widely prevailing view that planning means the worst of Government control and bureaucracy. Frankly, I think those who talk this way are talking nonsense if they mean it, or are laying down a smoke screen if they do not. I want to be quite emphatic about this. We wasted manpower and facilities and money during the war because we did not plan and we did not set up an integrated agency to the planning and to coordinate the activities of various agencies until late in the war. But even that lack of planning was planning—it just happened to be poor planning. For what does lack of planning really mean? It means that instead of coordinating your planning, of getting the views of all groups, sifting them and weaving them into a workable pattern, we let the planning be done in thousands of little sectors all over the economy, without any coordination.

We do not want the same situation to be prevailing in the transition and post-war period. Those who object to planning are actually those want to do the planning in their private cubbyholes, not subject to public scrutiny.

I would go further—if they have not seen the lessons of this war clearly those who don't want to plan are those who envision a contractor of the economy. They want new producers kept out of the market and they want to starve out the small producers. They take the same attitude toward small business that they take toward labor. They believe that the answer to the unemployment problem in the transition period and in the post-war period is to ignore unemployment. This is what I call the disappearance theory. That is, they can never tell how many people are actually unemployed because over-

night millions of people will—they say "disappear" from the labor market.

The Kilgore bill S. 1823, alone of the bills before the committee, addresses itself to the whole problem of maintaining an economy of full production and full employment after the war. Our association has endorsed the bill and urges that Congress act speedily for its passage. We are opposed to a piecemeal legislation approach. We therefore urge your subcommittee to incorporate the provisions of S. 1718 into the over-all mobilization and post-war adjustment measure.

It is my understanding that S. 1823 is, in its present form, primarily a statement of principles and methods, and that it is the hope of its author, Senator Kilgore, that this subcommittee will perfect it in detail. The remainder of my testimony is concerned with an analysis of the bill, the need for some of its provisions and suggested improvements. I am informed that the bill is currently being revised. Doubtless some of these recommendations have already been incorporated into more recent drafts.

Title I of S. 1823 provides for a centralized office of mobilization and post-war adjustment. The problem of converting a peacetime economy to war taught this country the need for unified action on the part of the Federal agencies so that they could function efficiently 1 year ago.

That was on S. 1607 of which you were one of the introducers, and Senator Thomas and one or two others.

At that time I testified that Congress should take the initiative in setting up a mobilization office.

The problems of converting from war to peace are even more complex and a unifying office is sorely needed. If such an office is to function effectively it should be set up by legislation immediately. It would be a mistake (as was orginally proposed in the Murray-George bill, S. 1730) to set up an Office of Demobilization as a body separate and possibly conflicting with the present Office of War Mobilization. The maintenance of our facilities for war production and conversion of others to civilian production as the war progresses must be supervised by the same agency.

This title provides for the concentration of final authority in a single director who is to be guided by a National Production Employment Board made up of representatives of industry, agriculture, and labor.

The importance of this type of cooperation should not be underestimated. This country can be wrecked if industry, agriculture, labor, and government do not work as a team to maintain and expand production and employment. There is an equal need for such cooperation with respect to major industries and joint management-labor boards should be provided for each industry.

Title II provides a clearing house for war and post-war as they arise. We have hundreds of private groups and dozens of public bodies sifted so that the best of them can be embodied in practical operating programs. Such programs should be worked out in close cooperation with the proposed joint industry-management-labor-agriculture boards.

In this connection, I should specifically add transportation to the surveys outlined in section 202 (d) to make sure that our industry will be taken into account specifically. It is not specifically stated in that section. In the case of the railroads the passage of this legislation would open the way for the reconstruction of this industry. It would be a boon not only to railroad industry and labor but also to all other sections of the population.

In the last war there was no agency to survey continuously the status of employment and production and as the war ended no provision could be made to maintain and expand production. This was one of the main factors in the post-war chaos of 1919 to 1923.

There will be some necessary lag between civilian production and war production but this can be kept at a minimum if title III is enacted and carried out efficiently by the War Production Board.

The safeguards provided for small business are indispensable as are also the provisions for industry-labor participation in development of maximum peacetime production as wartime needs are reduced. It is important that civilian production be resumed in the order of its essentiality and this should be clearly written into this title. Thus materials and manpower should be allocated as early as possible not only for new railroad rolling stock, but also for safety devices and other necessary transportation devices. Companies should not be permitted to begin the manufacture of luxury items while materials and manpower are still not available for essential items.

I shall not comment in detail on the section dealing with disposal of surplus war property as I understand it is being revised extensively. The title IV should not permit the destruction of any war property. Surplus war property should be disposed of as rapidly as it becomes available and for the most useful purposes. I am told that some of the present radio equipment manufactured for the military will no longer be required. No doubt, there are many places where this equipment could be used now.

At the moment, we are confronted with a national emergency, and great industrial changes must take place as our economy is reconverted from war to peace production.

Plants will be closed down by decision of the Federal Government; workers will be unemployed as a result of these same decisions. Every contract that is terminated leads to unemployment in a war plant, which may, if there is a lag in production, also lead to unemployment in steel mills, on railroads, and in coal mines. Provision is being made to deal with industry's problems. It is true that some of this provision has been generous, as for example, the large refunds in taxes which have been provided by recent tax laws. We are not asking that similar lavish treatment be given the workers of America. But we do want decent guaranteed minimum standards. The Kilgore bill, to us, provides a minimum standard of income to workers available for work and who are unable to get employment through no fault of their own.

Workers want jobs, but if they do not get them through no fault of their own, if they do not get them because of failures of industry to expand rapidly, they will not again tolerate starvation. Senator Kilgore's proposals which have been substantially paralleled by Direc-

tor of War Mobilization Byrnes, will provide such minimum security. It recognizes now the Federal responsibility for unemployment during the period of reconversion, and does away with the possibility of a patchwork of relief systems, and finally, as I have already stated earlier in my testimony, by providing a minimum income to American workers, it prevents the bottom from dropping out of America's economy as it did in the period 1929–33. It assures that the essential products needed by Americans will be purchased and will support industrial production.

The emphasis of title V of S. 1823 on job placement and training is the only sound approach to keeping this unemployment at a necessary minimum. I see a very useful function performed by such training and placement in the railroad industries. As our war veterans return to civilian life, many of them will go back to their former positions in the railroad industry to which they are entitled; some of them will need retraining. This should be provided. As these veterans take back their old jobs, some of the workers who went into the industry to help keep our war transportation moving will be discharged. They, too, may need retraining for some other industrial pursuit where employment opportunities will be available. This, too, should be provided.

This bill provides that emergency unemployment compensation be paid to all workers whether they have been servicemen or civilian war workers. This is not only a matter of justice but of economic necessity in a country which can and must provide enormous economic abundance. I would like to make some detailed suggestions for the revision of this particular title of the bill.

Certain administrative provisions are left to the regulation of the Work Administrator. This seems to me highly undesirable since the Administrator will be subjected to enormous pressures from every direction and he should, particularly on matters of controversy rather than on matters of technical administration, be fortified with a clear statutory directive.

Among such matters are the provisions concerned with disqualification. The provisions with respect to disqualification of suitable workers under the Railroad Unemployment Insurance Act, and some minor modifications would be highly desirable in this connection.

The usual provisions with respect to ability and availability to work may be waived by the Work Administrator in a period of illness or disability. Clear statutory policy is highly desirable in making this provision.

Payments for partial unemployment are left to the regulations of the Work Administrator. This is a matter on which Congress ought to lay down the rules, and here again I suggest that the provisions of the Railroad Unemployment Insurance Act would be suitable.

The $600 wage qualification is relatively high. In fact, I think excessively high. The qualifications are considerably higher than present qualifications under State laws and under the Railroad Unemployment Insurance Act.

I think ours is $150.

I understand from Senator Kilgore that he has every intention that railroad employees be covered in the perfected legislation and that the bill as drawn was intended to show broad coverage and failed to refer to railroad employees and the Railroad Unemployment Insurance Act through an oversight. I would like to make a few comments on the administration of this section.

As an emergency measure, the administration by the States of this unemployment compensation for groups for which they have records, is ecrtainly a desirable approach since it will permit the law to be put into effect virtually overnight.

On the other hand, for the same reasons, certain classes of employees should receive their benefits through other agencies. Railroad employees should receive benefits through the Railroad Retirement Board which maintains unemployment records for their workers. Federal employees and maritime workers should receive their compensation through a Federal agency, preferably the Social Security Board. As far agricultural workers, it would seem to me that since at present there are no records of their employment, the administration of their benefits could be accomplished either through the States or through some Federal agency—here again preferably the Social Security Board.

I want to say a few things about the hearing of this legislation on the railroad industry. As you doubtless know there has been a long-time downward trend in employment on the railroads. I think one of the main reasons has been the failure of the roads to keep up with equipment, by putting in modern equipment and facing up to the problems of a motorized and airplane world. While the roads are doing a fine job during the war, we must remember that in this sector of the economy as in so many others, there is vast room for improvement. Prior to the war the railroads permitted a vast deterioration of their equipment, in addition to failing to take steps to modernize their equipment to meet competition. The result was that during the depression the failure of the roads to buy new equipment was one of the basic factors in keeping our economy at low levels. Even worse, when war came on the roads were without the most necessary equipment to carry their wartime loads. It makes bad reading to compare their resistance to buying new equipment in the early stages of the war and preparedness and their later frantic efforts to get as much equipment as they could, just when railroad equipment and the facilities for building it were most needed to turn out the tools of war.

Now the railroads face the problem of modernizing their equipment in order to face the vastly expanded competition by air and motor road. They have a real contribution to make to the economy if they set about modernizing their equipment, if they introduce new safety devices, new brakes, improve block signaling, introduce radio communications to prevent accidents and better control traffic. Above all, they must reverse a long-time trend toward heavier cars, bigger locomotives, slower and fewer trains—a trend which has driven the small shipper to the trucks and now to the plane.

And I want to emphasize that particular phase of the railroad industry is not going to increase employment.

Years ago, as far back as 1905, when I was dispatching trains, we had small 17-inch cylinders. We would take a train in Montpelier of 22 cars and go into Detroit, 93 miles distant.

That train would leave 20 minutes ahead of the faster scheduled train we had out of Detroit, and would go in 20 minutes ahead of it, the same as at Montpelier.

We don't do that today.

Now the shippers that have small shipments will take the truck. We have lost a lot of that business, and we are going to lose more of it if we don't wake up.

If the railroads will rise to their opportunity, they will break away from their sheltered monopolistic position and make their way in the free competitive market. And they will also be providing new employment opportunities. For I believe that railroad travel will not fall off, that as restrictions are removed there will be more travel, and that if the economy as a whole keeps operating at high levels, there will be an increase in freight movements.

I make these remarks to show you that the fate of the industry is closely bound up with the fate of the economy as a whole. The railroad workers are therefore terribly concerned with any failure of the economy to function properly during the reconversion period. They are similarly concerned with seeing that the economy keeps at high levels in the past-war period. And when we consider the problem of technological unemployment that faces us, we would want to strengthen and add to the program bureau outlined in Senator Kilgore's bill to take on the job of making recommendations for handling technological unemployment. We feel that more adequate unemployment compensation during the period of reconversion, provisions for retraining workers, and the efforts made to keep the economy in full production will go a long way to solve the immediate problems of technological unemployment.

Senator MURRAY. Mr. Luhrsen, I think that no one can fail to agree with you on the basic questions that you advocate there in the post-war period. I think that I can agree with everything you said. Also your observations in regard to the short-sighted policies of business and railroads, as you mention them; their failure to modernize and to keep lower rates, maintain lower rates, which has been a very serious obstacle in the development of the railroads of the country. Has it not?

Mr. LUHRSEN. That is right. I think it has.

Senator MURRAY. They were compelled at one time to reduce rates and they fought that very bitterly, did they not?

Mr. LUHRSEN. Yes.

Senator MURRAY. And when it was finally put into effect it was found to greatly increase their revenue, was it not?

Mr. LUHRSEN. Yes; and you know as well as I do that the Commission did grant them an increase a year or so ago and the O. P. A. contested that and said there was no need for it and the Commission then deferred putting it into effect, and I think it is again before them now as of May, and I wouldn't be a bit surprised if they would again defer that increased rate.

Senator MURRAY. Yes.

And the same applies to business generally, if they don't recognize the need to maintain reasonable rates and the lowest reasonable rates

they can afford to have in the post-war period while maintaining high wages, we are not going to be able to meet the problem of unemployment.

Mr. LUHRSEN. That is correct.

Senator MURRAY. I agree with you in everything you say of the need for the highest cooperation between labor and business in the post-war period.

Mr. LUHRSEN. I think we should be very close together in management and labor in discussing the problems both ways, what effect it has on us and what effect it has on them.

Now, I think Henry Ford has perhaps made the greatest contribution of any—not that I have any particular brief for him—but his low-priced automobiles. Now we have 30,000,000 automobiles in operation. The others had to come to it with increased production.

Now, I cannot see but that the airplanes, as Mr. Murray has said, is going to come into operation.

I think he said there would be airplanes produced as low as a thousand dollars, wasn't it?

Senator MURRAY. I think that was true.

Mr. LUHRSEN. Now, if the railroads are going to compete, we have to speed up our traffic, and the only way we can do it is not by a locomotive that hauls 150 cars but by a reduction to a locomotive to haul 75 cars that can come into the usual side track in passing while the 150-car train cannot.

As a result, we hold back today a 150-car train for 3 or 4 stations because there is no side track big enough to hold them and we don't want to saw by a streamlined passenger train, causing delay.

That means we get in between the switches because a freight train has its end sticking out.

It has been the tendency of the railroads to haul more cars per train.

We are inclined to be a speedy Nation, and I think everybody is looking for greater speed rather than slowing up.

Senator MURRAY. Well, I think we are all in accord in what is necessary to be done, that is to say, we should work out these programs for the post-war period as rapidly as possible and that the human rights there should be given the same recognition as property rights.

Mr. LUHRSEN. I agree with you, Senator, and it seems to me the human rights even come ahead of the others, because after all it is the many humans who are the real consumers of the products we produce and if they haven't the money, haven't a job, what is the reason for producing, if they haven't the money to buy it.

So I want to throw out this suggestion:

Mayor LaGuardia, while I could not hear him very distinctly, said something about being able to spend $1,600,000,000 in New York alone for public works, and he referred to the various other things that I think are of very vast importance.

It seems to me it would be wonderful if we could get his message to other large cities, let them think about it, and see if they are looking ahead or are still in the groove.

Senator MURRAY. I think there is generally a program being developed throughout the various States. I know my State of Montana is providing a post-war program of public works that should be ready in case of need.

Of course, those public works should only be utilized to the extent necessary to prevent unemployment.

Mr. LUHRSEN. Right.

First of all I think we should have—if we are going to get into that field extend whatever we build only to the extent of things that are essentially needed and are lasting.

Senator MURRAY. We use the expression sometimes that these public works should be regenerated.

Mr. LUHRSEN. That is right.

Senator MURRAY. That is to say they should result in providing employment and being able to pay for it themselves.

Mr. LUHRSEN. That's it.

Senator MURRAY. Lots of public power plants and irrigation projects of the West.

The highways are very important, I think, because they increase business. They are valuable in an economic sense.

So the works should not be of the least-rating kind in the post-war period because they are necessary.

Mr. LUHRSEN. We are going to have need for all of them in the future and we should have hospital facilities, as we have the increased need, have them available.

Senator MURRAY. Well, I have listened very carefully to your statement, Mr. Luhrsen, and I want to congratulate you on it.

I am especially interested in your observations with respect to the contract-termination authority.

Now the contract termination bill seems to have the approval of small business, big business, and labor. There is no objection to it at all. The only question is whether it should be delayed now until the over-all legislation can be provided.

It seems to me that there is no—I can see no attitude in Congress here to oppose the necessary legislation to protect labor in the post-war period.

Mr. LUHRSEN. I think you are right.

Senator MURRAY. Senator George stated that to Mr. Murray—Philip Murray—here the other day.

Mr. LUHRSEN. I heard him.

Senator MURRAY. And they have assured me that they intend, because we could not enter the post-war period unless we have provided adequate unemployment compensation, to protect the rights of labor in every way.

And as you point out, if we don't cooperate, if there isn't the fullest and fairest cooperation between the workers of the country and management, we are not going to get through the post-war period without very serious developments.

Mr. LUHRSEN. Worse than the last war, following the last war.

Senator MURRAY. Yes.

So I am convinced that you are going to find Congress is going to go through with a program that will protect the rights of labor in every respect. The only question is as to whether or not we should tie up this contract termination legislation now which is already to be passed.

If we try to load it down with the other provisions it would create a very serious delay while these contract terminations are going on.

Contract terminations have piled up tremendously and we are getting complaints from all over the United States from small concerns who are unable to get their money out of their contracts.

That is going to create a serious situation unless speedy action is had on it.

Mr. LUHRSEN. Take the aluminum situation: many of the plants have closed down. No provision was made, I believe, for labor. They are just out of a job in many of these places, 12,000 here and so many there.

Senator MURRAY. Yes.

Mr. LUHRSEN. Now, as I recall it, I think I read it in the Wall Street Journal——

Senator MURRAY (interposing). Well, that is because the post-war program has not been worked out.

Mr. LUHRSEN. No.

Senator MURRAY. They haven't made provision for the allocation of those materials for civilian production. If they had, if that program had been ready, I believe we could have avoided some of that unemployment.

Mr. LUHRSEN. I just perhaps make this not as a suggestion more as an inquiry. I read, I think in the Wall Street Journal, several weeks ago, two items.

One of them was they want to put into effect the cotton pickers; the International Harvester, of Chicago, Ill., already has produced 10 and now want to manufacture 12 more, and one alone says he could use 50 of them in the South.

Now that is going to throw out unemployment.

Another item was to the effect that 100 corporations have practically 70 percent of all our war contracts.

They will have enough contracts to fulfill as they go on, to run them 18 months to 2 years.

Take the small contractor, the subcontractor, he won't be as well off as those big fellows, because he can manufacture his outstanding orders in 5 or 6 months; so he won't be on a comparable basis for production as will be the 100 big corporations.

And I think that ought to be rigid as to justice, and no discrimination.

I just called it to your attention. I was reading about it. I cannot recall the facts as closely as I could if I had read it recently.

Senator MURRAY. Well, I said I want to congratulate you on your statement, Mr. Luhrsen.

Mr. LUHRSEN. Thank you.

Senator MURRAY. I think that was very fine and very helpful to us.

The hearing will now adjourn. Next Tuesday, May 2, the committee will hear Hon. Jesse H. Jones, Secretary of Commerce; Edward Norris, vice president of the Brookings Institute; and H. L. Carpenter, chairman of the Post War Planning, Commerce, and Industry Associations, New York.

(Whereupon, at 1:25 p. m., an adjournment was taken to Tuesday, May 2, 1944.)

(By direction of Senator Murray, the following material is inserted in the record:)

INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT, AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (U. A. W.-C. I. O.),
Detroit, Mich., May 2, 1944.

The Honorable Senator JAMES E. MURRAY,
Senate Office Building, Washington, D. C.

DEAR SENATOR MURRAY: During the presentation of my testimony before your Committee on War Contracts on April 26 you inquired whether profit figures of automobile manufacturers submitted for the record were before or after renegotiation. I am informed by our research department that the net profits after taxes are after renegotiation, wherever renegotiation has already taken place.

Sincerely yours,

R. J. THOMAS, *President, UAW-CIO.*

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, April 24, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate.

DEAR MR. CHAIRMAN: The Commission refers to S. 1823, now before your committee, which proposes to establish an Office of War Mobilization and Adjustment in the Executive Office of the President.

Section 102 (b) gives the Director of War Mobilization and Adjustment authority "without regard to the civil-service laws, rules, and regulations, and the Classification Act of 1923, as amended, and except as herein otherwise provided, employ and fix the compensation of such officers and employees, * * *."

Section 504 of the bill contains the following provisions:

"The Work Administrator may, without regard to the civil-service laws, rules, and regulations, and the Classification Act of 1923, as amended, employ and fix the compensation of such officers and employees, * * *."

It is the belief of this Commission that any proposal to exempt positions from the civil-service requirements does not constitute desirable legislation, particularly in view of the present manpower shortage and the high cost to the taxpayer because of several agencies bidding against each other in their efforts to secure qualified employees.

It is urged, therefore, in the interests of efficiency and good administration that the words "without regard" which appear in line 4 on page 3 and also in lines 13 and 14 on page 22 be deleted, and the words "in accordance with the provisions of" be substituted therefor in both instances.

The Bureau of the Budget advises there is no objection to the submission of this report.

By direction of the Commission.

Very sincerely,

HARRY B. MITCHELL, *President.*

AMERICAN COMMUNICATIONS ASSOCIATION,
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
New York 7, N. Y., April 25, 1944.

Hon. JAMES E. MURRAY,
Committee on Post-war Plans,
Senate Office Building, Washington, D. C.

DEAR SIR: The enclosed resolution was adopted at the Seventh National Convention of the American Communications Association, Congress of Industrial Organizations, held in Kansas City March 27 to April 1, 1944.

I felt that you would have a particular interest in the subject matter of this resolution.

Very truly yours,

JOSEPH P. SELLY, *President.*

RESOLUTION NO. 17. STATEMENT ON POST-WAR PLANS FOR MARITIME INDUSTRY

Despite the numerous and difficult problems which beset the shipping field the outlook for a prosperous and expanding industry is bright. Shipping is essentially an international industry. Its prosperity is dependent upon a stable, peaceful, expanding world economy. Such an economy is envisioned in the Cairo and Tehran Declarations.

A new situation has arisen in the maritime field. For the first time important segments of the American shipping industry (together with important segments of all American industry) recognize the necessity for working cooperatively with labor, government, and our allies in order to restrict the areas of sharp economic conflict and to promote world trade.

This real collaboration between labor, government, and certain sections of industry puts the spotlight on that reactionary portion of capital which is concerned with the return to normalcy of the twenties and thirties when the Nation had up to 12,000,000 unemployed; with imperialist venture the rule of the day, with reactionary control of the Government, and with destruction of the trade-union movement the goal of these forces. These die-hard imperialists will not stop short of betraying our Nation and delivering it to fascism, if necessary, to assure their domination. Consequently the continual growth of collaboration between the various branches of maritime labor, and the progressive section of capital, is of utmost importance.

Shipping interests have begun to propagandize the American people along the following line: "Twice before our Nation has built great merchant fleets. Once in the famous 'clipper ship' days, when the California gold rush and the tea trade of China were the incentives; once under the urgency of World War I. Both times we dissipated that fleet because of disinterest on the part of the American people once the initial emergency was passed. We must not let that happen again."

This is a fallacious picture. The American merchant marine was dissipated during the 1920's not because of disinterest of the people, but by the greed and avarice of American shipping interests. The essential difficulty of the American merchant marine was that it was being utilized for a series of financial manipulations designed to milk subsidies and to make profits on ship sales, instead of for the legitimate purposes of the carrying trade.

The Black Senate investigation of ocean mail contracts exposed the deplorable situation, and the Merchant Marine Act of 1936 enacted pursuant to this exposure, although a compromise, set forth a more realistic basis for a sound maritime policy. American maritime labor, along with the operators, stands committed to a large, modern, fast merchant marine. However, we know that there can never be stability in the maritime field as long as the traditional policy of cut-throat rivalry prevails. We know that the meaning of the Tehran and Cairo Conferences is that the United Nations will strive to remove the areas of sharp economic conflict, and that if the perspectives of Tehran are to be realized the unity forged by wartime necessity in the United Nations coalition must continue in the field of post-war economic collaboration.

Shipping economics are international economics. It is good business for maritime interests to view shipping as an international rather than a national issue. The problem can be solved only with such an outlook.

It is not too soon for preliminary international agreement on tonnage quotas, routes, rates, and minimum labor standards. Such agreement will do much to allay the fears which are causing shipowners of all nations to cry for diversion of vessels from wartime needs to private, economic trade routes at the very moment when the maximum concentration of shipping is required for the imminent land invasion of Europe.

The shipping industry of most countries has been in distressed straits for many years. The major problem has been that there have been more ships than trade. The surplus of cargo space over demand was 21 percent in 1929 and 68 percent in 1932. Despite a reduction of world tonnage by 5,000,000 gross tons during the great depression, tonnage was still 44 percent greater in June 1937 than in June 1914 while world trade was only 30 percent greater.

If we look forward to a post-war fleet of 15,000,000 gross tons, or even if we and the British reach a parity of 20,000,000 gross tons apiece, there is no need for sharp economic rivalry. The combined pre-war fleets of Germany, Japan, and Italy totaled 13½ million gross tons, of which over 6 million was probably

in foreign trade. If the foreign trade fleets of the Axis Nations are to be restricted, the gap will have to be made up by the Allied Nations.

However, in the long run, the solution to the shipping problem is to increase the carrying trade. The stable, progressive, more united world envisioned in the Tehran Declarations; the coming economic and political emancipation of the colonial peoples; the growing maturity, economic independence, and potential prosperity of China, India, and the Latin-American countries are the preconditions for a vastly increased world trade. The vast reconstruction and relief needs of war-ravaged Europe will require tremendous shipments for many months after the war, giving the maritime industry additional time for an orderly transition to peacetime operation.

Pious and vague resolutions for increased world trade will not solve the problem. What is needed is preliminary international agreement reached now for the restriction of areas of sharp economic conflict, for lower tariff barriers, for multilateral rather than bilateral trade agreements, and for the abolition of discriminatory trade provisions.

LABOR AND POST-WAR PLANNING

The voice of maritime labor has matured greatly in recent years. This voice must be prominent in the council halls that determine post-war shipping policy. It is a nonpartisan voice, nonpartisan because it is cognizant of the fact that seamen's conditions are completely dependent upon a sound national and international maritime policy.

We recognize that the post-war merchant fleet will be a privately owned fleet. In large measure, it will be given to American shipowners at costs which are greatly written off. We are interested in a constructive policy and therefore we shall not pursue the course of muckraking. That part of the fleet that is written off must be written off as wartime costs.

We do know from experience, however, that ship speculations do not promote a healthy maritime policy. The merchant marine must be sold in an orderly and planned fashion. We feel that the suggestion of Admiral Land that a fair and equitable floor be placed on the prices of ships is a sound one, if properly implemented.

These and many other problems which will confront the American merchant marine are in the hands of the House Merchant Marine and Fisheries Committee, and in the hands of Admiral Land's Maritime Commission and War Shipping Administration. We know the strong influences that the shipowners exert on both of these organizations. To date the only recognition accorded labor has been advisory, on two minor subcommittees of the Maritime Commission's Post-war Planning Committee. These subcommittees have never met. Labor must be accorded a more important role in policy formation.

AMERICAN COMMUNICATIONS ASSOCIATION PROPOSALS

While it is premature to offer a detailed blueprint post-war plan for the maritime industry, it is not too soon to establish some general principles and some minimum specific proposals.

In regard to general principles for conversion of the maritime industry in the post-war period, we believe that in the main the general principles enunciated in the Baruch-Hancock report, insofar as they are applicable to the maritime industry, are sound and provide the basis for a correct national policy.

At this point we would only add, subject to periodic review, the following specific guaranties that should be incorporated in any post-war plan for the protection of the wages and working conditions of marine radio officers and in the public interest.

1. Basic wages must be raised to a decent minimum level consistent with the training, experience, qualifications, and responsibilities of a marine radio officer.
2. Proper safeguards for maintaining maximum protection of life and property at sea must include the maintenance of round-the-clock radio watch. Three radio officers on a ship is a sound and necessary policy for peace as well as war.
3. Labor must be given direct and equal representation with the operators and the Government on all policy-making and administrative questions dealing with post-war planning for the maritime industry.

We believe this general statement of principles is consistent with and implements the Baruch-Hancock report as applied to the maritime industry.

MOBILIZATION AND DEMOBILIZATION PROBLEMS

TUESDAY, MAY 2, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE OF THE
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to recess, at 10:30 a. m., in room 318, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray (chairman).

Also present: Congressmen Kefauver and Gwynne; B. M. Gross, staff director of the subcommittee; Kurt Borchardt, counsel to the subcommittee.

Senator MURRAY. The hearing will come to order.

Before we start the hearing, I wish to say that at noon today I shall have the privilege of formally reporting S. 1718, the contract-termination bill, to the Senate on behalf of the Military Affairs Committee, which last week voted unanimously to report the measure favorably with the recommendation that it be acted upon expeditiously.

Naturally, contract termination is only one phase of the broad economic problems that face our economy. It is the intention of Senator George and his committee, and myself and my committee, to press forward toward action in the near future on the broader problems of post-war adjustment as covered in S. 1730 and S. 1823. On this point, I should like to insert into the record the statement made jointly on April 28 by Senator George and myself. I would like to have that appear in the record at this point.

(The statement referred to is as follows:)

JOINT STATEMENT BY SENATOR WALTER F. GEORGE, CHAIRMAN, SENATE SPECIAL COMMITTEE ON POST-WAR ECONOMIC POLICY AND PLANNING, AND SENATOR JAMES E. MURRAY, CHAIRMAN, WAR CONTRACTS SUBCOMMITTEE, SENATE COMMITTEE ON MILITARY AFFAIRS

It is our mutual conviction that broad legislation to help achieve full employment after the war must be enacted by the present session of Congress. This is essential if our country is to be fully prepared for peace. It is also essential if our Congress is to discharge its proper functions as a policy-making body and assure a full return to democratic governmental processes in the post-war era.

It is our considered judgment that the following legislation should be enacted during the present session:

I. A BROAD POST-WAR ADJUSTMENT BILL

Two bills of this type are now before the Senate Military Affairs Committee: S. 1730 (George-Murray) and S. 1823 (Kilgore). We are now studying a number of revisions that have been suggested during the recent hearings before the Military Affairs Subcommittee. It is hoped that this over-all legislation can be reported to the floor of the Senate in the very near future.

The contemplated over-all legislation includes provisions setting forth specific Congressional policies on cut-backs in war production and on the resumption of civilian production. The recent hearings have revealed a state of confusion on these questions that can be corrected only by legislative action.

Other hearings and investigations of the War Contracts Subcommittee have uncovered the fact that there is still a large amount of waste and extravagance under war contracts, particularly cost-plus-fee contracts. This is a problem of fundamental importance to our plans for post-war employment. Curtailing wasteful practices in war production will lower the cost of the war, reduce our debt burden, lead toward more efficiency in conversion to peace and help us achieve the low price levels that are essential to the development of our post-war markets. Although a separate measure on this subject is now before the subcommittee,[1] consideration is being given to achieving the purposes of this resolution through an appropriate section in the general bill.

The problems of surplus war property and the demobilization of veterans and war workers may also be dealt with in the legislation now being studied.

The revised over-all legislation will also spell out in detail the planning functions of the top war mobilization and post-war adjustment agency. This will be done without duplicating or displacing the planning activities of established Federal agencies and without detracting in any fashion from the planning functions of the Congress. Serious consideration will also be given to appropriate representation in an advisory capacity, for industry, labor, agriculture, and the public.

II. UNEMPLOYMENT COMPENSATION

On April 12, 1944, the Honorable James F. Byrnes, Director of War Mobilization, stressed the necessity for legislation providing Federal assistance to the State unemployment compensation system.

We heartily concur in Justice Byrnes' proposal and will shortly submit a jointly sponsored bill embodying this recommendation. In the Senate, the bill will be referred to the Finance Committee, where the Chairman will immediately appoint a subcommittee to work toward prompt reporting of the measure to the floor.

III. CONTRACT TERMINATION

The pending contract termination legislation meets with general approval and should not be delayed any longer. S. 1718 as amended, which is now to be reported out of the Military Affairs Committee, should be passed promptly by the Senate and the House.

Senator MURRAY. During the past few weeks, we have received testimony from businessmen, labor leaders, and the heads of many executive agencies. Today and tomorrow we shall hear from two outstanding economists who will present their views on the basic economic issues involved in achieving full employment in the transition and post-war periods, as well as on the specific legislative questions now before this committee.

Mr. Nourse, of the Brookings Institution, will be the first witness this morning.

You may state your full name, Dr. Nourse.

STATEMENT OF EDWIN G. NOURSE, VICE PRESIDENT, BROOKINGS INSTITUTION

Mr. NOURSE. My name is Edwin G. Nourse.

Senator MURRAY. And your connection?

Mr. NOURSE. I am vice president of Brookings Institution, but I am not making any pronouncement on behalf of the institution this morning, but rather presenting my own views, some of which, however, are related to things that we have dealt with in publications.

[1] S. J. Res. 80, to prohibit the use of the cost-plus-fixed-fee system of contracting in connection with war contracts, introduced by Senator Homer Ferguson of Michigan.

Shall I proceed with my statement?

Senator MURRAY. You may proceed with your statement.

Mr. NOURSE. Your committee has been considering a wide range of situations related to problems of demobilization, termination of war contracts, and the disposal of war-created plant and surplus materials. Specific action as to many detailed steps in this reconversion process has been urged upon you by persons having strong individual or group interests in some particular decision or policy of the Government agency that will handle these affairs. At this juncture, if I understand the thinking that prompted Senator Murray to extend to me an invitation to appear this morning, it seemed worth while to back away from this detailed picture to get a more general perspective on the broad issues which are involved in the several alternative courses of action which might be taken in the next few months or years.

What is in fact a sound answer to any one of the concrete questions with which your committee has been grappling comes back, in the last analysis, to what are the fundamental operative principles according to which a system of private capitalism can be continued in successful operation in a democratic country. Of course, if we were contemplating the abandonment of private enterprise and the setting up of a system of state socialism, communism, or fascism, we would need to make extensive exploratory studies of the principles according to which any one of those different types of economic machine would operate. That we leave to others. But we should recognize that there is a very real danger in the attempt made by some well-meaning people to mix principles applicable to different economic systems, without realizing the inconsistencies between them, and the continual frictions and partial break-downs that are bound to result from jumbling together structural and operating arrangements which are designed for different types of economy.

I have been deeply concerned for some time back to examine the working requirements of a system of democratic free enterprise under private capitalism with a view to discovering why the system has creaked and groaned as it has and suffered from partial stoppages. Or, from the other side, I have asked what changes in business philosophy or current policy and practice would be necessary if, returning to a system of private capitalism after the war, we are to demonstrate its capacity for high efficiency, smooth operation, and well-sustained prosperity?

Senator MURRAY. During the depression period, many economists of the country pointed out that our economic system had completely broken down, that it had failed to supply a livelihood for nearly a third of the population, and any system that fails to accomplish that couldn't expect to endure in this country; that some way must be found to bring about widespread employment in this country, or otherwise the people would not be interested in voting for and sustaining a system which was so defective nad deficient.

Mr. NOURSE. It seems to me that that is a practical situation with which we are confronted. My position has been that the system did not break down from inherent possibilities of its successful functioning, but that in many regards it was not as well handled, it was not handled in full understanding of its own inherent requirements.

In the study that I have been making, I have accepted the affectionate designation of the traditional pattern of American business as "the American way of business life," and I identify its major ingredients as freedom of business enterprise, competition in free markets, and the natural or spontaneous pursuit of the profit motive. Looking at these three basic features of the American system of private capitalism, I find each one of them to be good in itself, and all three to be consistently interrelated in a system that would make for maximum sustained economic welfare. But this means that each must be interpreted in terms consistent with the operative requirements of the system as a whole.

Free enterprise opens the gateway for each individual, high or low, to invent, devise, reorganize, shift from one line of effort to another, so as to get the maximum efficiency from his productive efforts and the maximum satisfaction by freely expressing his consumer preferences in the market. This is the principle by which we can assure ourselves the most rapid rate of technical progress or advance in efficiency in our productive efforts. This freedom must be preserved by a legislative, administrative, and judicial system which safeguards for each individual the maximum opportunity to exert his industry and to express his ingenuity in the form of better technique or organization.

But, human nature being what it is, free enterprise has, in fact, often been interpreted as a demand by those of greater strength, better location, more favorable situation, or greater ruthlessness, that they be allowed to exercise their full power toward advancing their individual or group interests even when the effect is to restrain the enterprise of others. Legislation has often been secured to buttress this unhealthy or distorted manifestation of free enterprise—a sort of economic elephantiasis. I shall return to this presently in connection with the problem of the post-war conversion period.

Competition is the economic practice by which free enterprise is transmitted from its point of entrance as increased operative efficiency to its broad area of application through guidance, and particularly expansion, of the market. The normal outcome of free enterprise is enlargement of the stream of consumers' goods, both because every worker has opportunity to continue his productive effort as long as he prefers more income to more leisure and because he is constantly trying to make his labor more efficient—that is, to produce more goods with a given amount of work, either directly or through the addition of capital equipment. No proverb is more glibly repeated than "Competition is the life of trade," and none could be more true if we really mean what we say. If trade is truly alive in a land of free enterprise and rising efficiency, the volume of trade is constantly growing. The flood of production, nourished by the springs of free enterprise, flows in ever-enlarging volume into the market, where consumers, freely expressing their preferences as between one kind of goods and another, guide future enterprise to the lines of production that will give greatest satisfaction.

But no one who will honestly look at the past and present record of America can doubt that the majority of businessmen are, in fact, afraid of competition, just as they are afraid of really free enterprise. There is a constant fear that there won't be enough purchasing power to go around, that if we really "let ourselves go," with all our skill and ingenuity, with all the technical efficiency we have developed, there would be general overproduction, flooding of the markets, and general breakdown. But I submit that there is no evidence in fact or theory to justify the proposition that a country can be really harmed by providing opportunities for all its workers to apply themselves to the production of the goods and services they mutually wish to enjoy and by putting all plant and equipment at their disposal for making that work as efficient as possible. If prices are properly adjusted, the increased incomes of those who participate in production provide a market for the added product.

It is, of course, true that any particular line of production may be out of balance with others at a given moment. It is the peculiar function of the businessman to compare commercial opportunities, even peering into the future as far as he can, and to shift productive effort and use of resources from the point at which supply is relatively overdone to points at which it is relatively underdone or even entirely lacking. This is the essence of free enterprise. But when any economic agency turns from this important constructive function of shifting effort and accepts the destructive role of throttling down production, retiring plant from use, forcing laborers into idleness when they want to work for the good things of life or preventing would-be new enterprisers from trying their hand against the old concerns, it is gaining temporary protection at the expense of permanent loss. It is not competition, however vigorous, so long as it be open and sportsmanlike, that we need fear, but those artificial and protective devices that seek the stifling of competition or agreements in abatement of competition.

Values as a whole cannot possibly be forced to ruinous levels because they soon find their own balance if we but courageously continue to produce, promptly adjust lines of production, and allow the total product to flow freely into the market.

This combination of free productive enterprise and free market competition provides the businessman with an operative principle of management which I have designated "low-price policy." It may be summarized in a very few words: As fast as business enterprise introduces cost-reducing efficiencies, set aside for capital only such part of this technological gain as is necessary to maintain the capital plant in a state of high efficiency and expand and improve it as new techniques can be developed.

Senator MURRAY. I might ask you this: In the depression period, business widely accepted the theories of the N. R. A., and most of them were anxious, I suppose, to continue that system indefinitely. Is that not true?

Mr. NOURSE. Well, I think there is a very substantial faction within business that would like to see it restored.

Senator MURRAY. Even in the depression period, they sought to raise prices and curtail production.

Mr. NOURSE. The rest of the efficiency gain, after providing for maintenance and increase of capital, may go in part to the advance of wages of any workers whose rates are so low as to be out of line with the general wage structure. But in the main, technological gains should be disseminated to the whole mass of consumers in the form of lower prices of the product.

98534—44—pt. 3——2

The great bulk of such gains redound to the benefit of the working population anyway, since lower market prices proportionately raise their real wages, but lower prices, by expanding the market for the very product in whose production the added efficiency was attained, tend to expand that line of production and maintain employment at the point where labor-saving techniques are introduced. Even if this market fails to expand in the same proportion as the labor saving, the price lowering leaves purchasing power predominantly in the hands of that very part of the population which has the most unsatisfied consumer wants and which will therefore spend this money most promptly to buy goods, which create a demand for a like amount of labor elsewhere. Thus, low-price policy, as the rational expression of competitive private enterprise, presents the basic logic for the maintenance of job opportunities for the whole population that wants to work.

This brings us to the third major feature of "the American way" of private capitalistic business, namely, the profit motive. This, too, is a principle of the most profound truth and of major importance in the working of a system of private business. The enterprise of each participant in the productive process will be most actively stimulated, and therefore the best guide for his effort, if he gets income returns in proportion as he does those things that the consuming public wants done, with special premiums or prizes when he introduces some particularly desirable innovation, when his enterprise raises his efficiency above that of his competitions. The profit motive works most surely and effectively if these competitors are entirely free to capture this prize for themselves in the next round of productive enterprise.

But the profit motive, like both the other basic principles of private capitalism, is subject to abuses as well as constructive use. If the big profit which appears when some marvelous new product is developed or some sharp reduction in cost is effected by the introduction of a new method is frozen into the price structure; if this special reward is continued after the activity itself has become mere routine; if this extraordinary profitableness invites the construction of excessive new capacity; if the profits accumulate in the hands of individuals or institutions because they do not find other investment opportunities presenting a like degree of profitableness; or if these funds are used to bid up the prices of investment securities or other properties, then the general circulation of our economic body is retarded, and we may show ills that range all the way from retarded growth to acute organic disease.

A particular manifestation of misuse of the profit motive is the accumulation of high profit at times of better-than-average business activity on the theory that these reserves will be necessary to tide over the next period of business recession. Two evil results follow from this: (1) The gilded profits of the prosperous period lead to overbuilding, overextension of credit, and a bidding up of property values which produces in the capitalistic system a top-heavy and vulnerable condition——

Mr. GROSS (interposing). Is there that tendency today at this particular time?

Mr. NOURSE. Well, I think the restraints of the war control hold that in check. I think there is considerable reason to think that in a period shortly after the war, such a situation might repeat itself.

Senator MURRAY. Very seldom would business reduce prices when the cost of production has been greatly lowered. They usually want to continue to make the profits and don't take into consideration the effect that that has on the general economic system.

Mr. NOURSE. That is true, and the point I am making here is particularly that they, to justify that, say it is needed because of the necessity of having something to tide them over the depression period; whereas, this course brings on the depression.

Mr. GROSS. Isn't that the basis for the drive for large post-war reserves at this particular moment?

Mr. NOURSE. It seems to me it is.

Senator MURRAY. In the last depression, even in the midst of the depression, the large basic corporations of the country made more profit than they did in 1929, which was the highest period of productivity in this country. I have a statement published in Barron's magazine on April 4, 1938, which showed that 130 of the important listed corporations of the country made more profits in 1937, which was in the depression, than they had made during the highest period of productivity, 1929. That struck me as being a very strange situation. While we were attempting to combat the depression, and the Government was spending billions of dollars to bring about reemployment, the corporations advanced their prices and skimmed the cream off of the Government's spending, and were making more profits right in the midst of the depression than they had when the country was prosperous. That shows a very glaring defect, it seems to me, in our economic system.

Mr. NOURSE. That would be true as to certain companies. For corporations as a whole, of course——

Senator MURRAY (interposing). That is true because some of them were competitive. Take in the dry goods business, they were extremely competitive; but the metals had a record year in earnings, as did steel, oil, aluminum, machinery, chemicals, and the automobile industry—in fact, all the heavy industries showed high records of earnings for 1937.

At the close of your statement, I should like to introduce into the record a statement which I made on the floor of the Senate in 1938—May 23, 1938—covering this situation. I won't interfere with your statement, but I should like to have it inserted following your statement.

(The statement referred to will be found at the conclusion of Mr. Nourse's statement.)

Mr. NOURSE. Shall I continue?

Senator MURRAY. Yes.

Mr. NOURSE (continuing). (2) The withdrawal of funds from the consumer market at so rapid a rate in proportion to the volume of goods released into the market progressively dries up the volume of demand upon which the active utilization of these capacities depends. This initiates or accentuates the very condition of depression which was feared. The reserves will be dissipated in meeting the drains of the depression period which are due simply to the fact that men are out of employment, plant idleness, and the current production of wealth restricted, not by physical or technological necessity, but

by fiscal reasons stemming from the faulty price policy of the preceding prosperous years.

Some traditional economists and some old-fashioned businessmen experience difficulty in accepting this interpretation of the nature of profit-seeking capitalism. They suggest that low-price policy amounts to low-profit policy, and that this is contrary to the nature of private capitalism. As a matter of fact, what I have pointed out is simply that setting the profit sights too high, charging what the traffic will bear when the going is easy, refusing to embark on economic ventures unless a return is assured which will yield profits on idle plant as well as utilized plant, and in periods of unemployment as well as more prosperous periods, is self-defeating in the long run. The net return to capital is no greater and probably less than it would be under such low rate as would provide more evenly sustained production. I do not hold with that school—sometimes referred to as the "stud poker school of capitalism"—which maintains that even in this age of enlightenment, we must have glamorous profits and severe losses to sustain the zest and tempo of capitalistic business. I believe that scientific techniques of management make it entirely possible for capitalist administrators of business to reduce and equalize technical and commercial hazards and so sustain the flow of productivity that a smaller profits percentage of a larger national product will give to capital a larger total return in the long run, together with higher real wages to the masses and lightened burdens on the agencies of government.

Senator MURRAY. That seems to me to be the royal road to prosperity in this country, the lower prices and higher wages do produce purchasing power in the hands of the people of the country.

Mr. NOURSE. That is where I place my emphasis, certainly.

This broad picture of the way in which the system of private capitalistic enterprise operates and certain of the dangers to which it is characteristically exposed is very pointedly applicable to the period of reconversion, which is the subject of this committee's particular attention. The greatest danger of the reconversion period, as I see it, is likely to come from the reassertion of the doctrine by various interest groups that their welfare is to be promoted by lines of action which retard rather than enhance production. This danger stems from the prevailing fears of workers that there are not enough jobs, of capitalists that there aren't enough investment opportunities, and of producers and distributors generally that there isn't enough market demand to go around. Because of this fear, workers try to shorten the work period, slow down the rate of output, or pad the size of the working crew. Labor unions try to spread the work or to exclude all except a favored membership from work opportunities. Capital, fearing that there are not enough investment opportunities, tries to get a high return from the places where it is employed by withholding invested capital from capacity use or withholding capital funds from active investment. Producers and distributors engage in costly competition to get each for himself the largest share of the limited demand which exists at relatively high prices (prices enhanced by the cost of intensive selling effort) rather than promoting the maximum amount of consumer satisfaction and abundant employment by getting prices down to the point where goods are accessible to the largest possible number of users.

Senator MURRAY. It is this conflict between the various groups that make up the economic system of this country that is the cause of the failure of our system, each one looking out for himself, and all bringing their pressure on Congress here to take care of their own interests instead of wisely and intelligently looking at the problem from the broad standpoint of the best interests and welfare of the country. Isn't that it?

Mr. NOURSE. I am sure you feel those pressures right along.

Senator MURRAY. Yes; I get them every day from every direction—from people sometimes who don't know what they are talking about—telling you exactly what you should do, how you should vote, and so forth. It is a very unfortunate situation, it seems to me.

Mr. KEFAUVER. Dr. Nourse, have you got some remedy for the situation?

Mr. NOURSE. I think the voluntary application of low-price policy by the managers of business themselves—that is, those who are in a position of price administration—is the means of self-salvation. Whether that lesson can be learned and can be applied is another question. But I have outlined what seems to me the requirement of a really successful system of private capitalism.

Mr. KEFAUVER. But you don't know whether it will happen that way——

Mr. NOURSE (interposing). What I find in studying the problem is evidence of an encouraging sort in certain quarters, with reference to certain business leaders, that they both accept and attempt to practice this economic philosophy, and on the part of others a very discouraging tendency not to try to practice it—in fact, to deny it. Which side is going to win, I don't know. I think there are both forces within the field of business today.

Senator MURRAY. Won't aggressive activities on the part of the Antitrust Division of the Department of Justice, and also active work on the part of the Smaller War Plants Corporation, have a tendency to help in this situation?

Mr. NOURSE. I think so; but the work of the Antitrust Division, important as it is, is necessarily negative in character, and what I am talking about is a positive philosophy of active administration within capitalism itself.

Senator MURRAY. Within capitalism itself?

Mr. NOURSE. Yes; and, of course, the importance of the Government at times when they have an active role to play, as in the reconversion period; that is the point I want to make.

Senator MURRAY. A low-price policy in industry doesn't mean a low-price wage at all?

Mr. NOURSE. No; it means higher real wages.

Senator MURRAY. Higher wages and more consumption?

Mr. NOURSE. Yes.

Senator MURRAY. It means more production and more profit for industry, and at the same time better wages for the workers?

Mr. NOURSE. Yes.

Senator MURRAY. I notice that in the depression period there was one corporation that had greatly increased its production, had lowered its prices, had paid more taxes, and yet had raised its wages and lowered the hours of employment.

Mr. NOURSE. You can find a considerable number of illustrations of that sort. In fact, I hope some day to publish a case book of those.

Senator MURRAY. Yes.

Mr. NOURSE. In applying our basic principles to the particular problems of post-war reconversion, I shall not attempt to discuss the labor aspect of the problem, although it is obvious that if organized labor follows restrictionist practices and tries to exploit a position of strong labor control, it will seriously complicate the problem of getting a workable post-war adjustment.

Turning to the capitalist side of the picture, the employer side, mingled motives of self-protection and patriotism in a war crisis have caused us really to discover or to reveal how mighty is our productive power, once we really unleash it. In a curious way, it is business fear of this expanded productivity that constitutes the core of the reconversion problem. Through its contribution of war plant, the Government has really got the economic "bear by the tail"; and the gentlemen of industry are afraid of what will happen when we let go, afraid that they may not be able to get this producivity under manageable control as we transfer it back from public-directed war production to privately directed peace production. The relation of this concept of control to the principle of free enterprise is most interesting, since the same parties profess both. It is a little amusing to see how private business, which has been inveighing against the curse of Government control, now is concerned to have Government protect it against the forces of competition latent in these greatly enlarged plants and the surpluses they have produced even above war needs.

It is perfectly obvious that such a gigantic transfer operation cannot be effected without stepping on someone's toes. But I am profoundly convinced that more harm to the economy will result from too cautious a policy in releasing plant and surplus supplies than from what may seem a drastic policy of withdrawing Government ownership and allowing the system of private business to find its own equilibrium.

Senator MURRAY. Right there, do you feel that as materials are released from war production and contracts are terminated affecting small plants, that they should be entitled to enter immediately into civilian production to the extent that it would not interfere with the war?

Mr. NOURSE. Yes.

Senator MURRAY. Well, there is a feeling around here that that shouldn't occur, that we should wait until the larger corporations, who are still engaged in war production, shall be able to terminate their contracts, so that they may be able to start at exactly the same time as the small plants start, because they are fearful that the small plants may get some advantage as a result of being allowed to start immediately.

Mr. NOURSE. I have to confess that I am rather out of sympathy with that general point of view, that it seems to me to exaggerate the dangers to which the large, strong, and entrenched companies will be exposed. They are going on with their war activities in the interval. If they are afraid actually that they will not be able to meet the competition that these people have developed in the meantime, that seems

to be the only rational explanation for it; whereas, on the other hand, if we hold back a considerable part of our economy waiting to get what will be called an even start, you really prejudice the smaller and weaker companies, who will pass out within that interval, whereas it seems to me it is giving more protection than is necessary, in a truly competitive economy, to those that are the stronger and better established companies and are continuing in war work from which they are deriving income.

Senator MURRAY. I think that is a very clear statement.

Mr. NOURSE. During the period that the Nation's business was war, it was quite proper and necessary that Government plan and coordinate and control this great national effort as something in the nature of a public enterprise. But if Government undertakes to plan and execute the details of reconversion to a private basis, the delays, inflexibilities, and bickerings which will ensue seem to me far to outweigh the possible gains.

As I see the problem, Army, Navy, and War Production agencies should be regarded as concerned only in a military effort and honor bound to relax their controls of economic agencies or activities as fast and as fully as this can be done without prejudice to the winning of the war. Restoring the peacetime economy should not be confused with their quite different assignment. I believe, second, that private business will serve its own long-run interests best by accepting the brunt of taking back and administering industrial plant and market supplies with a minimum of protection against the competition that this level of productivity subjects them to. That is the point in line with the Congressman's question. I think they hesitate somewhat to exercise this very vigorous competitive philosophy, but the action which the Government takes can create a more competitive or a less competitive situation, and can pace them or can act as a drag upon such competition as they would themselves exercise.

I believe that private business must itself devise ways of living with the high productivity that fully competitive enterprise would entail. And the more promptly and more unflinchingly they set about that task, the more successfully will private business be reestablished.

The situation that you referred to was where they do really flinch from taking the impacts of that reconversion.

As I see the place of a Government resources board or office in this picture, its role is largely to resolve broad questions of public policy at a limited number of strategic points, such as the actual disposal abroad of a few categories of machinery and materials whose domestic absorption would take so long as to prejudice the orderly revival of our industrial system. The actions it takes should be decisive and irrevocable, giving business the maximum assurance as to the future market situation and providing speculators or others no opportunity for manipulation of stocks to their own advantage. Past experience at home and abroad, with cotton, corn, silver, and coffee, all show that the idea of scientific and constructive impounding and release of such stocks is a dream. The longer you have it hanging over the market and creating stale situations, the more is the revival of a really active economy retarded.

As to the handling of industrial plants likewise, I believe that the useful service of a Government reconversion board should be limited

to broad decisions of policy on a few strategic points, such as shipbuilding and synthetic rubber, which involve very specialized facilities and where conversion to other uses is largely impracticable.

One of its first clarifying and stimulating acts should be to announce a very large area in which it would assume no responsibility but in which the ingenious and flexible adaptation of strictly private business would be relied upon to make this reconversion, as fast as military control can be relaxed.

Even in the area in which such a board does accept jurisdiction, it should define its role as expediting the tailoring of plant capacity to the reasonably long-trend needs of the economy on a level of high production. It should help to convert obsolete plant to scrap and settle an ample capacity of most efficient plant firmly in private hands, without the dangers and ambiguities of large amounts of Government-owned stand-by or yardstick capacity. In a word, we should really liquidate the war economy, take our losses, and not try to postpone the day of reckoning.

Senator MURRAY. I think you have answered the questions that I had in mind to ask you in the course of your statement. I was intending to ask you the question: With increased labor productivity as the result of approved technology, is it possible for labor costs to be reduced at the same time as wages are increased?

I think you have covered that.

Mr. NOURSE. By and large, I should say "yes."

Senator MURRAY. Have you seen the bills that are pending before this committee, S. 1730 and S. 1823?

Mr. NOURSE. Yes; I have seen those.

Senator MURRAY. Would you like to make some comments on that proposed legislation?

Mr. NOURSE. There are just one or two points which I think will perhaps supplement or illustrate the things I have referred to here. As I said, it isn't possible to effect such a large reconversion operation without stepping on somebody's toes, and there will be plenty of business interests that are making very strong representations, and many of them thoroughly warranted representations.

But it seems to me that we cannot wisely draft a bill which promises that such pressures, or such disruptions, will be entirely relieved. As I said, people's toes are bound to be stepped on in the process.

I noticed in S. 1823, in section 408, it said:

> No sale or other transfer of surplus property shall be made unless the disposal officer shall certify in writing to the Administrator that in his judgement such sale or transfer (1) will not adversely affect the maintenance and promotion of maximum eployment; (2) will not unduly dislocate domestic markets.

There is bound to be some dislocation, and the word "unduly" is put in as a safeguard there. In the previous sentence it says: "Will not adversely affect the maintenance and promotion of maximum employment." I think there would be situations in which it would be shown that there might be reduction of employment opportunities at particular spots. So it seems to me that some qualifying word must be thrown around that. I think the same passage is not used in S. 1730, but if a similar passage was used it seems to me it should very decidedly be safeguarded.

A second point is in connection with sections (i) and (j) on pages 12 and 13 of S. 1730. It seems to me there again that the statement should be in the most limited terms. It sets aside aircraft, synthetic rubber, aluminum, magnesium, or steel, or any Government-owned shipyard or pipe line, unless such disposition is required by a valid contract provision.

For instance, I think that magnesium might well be dropped from that list, being a small adjunct of the light metals industry. Certainly if aluminum is covered in this special category, I see no reason for including magnesium also.

In the case of aluminum, the growth of capacity to 6 or 7 times its pre-war level, I think creates a strong case for putting it in the special category. The increase in steel, it seems to me, is by no means so disproportionate to the normal uses of a staple metal of that sore. I should think it was quite debatable whether that should be set aside in that category.

Senator MURRAY. But you do believe that magnesium should be eliminated from that list?

Mr. NOURSE. Yes; it seems to me that it goes under the wing of aluminum.

Senator MURRAY. And do I understand that you feel that steel also should not be included?

Mr. NOURSE. Well, I think it is very doubtful as to whether there is a similar case for it. I don't want to pass a categorical judgment on that, but I would suggest to the committee a careful scrutiny of the issues of policy which are involved in that, which it would seem to me are very different from synthetic rubber, shipyards, and aluminum.

Mr. KEFAUVER. Dr. Nourse, the Senate today will begin consideration of contract termination legislation—Senator Murray said he would report the contract termination bill in a few days.

Anyway, that seems to be the first big matter of the problem of reconversion that will be actually acted upon by one of the legislative bodies, and I wondered whether, in line with your idea of post-war economy, you have any comments you would like to make about contract termination, or the specific bill that Senator Murray will report?

Mr. NOURSE. No, I have not made any particular study of that bill. It seems to me that the questions there are largely questions of law, accounting, engineering, and so forth, which have to be given expert attention in each case on its merits.

Mr. KEFAUVER. I take it that you would feel, in order to have a competitive economy, that it is highly necessary that there be a workable contract termination law that enables these claims to be settled as quickly as possible?

Mr. NOURSE. Yes; promptness and completeness of liquidating seems to me the main desiderata; then, depending upon these technical agencies of advice that I have indicated, to come as close as possible to an equitable settlement. But again, the general principle that I have enunciated, of prolonging the period of liquidation in order to try and keep anyone from being in any way harmed, seems to me a policy which tends to retard the period of reconversion. As I see it, anything that does that gives us a nearby unavoidable number of un-

employed; that that immediately creates a pressing demand for some program of Government spending which will take care of those; that that immediately discourages those who have to make commitments in the restoration of private enterprise; that you get a bad cycle there. Therefore, as I said, we should take our losses promptly, come to quick and decisive and irrevocable decisions on them, clear up the conditions of the war and resume peace activity.

Senator MURRAY. And you think that it is very important that a program for the termination of those contracts, and the reconversion of industry to civilian production, be prepared as quickly as possible, be enacted as quickly as possible?

Mr. NOURSE. That general principles be understood, and that the agency for meeting these technical questions involved be set up.

Senator MURRAY. Of course, that is only one step. You recognize, of course, as we all do, that the human issues involved in reconversion are just as vital, if not more vital, than this?

Mr. NOURSE. Yes.

Senator MURRAY. And that it is just as essential that we have a program for the protection of labor in the reconversion period as it is that we have one for the protection of industry?

Mr. NOURSE. Right.

Senator MURRAY. Enabling industry to get back into production so as to avoid unemployment developing right in the midst of the war, so that if it were possible you think, I suppose, that we should have that legislation protecting labor enacted at the earliest possible moment?

Mr. NOURSE. Well, I think whatever legislation governs these settlements, that each piece of it should be passed as early as possible so that we may see the picture.

Senator MURRAY. And if we had the legislation all prepared at this time, the over-all program and the others matters, such as termination of contracts, unemployment compensation, the disposal of surplus property, approving of public works to fit in during the reconversion period in case of rapid unemployment, and any other matters that are essential in connection with the total over-all program, it would be advisable that we have it all enacted at once, wouldn't it, if it could be done?

Mr. NOURSE. Well, I should think the contract termination was the one which is most pressing, and the others as rapidly as possible in succession after that.

Senator MURRAY. But any failure to carry out a proper program with reference to all of these items would be fatal?

Mr. NOURSE. Yes; I think so.

Senator MURRAY. Have you a fear that Congress would neglect any of those steps in the interest of protecting some groups and not favoring other groups?

Mr. NOURSE. No; it seems to me that they have been diligent, have been forehanded, in getting legislation to this stage by the present time, and that it should be pressed through from here on.

Senator MURRAY. You, of course, recognize that there is a need, absolute need, for this top planning board attached to the Office of War Mobilization and Post-war Adjustment, which is sought to be considered in these two bills that we have pending?

Mr. NOURSE. Yes; I think that the point that I make with reference to that is that such a board should primarily be a broad policy board, should take care of particular exigent situations, but not attempt itself to conduct the process in any detail or to plan the details of execution.

Senator MURRAY. But it should lay down the policies?

Mr. NOURSE. Absolutely.

Senator MURRAY. Quite clearly and distinctly, and that Congress should control that?

Mr. NOURSE. Yes.

Senator MURRAY. And should lay down the policies to direct the reconversion activities?

Mr. NOURSE. I think the early and clear enunciation of those policies would be one of the most constructive forces we can have.

Senator MURRAY. Thank you for your very able statement, Dr. Nourse. We appreciate having you here, and we are certainly glad to have that statement on the record.

Mr. NOURSE. I appreciate being here.

(The statement of Senator Murray, directed by him to be incorporated in the record at the close of Mr. Nourse's testimony, is as follows:)

FROM SPEECH DELIVERED IN THE SENATE BY SENATOR JAMES E. MURRAY ON MAY 23, 1938

I mentioned a moment ago that Barron's, the National Financial Weekly, of Wall Street, in the issue of April 4, 1938, shows that 130 listed corporations had profits in 1937 which were ahead of all the previous high records of 1929. The metals had a record year in earnings as did steel, oil, aluminum, machinery, chemicals, and the automobile industry. In fact, all the heavy industries show high records for earnings for 1937.

Building material prices advanced so high as to stifle the building program of the country, and the railroad equipment prices, too, were raised so high that the railroads were compelled to abandon their program for railroad repairs and improvements.

About the middle of 1936 they began the move to run up their prices as the Federal Government poured millions into public works, and in 1937 they jacked up their prices to inordinate heights. A terrific race followed to fill consumer inventories engendered by fear of a continued rise in prices. At first industry could not execute its orders, but as inventories filled up business slacked off and unemployment began. When the inventories were completed, of course, the factories and manufacturing concerns of the country began to lay off their men, and, as they laid off their men, of course, the depression was bound to develop. By the boosting of unit prices, the sum of the prices of mass-production goods became greater than the total monetary purchasing power available in the pockets of the consumers. The result was that when these prices were so boosted and maintained, and the monetary income, or purchasing power, of the consumers was not increased, but, on the contrary, was decreased by laying men off, there was not sufficient purchasing power in the country to buy the output of American industry and agriculture at the prices charged.

The Brookings Institution has made a study of this subject and has arrived at the conclusion that the royal road to prosperity in this country is for the corporations to allow wages to be raised without raising prices, and that in that way, and only in that way, are we going to have prospertiy in the country. We have to spread purchasing power. We have to get the money out in the hands of the people, and enable them to buy the things the manufacturers are making. Some of the big manufacturers of the country are beginning to realize that they will not succeed by exploiting labor; that their success will be brought about by improving the condition of labor, and increasing its wages, and putting its members in a position where they can buy things, and not by attempting to hold down their wages.

Senator MURRAY. Mr. H. L. Carpenter, chairman of the small business division, post-war-planning committee, Commerce and Industry Association of New York, Inc., is our next witness. Mr. Carpenter, will you please state your name and official position?

STATEMENT OF H. L. CARPENTER, CHAIRMAN, SMALL BUSINESS DIVISION, POST-WAR PLANNING COMMITTEE, COMMERCE AND INDUSTRY ASSOCIATION OF NEW YORK, INC.

Mr. CARPENTER. My name is Herbert L. Carpenter. I am president of the Carpenter Container Corporation, Brooklyn, N. Y. I am also chairman of the small business division, post-war planning committee of the Commerce and Industry Association of New York, Inc.

If I may be permitted, I shall read a statement which I have prepared.

Senator MURRAY. Proceed in your own way, Mr. Carpenter.

Mr. CARPENTER. The Commerce and Industry Association of New York, Inc., is the largest chamber of commerce in New York, and a charter member of the Chamber of Commerce or the United States. The association is made up of several thousand firms engaged in over 50 different lines of business and industry. The majority of these firms would be regarded as small enterprises, although many operate on a national and international scale.

Mr. Chairman, I am one of those typical small American businessmen and I employ about 100 or 150 men in different plants. This business has been built up over the years. I have had national contact with the small industries of the country. We have the Army and Navy "E," with one star, and the War Department granted me another star yesterday. I can assure you that we think and pray to Almighty God every day that we may do our duty in winning this war, and equally do our duty in winning the peace, which is what we are fighting for.

The major field of interest of the association is in the development of local, national, and international conditions wherein private enterprise can operate effectively. Our post-war planning committee is devoting itself full-time to consideration of questions having to do directly and indirectly with employment in the post-war period. It is actively working upon legislation policies relating to cancelation of contracts and disposal of war surpluses.

Studies which have been made by our committee indicate that when hostilities end in Europe or in the Pacific area, or both, there will be unavoidable unemployment due to the necessity of converting plants from war to peacetime production and to the wide readjustments of our economy. The extent of unemployment will be determined in large measure by the promptness and procedure in settling war contracts and disposing of surplus materials and properties.

If contractors are able to get their claims settled quickly and to receive funds due them, they will be in position to convert their plants quickly and to get into peacetime production soon. Delays in settlements will slow up conversion and hence prolong the period of unemployment. Likewise, the speed and manner in which surplus materials and properties are disposed of by sale, lease, or transfer will

also affect employment. If there are long, unwarranted delays encountered by contractors in acquiring plants, equipment, and related properties which are now Government owned, they will be that much longer in undertaking peacetime operations and employing workers.

Furthermore, if there are any indications that surpluses may be dumped on the market or will get into the hands of speculators, manufacturers will be very hesitant to undertake production and such a course would prove a brake upon employment which would have ramifications into many fields.

The Congress is certainly in a position to prevent serious unemployment which may occur upon contract cancelations. It is the only agency with the power to provide for quick and equitable settlements of contracts and for orderly and economically sound disposal of war surpluses. I am certain there is the will and the ability in Congress to do this job and I am sure you appreciate that sound solution of these problems is vital to the welfare of cur Nation, and second only to winning the war.

I think, apropos of what the previous speaker said, and what you said, Senator Murray, that this is vital from the standpoint, and the principal standpoint of the employment of labor and the welfare of labor.

In the opinion of great numbers of businessmen and industrial leaders with whom we are in constant touch, it is of the utmost importance, and particularly to the small industries, that this Congress act prompty in determining measures to be pursued with contract terminations and settlements, disposal of probable war surpluses, revision of tax regulations—I hope Congress is going to review that with a very serious consideration from the standpoint of the little man—so that business will be able to operate effectively and provide employment after the war; and means, based on business experience and practice, to accomplish the elimination of control of prices and goods as promptly as possible.

Mr. Chairman, on the question of control of prices and goods, those who vision the economic upset which we are approaching certainly feel that prices of goods, and rationing of essential products, as well as adequate distribution of the limited available essential and nonessential civilian goods, will have to be under some control in order that justice is done to the little fellow.

As the day of victory comes nearer and we come closer to the task of undertaking peacetime operations again, it is imperative that we have here in Washington an effective administration of measures to solve these problems. It is our view that Government faces a challenge as to whether it will be as efficient in aiding business and industry—and I might add labor—to win the peace as business and industry have been in aiding it to win the war. The attitude of Congress in approaching these problems is a very hopeful sign.

We have a long, hard pull ahead of us. Domestic and world needs must be ascertained and met. The necessity for speed in resuming peacetime operations should be a strong deterrent against pursuing untried schemes. Taxes will be heavy for years to come and there is no excuse for making them heavier through unnecessary unemployment and by the creation of unwarranted Government bureaus and

agencies. Instead, we should be giving thought now to extensive curtailment of the many agencies we now have; to an ending of the unwarranted and inexcusable duplication of effort that goes on; and to reduction in the countless rules, regulations, directives, and questionnaires that are slowing up the war effort and which, if continued, will definitely impede full employment and peacetime progress, particularly in small business and industry.

Mr. Chairman, I should like to say that I have presided at innumerable meetings with thousands of industries in behalf of the War Production Board, the War Labor Board, and the O. P. A., and whereas the large institutions, with executives who are detailed directly to conform to all of these rules and regulations get along pretty well, the major part of the typical small industry or business in this country is totally unable to even learn the functioning and requirements of these vast numbers of rules and regulations; and it is the sincere hope on the part of small business, perhaps through the Smaller War Plants Corporation, or some other agency, and perhaps through the Small Business Division of the Department of Commerce, that simplification may be granted to the smaller businessmen so that in this conversion period they can live.

Senator MURRAY. I might say this, that when the Small Business Committee was first created, we sent out questionnaires over the country asking them to give us their complaints about what they thought Congress might do to assist them, and one of the chief complaints we had was the fact that they were being deluged with these demands for questionnaires and reports, and so forth. As a result of that we enacted some legislation here to protect them from that sort of a situation because these reports and questionnaires were largely duplications—so we are overcoming that.

I had a report on the administration of that new bill just recently, which indicates that they are making very rapid headway in preventing small business from being pestered by demands for unnecessary reports and questionnaires.

Mr. CARPENTER. Your efforts will be a great contribution to the happiness and progress of the small businessman, I am sure.

Mr. KEFAUVER. Mr. Carpenter, while you are talking about small business, I am interested in your statement that you had a great many contacts with hundreds of small businesses throughout the country——

Mr. CARPENTER (interposing). Thousands of them.

Mr. KEFAUVER. I. personally, have a feeling that during the period of reconversion and readjustment that it is going to be most necessary that we have some organization, like a revamped Smaller War Plants Corporation, to help fight the battles for small business and small plants. I wonder if you feel that the S. W. P. C., or some organization like that, should be in existence and should have real authority and contacts so that it can help small business?

Mr. CARPENTER. I feel that it is very necessary, gentlemen. I am a conservative businessman in every sense of the word, but the condition today is an example. I think you will find that the record will show that the great drygoods houses, with their purchasing pools, and the 5-and-10-cent stores, as nationally constituted, and the mail-

order houses with their superior purchasing ability and financial resources, are acquiring a major part of all of the available civilian supplies today, and the shelves of the little, typical town store all over the country are denuded. That is not an evidence of greed, perhaps, on the part of the larger units, but an evidence that the little fellow needs help very definitely.

Mr. KEFAUVER. Mr. Carpenter, some people of course have the theory that the Smaller War Plants Corporation was created for bringing small business into the war, and that when the war is over its function should cease and that at that time the Corporation should be abolished. As you know, Senator Murray has been giving consideration to revitalizing the Smaller War Plants Corporation for the reconversion period, to help small business, and I wonder if you have studied Senator Murray's proposed bill?

Mr. CARPENTER. I haven't studied any new one, but the Smaller War Plants Corporation in our territory asked me to act as one of their advisers, and I can assure you now that they are using their facilities for disseminating among the smaller industries very valuable infomation on the peparation of their records and books in advance, in order that contract termination as it affects the small industries may not reach an impact and complication that will destroy them. I think that the Smaller War Plants Corporation is doing a fine job in that respect. They have the facilities, they are collecting the various industries, thousands of them, under headings of the various industries they are in, determining which of those groups are in distress, deprived of proceeding with manufacture due to limitation orders, and are doing a fine educational job in enabling small industries to look into the future. I think the work it has already done is fine and they have a good deal to do from now on.

Senator MURRAY. It can be a great help in enabling small business to secure a fair share of the surplus materials.

Mr. CARPENTER. I feel so, too. I heard you ask the previous speaker, Mr. Chairman, as to whether the larger concerns should be allowed a general suspension of the re-use of some of these vital materials as against allowing the small industries to begin in the early stages. I don't think there is anything but one answer there.

The big concerns that are engaged in war production have planned effectively and in detail for conversion periods, and conversion sales, and conversion markets. The little man has been totally unable to do that; he is out on a limb. Through the limitation orders he may have been reduced to almost bankruptcy, and yet he is hanging on although it may be an essential little industry in a community.

I believe the little fellows should have the first opportunity, and I think it would be a great shame if those who have charge of the policy in the distribution of these materials did not, under the direction of Congress, give the little man an early opportunity to get back on his feet so that he is at least in a competitive position.

Now the other people may complain as to that, but I think they are wrong. You gentlemen know that probably 70 percent of the employment of this country is in the smaller industries and businesses, and 70 percent, probably, of the invested capital of the whole country is represented in the multitude of small, typical American, industries and businesses. They are, under the restrictions of this war, and

agencies. Instead, we should be giving thought now to extensive curtailment of the many agencies we now have; to an ending of the unwarranted and inexcusable duplication of effort that goes on; and to reduction in the countless rules, regulations, directives, and questionnaires that are slowing up the war effort and which, if continued, will definitely impede full employment and peacetime progress, particularly in small business and industry.

Mr. Chairman, I should like to say that I have presided at innumerable meetings with thousands of industries in behalf of the War Production Board, the War Labor Board, and the O. P. A., and whereas the large institutions, with executives who are detailed directly to conform to all of these rules and regulations get along pretty well, the major part of the typical small industry or business in this country is totally unable to even learn the functioning and requirements of these vast numbers of rules and regulations; and it is the sincere hope on the part of small business, perhaps through the Smaller War Plants Corporation, or some other agency, and perhaps through the Small Business Division of the Department of Commerce, that simplification may be granted to the smaller businessmen so that in this conversion period they can live.

Senator MURRAY. I might say this, that when the Small Business Committee was first created, we sent out questionnaires over the country asking them to give us their complaints about what they thought Congress might do to assist them, and one of the chief complaints we had was the fact that they were being deluged with these demands for questionnaires and reports, and so forth. As a result of that we enacted some legislation here to protect them from that sort of a situation because these reports and questionnaires were largely duplications—so we are overcoming that.

I had a report on the administration of that new bill just recently, which indicates that they are making very rapid headway in preventing small business from being pestered by demands for unnecessary reports and questionnaires.

Mr. CARPENTER. Your efforts will be a great contribution to the happiness and progress of the small businessman, I am sure.

Mr. KEFAUVER. Mr. Carpenter, while you are talking about small business, I am interested in your statement that you had a great many contacts with hundreds of small businesses throughout the country——

Mr. CARPENTER (interposing). Thousands of them.

Mr. KEFAUVER. I think that the Smaller War Plants Corporation is doing a fine job in that respect. They have the facilities, they are collecting the various industries, thousands of them, under headings of the various industries they are in, determining which of those groups are in distress, deprived of proceeding with manufacture due to limitation orders, and are doing a fine educational job in enabling small industries to look into the future. I think the work it has already done is fine and they have a good deal to do from now on.

Senator MURRAY. It can be a great help in enabling small business to secure a fair share of the surplus materials.

Mr. CARPENTER. I feel so, too. I heard you ask the previous speaker, Mr. Chairman, as to whether the larger concerns should be allowed a general suspension of the re-use of some of these vital materials as against allowing the small industries to begin in the early stages. I don't think there is anything but one answer there.

The big concerns that are engaged in war production have planned effectively and in detail for conversion periods, and conversion sales, and conversion markets. The little man has been totally unable to do that; he is out on a limb. Through the limitation orders he may have been reduced to almost bankruptcy, and yet he is hanging on although it may be an essential little industry in a community.

I believe the little fellows should have the first opportunity, and I think it would be a great shame if those who have charge of the policy in the distribution of these materials did not, under the direction of Congress, give the little man an early opportunity to get back on his feet so that he is at least in a competitive position.

Now the other people may complain as to that, but I think they are wrong. You gentlemen know that probably 70 percent of the employment of this country is in the smaller industries and businesses, and 70 percent, probably, of the invested capital of the whole country is represented in the multitude of small, typical American, industries and businesses. They are, under the restrictions of this war, and

through no fault of their own, in a deplorable condition, and yet they are the foundation stone of our future employment and prosperity; and anything which Congress or the instrumentailities created by Congress can do that will openly and deliberately safeguard the small business of the country, I think is not only the right thing to do but that it is their duty to do it.

Senator MURRAY. That is a very excellent statement, and it is right in accord with what I have been thinking about the problem, but I want you to know that there is another school of thought on that, and they feel that big business should be protected from the competition of these small concerns and that, as the contracts are terminated, the smaller concerns should not be allowed to enter into the production of civilian goods or products which in any manner compete with the larger concerns.

It does seem to me to be a very narrow view, and I am very glad to have your statement.

I also wish to give you the proposed amendments to the Smaller War Plants Corporation bill.

Mr. CARPENTER. Thank you.

Fortunately, I have been able to be in contact with many of the larger and smaller industries. I can assure you that the major part of the larger industries of the country, if they were not awakened to it before are now, that the whole prosperity of this country in the reconversion and post-war period is going to be dependent upon the security and the prosperity of the small industries, and if they fail and fall it will be a terrible blow to the whole economy of the country.

I think that that other school of thought which you referred to consists of a limited, thoughtless group. I think that we all feel that the future holds forth a period, as you said awhile ago, of wide employment. Our whole attitude in the proceedings, in the study of this question, is: employment and more employment at the best possible wages, and the conduct of industry on the basis of the highest possible efficiency at the lowest prices. We can have good prices of labor and we can have low prices of material through high efficiency.

But the major issue is wide employment and more of it, because upon wide employment, good wages, and high purchasing power in this country rests the foundation of our future prosperity. We know that; I practice it in my business.

Senator MURRAY. That is right. In other words, our American mass-production system must be supported by a mass-purchasing power in the hands of the people?

Mr. CARPENTER. It must be. Another thing is—and I think we have all got to recognize it—that this war has caused a terriffic period of destruction all over the world, the loss of vast numbers of the cream of our young men and women, and that the future period of reconstruction in the post-war era cannot be a period of great profits for anyone. It has got to be a case of willingness to sacrifice all along the line.

I have said to many groups that the future means that we have got to proceed not for our individual benefit but for the welfare of all, and if we don't, we will fail ourselves.

The philosophy of the little American businessman is pretty sound, Mr. Chairman, and he sees the light ahead and he is willing to go along—and the others will have to.

Congress should provide for the rapid settlement of contracts and disposal of surplus properties; for the coordination of cut-back policies and programs with allocation of materials for civilian production, particularly to enable small enterprise to survive and again become the greatest source of employment. Congress should also provide for control of prices and materials for as short a time as conditions warrant, and we know it will have to be for some time.

We already have agencies which should be capable of handling problems of education, social security, employment, and reconversion financing. There is no reason for duplicating their efforts by setting up new agencies to handle such situations as may be created by the return of service personnel, lay-offs of workers from war production, and resumption of peace operations.

It is the opinion of those whom I represent, also of members of comparable groups of business, industrial, and agricultural men whose executives we have conferred with—and who are the "grass rooters" as I know—that the Congress should make it clearly evident that the aim and intent of our Government is to bring about quick, equitable, and complete settlements of war contracts and to accomplish the disposal of our war surpluses by recognized standard business procedures which will not permit these surpluses to come into the hands of nor promote monopolistic control; will not permit them to fall into the hands of fly-by-night speculators or others seeking "fast" dollars; and will not permit them to disrupt efforts to restore our industrial, commercial, and agricultural enterprises to a sound peacetime footing.

In striving for peacetime progress and prosperity, it is vital that the Congress keep in mind that speed in converting from war to peace operations is of the essence.

I don't want you to think that small business, or any of us, deviate for one minute from our vital duty to see this war won first, but that is no reason why we shouldn't plan to be sure that we secure the thing we are fighting for.

Delays and unsound moves can only pile up costs and an endless array of troubles. There seems no doubt that Americans as a whole much prefer to stand on their own feet, to earn their own living, to live as they deem best. They have had their lesson from Government doles and made work. They know there are taxes that must be paid to cover the cost of the war. They do not want those taxes increased to pay for work projects undertaken as a cover-up for inefficiency and slowness in winding up war matters. We believe that it is much better for the Government to pay out a few millions in the settlement of contracts, and to accept market prices for these goods in disposing of surpluses, than to hand out billions in doles and relief jobs. If you will provide the opportunity for Americans to get to work promptly when war demands end, they will take the war bill in stride and America will move forward.

It is clear, therefore, that the Congress should pass legislation authorizing prompt and final settlements and arrangements for the proper disposal of war surpluses. This legislation should eliminate

personal liability on the part of those actually doing the work—except in cases of fraud or collusion—and should encourage final settlement by negotiation rather than through exhaustive audit.

Mr. Chairman, I have been through cut-backs and cancelations and new contracts, and I have the highest regard for the procurement agencies of the Army and Navy, and they have been given the responsibility and the authority and the money to execute these contracts; and under policies created in Washington, definite policies under the pending laws, they are the ones than can do the job, meet the obligations that the Government has to those who have done the war work and now have their contracts canceled, and do it as quickly as possible.

I congratulate you gentlemen on getting this contract-termination bill in fine shape at the earliest possible moment because that is the first step vital to the progressive steps that will have to come afterward.

It would be a physical impossibility to arrange any system of extended audit of hundreds of thousands of contracts and subcontracts that would not result in serious delays in final determination, and the creation of disastrous unemployment. The cost to the Government of meeting such unemployment, and to the country as a whole because of it, would be enormous and many, many times any amounts that might be lost to Government through settlement by negotiation. This is also particularly true of the small businesses.

With proper legislation that will make for prompt, final determination of canceled war contracts that will enable industry to employ men, it will not be necessary to even consider other programs which have been advocated because men returning from military to civilian life will be able to find jobs on a straightforward basis without seemingly being in the position of accepting favors. There is no question but that able-bodied veterans will need the opportunity to work when the peace comes, more than they will need anything else. It was partly because such men were unable to obtain useful work following World War I that the nervous tension brought about by war could not be controlled. In many European countries, returned soldiers and others were unemployed and put on a dole. This resulted in the development of tremendous unrest which helped lay the foundation for World War II.

We do not wish to risk the development of such a situation when the present war is ended. If we are to succeed in this, returning soldiers must assume all the responsibility of citizenship for their own protection and for that of the people of the United States. Any plan which would permit a lessening or sidestepping of this responsibility should, therefore, have no place in our laws. That has no reference to disabled veterans or others who are unemployable, concerning those whom we know that nothing can be done to match the sacrifices that these boys have made, but let's don't take the responsibility of citizenship off their shoulders when they come back.

Disposal of surplus supplies should be carried out by the agency provided for in the Baruch-Hancock report. Laws should be passed to supplement this report, preferably S. 1718 and S. 1730, separately or in some combined form that will give force and strength to the

Executive orders covered in the Baruch-Hancock plan, and that will carry Congress into the situation in such manner as to best protect the interests of the people.

Property and other supplies held by, or for, the Government following cancelation of contracts should, when they have been declared surpluses by the military agencies of Government, be turned over for disposal in accordance with policies established by one agency for that purpose.

All methods of disposal should be those which, when carried out, make for the protection of the private enterprise system and their utilization in such manner as to enable industry to function and employ men. There should be no dumping processes that would injure or destroy markets either here or abroad; no Government competition with private enterprise, and no method should be employed which would result in useless waste or that will put brakes upon the smooth working of business, industry, and agriculture, including labor, throughout the country.

Our major issue is to insure full employment when war ends. It will be the foundation of our future prosperity.

That, gentlemen, is the essence and, I think, typical of the attitude of the American businessman who has struggled through this war, the American small businessman who has rendered invaluable service to the war effort and hopes and believes he is entitled to the protection of the Government, where necessary, to secure his position for the future.

Senator MURRAY. Thank you, Mr. Carpenter, I think you have made an excellent statement here. I think that the whole country is in sympathy with everything that you have said here. The preservation of small business in the post-war period, as you have so ably pointed out, is the most important issue confronting us.

Mr. CARPENTER. We believe so.

Senator MURRAY. Because if anything should happen that would permit the destruction of our system of small-business enterprise in this country, our whole democratic system would fall with it, it seems to me.

Mr. CARPENTER. It would.

Senator MURRAY. I also appreciate very much your observations with reference to the need for maintaining good wages in this country, and it seems to me that in the reconversion period we are going to be up against problems of temporary unemployment, and there is need, in connection with this post-war planning, of a very strong system of unemployment compensation, so that as men are eliminated from jobs they will not suffer as a result of unemployment.

Mr. CARPENTER. On the other hand, Mr. Chairman, the destruction throughout the world has been terrible. This country has been blest—although it has lost many of its young men and will lose still greater numbers—but its property loss has been small, and under the proper guidance and control and operation of our economic system there seems to me to be every opportunity in this country, if everyone works together and sacrifices for the general good, that we will have continual employment, we will have opportunities for the returning soldiers who are able-bodied, and for the workers who come from the war plants and have to go back into industry.

There will be a great reorganization, but we have done a miracle in war production and let's do the same miracle in readjustment. If we do it with the same spirit, I am quite optimistic that many of these other activities in the way of made work and dole and other things may possibly be avoided.

I think Congress has a very clear view of both the objective and their responsibility, and I know that the small business of the country stands ready to cooperate in every possible way with Congress in meeting their responsibility.

Senator MURRAY. Thank you very much, Mr. Carpenter. That has been a very inspiring and encouraging statement, and I want to thank you.

Mr. CARPENTER. Thank you, sir.

Senator MURRAY. The hearing will now adjourn until Thursday morning at 10:30, at which time Brig. Gen. Frank T. Hines, Administrator, Retraining and Reemployment, will be the only witness.

(Whereupon, at 11:50 a. m., the hearing was adjourned until Thursday morning, May 4, 1944, at 10:30 o'clock).

MOBILIZATION AND DEMOBILIZATION PROBLEMS

THURSDAY, MAY 4, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE
OF THE COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to recess, at 10:30 a. m. in room 318, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray, and Representatives Kefauver and Gwynne, members of the Committee on the Judiciary of the House of Representatives.

Also present: B. M. Gross, staff director.

Senator MURRAY. I should like to make a short statement for the record before we open the hearing.

On February 15, the Baruch-Hancock Report recommended the appointment of a Work Director to "work with Congress on a combined program of legislation and operations for the entire human side of demobilization."

In conformance with this recommendation, the President appointed the able head of the Veterans' Bureau, Frank T. Hines, as Director of Retraining and Reemployment. It is with great pleasure that we now look forward to General Hines' recommendations for Congressional action on the human side of demobilization and post-war adjustment.

Contract-termination legislation, which is before the Senate today, is well on its way toward final action in both Houses of Congress. Expeditious action on this matter will clear the decks for a full-fledged attack on the human phases of reconversion.

It is my conviction—and the conviction of many of the leading Members of Congress—that decisive legislation on retraining and reemployment must be enacted during this session of Congress. As I said on the floor of the Senate yesterday afternoon, this legislation must be enacted even if Congress must stay in continuous session until the end of the year.

I know that General Hines takes the same position and that Congress can rely on his cooperation in the development of adequate legislation in the field of retaining and reemployment.

General HINES. Mr. Chairman and gentlemen of the committee, I would first like to make a general statement, and then refer to the

statement that I furnished the committee, which is the Statement of Facts and Problems Before the Administration.

In relation to the matters under your present consideration and in keeping with the request of your committee, permit me to make a few preliminary observations to you in the field of fitting and adjusting the manpower of this Nation to the period before us. Having accepted the appointment by the President as Administrator of the Retraining and Reemployment Administration in the Office of War Mobilization, a position established, as you know, following recommendations of the Baruch-Hancock report, I enter into this work conscious above everything else that full understanding and unity in all the forces of our Government and our people are indispensable factors to the attainment of that success that will mean so much to us in the years ahead. No intelligent person can follow the work of this present Congress without recognition of its awareness and its virility of thought and action to problems confronting us. I welcome this opportunity to discuss with you the importance and the objectives of our retraining and reemployment work.

I could not enter upon my duties with the same sobering feeling of responsibility that possesses me if I were not so fully imbued with a consciousness that the retraining and reemployment of our manpower is the vital spot of all endeavor looking to the great transition from war to peace—the vital spot in protection against the dangers that will beset us—the vital spot in the continuance of our American way of life as freemen. Herein I feel is the key to the accomplishment of a cherished contentment and happiness for our people when implements of war are put aside.

If everyone in the United States willing to earn an honest living in the field of work for which he or she is fitted is given the opportunity to do so, the danger of difficulties that otherwise inevitably would arise will be dissipated. Domestic problems that will remain with us and new issues that arise from time to time can and will be controlled with a self-respecting American citizenry gainfully employed.

I believe I do not lose my perspective in feeling the importance of this matter. I know full well what hangs in the balance in our relationships with the nations of the world, either in the potentialities of conflict or peaceful pursuit of commerce. But I do maintain that we may win the war and win the peace in international adjustment and stability following the peace, and yet lose the peace here within our own borders at home if we fail in that coming great test of our Government's ability in our adjustment from war to peace. The retraining and reemployment of our manpower constitutes the very heart of that tremendous undertaking.

It takes very little imagination to conceive the extent of the work before us. You will recall the expressed hope of the President that we would serve the democracies of the world in necessary war materials to repel oppression.

The merits of such a status is now beside the point in relation to the work of retraining and reemployment. The fact is that we are now

the arsenal of democracy. This has entailed the building up almost overnight of a colossal industrial machine the like of which never before has been witnessed. During the incredibly short space of 3 years gross national production increased 100 percent from $100,000,000,000 in 1940 to $200,000,000,000 in 1943. Our armed forces have been increased by more than 10½ million. Manufacturing employment has increased to 175 percent of the 1939 base; an unprecedented labor force of approximately 61½ million are at work, more than one-half of them engaged directly in the war effort. Great shifts in our population have taken place and will continue to take place from one type of industry to another and from one locality to another. High wages are paid, and there is an abundance of work for all. Our great American industry—a colossus in the world even before the outbreak of this war—has been geared to the gigantic struggle in which we are now engaged and runs full ahead gaining momentum in its progress. What were bluprints but a year or 2 ago are now thunderous factories employing millions of men.

We have no admirals, we have no Army officers, we have no laymen and we have no seers among us who can tell us when this war will end—or how abruptly. But any man of common sense among us will recognize the absolute necessity of preparedness to meet any eventuality in this respect. The peace that is rightly longed for in hearts of the mothers and fathers of America when the victory is won, can only turn into the deserved fruition of security and happiness if we can successfully meet the dislocation that the peace will entail as well as we have met the onslaught of our enemies. That this Congress is aware of that fact is evidenced by the many measures proposed or agreed to by the Congress looking to post-war social and economic problems.

The functions of the Retraining and Reemployment Administration are defined and described in the Executive order establishing it as follows:

> With the assistance of the Retraining and Reemployment Policy Board, composed of a representative from the Department of Labor, Federal Security Agency, War Manpower Commission, and the Selective Service System, the Veterans Administration, the Civil Service Commission, the War Department, the Navy Department, and the War Production Board, it is the function of the Administration:
>
> (*a*) To have general supervision and direction of the activities of all Government agencies relating to the retraining and reemployment of persons released from the armed services or other war work, including all work directly affected by the cessation of hostilities and the reduction of the war program * * * and to advise with the appropriate committees of Congress as to the steps taken or to be taken with respect thereto.
>
> (*b*) In consultation with the Government agencies concerned to develop programs for the orderly absorption into other employment of persons discharged or released from the armed forces or other war work, including adequate provision for vocational training, the finding of jobs for persons so discharged or released, or assisting those persons and their families pending their absorption into employment, and for dealing with the problems connected with the release of workers from the industries not readily convertible to peacetime use. * * *
>
> (*c*) In consultation with the Government agencies concerned to develop programs for the adequate care of persons discharged or returned from the armed services, including physical and occupational therapy for the wounded and the disabled and the resumption of education interrupted by the war.

Under the foregoing as Retraining and Reemployment Administrator, I fully understand and realize that my duties cover a very wide field in demobilization, rehabilitation, retraining, and relocation. In unity with the Congress, Government agencies, industry, and organizations of labor, I conceive it to be my task to chart, in the matter of manpower, the road back when the peace comes. It is not an easy task. The problems of demobilization are no less, and in many respects far greater, than the problems of mobilization. As in peace we must be prepared for war, so in war we must be prepared for peace. The war effort and measures to insure the peace are interlocked; where the military leave off in the forward prosecution of the war, civil authority must carry on the great war-making machine in reverse. In the security of the Nation the latter is no less important than the former.

Among the problems confronting the Retraining and Reemployment Administration are the following: Jobs for all who can and want to work; vocational training for all who need it; resumption of high-school and college educations interrupted by the war; special care and consideration for disabled veterans, including physical and social rehabilitation; special employment problems of the great war industries; timing of release of workers from industry; rate and method of demobilizing the armed forces; problems of the geographical dislocation of labor; adjustment of labor laws to changing manpower needs; adequacy of unemployment insurance; distribution of information on occupational trends; advice and guidance in respect to employment; consultation with Congress on all of the above problems.

One of the cardinal principles of the Administration will be emphasis on the human factors involved. Never shall I loose sight of the fact I am dealing with souls—individual human beings with rightful individual characteristics and desires. The American way of government and of life shall be maintained in our work as against any Fascist rule that glibly obliterates the individual for advantage to the state.

At the entrance of the National Archives Building, where rest the permanent records of this Republic, there are inscribed in the marble at either side the two inscriptions: "Study the past" and "History is prologue." I intend, gentlemen, in the Administration of retraining and reemployment to recognize those inscriptions, particularly in the light of the history of our country in the wake of the last war. As to the millions of servicemen who will return to civil life, I set my goal that not a soul among them will become a mendicant—except at his own choosing. To do this, the help and full cooperation of the Congress, of Government agencies, of labor, and of business is essential.

A multitude of facts and figures will enter into the work of the Retraining and Reemployment Administration. I shall not burden you with any detailed recitation of these. A few passing references may be of interest. According to the estimate of the Bureau of Labor

Statistics, immediately after the war, manufacturing industries will face the largest total decline from a war peak of around 17,000,000 to perhaps 12,000,000, with tremendous cuts in manpower in such industries as aircraft, shipbuilding, and machinery. Total Government employment will take a cut-back from approximately six to four million. The same Bureau of Labor Statistics estimates shifts in industry as follows: The manufacturing industries in which there will be a post-war reduction in labor force are iron and steel, about one-half million; machinery one million, aircraft over a million; shipbuilding over a million; chemical and petroleum products one-third million; automobile concerns about a quarter million; and food one-quarter million.

Those industries in which it is estimated the labor force will remain approximately the same are printing; railway equipment, rubber, stone, clay, and glass; and those wherein there will be increases in labor are lumber, about one-sixth million; textiles, apparel, and leather products, of about one-half million. In the nonmanufacturing industries there will be a reduction aside from the Government service about one-fourth million in transportation and in the nonmanufacturing industries in which there will be an increase we find construction estimated at nearly two million increase, trade three-quarters of a million, finance and services one-sixth of a million.

The people of this country are vitally interested in retraining and reemployment, and are fully awake to its importance. Abundant evidence of that fact already has reached me. Business organizations, educational institutions, labor councils, alike, unmistakably have shown their interest. I have confidence there will be cooperation in our efforts commensurate with that interest. A great part of my job lies in the maintenance of mutual understanding and unified action on the part of industry and labor. I feel hopeful that this working together in this vital question of retraining and reemployment will serve a purpose in the furtherance generally of understanding in all relations between industry and labor.

I do not conceive this retraining and reemployment work as an overnight job. There must be a well-grounded and sustained effort to maintain the structure of Government assistance. This is not a stroke to put the Government in business further. It is the direct opposite. It is an effort, in the words of the Baruch report, to get Government out of business and private enterprise into it.

I have given you, gentlemen, with intended helpfulness, a brief general view of the work in hand for the Retraining and Reemployment Administration. In the interest of our boys, who now bear the shock of the battle lines on foreign soil, in the interest of the American worker here at home, and for the common good of our beloved country, I will carry on in the confidence that the work in which we are engaged will have your full support. I hope I will have your full support.

Mr. Chairman, I would like to introduce following that general statement, the statement of fact and problem before the War Contract Subcommittee of the Committee on Military Affairs, United

States Senate, which I submitted to you, and, with your permission, I will be glad to take up all of them in the order given or any special ones in which the committee may be particularly interested at this time.

Senator MURRAY. Thank you, General Hines. The statement of fact which you have prepared will follow your first statement.

(The statement of fact and problem referred to is as follows:)

STATEMENT OF FACT AND PROBLEM BEFORE THE WAR CONTRACT SUBCOMMITTEE OF THE COMMITTEE ON MILITARY AFFAIRS, UNITED STATES SENATE, BY GEN. FRANK T. HINES, MAY 4, 1944

Pursuant to the recommendations of the Baruch-Hancock report the Retraining and Reemployment Administration was set up in the Office of War Mobilization, coordinately with the Surplus Property Administration, to guide the processes of demobilization, retraining, and reemployment.

PROBLEM IN BRIEF

The magnitude of the task is indicated by the fact that more than 12,000,000 workers have been added to the pay rolls, that half of the 62,000,000 persons in the labor force are directly in war work and that there has been a dislocation of workers in industries and occupations as well as a geographical dislocation which breaks all migration records. Probably 20,000,000 people will have to change their work at the end of hostilities. Millions of these will have to change their location. In order to make the shift over from war to peace activities many of them will need retraining, interim unemployment compensation, and finally location in peacetime jobs.

HISTORY OF PROBLEM

In 1918 there were plans for the transition period and legislation had already been introduced into Congress for the institution of a planned scheme to gear demobilization to the economic situation, but so engrossed were our public officials in the prosecution of the war and the preparation of plans for the peace that this legislation died in committee with little or no debate. As a result, when the armistice came peace caught the country unawares. There was no over-all organization of Government agencies to plan the transition. There was no flexible national program to bridge the gap between war orders and peacetime production. There was no efficient employment policy involving the cooperation of management, labor, and Government to steer the course of demobilization, conversion, retraining, and reemployment. Thus the country faced the post-war period without the guidance of its leaders. There was no time for the selection and training of the administrative force needed for the task. The whole process of demobilization and reemployment was thrown into confusion. One month after the armistice, while plans for demobilization were still in the formative stage, half a million men were released from the armed forces, and, unfortunately, about one-third of these were demobilized in areas where thousands of workers were being released from war plants. There was little coordination between the concelation of war contracts, conversion, and reemployment. Demoralization resulted. Soldiers returned from Europe and from camps in the United States to cool their heels in employment offices and to walk the streets looking for jobs that did not exist. Finally came the depression of 1920 and the great depression and break-down of 1933.

Our impending dislocations are far greater than they were in the last war; hence the potentialities for eccnomic and social catastrophe are greater. In such a situation over-all guidance becomes absolutely necessary. This Nation cannot fight a war for freedom from fear and freedom from want and run the risk of having its population faced with the fear of depression and want when the war is over. Bills have been introduced by Senator George and Senator Murray, S. 1730, and by Senators O'Mahoney and Kilgore, S. 1823, on this problem.

RETRAINING AND REEMPLOYMENT ADMINISTRATION

In order that the mistakes of the past might not be repeated and to provide adequately for events to come, the Retraining and Reemployment Administration was set up by Executive Order 9427, under authority of the First War Powers Act of 1941. Its duties are as follows:

FUNCTIONS

The functions of the Retraining and Reemployment Administration with the advice of a Policy Board of representatives of nine Government agencies under the supervision of the Director of War Mobilization and in consultation with the Government agencies concerned are:

1. To have general supervision and direction of the activities of all Government agencies relating to the retraining and reemployment of persons discharged from the armed services and persons released from other war work, including all work directly affected by the reduction of the war program.

(*a*) To issue necessary regulations and directions in connection therewith.

(*b*) To advise with appropriate committees of Congress as to steps taken and to be taken.

2. To develop programs in consultation with the Government agencies concerned for the orderly absorption into other employment of persons discharged or released from the armed services or other war work, including:

(*a*) Adequate vocational training.

(*b*) Securing of jobs.

(*c*) Assistance to discharged persons and families pending reabsorption.

(*d*) Special consideration of the problem of release of workers from nonconvertible war industries.

(*e*) Integration of the above with wartime manpower controls.

3. To develop programs for the adequate care of persons discharged or released from the Armed Services, including:

(*a*) Care of wounded and disabled by physical and occupational therapy and vocational rehabilitation.

(*b*) Provision for the resumption of education interrupted by the war.

WORKING PRINCIPLES

Present viewpoints and assumptions are as follows:

A. The task constitutes a major national problem. The change-over from war to peace will affect every part of our economic life. No comparable task has exer existed before. More than $50,000,000,000 worth of annual current production of strictly war goods will be stopped when the war ends. This gap must be filled in large part by civilian production and civilian services. In solving the problem it will be necessary, in the language of the Baruch report, "to cure the things that cause us worry; to strengthen the good; to hold to the proven, as well as to test the new."

B. The task which confronts the Retraining and Reemployment Administration involves a partnership of Government, industry, and labor. While the function of the administration is to secure facts and set up policies and issue regulations and procedures for an over-all guidance of the reconversion processes, as well as to institute programs, it cannot accomplish the purpose without the cooperation of industry. Manufacturers and businessmen through their organizations will need to make plans for peacetime production, including surveys of need, liquid purchasing power, deferred demand for consumers goods, schedule of producing the right amount of goods to meet the demand over a given period of time, and the translation of manufacturing estimates into terms of man-hours and job and labor inventories. Labor, on the other hand, will cooperate in various ways. Thus control will be matched by individual initiative and free enterprise.

C. Reemployment is the key to the post-war problem. The solution is full employment in an expanding economy. An economy of scarcity and the cutting down of the labor force are not the solution.

D. The veteran's welfare is closely interwoven with the welfare of all.

E. Production must be maintained as high as good business judgment will dictate. There must be work to do. Without it there can be no jobs. Utilization of the present labor expansion cannot take place in a vacuum. At the war's end there will be a tremendous void to fill which can only be filled by full production of civilian goods and full use of services. Everything that will stimulate business, therefore, is essential to this program. There must be full utilization of new products and new inventions; full utilization of schools with their training faculties; dissemination of research findings on new world needs which can be met by American industry; encouragement of extensive trade with the nations that will need to be rehabilitated and rebuilt; encouragement of investment; adequate wage standards so that the population can purchase what it makes. As a means to this end industry and business must make plans now. It must estimate consumer demand, lay plans for reconversion of plants and machinery, estimate demand and purchasing power, estimate the product that should be turned out, and the labor components necessary to produce it. Various plans, such as the Gray plan and Lea plan, have been proposed.

F. The full use of cushioning is necessary. The cushioning factors in the situation are as follows: The war will probably end in different places at different times, making a gradual demobilization possible, both of soldiers and war workers. Their absorption by peacetime industry will be aided by several factors—the retirement of many women from the labor force, especially in agriculture; the return of younger workers to school; the resumption of college and professional training which was interrupted by the war, now estimated as a back-log of 1,500,000 man-years of college education; the retraining of both soldiers and war workers to prepare them to take new jobs; the renewal of services and businesses stopped by the war; the starting of new enterprises based on inventions developed during the war; increased production and commerce to meet the needs of rehabilitation and construction in devastated countries; increased travel; reduction of the work week; increased time for recreation; retirement of the older people, etc. These factors will cushion the transition from war to peace and should be kept in mind as aids in the readjustment program.

INVENTORY OF PROBLEMS IN RETRAINING AND REEMPLOYMENT

The following problems are receiving the attention of or are closely associated with the task of the Retraining and Reemployment Administration:

Fact finding and information.

1. Information on manpower needs and available labor supply—present and projected inventories.
2. Occupational outlook information; probable war-to-peace shifts in the labor force; amount of increase and decrease in labor demand for each industry and occupation within the industry, by States and regions.
3. Occupational analyses with emphasis upon common factors in related occupations for purpose of transfer of workers from wartime to peacetime jobs and from military to civilian pursuits.
4. Physical demands studies; job studies from the point of view of the requirements of the work for the selective placement of the handicapped.
5. Information for industries on how to use the handicapped in work they can do, maximizing their abilities and making minimal demands on their disabilities.
6. Handbook giving all the information on his rights and privileges a soldier or war worker needs to know.
7. Information centers for servicemen and war workers giving, in large cities, full information through specialized and trained interviewers, and in small places standardized information and handbook with referral to agency concerned which can give full advice and service.
8. Pooled information for guidance of production program for various industries.
9. Information on demobilization ratios in different geographical areas.
10. Economic and job information for soldiers, veterans, and war workers to guide them in their plans for retraining and employment now.
11. Report system for a quarterly survey and assembly of all information necessary for the reemployment program.

Demobilization, reconversion, and reemployment.

12. Questions of scheduling of reconversion of plants while the war is going on and afterward.
13. Problem of rate of demobilization in relation to ability of industry to absorb workers.
14. Cut-backs on contracts in areas of labor shortage first and in areas of labor surplus last.
15. Demobilization of war workers in industries and areas with due regard to the effect of such demobilization on the workers, the returning servicemen, and on industry.
16. Aid to industries in the development of manning tables and job and labor inventories in projecting peacetime plans.
17. Balancing labor supply and demand by redistributing production where necessary.
18. Redistribution of labor from region to region to take care of the displacement occasioned by the war and to improve its utilization.
19. Continual reappraisal of the national production requirements in relation to consumer demand and manpower resources.
20. Provision for maintenance, reeducation, and utilization of men and women in factories where retooling is going on.
21. Limits of demobilization of Army and Navy in the light of national defense needs.
22. Estimated demobilization schedule after one enemy is defeated; when both are defeated; during period of military government, and after.
23. Demobilization priorities: Those who have jobs waiting, first; oldest or married first; longest in service first? Which policy will serve reemployment and stabilization best?
24. Demobilization of wives with husbands.

Retraining.

25. Adequate provision for vocational training through utilization of agencies concerned and established institutions to enable soldiers and war workers to enter new employment.
26. Conversion of war training institutions and programs, civilian and military, to peacetime training; utilization of suitable plants and facilities.
27. Institution of new facilities and courses if necessary.
28. Course construction, based on job analysis; streamlining and acceleration.
29. Preemployment or vestibule courses for men and women, war workers and veterans, in industries.
30. Continuous training in industry after employment.
31. Liberalization of apprentice training for war veterans providing suitable credit for training and experience along the lines of the trade, and acceleration according to capabilities.
32. Experimental determination of minimum and maximum time required to learn a trade or other occupation.
33. Establishment of apprenticeship ratios by the labor unions and local apprenticeship committees for veterans.
34. Vocational and educational guidance, including testing for all applicants for retraining.
35. Determination of standard cost ranges for instruction, tools, and materials for training.
36. Securing of lists of accredited schools and training facilities.
37. Encouragement of the establishment of training departments in industry.
38. Encouragement of modern methods of instruction; visual aids, job sheets, laboratories, et cetera.
39. Encouragement of vocational education on adult level; subengineering technical training for foremen.
40. Continuation of job instructor training, job relations training, in industry and in Government.
41. Prediction of retraining needs so that educational institutions may prepare their educational services.

Reemployment.

42. United States Employment Service program—setting up of experimental stations in which best methods for veterans and war workers are worked out: Training for counsellors, et cetera.
43. Definition of programs of public and private associations for employment of veterans.
44. Definition of work of Selective Service System veterans' representatives.
45. Occupational analyses from the point of view of showing common or transferrable job elements and skills, and coding of occupations and workers on this basis to facilitate placement.
46. Preparation of charts on occupational trends.
47. Preferential employment for veterans in Government and industry; employment ratios for veterans.
48. Training on the job for disabled veterans in Government work with pay while training.
49. Occupational guidance.
50. Controlled referrals based on occupational information in hands of United States Employment Service.
51. Provision for securing the veteran his old job.
52. Estimated need and plans for public works and national service to take up slack in employment in interim period and afterwards.
53. National service up to 1 year, or other length of time to be determined, for all youth, men and women, including outdoor work, living and training.

Rehabilitation.

54. Physical and mental rehabilitation of veterans while in the Army and Navy hospitals, or afterward with the Veterans' Administration, with full utilization of physical and occupational therapy.
55. Vocational rehabilitation, including advisement and training under the Vocational Rehabilitation Service of the Veterans' Administration, with placement and follow-up.
56. Coordination of all rehabilitation programs, so that continuous service is rendered the individual under military and civilian jurisdiction in guidance and training; transferrable gudance schedules and records.
57. Rehabilitation of disabled war workers through the Rehabilitation Service of the Federal Security Agency.
58. Occupational analysis to determine physical requirements of jobs in preparation for selective placement of handicapped.
59. Establishment of employment ratios for the handicapped in industry, i. e., in the same proportion in industry as they are in the population or by some other measure.
60. Coding system for the purpose of relating certain patterns of disabilies to occupational demands; comparison of systems used in England and other countries.
61. Domiciliary care in veterans' hospitals for seriously disabled veterans.
62. Adjustment of workmen's compensation laws in the various States so that they do not work a hardship on those they aim to protect; Federal funds for extra compensation for second injuries, et cetera.
63. Securing of favorable attitudes of employers and workers toward the handicapped to aid in their employment.
64. Provisions for extra amount of permanency in jobs for the handicapped in view of the fact that the handicapped have difficulty in securing new jobs while as a matter of fact they hold their jobs very well.
64. Social rehabilitation of handicapped, especially the blind, ince the reconstruction of their social and personal habits is basic to vocational rehabilitation.

Resumption of education interrupted by the war.

66. Provision for continuation of educational plans of veterans and young war workers.
67. Determination of conditions under which education will be furnished, including a length of time in relation to the length of service and proved educational achievement of the applicant.

68. Prediction of the amount of higher education needed and in what fields so that the institutions may prepare faculties and materials; poll of Army and Navy to secure intentions in regard to amount of education and subject matter desired, under various conditions: Government paying a certain amount; without Government subsidy, et cetera.
69. Determination of rates to be paid by the Government for tuition.
70. Determination of Government aid for subsistence while receiving education.
71. Revamping of college courses and methods to make them suitable for older and more experienced students; increase of technical education, and education in economic and political problems capitalizing the new knowledge of the world.
72. Advanced standing or credit on length of college courses for war experience, training, and travel.
73. Provision whereby those who can make the best use of education will get the most of it; emphasis upon special consideration for the bright as well as the backward.
74. Information bulletin revised annually listing all the courses of all the higher institutions indexed by course, occupation, and locality.
75. Information bulletin on all vocational education indexed by occupational objective and locality, including all private as well as public institutions.
76. Listing of schools on the recommendation of Governors of States or regional educational agencies as accredited for the education of veterans.

Provision for special groups.

77. Retraining and reemployment for women.
78. Retraining and reemployment plans for professional workers, technical workers, youth, aged, and the disabled.
79. Securing the cooperation of special groups, organizations, manufacturers' associations, trade unions, etc., in educational plans.

Unemployment compensation and assistance.

80. Establishment of a temporary plan for unemployment compensation to carry over the adjustment period between dismissal or discharge and work for veterans, war workers and others not presently covered by unemployment insurance—this plan to run so long as the Congress deems advisable. This plan would involve the Federal supplementing of existing State unemployment systems to the extent necessary.
81. Exploration of the advantages and disadvantages of dismissal pay. The practicability of this is open to serious question.
82. Old-age retirement system can be invoked in case of the superannuated.
85. Cooperation of business organizations, chambers of commerce, etc., in

Stimulation of production for jobs.

84. Government aid in industrial and business expansion.
85. Cooperation of business organizations, Chambers of commerce, etc., in making jobs for demobilized soldiers and war workers.
86. Gearing American production to any plans which may be developed for reconstruction in devastated areas of Europe and Asia.

* * * * * * *

The above list of problems is not exhaustive, but is indicative of the types of problems which will have to be solved if the major task is to be accomplished.

PROGRESS TO DATE

It should be borne in mind that the Executive order provides that the functions conferred on the Administration shall be performed through existing Government agencies and officials insofar as is feasible. It is the purpose of the Administration to fully comply with this provision, and accordingly it is anticipated that the organization to be developed will concern itself with basic problems relating to the coordination of functions and programs.

The Administrator has met a number of times with the representatives of the nine agencies making up the Policy Board; namely, the Department of Labor, Federal Security Agency, War Manpower Commission, Selective Service System, Veterans' Administration, Civil Service Commission, War Department, Navy

Department, and the War Production Board, with the view of determining the programs of these agencies as they relate to retraining and reemployment in the interest of an integrated program.

In addition to the organization of the Policy Board an administrative office has been established.

Sufficient time has not yet elapsed for the Retraining and Reemployment Administration to give adequate consideration to the development and formulation of proposals to be presented to Congress for its consideration in conection with its functions. Such proposals as may be indicated will require a more comprehensive study and analysis of what is now being done under existing laws and through existing agencies in the fields of retraining and reemployment and what needs to be done.

It is the purpose of the Administrator to have comprehensive studies made for effecting the coordination of related work being done by the several agencies and establishing such programs for the post-war period as may be necessary to accomplish the objective or providing employment to the millions of workers and soldiers who will be faced with the necessity of seeking peacetime employment. It is believed that plans for the transition from war to peace constitutes part of the war effort.

Soon after the Executive order was issued establishing the Retraining and Reemployment Administration the heads of the Government agencies represented on the Policy Board were requested to designate their respective representatives for membership on that Board. The Board was promptly organized and held its first meeting on February 28, 1944.

The Board has concerned itself with taking inventory of its responsibilities and functions in relation to the Administration and has given detailed consideration to the establishment of local information centers where returning soldiers and war worker might go to ascertain their rights and privileges. The Board has also given consideration to the formulation and release of information in written form to persons being discharged from the armed forces. An appropriate pamphlet is now being prepared.

Further, initial meeting was had by the Administrator with labor represented by Mr. William Green and Mr. Philip Murray. The part labor is to play in the work of the Administration was thoroughly discussed and both representatives asked to name a liaison officer to deal directly with the Retraining and Reemployment Administration on problems as they arose. This request was granted, and Mr. Matthew Woll and Mr. Robert Lamb were named.

Conference was had between the Administrator and Mr. Lamb and Mr. Woll recently, and they are cooperating by writing local organizations of labor, taking up with them a number of problems that will arise in reference to the reinstatement of men and women now in the service of the Army and Navy in employment.

Conference was had with the Manufacturers' Association to obtain information as to what steps they have taken and the cooperation that could be obtained through this organization made up of more than 40,000 manufacturers. They have agreed to obtain information essential in the planning required by the Retraining and Reemployment Administration.

A letter was addressed to all Governors with a view of determining what steps are being taken by the several States dealing with the problems of retraining and reemployment. Excellent responses have so far come in from 27 Governors. These reports are being analyzed, and a summary will be prepared from which prompt information may be obtained as to just what the plans are in each State and how they will fit into the final planning.

Conference was had with Mr. George Romney, managing director of the Automotive Council for War Production, relative to the steps being taken in the planning of the automotive industry. Valuable information will be obtained from this organization relative to reconversion and the problems that might arise relative to reemployment not only of those now in war work, but men and women in the services.

Senator MURRAY. I have prepared some questions here which I think will bring out the facts that we are mostly interested in, and I think that will be sufficient for the purposes of the committee.

First, let me ask you, General, under the Executive order, do you have the responsibility of determining the rate of demobilization for the armed services?

General HINES. Mr. Chairman, I do not have that responsibility. However, the Policy Board has a representative of both the Army and the Navy, and that Board will take up that very question.

The committee may be aware that at one time there was a committee appointed by the President to study post-war demobilization, and at that time we took up the question of demobilization, whether it would be a slow orderly demobilization, or a more rapid demobilization. That problem will come up again before the Policy Board of this new unit.

I might say to the committee that I am a strong advocate of a slow orderly demobilization. I think one of the difficulties that we encountered in the last war was throwing on the communities the additional load of those that left the armed forces at a time when they were going through the period of readjustment.

Now, I should say, however, that I feel confident that the armed services, both War and Navy Departments, will be opposed to any long period, and they have two arguments that should be given consideration.

I advocated that these men be permitted to go home on furlough for 6 months. The only requirement during that 6-month period would be that they apply for employment. At the end of that time, they should be discharged.

Since that time, the Congress has taken steps which have changed, would change my views somewhat in that they have authorized a mustering-out pay, and undoubtedly the bill before the House contains a certain provision for unemployment compensation to the veterans that are unemployed. The picture as it was when we first discussed it with the War and Navy Departments has changed. However, their argument against any prolonged demobilization in the armed forces, it seems to me, should be considered.

First, they feel that the men themselves, and their friends, both in the public and in the Congress, will demand as they did before that they be discharged promptly.

Second, they feel that when they send men on furloughs for any great length of time, that they lose control of the discipline that may be needed in some cases. Something may happen that would be a disgrace to the military service or to the uniform.

Now, both of those arguments can't be readily pushed aside; they should be considered. Then, too, they undoubtedly would say to you that the matter of continuing the payment of these men, and the paper work and the employees necessary to do it, would be quite a factor in those two institutions. Personally, I do not feel that you would have the same problem with the Navy as you would have with the Army. I am hopeful, as many others must be, that our Navy will not demobilize very much. There may be some replacements, but I think I can see a good future use of the very strong Navy, and probably as

strong a Navy as we will have at the end of the war. I know of no better way to insure a proper peace and a proper settlement of some of the problems that will grow out of the war than to be prepared to meet any contingency that should arise. Our Navy can do that.

Senator MURRAY. Certainly, the end of the war in Europe would not have any appreciable effect upon the Navy with regard to the need to keep the sailors and personnel, because of the situation in the Pacific?

General HINES. I feel that it should not, although there is one factor that we must consider, and it has a bearing upon this particular problem. We have, in both the Army and Navy, as you gentlemen know, men who are employers themselves, and their release from the armed services will be a factor and will be helpful in our reemployment set-up.

Now, that is going to bring about a question of how we should demobilize: What will be the method? What will be the first man in and the first man out, and so on? That is a problem which I understand the British have been debating at some length even now while our effort is devoted to conducting the war.

Senator MURRAY. In an address made on April 6, 1944, Major General Hershey, Selective Service Director, made the following statement. I quote:

> The Congress in the Selective Training and Service Act provided that the rate of induction of men into the services must be based upon the ability of the Army and the Navy to absorb these men * * * Demobilization, if we are wise, will follow a similar pattern * * * The numbers discharged in any one area at any one time should be limited and should be based on the capacity of the community to absorb the numbers demobilized.

A previous witness, Dr. Melvin Copeland, director of research at the Harvard School of Business Administration, stated that such a policy would be impossible to administer, since the pressure from the folks back home to have the soldiers and sailors demobilized as quickly as possible would be the deciding factor.

What comment have you to make on this question?

General HINES. Well, General Hershey, of course, is a member of this same conference that I referred to where we discussed that, and I think he was in accord with my suggestion on the slow demobilization, so that accounts for his statement.

I feel that the pattern of mobilizing could not very well be followed, Mr. Chairman. We all know that our men are in all parts of the globe. Transportation is going to be a very important factor. It may be a sufficient factor to accomplish what I am in favor of—a slow, orderly demobilization. However, we have the ledger of the facts that we know in Europe and with rapid transportation, large numbers could be brought back as we did before.

In the last war, we brought men back from Europe faster than we sent them over; there were more men per month that we brought back.

No; the regulation of demobilization must necessarily be coordinated, and I consider that I am fortunate in having on these boards men of the caliber that has been designated. For instance, the Navy is represented on the Board, the Policy Board, by Vice Admiral Jacobs, who is an experienced man in personnel matters, and realizes the problem. General Thompkins, of the General Staff of the War Department, heads the War Department's Demobilization Unit. Those men, with the others on the Policy Board, I feel confident, would be able to offer a solution that will be workable; and it will be our purpose to take that up very soon.

The Board has at the present time before it the matter of cut-backs on contracts which, in some instances, has resulted in unemployment temporarily, but not serious; but as we all know, a cut-back can become pretty near to a close-down in some instances, and we should devote our efforts to finding out how well we can handle those which may lead to the proper solution of the larger problem of demobilization that we have to take up at this time.

Senator MURRAY. Of course, it would be desirable, if it were possible, to have demobilization geared to the ability of industry to employ——

General HINES. To absorb, yes; I agree with you, Mr. Chairman.

Senator MURRAY. But that would be a very difficult——

General HINES. I think we should aim at that; and how close we can come to it will probably involve a number of factors.

Mr. GROSS. General Hines, that policy would assume that industry be ready to provide jobs for the workers?

General HINES. Yes.

Mr. GROSS. To the veterans?

General HINES. Yes. I am not very much concerned with the veteran. Now, of course, you are familiar with the proposition that is already on the statute books under the Selective Service Act—a man coming out of the services is supposed to return to his draft board. On that board, they have an employment representative. It is his business to obtain for the man his old job, if it is still available; if not, then to endeavor to get him a new one. That is working in some respects, but not 100 percent. In other words, the men that have so far been discharged haven't all gone back to their original draft boards. Some of them have communicated with them; some of them have reported to other draft boards. We are endeavoring to do this at the present time, and if it works out as we hope it will, first, as these men are discharged by the Army and Navy, there is placed into their hands a pamphlet, a booklet, which outlines the benefits they are entitled to. But better than that, it will outline where they are to go for information. We are hopeful that that will avoid what has taken place so far in the demobilization that so far has taken place of a veteran going to one place, and then being told he has to go somewhere else.

In addition to the Army and Navy coming into the hands of the men before they are discharged, the Policy Board has approved a policy setting up in all communities extending out to the small ones, an information center. Now, that center isn't a combination of these agencies I have referred to—it will become known to everyone in the community that that is the place for the veteran to go to get accurate information.

Now, at those points, this booklet and information also will be made available. I have confidence that the combination of the agencies charged with establishing those and the utilization of many such agencies already set up by the States—and I should say to you that one of the first steps that I took was to write a letter to every Governor, and I have had remarkable responses. I told him the problem that had been given to me. I felt confident that they too had been giving some thought to this, and many States have. Many States have progressed further in their study of the problem than the Federal Government at the present time. But they all indicated a strong desire to cooperate, and work with the Federal Government. In other words, they say, "Give us the pattern; tell us what is best to do, and we will help you in every way we can." The result has been that in numerous communities and States, they have already set up information centers that are probably more extensive and more valuable than those that we are contemplating ourselves.

Senator MURRAY. Do you think there is any danger of going too far in preferential post-war treatment for veterans as compared to war workers?

General HINES. Well, Mr. Chairman, I have very definite views on that, and I think I know the veteran—the two groups of veterans. The disabled veteran will be accorded special treatment by the laws of Congress as already enacted. We should do everything possible for him that we can for his rehabilitation to enter employment again. That should be undertaken early. We should again find employment for him. He has a preference under the Federal laws and under most of the State laws, so he will get preferential treatment.

But for the larger group of able-bodied veterans, when they go back to their own communities, I think I can feel a sense of feeling on their part that they will again want to become citizens of that community; that they will not want to be taken by the hand and led around and told what they have to do, where they have to go, but they will look for opportunities of gainful employment. Now, their future is interwoven with the welfare of that community, and I am sure you will find they will be perfectly satisfied in unemployment compensation and whatever benefits the Congress deems wise to give them, to go along with the rest of our citizens and neighbors in their own community.

Now, I may be wrong in that, but that is my feeling at the present time.

Senator MURRAY. Do you think that there should be a congressional declaration of policy on behalf of equal treatment for demobilized soldiers and sailors, and demobilized war workers?

General HINES. I think after due consideration by this committee and the Congress, that it would be helpful, and I would hope that we could get some indication from the servicemen themselves on their feeling in that respect because it is going to have a very important bearing on the future; I am sure of that.

Suppose we took the other side of it and we attempted to set up a special treatment. Now, I am speaking of the able-bodied veteran, not the disabled. And we are going to treat him—he is going to get more unemployment compensation over a longer period than the worker. I have a feeling that it would in the long run work to his detriment; that he would build up in that community a certain resistance that would not be helpful to him or helpful to the community.

Now, an announcement of policy on what is done when you reach the point of solving that problem, I think, would be helpful; it would cause the people, I think, to understand the reasons that Congress acted as they did in the matter.

Senator MURRAY. Would you submit to the committee, in your own language, a tentative draft of a policy statement of this kind?

General HINES. I should be glad to.

Senator MURRAY. We should be glad to have you do that at your leisure.

Is there a need for more legislation in the field of unemployment compensation?

General HINES. I feel there is, Mr. Chairman.

Senator MURRAY. What kind of legislation do you favor?

General HINES. I think we should approach the problem carefully, and make sure—I am not an expert on unemployment compensation. Federal Security Agency—and I did suggest to the Committee that the head of the Security Board, Mr. Altmeyer, be called, because his views are based upon long experience. I have been only on the outskirts of the unemployment compensation up to this time, but so far, in studying the problem, I have these views, and I hope that they will meet with the approval of the head of the demobilization unit in which I am a part.

We know that there will be a definite period, I am not sure that I am prepared, or anyone else is prepared at this time to say how long the readjustment period should be made. But as a matter of approaching the problem, suppose we agreed that it would take 18 months. I feel that during that period of 18 months there should be a form of unemployment compensation.

If you leave it to the States under the present law as they are now set up, there is a great lack of uniformity. I doubt if all the States would be prepared to take in all that you might put in that period because there would be other than those that are covered now, groups that have never had any coverage, which would include probably veterans as well as war workers. So I have this suggestion to make: First, adopt a period of what we will call the period of reconversion. During that period, all unemployed workers, veterans, and even the groups that are not covered, be allowed a certain amount of unemployment compensation.

Where the worker or veteran, and there will be some veterans that will be covered when they come home, because my information leads me to believe that some 46 States have taken action to freeze the credit

of the men who are now in the service. Whether those men are in the same States or will go back to where that is frozen, I don't know; and Mr. Altmeyer would probably be a better witness, but we do know that there are many groups not covered that will be unemployed temporarily. For instance, one of the groups that has undoubtedly contributed greatly to the war effort—has been uncovered—agriculture. Regarding Government employees—some probably are covered, but, as I understand, practically none is covered insofar as unemployment compensation goes. And there are other groups which arrive at a minimum amount in order to avoid inequalities of the States.

I think the World War Veterans' Committee yesterday, in bringing out the Legion bill, arrived at an amount for the sake of uniformity of $20 per week. That may be too high; that is higher than the average of all the States at this time. Let the States pay the unemployment compensation. To set up a duplicate machinery for such purpose, in my judgment, would not be advisable; the administrative costs would be high, but then have the Government reimburse the State funds to the extent of the payments they have made at the requisite number of weeks unemployed, and that is fixed generally, I think, at 26 weeks in the given time stated. Let the Government reimburse the State funds for those uncovered groups that have no credit in the States. Let that be for a definite period at a definite minimum amount and over a definite length of time.

I do feel, Mr. Chairman, that some investigation should be made to determine whether, under existing laws, there is a tendency on the part of some people who frequently work harder to keep out of obtaining a job than getting one, than working at it, are not abusing the existing laws by working so many days a week and no more, and then being eligible for unemployment compensation. How extensive that is I don't know, but I have a kind of feeling that it is a subject that ought to be canvassed a little to see whether there is any abuse. The cost is going to be great enough, and we should avoid any abuses that can be eliminated.

Senator MURRAY. Do you think there is a need of legislation for the education and retraining of demobilized soldiers and workers?

General HINES. Of course, at the present time, we will take, first, the veteran. The disabled veteran is eligible for training under the Veterans' Administration at the present time if he has lost his ability to carry on in gainful employment by the disability caused by the war. Of if he comes to us and did not have any vocation when he entered the service, but he is in need of training to enable him to get ability to carry on, he can be trained.

In the Federal Security Agency you have another rehabilitation set-up where their attention now, I think, is devoted primarily to training for war industry, people that are untrained. They also rehabilitate the nonservice veteran as well as worker who is disabled in industry.

This Executive order contemplates, if it remains in effect, so long as the President has the power of maintaining it, that there will be retraining to fit employees into jobs. Undoubtedly, that is the ultimate objective, if I understand the order. I would say that it would be an excellent thing for the Congress to make sure that the policy which is now divided between two Government agencies at present, and there might be some question raised at a later date as to whether it is contemplated that when we have jobs and we haven't the character of people that will fit in those jobs, we undertake to give them some kind of course that will enable them to carry on.

Now, we are going to find, Mr. Chairman, as a result of what has happened to the men that have gone into the service, many men who went into the service with a certain character of employment when they come out they will not be satisfied with that job. They have been trained, many of them have been made excellent mechanics, particularly those that have had much to do with the mechanized part of the Army, and the Army and Navy together have had excellent schools. So many of those men are going to come out well qualified for better jobs than they had when they went in, and, in my judgment, we should encourage and help them to get better jobs.

Now, that may throw our employment schedule out of gear somewhat. We may find we can have more mechanics and more men in certain lines than we had before the war. Now, I have a feeling that if we are going to be a great nation, as we claim, and we have been able to do this job of mobilization, we ought to be prepared to find the way to keep all of our people gainfully employed. Unless we can do that, we are not solving the problem, so that retraining will, I think, take place in two categories.

Industry themselves are prepared to take part in this. Most of the large corporations have asked how they can get in touch with their old employees; they want them back. They have stated at the same time that many of them will have to be given refresher courses.

You probably noticed that Mr. Ford, in his large industry, issued a statement, without any prompting on anybody's part so far as I know, and it has been said by other corporations, probably, before and since, at least, that he wants all of his men back; he will take care of retraining and fitting them into the jobs.

Now, I think that is the attitude on the part of industry that we should encourage. It will simplify the Government's job in doing it. I do feel to do the job completely, we should have authority to retrain, if that means the only way we can reemploy.

Senator MURRAY. During the war, workers have migrated to points distant from their homes. What have you to say as to the need of legislation providing for transportation to take those workers back to their homes—to their original homes?

General HINES. Well, Mr. Chairman, that is going to be a problem that is difficult to answer. I have given some consideration to it; I have had no opportunity of discussing it with the Board. It will be a debatable issue when it appears on the floors of Congress, I am sure. The

charge will be made that these workers left of their own accord. Some of them did, but some of them left, I think, on invitation, because they went where it was necessary to carry on. As an example, I would like to cite to the Committee, to show that the problem is being considered by others beside the Congress and myself. In a letter from the Governor of the State of Washington, he wrote me a splendid letter, and he finally wound up and said, "Well, General, the State of Washington has 45 percent more population today than it had in 1940. The problem is going to be: What are we going to do with that additional 45 percent?" And that he barely had enough employment in that State to take care of the problem of employment in 1940.

Now, the problem is not easy of solution. In other words, there will be some of the people that have migrated; those that will want to stay. There will be some that will want to go back, the distances will be short; but if it works out anything like the problem we had with the bonus marchers who arrived in Washington, a lot of them will probably want to go the greatest distance that they can travel so that I wouldn't want to say at this hearing, Mr. Chairman, that I could recommend a policy on that at this time. I would like to discuss it with the Board. It is a problem that will have to be met. Now, to what extent he Federal Governmen will have to get into it, I am not prepared to say at this time. It is the hardest of all the problems connected with this dislocation of employment.

Senator MURRAY. Some of the industrial centers that have become overcrowded as a result of the war effort, I should think, would be very anxious to get rid of the surplus population and would be willing to furnish transportation for some of them in order to avoid the burden that will be upon them.

General HINES. I have no doubt that we will find, just as the Governor of the State of Washington said: Think of it right now; I may not make the bull's-eye on it, but I am going to attempt to find out the workers in some of these communities where they have industries and nothing else, no reemployment in some places where we set up plants. What are their plans? If you can get that pulse, I think we should get it.

Now, we must be considerate in all these problems, if we are going to solve this thing, and I would not want to say no, that they got there of their own accord and we should not help them to get back; it may be to the interest of the country to get them back. If it is, we should do it.

Senator MURRAY. Of course, it would not be a tremendous problem with reference to single men who have been employed at good wages during the war effort, but in cases of married men with families, it might present a problem that should have consideration.

General HINES. I attempted, in discussing some of the problems with labor, to get an estimate as to whether the war worker had accumulated any great amount of surplus as a result of high wages and continuous employment. It was the consensus of opinion at that time, and it was rather an answer off the record, it wasn't with any study or any consultation with the field at all, I was advised that the war worker generally would have little surplus; that whatever surplus they had would probably be found in War bonds, or they had utilized it to reduce indebtedness that existed before, to reduce the mortgage, and that the liquid cash available for any undertaking, like moving from one place to the other, would not be very much.

There is evidence of some of the men who have come out of the service that they have probably made greater savings than the war worker at home. That would be natural, particularly if they had been in a long time in remote places.

Now, of course, it would be unfortunate if we should adopt a policy that would require the sale of Government bonds to do something. In other words, the man who is employed will spend, whereas when he gets out of employment he tightens and hangs on to what little cash he has and what bonds he has.

Now, the Federal Government, if we are to be successful, must keep up production; we must keep up this large national income for many good reasons. We have got a terrific tax load on our hands which we will want to do something about liquidating, and if we permit our national income to go down, then it is going to be more difficult to meet the problem, and that will produce more unemployment, and more unemployment, more tightening up, and the cycle will not be going in the right direction.

Senator MURRAY. General, we have pending before the committee, several bills, one, S. 1730, and another, S. 1823, dealing with the over-all setting up of an over-all agency to handle the period of reconversion; and I should like to ask you if you have any comments to make on either of those bills?

General HINES. I haven't attempted, Mr. Chairman, to analyze the bills as to their sufficiency. I took the problem as presented to me to be one that you wished advice on the retaining and the reemployment section. Iwill be glad to go over them.

I do feel that it would be helpful, although I should not be speaking for Justice Byrnes, who is the head of the whole unit, but as I stated in the opening statement, those best able to handle demobilization are certainly those that helped to mobilize. In other words, it is the reverse of the problem, and they have certain information that is valuable. I should feel in the part of the job assigned to me on much firmer ground with legislation than without it, and I think, generally, that rule is a good rule.

Now, I am not sure what Justice Byrnes' views would be, but I certainly could not anticipate that there would be objection to the Congress outlining a policy and authorizing the establishment of an agency of this kind.

At the present time, the whole effort has been not to duplicate existing Government agencies, but to coordinate them, and to plan. I am not sure whether in the final solution of the problem but what it may be necessary to go further with some of those problems, but I think before we do that we should analyze them a little bit better, and whatever legislation is enacted, I would suggest it be in general terms that

would enable a study of them, with the thought that periodically we would report back to the committees of Congress with such changes as may be necessary to do the job.

Mr. KEFAUVER. I was going to ask, General Hines, the question of contract-termination legislation, which is well on its way toward passage in Congress, and you have enumerated, I take it, that that should be passed as quickly as possible because it affects——

General HINES (interposing). I have a very strong feeling, Senator, that——.

Mr. KEFAUVER (interposing). I am just a Congressman.

General HINES. All right; well, you are in the right place. I feel that there should be some definite authority to expedite the prompt settlement of contracts so that the Government can get clear of the plants that are engaged in war work.

Mr. KEFAUVER. Then there are a great many human aspects of demobilization which you have mentioned, and which all of us are interested in. Do you feel as quick as we can get contract-termination legislation, that these other matters should be taken up at this session of Congress?

General HINES. I do, if you have time. But there is one advantage of the operations that we are now carrying on under Executive order to give us an opportunity, probably, of being in a position to give the Congress better advice than if we had nothing until you pass legislation. But it is a problem in which, certainly, the Congress should take part.

Senator MURRAY. Any other questions?

Mr. GWYNNE. General, I presume after the war it will be necessary to keep a substantial force in Europe and other places, and that will tend to slow down demobilization to some extent, would it not?

General HINES. It would; and the remote places that part of our force is in will tend to slow it down. Our transportation will probably be in as good a shape as we have ever had it, but, at the same time, the distances are great, and certainly, not only the distances, but conditions may be existent in certain parts that will be such that we will want to——

Mr. GWYNNE. I am also wondering just how many of these young men who interrupted a college course to go into the Army or Navy will be able to go back and finish their course. Was it not the experience that many of the boys never did go back and complete college work in the last war?

General HINES. Yes. Much is going to depend on the age of the man when he comes out, what the opportunities are for him to get into gainful employment. I favor the educational provision in the Legion bill for two reasons: The President had said, when we lowered the draft age, to the Congress that we would repair whatever damage was done to the young man who was in school and pulled out. And while this bill goes further than that, it gives them all an opportunity to go for 1 year, and longer if they make good, I feel that it provides

an excellent cushion for the reemployment proposition for probably 800,000 to a million of the younger part of the armed forces. It is rather difficult to say what these men will do when they come back.

The Veterans' Administration has reemployed more than a thousand veterans of World War II up to date. I have talked to a number of them. We have a policy of employing as many veterans as we can, and wherever we have places for them. They don't seem to be decided, as a matter of fact, on getting back into schools; as far as I can tell, it is on getting a gainful job. Now, that is due in some cases to a change of, say, 2 years in a man's age. In other words, when he comes out, he will have had 2 years of service—a number of them will have had. But in rehabilitation, for instance, we have found approximately 8,000 eligible to be trained that have come out with service-connected disability. When we send them applications to apply for training, they haven't filed anywhere near that number. We have some 1,600 in vocational rehabilitation. That is due, undoubtedly, to one thing: That they are able to get employment at much higher rates than we pay as training pay during the period and, therefore, they are taking advantage of that, and many of them will undoubtedly come back to us for vocational training.

Senator MURRAY. General, many of us in Congress recognize these two main problems connected with reconversion as very serious departments and requiring legislation as promptly as possible. Could you within the next few weeks give us any recommendations that you can think of in connection with these problems?

General HINES. Yes; I will be glad to.

Senator MURRAY. We will be glad to have you do that as quickly as possible so that we may proceed with——

General HINES. (interposing). I would like to confer with Justice Byrnes, of course, on them.

Senator MURRAY. Yes.

General HINES. Where I will have to get a clearance, and also I hope to have the opportunity of discussing them with the President because a clearance on legislation of that character has to go through the Budget and be cleared.

Senator MURRAY. Yes.

General HINES. But I do feel that we should undertake to tell you early what steps should be taken on two particular problems that have been mentioned here today, unemployment compensation, because they may occur even with cut-backs, to some extent.

Senator MURRAY. Yes.

General HINES. And on the question of what we should do on reallocation of the labor that has been moved and the migration which has been very great, I was rather surprised to find it runs to millions rather than into hundreds of thousands. I will be glad to do that.

Senator MURRAY. Well, thank you for your statement, General.

Mr. KEFAUVER. Mr. Chairman, may I ask one further question: General, have you discussed this provision—after the opening com-

ment, I don't want you to repeat, but did I understand you to say that under Executive Order 9427, which was issued pursuant to the authority in the First War Powers Act, there was a division of activity in the Retraining and Reemployment Administration in connection with carrying out that program?

General HINES. No. The problem of retraining at this time is in two Government agencies. The Veterans' Administration has the training and rehabilitation of veterans with service-connected disability. The Rehabilitation Division of the Federal Security Agency has retraining or training for war jobs of war workers and able-bodied veterans.

Mr. KEFAUVER. Is it your recommendation that those two programs be included under the jurisdiction of one agency?

General HINES. No, I would not recommend that, Congressman. I can see with the proper overhead—over-all organization, that coordination can be kept in such a way as to avoid conflict or any duplication of effort. If they should attempt to put all veterans in one place, then certainly it should go with the other rehabilitation in the Veterans' Adminisration. But as long as the able-bodied veteran is to take his place with the war worker or other worker, then they have got it in the right place right now.

Mr. KEFAUVER. I believe you said that you would feel better about the set-up if specific legislation were passed to set up the Office of Retraining and Reemployment Administration, rather than operating under an Executive order?

General HINES. Well, we all know that the Executive orders have limited life. Legislation by Congress is always a safer procedure for accounting offices. As it is now, we go to the Congress for funds, we have to under this, but really with no authorization except the Executive order; while, otherwise, we would have definite legislation with certain limitations.

Mr. KEFAUVER. And it is a matter of policy which should be determined by the Congress, don't you think, General?

General HINES. I do. Many of these problems will require the determination by Congress.

Mr. KEFAUVER. I was interested in your statement about the cooperation you were receiving from the various States. I believe you say here in your prepared statement that you received replies from 27 Governors which were excellent. How are the States fitting into this program?

General HINES. Well, they are fitting in this way: For instance, they have already taken steps to make sure that the returning veterans are given direct information, and they are assisting them wherever they can in employment. They haven't had the necessity of doing much for the war workers; that is because employment is generally good in all of the States, except in one or two spots where temporarily people are out of employment. But they are excellent because they are

planning on what to do when the war is over. That is, they have programs of construction of their own, not made work, but actually work that should be done. Some of it may involve the Federal Works Agency, but most of it that they are planning are things that could not be done during the war period—they could not get materials or they could not get the help. For instance, the State of Nevada is probably one of the smallest States in population, and has laid out a 7-year program of post-war planning and post-war work, and very much in detail; they have the projects itemized; they have estimates of cost, and so on.

Now, other States are doing the same sort of thing. I am trying to find out, really, what the Federal Government has planned so far in trying to get whatever projects they think are worth while so that—to see how well the State patterns would fit together. One of the problems that we will have is the joint operation, and we should coordinate with the States to avoid expending too much energy in the way of duplicating our effort, which would be a great mistake.

Mr. KEFAUVER. It seems to me it would be very important that the Federal Administration work in conjunction with the appropriate committee or group of States so that you don't duplicate your efforts, and you can work together in the matter.

General HINES. Yes. That will be my purpose, so far as I can regulate it.

Mr. KEFAUVER. That is all, Mr. Chairman.

Senator MURRAY. Thank you, General Hines. That will conclude the hearing this morning.

We will meet Friday morning at 10:30, at which time William L. Clayton, Administrator of the Surplus War Property Administration, and M. P. Moe, of the Montana Education Association, will be with us.

(Whereupon, the meeting was adjourned at 11:50 a. m. to be resumed at 10:30 a. m. Friday, May 5, 1944.)

(Chairman Murray directed the inclusion in the record of the following material:)

STATEMENT OF REPRESENTATIVE JERRY VOORHIS, OF CALIFORNIA

I appreciate very much the opportunity to present to your committee certain data regarding the problems of small business in southern California. I would like to include with my testimony the attached letter from E. F. Scattergood, advisory engineer of the department of water and power, city of Los Angeles, Calif., and also a copy of memorandum to Mr. Scattergood from O. K. Buck. I wish to add that I share the views of both of these gentlemen on this matter and concur with the content of this letter and memorandum. They have by no means overstated the problem. And I believe their suggestions for constructive action are along exactly right lines.

DEPARTMENT OF WATER AND POWER,
Los Angeles, May 4, 1944.

Congressman JERRY VOORHIS,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN VOORHIS: The directives of the War Production Board (*a*) prohibiting letting of contracts in A–1 labor areas; and (*b*) prohibiting production of civilian goods other than those formerly produced by any industrial plant, both require careful study and administration by the boards responsible in any area or region; need to be made more flexible in order that discretion may be used by such responsible boards; and there is need that such responsible boards are instructed to make such studies in order that the directives may be intelligently and advantageously administered.

The Los Angeles area, declared an A–1 area, is far-flung in extent and covers a wide variation of conditions. In some sections like the harbor district, where shipbuilding is going on, there is great difficulty in getting sufficient employees due primarily to the lack of adequate housing and of transportation facilities. Transportation is a poor solution because the distances are so great, but is helpful. There are other areas, covering a large part of the city or metropolitan area within and without the city, where applications are made for employment. This is true with respect to the greater part of our 3,500 small war plants, one-half within the city and one-half in the area about the city.

Clearly there is need for increased subcontracting with respect to shipbuilding and it is just possible that a change-over to two 10-hour shifts, thus decreasing housing demands by 20 to 25 percent, coupled with even greater subcontracting, would keep the small war plants busy and at the same time avoid slowing down shipbuilding, or even boost it.

This leads to the particular occasion of our efforts in favor of our small war plants in Los Angeles. There are many of them, and increasing rapidly, beginning to suffer, some of them seriously, for want of work because of the directive prohibiting contracts being let. This directive seems to result in some of the procurement agents not attempting to let contracts there, though others do.

The area production urgency committee, from which procurement agents must secure an O. K. before letting a contract in such areas, as above stated, should both have authority and be instructed to make studies of the conditions throughout such areas and of individual plants with a view to permitting, and in fact encouraging, direct contracts or subcontracts which will keep those plants reasonably busy, in order to preserve their productiveness available for war production and for utilization of what will be otherwise idle labor during the readjustment period.

The attached 2½-page statement handed me by an engineer of our business agent's division, Mr. Buck, sets out respects in which these two directives may be more objectionable than beneficial, if not properly administered, and makes suggestions as to possible modifications in the directives and procedure.

I feel that it would be very desirable if you would call this matter, as I have endeavored to present it to you, together with the statement by Mr. Buck, to the attention of Senator Murray's committee, which it is our understanding is holding hearings in the interest of small industry.

Also it would be greatly helpful to the Los Angeles area if you, together with Congressman Ford and Congressman Sheppard, could together plan procedure which might lead to the War Production Board altering the two directives, as may be necessary, that there may be greater flexibility and more effective administration of them.

With respect to the directive relating to civilian production, it may be pointed out that in the Los Angeles area, within and without the city, there are many of the small war plants which are new and, therefore, produced nothing previously; there are many changes in the economies affecting production of civilian goods on account of the recently appearing competition of the Northwest and the East, which would make it necessary to shift to other lines of production in order to carry on successfully; and lastly, there will be demands for durable goods which have never been manufactured before which may be successfully manufactured in Los Angeles. The net result is that with such a directive the possibilities of civilian production now or during the readjustment period would be reduced to perhaps something of the magnitude of one-half of what might otherwise be realized.

Yours very sincerely,

E. F. SCATTERGOOD,
Advisory Engineer.

MEMORANDUM TO E. F. SCATTERGOOD

(From O. K. Buck, April 27, 1944)

With the cut-backs in contracts for the production of war materials due to a shift in emphasis of the war activity, and the completion by production plants of present orders on hand, a situation has developed which is causing distress among war plants in the Los Angeles area and one which very obviously is becoming more intensely acute each day. This situation has been brought to a critical point by the following official actions:

1. Limitation of the use of materials for the production of civilian goods.
2. Placing Los Angeles in a No. 1 critical labor area.
3. The restrictions with respect to procurement as outlined in the War Production Board letter of October 5, directed to all procurement officers.

The purpose, of course, of the last two actions is to bring into balance labor and production. If carried beyond the necessary point or if improperly administered, however, the results may be contrary to the purpose. The following effects have already been noticeable and will become a serious problem to remedy:

(*a*) Slow down of employees because of fear of losing their jobs.
(*b*) Loss of use of production facilities.
(*c*) Disintegration of production organizations and facilities.
(*d*) Loss of technical staffs.
(*e*) Unemployment among those unsuited for heavy industry labor.
(*f*) Shift of labor to other areas.
(*g*) Economic distress of firms and consequent removal from availability for war production uses, and from war readjustments.

The statements enclosed herewith were requested in written form for the purpose of demonstrating specific instances of derangement in full utilization of our industrial processes. For your consideration we are placing before you definite recommendations which would tend toward more harmonious balance of labor production and national need:

I. Relaxing materials restrictions to permit use for limited civilian production, giving consideration to the market needs of the local area, the need to keep production organizations alive, the utilization of vital production facilities, and the saving on transportation demands. It is my understanding that much consideration has already been given to this point and according to newspaper reports an order has already been issued and withdrawn. It is my impression that the time is rapidly nearing when such steps should be taken in order to insure more effective conversion to peacetime production at the close of hostilities.

II. Specific classification by the War Manpower Commission of the type of labor which is needed in critical areas. In the Los Angeles area the heaviest demand is for shipyard workers. The type of labor employed in most of the smaller plants in Los Aangeles, wherein are used the physically handicapped, older men and women, is not suitable for employment on ship construction. Curtailment of orders in these plants, therefore, does little good toward easing the labor market for the shipyards, and for the further reason that housing conditions in the harbor area make the retention of labor difficult.

III. Modification of or official interpretation of the October 5 procurement letter so that consideration can be given those factors outlined under recommendation I, as well as giving consideration to delivery schedules. The interpretation

which most procurement officers have placed on the policy outlined in that letter of October 5 is that if contracts can be let in other areas that this must be done, even though many individual plants in other areas, where the overall labor situation may be less critical, cannot meet delivery schedules and much cross hauling by means of our already overloaded transportation system is necessitated. The procedure followed by many procurement officers to determine whether the orders can be filled in other labor areas is to avoid inviting bids from plants within the areas. This in effect places a quarantine on the critical labor area.

IV. Encouragement of more extensive subcontracting in the local area and the awarding of contracts direct to smaller firms. The need for labor in Los Angeles is more extensive in the larger plants, particularly in shipbuilding, as previously noted, and the smaller plants, because of better control, supervision, and direction of their manpower, have had little labor difficulty.

V. Reconsideration of the policy established by the War Production Board that aid cannot be given those plants engaging in the manufacture of a product which is other than that manufactured before the war. The influx of workers into the Los Angeles area, principally because of the shipbuilding and aircraft plants located there, has been considerable, particularly in view of the fact that Los Angeles was not a heavy industrial area. The increased population must be taken care of post-war in the smaller plants which constitute the most or our industrial activity. Many new smaller plants were established as feeder plants to the larger industries. These have been equipped with machine tools and other production facilities which will enable them to produce civilian products much needed in the west-coast market.

If the population is to be kept employed, it is definitely necessary that these smaller plants in that area be given all the encouragement which our Federal agencies are able to provide. If this is not done, then a serious unemployment and economic distress situation will result.

MOBILIZATION AND DEMOBILIZATION PROBLEMS

FRIDAY, MAY 5, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE
OF THE COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to recess, at 10:35 a. m. in room 318, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray (chairman) and Representatives Kefauver and Gwynne, members, Committee on the Judiciary of the House of Representatives.

Also present: Kurt Borchardt, counsel to the subcommittee.

Senator MURRAY. The hearing will come to order.

I have an opening statement:

Yesterday afternoon, by unanimous vote, the Senate approved and sent to the House of Representatives the contract termination bill which Senator George and I have been working on for almost a year.

In passing this bill as a separate measure, however, the Senate stands pledged to legislation at this session of Congress on the broader aspects of post-war adjustment. Perhaps the most important of these other subjects is the post-war utilization and disposition of Government-owned war property. The handling of such property can have a profound effect on the level of post-war improvement, on the concentration of economic power, and upon our relations with other nations. The country is looking to Congress for decisive legislative action on this subject without any more delay. The Baruch-Hancock report of February 15 recommends that the Surplus Administrator report to Congress as soon as possible on legislation needed for surplus Government property.

Today we have the privilege of receiving the recommendations of Mr. Clayton, who was appointed Surplus Property Administrator shortly after the Baruch-Hancock report. While I understand Mr. Clayton is not submitting specific recommendations this morning, I hope that such recommendations can be offered within the next 2 weeks at the latest.

We shall also hear from M. P. Moe, on behalf of the National Education Association, who will testify on the board's use of Government-owned property of the American educational institutions.

Mr. Clayton will be the first witness, if Mr. Clayton will come forward, please.

Before starting the testimony, I wish to insert in the record a letter from the American Farm Bureau Federation to Hon. Scott W. Lucas in reference to Senate bill 1794 and House Resolution 4457.

(The letter referred to by Senator Murray is as follows:)

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., May 4, 1944.

Re S. 1794 and H. R. 4457

Hon. SCOTT W. LUCAS,
United States Senator, Washington, D. C.

DEAR SENATOR LUCAS: It is our best information that since January 1, 1939, approximately 50,000 farm families have been displaced from their homes in the acquisition of their farm lands for war purposes. It is our further best information that possibly 3,000,000 acres of land so purchased by the Government for war purposes should be considered as arable for farm use after the war. There is probably an equal amount of submarginal lands that probably in the future should be devoted to nonfarm use.

The American Farm Bureau Federation is interested in the approximate 3,000,000 acres of arable farm land that can be used for farm purposes after the war. The board of directors of the American Farm Bureau Federation at its regular meeting in Chicago on March 3, 1944, stated its position in a resolution, which reads as follows:

"That the officers and the Washington office be requested at an early date to have prepared and introduced into Congress legislation having for its purpose the requirement upon Government to offer, just as soon as war conditions will permit, all farm land taken over during this war, returned to its original owner, at the price paid for the land adjusted to cover any damage—that if not purchased by such former owner within a reasonable time that such land be offered at public sale, with preference to veterans, after wide advertisement, to the highest bidder and in offering such land in public sale and in determination of acreage to be offered, that due consideration be given to the peculiar requirements in various sections of the country as to what constitutes desirable units of land operated."

We are not advised, of course, as to what part of these possible arable farm acres can be disposed of by the Federal Government at the present time. Within a reasonable time after the Army and Navy may determine that they have no further need for such possible arable farm land, disposal of same should be made by the Federal Government and under a practicable formula laid down by the Congress. The dominant reasons for these conclusions are as follows:

1. Persons dispossessed of their farm homes, even though they have been compensated therefor, should have an opportunity, on a reasonable basis, to repossess their former farm lands after, of course, the need for public use is past.

2. The farming community from which such farm land was taken is entitled to have its community restored to the fullest extent possible so that the character of the community will not be permanently destroyed or its social order radically changed.

3. Local taxing districts, from which such arable farm land was taken, are entitled to the same being restored to private hands so that the tax systems within such taxing districts will not remain disrupted for too long a period.

4. The restoration of such lands for arable use will assist in the production problems of agriculture.

It seems to us that the bill introduced by you in the Senate, S. 1794, and its companion bill in the House, substantially conforms to the action of the board of American Farm Bureau Federation as set forth in the foregoing resolution. The American Farm Bureau Federation therefore heartily endorses S. 1794 and H. R. 4457 with the following reservations:

1. The last line of section 1 reads as follows: "In the event the right to purchase such land under this act is not exercised, such land is to be disposed of as otherwise provided by law." We assume that such land shall be offered for sale in public sale after the previous owner shall have had the right to exercise his option. If this assumption is not correct, this part of section 1 should be amended accordingly.

2. Section 3 provides that the President shall have the right to designate such departments or agencies of Government as he may deem appropriate, for the administration of such sales of arable farm lands. It will be noted from reading the resolution that the sales of such land at public sale, after the previous owner has opportunity to exercise his option, shall be in units as the respective section shall peculiarly require. It should not be offered in a way that it would permit corporation farming. The act should be amended to require that sales of arable farm lands to persons other than the original owner, should be restricted to persons engaged in agriculture, but corporations should be excluded from purchasing such lands. The act should further require that due consideration be given to the requirements in various sections of the country as to what constitutes desirable units of land operated.

It is appreciated that after the land has been purchased for the Army or Navy that certain degrees of improvements have been placed upon the land, that in some cases improvements have been made covering several farms, which improvements and the land upon which they are located, might serve the public more fully by maintaining such improvements for industrial purposes. In such cases, of course, the Government should not be required to break up such land, that is reasonably connected with such improvement, into farm units.

It is also recognized that certain of the lands that have been purchased for Army and Navy use have had improvements placed thereon and that such improvements have been used and operated by war industries with options to purchasers. In such cases, of course, if such options were exercised Congress, it appears to the American Farm Bureau Federation, should not direct that the contract obligation be voided.

With the foregoing reservations the American Farm Bureau Federation endorses and, with the amendments as defined in the reservations, will support S. 1794 and H. R. 4457.

Very truly yours,

EDW. A. O'NEAL, *President.*

Senator MURRAY. Mr. Clayton?

Mr. CLAYTON. Coming, Mr. Chairman.

Senator MURRAY. We are very glad to have you here this morning Mr. Clayton. Have you a statement you wish to present?

Mr. CLAYTON. Yes, sir, I have.

Senator MURRAY. I am sorry that I am going to be called away for minutes to another meeting, but I will get back as quickly as I possibly can, and, of course, will read your first statements later. I will be back before you finish. Mr. Gwynne will handle the meeting while I am gone.

STATEMENT OF W. L. CLAYTON, SURPLUS WAR PROPERTY ADMINISTRATOR

Mr. CLAYTON. I much appreciate Senator Murray's invitation to appear before you this morning. In that invitation I was requested—

to describe the basic problems of national policy involved in surplus property utilization, the policy problems that call for congressional decisions, related matters that also require legislative action, and the activities of (my) office since its inception.

With your permission I will deal first with the activities of my office to date, because I think that my views as to the major problems of legislative and administrative policy, and particularly as to the all-important time factor in relation to those problems, will be much clearer to you when you know the nature of the immediate questions which are pressing us and what we have done and propose to do about them.

The Executive order establishing the Surplus War Property Administration was signed on February 19, 1944, about 2½ months ago. It does not purport to create any new powers to dispose of Government property, but it establishes an agency which, pending legislative action, has general direction and supervision over the handling and disposal of surplus war property. It names four disposal agencies, each dealing with a particular type of property, and all working under policies fixed by the Surplus War Property Administrator. This arrangement should prevent competitive sales activities between Government agencies. It should further prevent one agency buying in the market what another agency wishes to sell.

Our first problem is, of course, to organize our own agency. Its principal functions are those of policy determination and coordination, and we are particularly anxious to use the facilities of existing agencies and not in any way to set up a duplicating organization. But in order to know the facts which must form the basis of any intelligent policy, and in order to insure that a policy, once made, is being carried out and is working, we need a number of competent people. Our plan is to have one group which will deal principally with the large procuring and owning agencies such as the War and Navy Departments, one which will work directly with the various disposal agencies, such as Reconstruction Finance Corporation and Treasury Procurement, and one which will consist of experts in the major fields of property which we will ultimately have to sell, such as machine tools, automotive equipment, aircraft, communications equipment, and the like.

Mr. GWYNNE. Mr. Clayton, would you object if we interrupt to ask you a question as you go along, or would you rather finish your state ment?

Mr. CLAYTON. I don't object; I think it would be a little better to finish my statement before asking questions, but whatever your procedure it will be agreeable to me.

Mr. GWYNNE. I will do that, with the exception of this one question. You make reference to the laws governing the disposal of surplus property. I wonder if there is a convenient compilation of those statutes? There are a number of different laws, as I understand it, covering various phases of the subject.

Mr. CLAYTON. Are you speaking now of existing statutes, or proposed legislation?

Mr. GWYNNE. Existing statutes.

Mr. CLAYTON. In our Surplus War Property Policy Board, we set up a committee, I think, at the first or second meeting of the Board early in March, to study that very question. The chairman of the committee is the Attorney General, Mr. Biddle, and his committee is actively working on the matter now. He has made one or two little preliminary reports to us. It seems there are about one-hundred-and-forty-and-some-odd statutes dealing with the subject of disposal of Government real property, so that it is a major problem to go through all these statutes and to codify them and get the information necessary to make a report. We are hoping to get a report on the subject from the Attorney General within a short time.

Mr. GWYNNE. I think that will be very helpful in clearing up the confusion that now exists on that subject.

Mr. CLAYTON. Yes, sir; it will be.

We are now actively assembling the type of personnel we need.

Almost all our remaining activities are complicated by a sharp contrast, which I want to bring forcibly to the committee's attention because I think it has a pronounced bearing on the questions confronting you. That is the contrast between the immediate problem of surplus disposal and the ultimate and all-important post-war problem.

While the war is on there will be a comparatively small supply of surplus goods and a good demand for them, although a large part of that demand is artificially pent up by the necessary wartime restrictions on the production of civilian goods.

With the complete cessation of hostilities, however, this situation will be drastically changed. Surpluses will then be very large. The great questions then will be whether to sell or not to sell, whether to sell rapidly or slowly, and whether to sell at home or abroad, with all the implications which these decisions carry with respect to foreign and domestic social and economic policies.

It is, of course, for this final phase that we must all prepare. But it would seem clear that one of the most effective ways of preparing for it is to locate and dispose of as much surplus property as possible during the current phase when there is a useful demand and an opportunity to sell with beneficial effect on the domestic economy. Every article sold now is one which will not overhang the market after the war. This must never be lost sight of in the effort to organize so as to be able to handle the post-war problem.

With these somewhat divergent objectives in mind, the activities of my administration to date may be briefly summarized as follows:

(*a*) Formulation and issuance to the procurement agencies of price policies for the sale by them or under their authority of property becoming available as the result of contract terminations. These are purely short-term policies designed to promote the prompt sale of termination inventories directly from the plant of the contractor where they are located, so as to reduce the quantity which will have to be removed, stored, declared surplus, and finally sold by the disposal agencies.

(*b*) Establishment of a clear-cut segregation of the various types of property, on the basis of the Standard Commodity Classification, and assignment of specific classes of property to specific disposal agencies for sale. This is the first necessary step for the coordination contemplated by the Executive order.

(*c*) Organization of the disposal agencies on a regional basis in such manner that they can receive regional reports of surplus, record them on a uniform basis, exchange information as to property available in different regions and advise prospective purchasers of what is for sale. Surpluses in major categories arising in the interim are being declared to the central office of the appropriate disposal agency in Washington.

595360—44——2

(*d*) Development of an appropriate form for use in reporting surpluses, together with instructions for its use.

(*e*) Preparation of an initial regulation, about to be issued, instructing the agencies as to forms and procedures for the reporting of surpluses and as to their relative responsibilities with respect to surpluses so reported.

(*f*) Study through committees and otherwise of such longer term problems as price and disposal policies in connection with specialized classes of property, such as aircraft, organization, and procedures for disposal of property located abroad, coordination with appropriate agencies of foreign governments, effective organization of large prospective classes of buyers, such as tax-supported institutions, price control, existing legal impediments to effective disposition and many others.

You will see from this outline that as yet necessity has dictated that very little of our time be devoted to laying detailed plans for post-war disposal or even to the current day-to-day marketing problems of existing surpluses. First things must come first.

The urgent legislative job, in my opinion, relates to the termination of contracts and not to property disposal. You have heard of this urgency from other witnesses more directly concerned with the problem than I, and I will not labor the point. But it is clear to me that any delay in termination legislation would be contrary to the public interest, and equally clear that a present attempt to legislate with respect to property disposal would probably delay termination legislation. I am aware that your committee has recently reported out a termination bill, S. 1718, that it passed the Senate yesterday, and I hope that it will soon pass the House.

I further feel that some delay in legislating on the subject of property disposal is not only unobjectionable, but in some respects positively desirable. My reasons for their view, briefly stated, are as follows:

(1) As to the immediate problem of disposal in the period of short supply, there is no crying need for legislation. I am advised by the agencies involved that in general their powers are adequate to permit them to dispose of the property currently becoming available as surplus, and I do not think that such current disposals, although they require planning, coordination, and judgment, raise any serious questions of national policy.

(2) Most important of all, I do not feel competent at the present time to recommend legislation as to the important post-war policy problems, or even as to the prior questions of marketing and pricing policy. It seems to me that when the proposed coordinated group of disposal agencies which I have described has been effectively organized and has had practical experience in the daily disposal of surpluses, we will all be in a much better position to determine what legislative path should be followed.

I am therefore not before you today to recommend the adoption of any legislative provisions with respect to surplus property disposition, but, on the contrary, am recommending against the adoption of any such legislation at this time and in favor of the concentration of congressional effort on a contract-termination bill.

I wish to make it quite clear, however, that I feel equally strongly that there are several aspects of the disposition problem on which Congress should in due course express its will. In response to the committee's request, I will outline briefly what I think are some of these aspects, without in most instances indicating any opinion as to the view which Congress should take.

First. Congress should determine what agency it wishes to designate or to create to have over-all direction and supervision over surplus disposal. Coordination will be impossible without a single responsible and authoritative agency, and Congress should determine its composition, functions, and powers.

Second. Whatever agencies are authorized to do the actual selling should receive from Congress a clear and explicit confirmation of their power to pass valid legal title to a purchaser. The multiplicity of statutes on the subject at present, particularly with reference to real property, is highly confusing.

Third. There are a number of classes of prospective purchasers of surplus property who assert claims to preferential treatment, either by way of a prior opportunity to buy, or by way of price advantages, or by outright gift. These classes include veterans, small businessmen, former owners of lands acquired by the Government, tax-supported institutions like States, counties, and municipalities, tax-exempt and charitable and educational institutions, and others. Various individual bills are pending as to the rights of these different classes, such as Senator Lucas' bill in favor of former owners of land and Senator Clark's bill for loans or grants to tax-supported entities. No administrator can fully grant the wishes of any of these groups without legislation, and any administrator is entitled not only to have an expression of congressional will on the subject, but also to have it in a single, comprehensive piece of legislation which will clearly state, if preferences are to be given, both the order of preference and the exact nature of the preference to be given. A cautionary word should also be added to the effect that the draftsmen of any such legislation should keep very closely in mind that any preferential provisions should be administratively workable so as not to impede or delay the flow of disposal.

Fourth. Various proposals have been made for restrictions on the sale of various classes of property, such as industrial plants and critical or strategic materials, some involving a prohibition unless the sale has specific congressional approval. While this is outstandingly a subject requiring time and thought before intelligent recommendations can be made, I feel positively that no legislation should require that the terms of proposed sales be submitted to Congress. I do not believe the Government would profit from business transactions negotiated on such a basis.

Fifth. If, as will presumably be desirable in some instances, disposal agencies are to be permitted to extend credit to purchasers, legislation to that effect would be desirable and perhaps necessary.

Sixth. Legislation may prove desirable as to such matters as disposal of surpluses abroad, prevention of their reentry into this country thereafter, and coordination of this country's program of surplus disposal with those of other allied nations.

Seventh. If it proves impossible to handle the matter adequately through administrative control, legislation may be necessary on the related subjects of acquisition of surplus property by speculators, profits realized therefrom, and misrepresentations to the public by persons purporting to have preferential means of acquiring surplus property at low prices.

Eighth. I am in doubt as to the desirability of legislation on such matters of price and disposal policy as selling through established channels of trade, selling to manufacturers goods requiring reconditioning before public distribution, sales so as to facilitate purchases by small business, sales to discourage monopoly, maximum mark-ups on resale, and the like. General principles expressed in statutes may be helpful if they are not contradictory of each other and are capable of administration without impeding the flow of commence. But there is no substitute for wise administration, and a principle which is ideal for one type of sale may be burdensome and against public interest in another. I am inclined to think that in such matters it is wisest to trust the Administrator, requiring him to subject his every act to the scrutiny of the public and the Congress. This, like the others, is a big subject, and I urge that I be given time and an opportunity to learn by experience before being required to make definitive recommendations.

Senator MURRAY. I note that you don't feel that you are in a position at the present time to make any recommendations with regard to legislation on this topic, this subject.

Mr. CLAYTON. That is correct, Mr. Chairman.

Senator MURRAY. Do you think that within a few weeks you might be able to make some recommendations?

Mr. CLAYTON. It is difficult to say, Mr. Chairman, as I am sure you can imagine. We are working on day-to-day problems under considerable pressure. Our biggest problem is to get our agency organized, and that is not so easy at this time. We need some very high-type people, and we have to look largely to businessmen to get them, because, after all, it is a business problem, this thing of selling; and in these days, when businessmen seem to have their faces turned away from Washington instead of turned toward it, they haven't the same patriotic urge to come that they had some years ago. It isn't too easy to get organized.

Senator MURRAY. It is a highly complicated problem, and the conditions are different in nearly every industry, so that it would require, I suppose, a great deal of study in order to lay down the policies that should control. The policies that might apply in one industry would not apply in another; is that true?

Mr. CLAYTON. That is exactly true; yes, sir.

Senator MURRAY. Is there a danger that if we don't have some legislation promptly that there would be considerable confusion in the disposition or utilization of the property in the meantime? That is to say, the various agencies of the Government that are in control of this property are likely to have conflicting notions as to how it should be disposed of?

Mr. CLAYTON. No, sir; I don't think we will have any difficulty in that respect, because my agency, the Surplus War Property Administration, is charged with the responsibility of fixing the policies surrounding the disposal of this property. The procedure is that the owning or controlling agency, when they have no further use of the property, declares it as surplus to the disposal agency named in the Executive order, and our agency sort of sits between the owning agency and the disposal agency to see that they work effectively together and to fix the policies surrounding the disposal of surplus property.

Senator MURRAY. There have been some stories appearing in the paper with reference to disposal of surplus property in recent weeks which indicate a very serious lack of care in disposing of the property, resulting in disposing of this property at a tremendous sacrifice without recognizing the Government's right in the matter.

Mr. CLAYTON. I think, Mr. Chairman, the instances to which you refer occurred some time ago. I think I know of several of them, and they occurred before the issuance of the Executive order setting up this new agency.

Senator MURRAY. Such things could not occur now since your agency has been set up?

Mr. CLAYTON. I don't think they could; no, sir. We have, as I pointed out in this prepared statement, we have already issued regulations having to do with the pricing policy on what we call contract-termination property, which is to be distinguished from surplus war property as defined in the Executive order. We have not yet issued regulations regarding the disposal of surplus war property, as I understood by the Executive order, but the agencies which are to dispose of the property have been made aware of our policies, our general over-all policies regarding such disposition, and I don't think that we will have a recurrence of the instances that you have referred to.

Senator MURRAY. Reference was made to some of those instances yesterday in connection with the consideration of Senate bill 1718. And Senate bill 1718 itself was being criticized because of the fear that this would permit business to get consideration that would enable them to get away with unfair settlements of these contracts in being paid exorbitant amounts. Have you studied this bill, S. 1718?

Mr. CLAYTON. Not critically, Mr. Chairman. I have, however, given very careful study to the question of pricing of contract-termination property, because that was our direct responsibility as delegated to us by the Joint Contract Termination Board. And we did give study to that subject over a period of about a month, and I think we have

it worked out in such a way that certainly not from the sale of this termination property will business people make any exorbitant profits.

Senator MURRAY. In your statement here you say that Congress should determine what agency it wishes to designate or to create to have over-all direction and supervision of surplus disposal. Of course, you have been set up already under the Executive order?

Mr. CLAYTON. Yes, sir.

Senator MURRAY. And any legislation that would be enacted would, of course, in the usual order of things, name, or undertake to utilize, your office as the office for the proper handling of this problem. You think, though, that you should have some more experience and study of the problem before you could begin to make recommendations as to fixed policies?

Mr. CLAYTON. I think we should, Mr. Chairman.

Senator MURRAY. And in the meantime, you think that the Government could be adequately protected and safeguarded from any reckless disposal of property enabling individual corporations or individuals from making exorbitant profits on it?

Mr. CLAYTON. Yes, sir; I think so. I think we have already taken steps which will do that.

Senator MURRAY. In Senate bill 1823 a provision is incorporated to the following effect: No option to purchase or otherwise acquire Government owned property shall be honored, except in strict conformity with the price and other terms of such option. Have you any comment to make on that provision?

Mr. CLAYTON. Well, I think it is fairly obvious that if an option states the terms on which it may be exercised, that the option itself can hardly be availed of except on those terms.

Senator MURRAY. So if it is not availed of, then it would be our own option and it would be subject to disposal under the general policies that would be adopted?

Mr. CLAYTON. Right. Yes, sir.

Senator MURRAY. So that the person holding the contract should not be entitled to favorable treatment by having that clause modified to give them an advantage?

Mr. CLAYTON. I would think they should not be entitled to preferential treatment; no, sir. Many of these sales, though, Mr. Chairman, will be on a negotiated basis, I would think.

Senator MURRAY. Yes.

Mr. CLAYTON. And it might easily happen that the contractor who held an option would in the end prove to be the purchaser of the property at less than the terms the option would require. But that doesn't necessarily mean that he would get a preference or that the terms of the option had been changed.

Senator MURRAY. That is right; he would have to meet competition.

Mr. CLAYTON. Yes, sir.

Senator MURRAY. And if he were able to outbid the others who were in the market for it, why, then, he would get it?

Mr. CLAYTON. Yes, sir; although it might be less than the option provided for.

Senator MURRAY. That is right; yes. Senate bill 1823 calls for the insertion of provisions calling for the rescinding of such contracts if a certain level of operations is not maintained. That is, where the Government-owned property is taken over or is in operation by these corporations, that if they don't maintain a certain level of operations the matter should be rescinded.

Mr. CLAYTON. I don't think I quite understand that point.

Senator MURRAY. Well, it is proposed that in the sale of any of these Governments plants, that a clause be incorporated providing that if the purchaser of the plant does not maintain operations on a certain level, then the contract should be rescinded.

Mr. CLAYTON. You mean, the——

Senator MURRAY. The purchaser of the plant.

Mr. CLAYTON. Well, as I understand it, it means that—oh, after the Government has sold the plant?

Senator MURRAY. Yes.

Mr. CLAYTON. That they should make as a condition of sale that operations should be maintained on a certain basis?

Senator MURRAY. Yes. Here is the language of the provision [reading]:

> Every contract for the sale, lease, or other transfer of a plant shall be made upon the condition that the purchaser, lessee, or transferee, and their transferees, if any, shall maintain the plant in operation for production for a period of 3 years next succeeding the effective date of the contract, and that, upon breach of such condition, the Government may rescind the contract and recover the plant.

Now, that would mean that if a person purchased one of these plants and failed to maintain the operations on a certain level, they would be required to vacate the plant and surrender it.

Mr. CLAYTON. Would that be at a full level, that is, 100-percent capacity?

Senator MURRAY. No. It means that in the sale they fixed the level at which he would have to maintain it, and if he did not succeed in maintaining it at that level he would lose the plant.

Mr. CLAYTON. Oh. Well, Mr. Chairman, that would be just one of the elements of negotiations. If you sat down—if I were sitting down now trying to sell you a plant, and I wanted to put into it a condition that you had to maintain operations on a certain level, we might start out and say you had to maintain it on a 100-percent level. You would probably say, "Well, on that condition, I am only willing to pay $5,000,000 for this plant because I take too much of a chance." Then I say, "How about 50 percent?" "Well, on that basis, I could pay a little more," and so on. It is a question of its being one of the elements in the transaction.

I should think that it would not be a very good thing to try to do because I think it would delay and make more difficult the disposal of plants.

Senator MURRAY. Naturally. And it would require the Government to sell them at a greater sacrifice.

Mr. CLAYTON. It certainly would.

Senator MURRAY. Wouldn't it be natural for any purchaser of a plant to want to operate it at the highest possible level of production, if the conditions of the country at the time permit it?

Mr. CLAYTON. Certainly.

Senator MURRAY. So that there would be no need for a provision of that kind because the purchaser of the plant would lose if he did not operate at a high level of production?

Mr. CLAYTON. I should think so.

Senator MURRAY. With such a clause in there, it would, as you say, be difficult to secure anybody who would purchase the plant and pay a high price for it if he were saddled with an onerous provision of that kind?

Mr. CLAYTON. I should think so; yes, sir.

Senator MURRAY. Senate bills 1730 and 1823 each have provisions with regard to the Antitrust Division functions on surplus property. Are you familiar with those provisions?

Mr. CLAYTON. No, sir; I am not.

Senator MURRAY. Well, you are continuing your study of this whole problem on surplus disposal, and, in connection with your studies, I presume that you will examine these bills that have provisions——

Mr. CLAYTON (interposing). Yes, sir.

Senator MURRAY. Pertaining to disposal, and any other bills that may come up in the meantime?

Mr. CLAYTON. Yes, sir; we will.

Senator MURRAY. We shall probably have some hearings on the subject; and during the progress of your future study of the subject, you will be able to work out some recommendations in the way of legislation?

Mr. CLAYTON. Yes, sir.

Senator MURRAY. You feel that legislation eventually will be necessary?

Mr. CLAYTON. Yes, sir; we do.

Senator MURRAY. But you think we should not proceed too rapidly because we might make mistakes?

Mr. CLAYTON. I think so. I think we ought to have a little more experience, get our organization set up, and have a little more time to study the whole subject.

Senator MURRAY. Senator Lucas has presented a letter here from the Farm Bureau, which was introduced in the record this morning. I should like to have you examine it.

Mr. CLAYTON. All right, sir.

Senator MURRAY. For the purpose of making any recommendation that you may desire to make.

I also have a letter here from Senator Lucas, referring to his bill, which I ask to have put in the record at this point. I might read it to you and ask for your comment on it, Mr. Clayton [reading]:

Recently I introduced S. 1794 which deals with the dispostion by the Government of surplus land acquired for war purposes. The bill is self-explanatory and needs little or no comment from the undersigned. However, it seems to me that the measure in question is in keeping with the principles of equity and elemental justice.

Certainly those people whose forebears have for generations lived in the same community should have a priority on returning to that community if and when the time comes that the War Department has reached the determination that the land has no further military value.

In the letter written to you by the Honorable W. L. Clayton, Administrator, Surplus War Property Administration, you will note he states definitely that Congress might well pass legislation for this purpose. Then he proceeds to set forth certain problems which should be considered by the committee, and I shall discuss them in seriatim fashion:

1. I agree that where land has been acquired from various owners and structures ranging from barracks to large industrial plans have been erected, that it would be inadvisable to divide this property into separate units, as was found by the War Department, previous to the time they took it over. However, it should be definitely understood that when a plant and barracks are sold as a unit, that the barracks are to be used in connection with the operation of the plant.

2. It is to be hoped that the contractors now operating these plants have not obtained from the Government options on all of the land surrounding the plant. If that is true, contract rights should not be respected under these circumstances. That is especially true in the event that the plant is to be used for some other purpose, and the land obtained for protection purposes in the making of implements of war is unnecessary in the making of civilian goods.

3. I do not follow objection No. 3.

I agree that considerable latitude of administrative discretion should be left in the agency. However, our troubles in the past with interpretation by the various agencies leads me to believe statutory language should be as clear and comprehensive as possible, in order that there will be no question about the administrator carrying out the intention of Congress.

Respectfully submitted.

SCOTT W. LUCAS.

Have you any comment to make on that, Mr. Clayton?

Mr. CLAYTON. Well, only this, Mr. Chairman: That I certainly sympathize with the purpose of that bill. I think there is a great deal to be said in favor of giving to the people who sold this land originally to the Government the right to take it back at what they got for it. But there are in connection therewith some very serious and difficult problems. For example, how long should the right run to the original owner of the land? If you would say that it should run for, say, 30 days after the disposal agency had indicated the land was to be sold, that is one thing; but that step cannot be taken by the disposal agency until the land is declared surplus.

Suppose, for example, this refers only to land acquired for war purposes. It is conceivable that some of it may be retained by the Government for 10, 15, or 20 years, and then declared surplus. Is this right to the original owner to run for that length of time? If so, you can see that that introduces some very serious and difficult problems.

Another thing is that if you are going to legislate to that effect, you understand that it introduces the problem of adverse selectivity against the Government. The original owners of land who see that the value of the land has increased since they sold it would obviously want to take it back. Others who see that they got a good price for it when they sold it and it is not worth as much as they got for it would not be interested, so that is a rather serious problem.

595360—44——3

There are many other difficulties—question of improvements on the land; you may have the land where you built paved streets through it and greatly improved its value in one way or another, and that makes for a difficult problem.

Are you going to do it, are you going to give the right of repurchase only to the original seller, or to his heirs, and so on? And then the administrative problem of searching out these people and locating them and making sure you have located the man who originally sold it before you disposed of it, would be a time-consuming factor which might greatly slow up the process of disposition.

As you know, we have at the present time a very good market for the disposal of surplus lands, and we should like to get on to that job as soon as we can. There are other points that will occur on reflection to make it difficult, but I want to say that I do sympathize with the purpose that Senator Lucas has in mind.

Senator MURRAY. Yes; I can see where it presents a great many problems, and it seems to me that some hearings should be conducted on the bill so as to work out those questions in order to avoid any mistake. If a bill is passed, it would virtually create a lien on the property for the previous holders or owners of the property.

Mr. CLAYTON. I imagine that is right.

Senator MURRAY. And some way would have to be provided that if they did not exercise their right to come in and take the property, they would be barred from it and the Government would be entitled to sell it?

Mr. CLAYTON. I should think so, and there would have to be a definite limitation of time.

Senator MURRAY. Well, undoubtedly, there would be some hearings held on the bill, and at that time you will be able to testify further?

Mr. CLAYTON. Yes, sir.

Senator MURRAY. Any questions?

Mr. GWYNNE. Mr. Clayton, I have received several letters, of which this one I have is typical. I want to read one sentence or two [reading]:

> I note that the National Housing Authority now has the authority to dispose of certain building materials that may result from the wrecking of certain Government housing units that may no longer be needed for the war effort. They are considering a plan to sell this material direct to the consumer.

Then, he goes on to complain that such a policy would be very injurious to his particular group of retail lumber dealers.

Would you care to make any comment on that subject?

Mr. CLAYTON. I would just say that, while I don't know the circumstances surrounding this particular matter about which he writes, that, in general, our policy is to see that this surplus property is disposed of through the regular channels of trade. It is not generally possible for, or feasible for the Government to deal directly with the millions of citizens who are interested in making purchases; and to do so would mean that we would have to set up duplicate organizations of existing dealers and so on, which would not, of course, be feasible or desirable. And generally, we do work on the basis of disposing of the property through the regular channels of trade.

Mr. GWYNNE. Then, it is not true, as he suggests here, to go on reading, that the policy is being adopted——

Mr. CLAYTON. I beg pardon, I am sorry.

Mr. GWYNNE. It is not true, as he suggests, that a policy is being adopted that would put the Federal Housing Authority in direct competition with retail lumbermen of the country, that is not true?

Mr. CLAYTON. I should not say that it isn't true. I will be glad to make a note of it and look into it to see just what action has been taken. But I would say this: That as soon as we can issue our regulations, the N. H. A. will have to declare as surplus any salvage or scrap material that may result from scrapping these houses. They are the agency selected for the sale of the houses, but I doubt if they would be the agency selected for selling the scrap if the houses are wrecked.

Mr. GWYNNE. Now, in connection with the legislation that will eventually be adopted by Congress, do you think it should be the general policy of that legislation to require the disposal of surplus goods, particularly consummable goods, through the regular private channels of trade?

Mr. CLAYTON. I don't think so, and for this reason. I think that that question is just part and parcel of the general question of the type of legislation that we should have. I don't think that legislation ought to run much to details. I think it ought to leave a very wide latitude of discretion to the Administrator because there are so many importabilities in the situation that it is impossible to foresee what will arise in each case or with each commodity. A general expression of preference in certain discussions would be all right, as, for example, that wherever feasible the regular channels of trade should be used.

I have several times given as an illustration of where, in my judgment, the regular channels of trade should not be used—should not have been used and were not used. The example of the sale of Government surplus wool. We had 330,000,000 pounds of foreign wool to sell. It was surplus, and we thought the best way to dispose of it was by auction in Boston, and that is the way we have been selling it. We did not use the regular channels of trade there. It is not necessary to go into the different reasons, I don't think, that prompted us, but we felt that was the best way to sell the wool.

There will be other cases where, for this reason or that, you may want to adopt a different method of disposal than using the regular channels of trade.

Senator MURRAY. There was some thought that the Smaller War Plants Corporation could perform some role in connection with the disposal of surplus property, especially in connection with disposing of it to the smaller concerns of the country. Have you any thoughts on that subject?

Mr. CLAYTON. Yes, sir. I have discussed it at considerable length with Mr. Maverick, the Chairman of the Corporation. I think they can perform a useful service in helping to bring buyers and sellers

together because they are in touch with these smaller plants all the time, and they can inform themselves as to the kinds of property they wish to acquire and keep informed as to what the disposal agencies have for sale; they can perform a service there in bringing the two together, just as we have arranged to do with the Redistribution Bureau of the War Production Board. They have 12 or 13 regional offices all over the United States, and in the disposition of contract termination property, they are performing a very useful service in receiving the lists of the property that is available and in distributing those lists to the people that they know may be interested in buying the property, and generally in trying to bring buyer and seller together.

Senator MURRAY. I should think they could by reason of their contacts with the smaller concerns of the country, keep them advised constantly of the property, the character of the property that might be available.

Mr. CLAYTON. Yes, sir.

Senator MURRAY. What policies do you think should be enacted in regard to the peacetime use of these patents and new processes which have been developed during the war?

Mr. CLAYTON. Mr. Chairman, that is something I just haven't thought about enough to express an opinion. I should like, if I may, to revert a moment to the previous question just to add that in my opinion it is highly desirable to keep at a minimum the number of agencies which will be actually selling this surplus property, actually disposing of it, because, obviously, whenever you add a new agency as a disposal agency you just introduce more confusion and competition, and make it more difficult for me in my job to see that they stay in the line.

Senator MURRAY. Well, I am sure that during the course of your studies there, you will be able to develop ideas regarding the correct policies that should be considered in connection with any legislation, and we will be glad to have you submit to us some statement on the subject later on.

Mr. CLAYTON. Thank you, sir. I should just like to add one other thought, and that is that with reference to Senator Lucas' bill and bills of that character, which are designed for the purpose of giving a preference, that it is very desirable that all such bills, I think, should be incorporated in one measure so that we will know the order of preference. Obviously, if the owner of the land is to have a preference in repurchasing the land, and then some other class of citizen is to have some preference also in respect of their land, all these preferences ought to be set out in one bill so that we will know how to proceed—who has preference number one, and who has preference number two.

Senator MURRAY. I should like to ask, Mr. Clayton, if you could submit a preliminary draft of a bill which would cover the first three points of your suggestions in your statement here this morning. It

is not necessary that you would be bound by them, but an outline of what you think might be the basis of legislation which would cover these three first points you mentioned here.

Mr. CLAYTON. I think the first two would be very easy, Mr. Chairman—we would not have much difficulty on the first two. Number three introduces a very difficult question, that is, these preferences.

Senator MURRAY. Well, you could submit some alternative drafts on that, or some general policies that might be considered.

Mr. CLAYTON. I should like to confer with my counsel for a moment.

Senator MURRAY. I tell you what you could do, Mr. Clayton. I wish you would examine that and submit to me any statement you think might be helpful. We realize you are in a better position than anyone else to pass on the problems of legislation here and all we want is to have your best advice and assistance in considering the legislative features of it.

Mr. CLAYTON. Thank you, sir. We will try to do that within a short time.

Senator MURRAY. Thank you. Thank you, Mr. Clayton, we appreciate your coming.

Mr. Moe, will you state your full name, your residence, your position, and whom you represent?

STATEMENT OF M. P. MOE, EXECUTIVE SECRETARY OF THE MONTANA EDUCATION ASSOCIATION

Mr. MOE. My name is M. P. Moe, executive secretary of the Montana Education Association, Helena, Mont.

Senator MURRAY. Before you begin your statement, I wish to introduce in the record in connection with your statement a letter from Mrs. C. W. Gross, president of the Montana Congress of Parents and Teachers, in connection with this topic.

(The letter introduced is as follows:)

MONTANA CONGRESS OF PARENTS AND TEACHERS,
Helena, May 1, 1944.

Senator JAMES E. MURRAY,
Congress of the United States,
Washington, D. C.

DEAR MR. MURRAY: The Montana Congress of Parents and Teachers at a meeting of the executive board held on April 27, voted unanimously to instruct M. P. Moe, executive secretary of the Montana Education Association to represent them at the hearing before the War Contract Subcommittee to be held May 5.

We are in favor of that portion of war surplus materials which can be used for training programs in our public schools being distributed to the schools on an equitable basis. We believe that this would be for the mutual benefit of the schools and the public.

We also favor distribution of these materials through the various educational authorities on the various levels—National, State, and local—as these authorities should be best informed as to needs and maximum use to be made of these materials.

Very truly yours,

Mrs. C. W. GROSS, *President.*

Senator MURRAY. You have given your residence, Mr. Moe?

Mr. MOE. Yes.

Senator MURRAY. I welcome a representative from my home State to appear here before this committee to assist us in this important legislation we have. I am sure you can be helpful to us.

Mr. MOE. I appreciate very much, Senator, the opportunity to be heard. I am sorry that I haven't enough copies to be distributed at this time, but since arriving I have been asked to represent more than just my own State so I have had to revise what I had.

At this hearing I am representing, as an official, the following organizations:

1. The National Education Association, of which I am a vice president and a State director. The Montana Education Association is an affiliate of the N. E. A., as well as 47 other State education associations, altogether aggregating approximately 800,000 teachers in the United States, the District of Columbia, and the Territories.

2. The Montana Education Association, as its executive secretary.

3. The National Association of State Secretaries of Teachers Associations, as its secretary-treasurer.

4. The Montana Veterans' Advisory Board, as its secretary-treasurer.

5. The Montana district of Kiwanis International, as its immediate past governor and senior member of the State board.

I also represent the following organizations as indicated by the attached letters or copies of letters:

1. The Montana Congress of Parents and Teachers. I believe, Senator, that you have received a letter from Mrs. Gross.

2. The Montana School Boards Association.

3. The Helena Board of School Trustees.

4. The State department of public instruction, Elizabeth Ireland, superintendent, and Harry Norton, supervisor of visual education.

5. Montanans, Inc., the State chamber of commerce.

You will please note that the organizations and individuals represented form a cross section of our people. Had time permitted, I should have had letters for representation from other groups, such as the Montana Federation of Labor and the Montana Congress of Industrial Organizations, both of which are vitally interested in improved educational facilities as well as in the maintenance of production and of employment after the war.

A. It is our belief that materials now being used in the war effort, useful for training purposes in our schools, should be distributed to the schools on an equitable basis and without cost, possibly excepting cost of handling, storage, and transportation. It is impossible at the present time to know just what might be obtainable in surplus materials.

1. These materials would include, by way of illustration, such items as:

(*a*) Aeronautic equipment, training planes, parts, repair tools, motors, and apparatus suitable for equipping flying fields.

(*b*) Electronic equipment, radar, radio, and other radiations apparatus developed for war service.

(*c*) Visual aids—projectors, films, maps, charts, graphs, and so forth.

(*d*) Radio instruments, equipment, and supplies both for receiving and broadcasting and for training purposes in shops and laboratories.

(*e*) Musical instruments and supplies.

(*f*) Shop tools and equipment for auto and other mechanical training.

(*g*) Materials for demonstration and practice, such as engines, trucks, planes.

(*h*) Laboratory equipment and supplies for training in biological, chemical, physical, and other sciences.

(*i*) Transportation equipment such as chassis, tires, and other parts suitable for the building of school busses the supply of which has now been greatly depleted because of wartime restrictions on material and labor. Jeeps, station wagons, and the like would meet a vital need of attendance officers and maintenance employees.

(*j*) Miscellaneous materials, such as books of science, mathematics, aerodynamics, health, hygiene, recreation, military drill, and sporting and recreational goods.

2. Without such materials, the schools cannot hope to do the training in the post-war era that will be demanded of them. A few of the most fortunate schools may be able to do so, but a large majority are now having a difficult time to keep going. The post-war schools will be called upon to provide a vastly expanded program. The billion dollar educational program for veterans will call for a great increase in training equipment. The reconversion of war industry will require the retraining of millions of war workers for peacetime jobs.

3. Such materials turned over to the schools will eliminate a large quantity of goods from competition with post-war industry, thereby assuring maximum employment opportunities for returning veterans and war workers.

4. Such materials have been paid for by all taxpayers throughout the United States, who are entitled to their continued use. The only effect of our request is to transfer such property from the custody of Federal officials to State and local officials.

5. We believe that our request is based upon sound reasoning whether considered from the angle of the taxpayer or from the angle of our economic and social welfare. The distribution of such goods to the schools will enable them to improve their program of preparing our future citizens vocationally and socially in the more complicated age in which they will live.

B. We believe that in making these materials available to schools our established educational authorities, cooperating closely at all levels local, State, and national, should have a large part in determining what materials are usable in the schools and how they can most effectively be made available to them. The United States Office of

Education, the State departments of education, and the local school boards, will be able to give advice and counsel in the fields which they represent. The use of these agencies will reduce the costs of distribution by utilizing already established offices properly manned.

C. Do schools need the surplus war materials? One example may suffice to show this need. The Helena, Mont., school district is one of the wealthiest in the State; yet that district could not have trained 7,000 men and women (a number almost equal to one-half of the population of our capital city) for the armed forces and war industry had it not been for the materials furnished them by the various Federal agencies.

L. W. Fahrner, principal of the Helena Vocational School, stated on Monday of this week that he needs $25,000 worth of small tools and instruments right now. These cannot be secured because of the fact that all income now provided for operating the schools is being utilized to its full limit. A special election to vote additional levies must be held in order to prevent a curtailment of the secondary school program.

Other school districts are less fortunate. Our school taxation and finance laws have been liberalized and State funds built up so that today we can secure about twice as much money per classroom unit as we could have under the laws previous to 1929. In spite of this, increased demands and costs have outstripped increased finances.

A present State study shows that by 1960, due to increased birth rate, and demand for more and better educational programs, we shall again have to double the funds furnished for schools.

We are not asking the Congress to tax the people to furnish us with this surplus equipment; we are merely asking that you transfer title or custodianship from the Federal Government to State and local units of government. We oppose placing these materials on the market for sale at personal, corporate, or governmental profit, thereby depriving our schools of needed help and also entering into competition with industry and causing a curtailment of employment for our returning veterans and war workers.

We do ask that provisions for aiding education in this way be made as a specific mandate in legislation to be passed now. Now is the time—not tomorrow—to plan for effective education of the veterans and the war workers who will need to shift occupational skills immediately upon reconversion of war offices and factories to peacetime production. Without knowing now that such equipment and supplies will be available, we cannot plan effectively. We cannot wait for the liberalization of present State laws to finance the purchase of such materials. If the supplies on hand at the close of the war are not made available to schools, the education of both veterans and workers must wait, even thought the Government finance the purchase of new equipment, until the wheels of production have turned it out. This may take 2 years or more.

We ask you to give these thoughts your most serious consideration.

(The letters referred to by Mr. Moe as being attached, are as follows:)

APRIL 21, 1944.

Senator JAMES E. MURRAY,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR MURRAY: We are informed that a hearing will be held in the United States Senate on May 5, 1944, concerning the disposal by the United States Government of equipment no longer necessary to the conduct of the War, including radio, visual aids, aircraft and parts, etc.

It is our desire that a part of this material be made available for use in the teaching process by Montana public schools.

Mr. M. P. Moe, secretary of the Montana Education Association, is authorized to speak for our association at the hearing, and we trust that your committee will give thoughtful consideration to his remarks.

With best wishes,

Cordially yours,

———— ————, *Secretary.*

PUBLIC SCHOOLS,
Helena, Mont., April 24, 1944.

Senator JAMES E. MURRAY,
Congress of the United States, Washington, D. C.

DEAR SENATOR MURRAY: This is to certify that the Board of School Trustees of Helena has authorized M. P. Moe to represent it at your hearing on distribution of war surplus materials before the War Contracts Subcommittee.

The board is in favor of distributing materials useful to schools in their educational and training programs and also for making arrangements to distribute these materials through the established educational authorities on the National, State, and local levels.

Very truly yours,

F. E. YOUNG, *Chairman,*
J. F. MCBRIDE, *Secretary,*
Board of School Trustees, Helena, Mont.

DEPARTMENT OF PUBLIC INSTRUCTION,
Helena, Mont., April 29, 1944.

Senator JAMES E. MURRAY,
Congress of the United States, Washington, D. C.

DEAR SENATOR MURRAY: It has come to my attention that a hearing will be held in the United States Senate May 5, 1944, concerning the disposal by the United States Government of equipment no longer necessary to the conduct of the war, including radio, visual aids, aircraft and parts, etc.

If this equipment is to be made available to the schools of our Nation we wish Montana to be considered in the distribution as Montana schools could make excellent use of these teaching materials.

We understand Mr. M. P. Moe, executive secretary of the Montana Education Association, is to be present at the hearing and will speak on behalf of several groups, Montana State Department of Public Instruction, included.

Yours very truly,

ELIZABETH IRELAND,
State Superintendent of Public Instruction.

595360—44——4

DEPARTMENT OF PUBLIC INSTRUCTION,
Helena, Mont., April 25, 1944.

Mr. FLOYD BROOKER,
Director of Films, Federal Security Agency,
United States Office of Education, Washington, D. C.

DEAR MR. BROOKER: I have been told by Mr. M. P. Moe, executive secretary of the Montana Education Association, that he is leaving here to be in Washington for a conference on May 5. He expects to there on May 4 and I presume that he will at once make contact with Senator Murray.

The occasion of his visit to Washington seems to be the post-war disposal of material now being used by the armed forces. Since a considerable amount of their matériel may be in the field of visual education I have asked Mr. Moe to discuss with you the needs of Montana for material that could come from the Federal Government to the poorer schools of our State.

If you feel that you will have matériel which could be used by the department of visual aids of the State Department of Public Instruction of Montana, we would be pleased to have same and assure you it would be used to advantage.

Your very respectfully,

ELIZABETH IRELAND,
State Superintendent of Public Instruction.
By HARRY NORTON,
State Supervisor of Visual Education.

MONTANANS, INC.,
Helena, Mont., May 1, 1944.

To Whom It May Concern:

The bearer, Mr. Martin P. Moe, has talked over his trip to Washington on the release of excess materials to schools in the use in educational process.

We feel this would be a fine thing and give them facilities they could not afford otherwise and we concur in this move.

Yours very truly,

MONTANANS, INC.
By A. T. PETERSON, *President.*

Senator MURRAY. I think you take the position that the State educational institutions can be of great assistance in aiding in the proper disposition of this property?

Mr. MOE. Yes, sir.

Senator MURRAY. You don't mean that property should be turned over to the State institutions for disposition, but that they should be able to make recommendations as to how it should be distributed?

Mr. MOE. Yes. I did not mean that the institutions would be the agency desired to distribute, no, but simply that their knowledge and informational needs should be utilized so that would not happen. Recently I heard someone received an airplane and the cost of shipping was so much that they could not pay for it, but that only materials usable were to be distributed. We are not in favor of a plan that would distribute materials to schools they cannot use.

Senator MURRAY. If the State educational institutions had information with reference to the character and extent of the property that would be available for distribution, you could make an estimate on the amount that could be utilized in your State?

Mr. MOE. Yes.

Senator MURRAY. And provide suggestions and advice to the authorities who will be disposing of this property as to just where it should be disposed of in the several States?

Mr. MOE. Yes. I believe that in carrying on the work of distribution, the State Department of Education, which has its vocational set-up, particularly could give you informational needs in the various fields of material that may be available, and could do so on very short notice.

Senator MURRAY. Do you think the legislation that might be enacted should only permit the State educational institutions to have certain priorities, or should there be a firm mandate that they be required to distribute this property to the greatest extent necessary to the educational institutions of the country?

Mr. MOE. Immediately when the war is over, and, in fact, right now, the problem is appearing, but only on a small scale. But immediately when the war is over there will be thousands returning who will want to be retrained. We need that material now, because although we have been furnishing a great deal of material in our training of the 9,000,000 war workers in the past 3 or 4 years, that material is just about worn out and used up. For instance, in this school in Helena in a 2-year period they carried on on a four-shift basis, 6 hours each, for the full 24 hours, and they have actually utilized this material in the 2-year period equivalent to about 10 years of normal service. And we need it now so that we can be ready. We are already training some of the returning veterans in this very school and not some others, and we cannot wait for the others if we are to do the job.

Senator MURRAY. You then urge that legislation should provide ways and means of carrying out a program of that kind?

Mr. MOE. Yes. I do not believe that such legislation would be in conflict with Mr. Clayton's viewpoints. As this is not going on the market to dispose of materials.

Senator MURRAY. No. It would be practically withdrawing it from the market.

Mr. MOE. Yes.

Senator MURRAY. And protecting industry from being flooded with a lot of property while at the same time carrying on a very important function of education and training.

Mr. MOE. Yes.

Senator MURRAY. Which would be valuable to the country?

Mr. MOE. Yes.

Mr. GWYNNE. Mr. Moe, your notion is that this material should be turned over to these schools without charge?

Mr. MOE. Yes, as nearly as possible. I did mention that probably the cost of distribution, handling, and so on——

Senator MURRAY. Has any Federal agency yet asked you what surplus property you might be able to use?

Mr. MOE. None has come to my attention, although Miss Ireland did say that someone had written them stating some materials were available at the present time. But her statement was that the trouble

was, the materials available would be purchased if the local school districts had not already purchased the material. For instance, visual aids, projectors, we have about 135 schools already having projectors, but we have approximately 90 of our village and city schools which do not have because their budgets will not permit it. Then we have the rural schools in the 56 counties who probably could use a projector for all the rural schools by circulating—being circulated on the library plan. Then, we also have the State visual aid library, of which Mr. Norton is a director or supervisor, and he stated that of course they are short of materials for distribution, not turning over as property, but for use and distribution through the library method to these various schools, and, of course, they are anxious to build up the library to render the service that they are called upon to render.

Senator MURRAY. In addition to the public schools and institutions, there are a number of private schools. Do you feel they should also be entitled to participation in the distribution of this surplus property?

Mr. MOE. Of course, I have no authority to speak for the private schools, and haven't given that much thought.

Senator MURRAY. But if they are engaged in teaching along the same lines as the public institutions, they could greatly improve their work by having access to some of this surplus property also?

Mr. MOE. Now, in our State, I imagine that work would come in the colleges, as I don't believe we have any private high schools that have any programs of this kind. There might be some minor equipment, but as far as vocational training is concerned——

Senator MURRAY. Like where they teach chemistry or something like that?

Mr. MOE. Yes, that is possible.

Senator MURRAY. They have a Christian Brothers school in Butte, for instance, where they conduct high school courses.

Mr. MOE. Yes?

Senator MURRAY. They might be able to use some equipment in connection with their teaching program.

Mr. MOE. Well, that, of course, I think, is entirely a matter to be determined by your group. I haven't contacted any of them, so I don't know what their wishes are.

Senator MURRAY. Have you discussed the problem with Mr. Clayton, the Surplus Administrator?

Mr. MOE. No; I have not.

Senator MURRAY. I think it would be advisable for you to see him while you are in the city, and go over the subject and get his views on the matter. I think he could probably be helpful in advising you on what kind of program should be carried out.

Mr. MOE. Well, I will try to do that. I am leaving this evening, but I will try to contact him.

Senator MURRAY. If you can't see him, you could correspond with him. I think he would be able to help you.

Mr. MOE. I should be glad to do that.

Senator MURRAY. Well, thank you for your statement, Mr. Moe.

Mr. MOE. I thank you very much for this opportunity.

Senator MURRAY. I ask to insert in the record at this point reports from various Federal agencies on surplus property, in connection with the bills pending before the committee.

(The reports are as follows:)

WAR DEPARTMENT,
Washington, May 2, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs, United States Senate.

DEAR SENATOR REYNOLDS: The War Department is opposed to the enactment of S. 1775, Seventy-eighth Congress, second session, a bill to provide for restoring real property acquired by the United States for military purposes to the former owners thereof, with regard to which you have requested the views of this Department.

The purpose of this legislation is to insure that when any real property acquired by the United States under the act of July 2, 1917, authorizing condemnation of lands for military purposes, is no longer needed for such purposes it shall first be offered to the person from whom the property was originally acquired upon such terms and conditions as the head of the department or agency involved may determine to be reasonable. It is further provided that no such property shall be sold or otherwise disposed of other than to the person from whom it was acquired, for 1 year after notice has been given to the former owner, unless the former owner indicates that he does not desire to reacquire the property, cannot be found, or is determined to be dead.

Under existing law the War Department has no general authority to dispose of real property acquired for military purposes, with the exception of those facilities acquired pursuant to the provisions of Public Law No. 703, Seventy-sixth Congress, July 2, 1940, and Public Law No. 507, Seventy-seventh Congress, March 27, 1942. These acts authorize conveyances of military properties when it is deemed to be in the interest of national defense.

The act of July 2, 1917 (40 Stat. 241), as amended, referred to in S. 1775 authorizes the Secretary of War to institute proceedings to acquire by condemnation any lands needed for military purposes. It also authorizes the acquisition of such lands by direct purchase or contract when, in the opinion of the Secretary of War, the amount asked by the owner is reasonable. Thus, the properties effected by S. 1775 would include sites acquired by purchase as well as by condemnation. However, since Public Law 703, Seventy-sixth Congress (act of July 2, 1940) also authorizes the acquisition of land for military purposes, as does the act of August 12, 1935 (49 Stat. 610–611, 10 U. S. C., secs. 1343 a and c) and the act of August 1, 1888 (25 Stat. 357), when implemented by an appropriation act, there would be a certain number of properties now being used for military purposes to which the provisions of S. 1775 would not apply, since they were not acquired under the act of July 2, 1917. There appears to be no logical reason to restrict the operation of the proposed legislation solely to those owners whose lands were acquired under the act of July 2, 1917.

Senate bill 1775 is very similar to a number of bills which have recently been introduced to enable the original owners of lands acquired for war purposes, to repurchase their properties. In reporting on these measures, the War Department has consistently pointed out that, as a matter of principle, the repurchase of surplus property by former owners is desirable wherever this does not conflict with the prosecution of the war effort or the best interests of the public as a whole. In general, however, it has been found that surplus properties can best be disposed of on a competitive bid basis, thereby giving all prospective purchasers an opportunity to acquire a particular site. Every effort is made to advise the former owners that their lands are to be sold and to afford them an opportunity to submit bids thereon.

One of the most serious objections to the enactment of S. 1775 and similar bills is that it would place upon the War Department the burden of ascertaining

whether the owners of the property are still living and notifying such owners of the contemplated disposition of the property. The effect of such limitation would be to delay, in some cases for a year, the disposal of most of the 75,000 tracts of land which the War Department has acquired since the inception of the present emergency. It is obvious that the War Department would be confronted with a tremendous task should such legislation be enacted, since in a great many cases the original owners are no longer residing in the same community but have reestablished themselves in other parts of the country.

An equally serious objection to the enactment of this legislation is the fact that in many, if not most cases, the original boundaries of the component tracts within a given military installation have been obliterated and expensive improvements have been constructed upon the site. If the original owners are to be afforded an opportunity to repurchase their individual tracts, the orderly and economical disposal by the Government of such facilities as ordnance plants, airfields, and industrial sites would be practically impossible. Not only would the Government suffer a substantial financial loss through inability to dispose of a given installation, such as an airfield or manufacturing site, as a unit, but the country's post-war production potentialities would be seriously curtailed.

Enactment of this measure would encumber the titles to all lands acquired by the Federal Government pursuant to the act of July 2, 1917, by creating a right in the former owners thereof, which could not be readily eliminated as a matter of record and which would substantially impair the marketability of the Government's titles.

It is not possible for this Department to estimate the fiscal effect of enactment of S. 1775 but is believed that the expense of administration thereof and losses thereunder to the Government would be substantial. Accordingly, the War Department recommends that S. 1775 be not enacted into law.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

UNITED STATES SENATE,
Washington, D. C., May 5, 1944.

Hon. JAMES E. MURRAY,
United States Senate, Washington, D. C.

DEAR SENATOR MURRAY: Recently I introduced S. 1794 which deals with the disposition by the Government of surplus land acquired for war purposes. The bill is self-explanatory and needs little or no comment from the undersigned. However, it seems to me that the measure in question is in keeping with the principles of equity and elemental justice.

Certainly those people whose forebears have for generations lived in the same community should have a priority on returning to that community if and when the time comes that the War Department has reached the determination that the land has no further military value.

In the letter written to you by the Honorable W. L. Clayton, Administrator, Surplus War Property Administration, you will note he states definitely that Congress might well pass legislation for this purpose. Then he proceeds to set forth certain problems which should be considered by the committee, and I shall discuss them in seriatim fashion:

1. I agree that where land has been acquired from various owners and structures ranging from barracks to large industrial plants have been erected, that it would be inadvisable to divide this property into separate units, as was found by the War Department, previous to the time they took it over. However, it should be definitely understood that when a plant and barracks are sold as a unit, that the barracks are to be used in connection with the operation of the plant.

2. It is to be hoped that the contractors now operating these plants have not obtained from the Government options on all of the land surrounding the plant. If that is true, contract rights should not be respected under these circumstances. That is especially true in the event that the plant is to be used for some other purpose, and the land obtained for protection purposes in the making of implements of war is unnecessary in the making of civilian goods.

3. I do not follow objection No. 3.

I agree that considerable latitude of administration discretion should be left in the agency. However, our troubles in the past with interpretation by the various agencies leads me to believe statutory language should be as clear and comprehensive as possible, in order that there will be no question about the administrator carrying out the intention of Congress.

Respectfully submitted.

SCOTT W. LUCAS.

MAY 4, 1944.

Hon. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee, Committee on Military Affairs of the United States Senate, Washington, D. C.

DEAR SENATOR MURRAY: The War Department has given consideration to the provisions of S. 1823, a bill "To establish an Office of War Mobilization and Adjustment." It does not favor the passage of this legislation for the following reasons:

Title I of the bill calls for the creation of an Office of War Mobilization and Adjustment in the Executive Office of the President. The act contemplates that there will be a Director of War Mobilization and Adjustment and charges him with the responsibility of unifying the programs and activities of all Federal agencies affecting industrial production, economic stabilization, war production, or demobilization. Provision is made for the creation of a National Production Employment Board consisting of representatives of industry, labor, and agriculture, and the Director is required to consult periodically with this Board.

The proposed Office of War Mobilization and Adjustment would seem to duplicate the functions now being performed by a number of agencies, including the Office of War Mobilization, Surplus War Property Administration, and the War Production Board. The War Department fears that confusion may result which would be harmful to the war effort.

Title II of the proposed enactment provides for the creation within the Office of War Mobilization and Adjustment of a Bureau of Programs. The functions of this unit appear to overlap those of existing agencies. To the extent that they do not do so, they appear to be such as might be better performed in the manner best dictated by the judgment of the Director, without statutory restrictions as to administrative details.

Title III of the bill undertakes to charge the Chairman of the War Production Board with certain responsibilities, to be performed after consultation with a Production Program and Reconversion Committee upon which representation is provided for specified agencies. To this title the War Department takes exception; first, because the responsibility conferred upon the Chairman of the War Production Board is so broad as to involve an unwarranted intrusion on matters of a military nature (for example, he is charged with the duty of coordinating, expanding, transferring, and curtailing "the military production programs of the several procurement agencies"); and, secondly, because the function of the proposed Production Program and Reconversion Committee are already being performed in a satisfactory manner by committees of the War Production Board, particularly the Production Executive Committee, the Requirements Committee, and the Program Committee. While modification in the internal organization of the War Production Board may be required from time to time, it is believed that such changes should be left to the sound judgment of the Chairman, uncontrolled by rigid statutory limitations.

The provisions of title IV of the bill deal with surplus war property disposition. Provision is made for the establishment of a Surplus War Property Administration, headed by an Administrator and a board upon which are included representatives of 14 specified agencies and the 9 members of the National Production-Employment Board. The addition of the members of that Board to a body already large could not fail to impair its usefulness.

In general the provisions of title IV fail to accomplish the primary requisite of any legislation dealing with the subject of surplus war property disposition in that they do not contain any clear grant of authority to dispose of surplus property. The proposed legislation contents itself with the enactment of certain restrictions and the promulgation of certain policies. It is believed that a basic grant of authority is needed, especially in view of the fact that some of the legislation under which disposition of surplus property is now being made is of limited duration. This title is likewise objectionable in that it fails to reserve to the contracting agencies power to dispose of termination inventory and to make any disposition of surplus property which in the judgment of the agency is required to facilitate the prosecution of the war. Unless the power to make such disposition is reserved the prosecution of the war would be impeded, and termination settlement greatly delayed.

It is likewise believed desirable that any pending legislation should clarify the relation of the contracting agencies and the disposal agencies and should indicate that the disposal agencies have responsibility to take physical possession of surplus property at the request of the contracting agencies.

The legislation is likewise defective in failing to define surplus property as property declared surplus by a contracting agency. The absence of such definition may create confusion and be harmful to the efficient conduct of the war.

Section 403 of the proposed enactment contains what appears to be an iron-clad proviso requiring surplus war property located outside of the United States or to be disposed of outside the United States, to be assigned for disposition to the Foreign Economic Administration. It is believed that this provision may interfere with military operations overseas and may prove otherwise impracticable.

Section 405 imposes upon the Director of the Bureau of the Budget the duty to receive and review the property requirements of Government agencies for the purpose of acquiring such property in their behalf from surplus stocks. This would seem to require screening by the contracting agencies of their entire program with the Bureau of the Budget and would seriously impede the procurement of the necessary munitions of war.

Section 406 imposes on each disposal agency the responsibility of organizing advisory committees and in this respect seems to duplicate facilities already available within the War Production Board.

Section 407 requires circularization prior to disposition of any surplus property of detailed inventories thereof to the Bureau of the Budget, the Smaller War Plants Corporation, and the Foreign Economic Administration. This is believed to be impracticable. Furthermore, this section appears to authorize the Bureau of the Budget to acquire property on behalf of the War Department and to commit its appropriations. The War Department does not believe that the Bureau of the Budget should be given operating powers of this description.

Section 408 contains provisions restricting the disposition of surplus property. Paragraph (a) requires all disposition to be made after advertisement and competitive bidding unless the head of the disposal agency certifies that disposal by some other means would better effectuate the policy of the act. Paragraph (b) prohibits sale or other transfer of surplus property unless the disposal officer certifies in writing to certain findings as to the economic effect of the sale or transfer. Paragraph (c) prevents the disposition of a plant or group of plants representing a cost to the Government of $5,000,000 or more until an opportunity is afforded the Attorney General to render an opinion on the subject. Paragraph (d) requires that every contract for the disposition of a plant shall reserve to the Government the right to rescind the contract in the event that the transfer fails to maintain the plan in operation for 3 years. Paragraph (f) requires the disposal officer to notify the Smaller War Plants Corporation prior to disposition of any property. Taken altogether it is believed that these restrictions would effectively prevent any substantial disposition of surplus property.

Section 411 raises a number of difficult questions. It is not clear whether it intends to cover Government-owned extensions or additions to contractor-owned plants as well as wholly Government-owned plants; whether it intends to cover production of parts and components; whether it intends to forbid the disposition of plants in connection with war production; whether it intends to prohibit any temporary lease or use of such plants until Congress acts. The wisdom of such a prohibition seems doubtful.

Section 412 will likewise create serious difficulties. This provision may be sound with respect to entire plants but is obviously unsound if applied to property which is consumed or destroyed by being used and is unduly cumbersome for many other types of property. In addition many special types of tools, dies, and equipment designed for war production and many other special products for war uses will have no use or value for civilian purposes. The reduction of this property to scrap should be encouraged rather than restricted. Finally, in its application to military property such a provision might have extremely undesirable consequences. In this connection the War Department believes that surplus military property should not be disposed of without consultation with the War and Navy Departments.

All of the foregoing restrictions would, of course, be especially objectionable if made applicable to termination inventories or to the disposition of surplus property for purposes of facilitating war production.

With respect to title V of the proposed legislation, the War Department does not desire to comment upon the merits of the provisions therein contained. It does desire, however, to invite attention to the fact that the provisions of title V overlap in some respects the provisions of S. 1767, which has been passed by the Senate, and is now being given consideration by the House Committee on World War Veterans' Legislation.

Accordingly, the War Department recommends that legislation of the nature proposed be not enacted at this time.

This Department is unable to estimate the fiscal effect of enactment of S. 1823.

The Department has not been advised by the Bureau of the Budget as to the relation of this legislation to the program of the President.

Sincerly yours,

_____ _____,
Secretary of War.

MAY 4, 1944.

Hon. JAMES E. MURRAY,
War Contracts Subcommittee, Committee
on Military Affairs of the United States Senate,
Washington, D. C.

DEAR SENATOR MURRAY: You have asked the War Department to comment on S. 1730, upon which public hearings are now being held. The War Department does not favor the passage of the bill in its present form.

Title I of the bill provides for the creation of an Office of Demobilization with broad powers over war production and reconversion. This office is to be separate from the Office of War Mobilization established by Executive Order 9347, dated May 27, 1943, but until the termination of hostilities is to be subject to the supervision, direction, and control of that office. Provision is made for a National Demobilization Board and for consultation with representatives of industry, labor, agriculture, and for public sessions with members of the general public.

While the bill places the Office of Demobilization under the supervision, direction, and control of the Office of War Mobilization during the war, we do not think that this arrangement is entirely sound. The process of war production and procurement and of contract termination and disposition of surplus property

The provisions of title IV of the bill deal with surplus war property disposition. Provision is made for the establishment of a Surplus War Property Administration, headed by an Administrator and a board upon which are included representatives of 14 specified agencies and the 9 members of the National Production-Employment Board. The addition of the members of that Board to a body already large could not fail to impair its usefulness.

In general the provisions of title IV fail to accomplish the primary requisite of any legislation dealing with the subject of surplus war property disposition in that they do not contain any clear grant of authority to dispose of surplus property. The proposed legislation contents itself with the enactment of certain restrictions and the promulgation of certain policies. It is believed that a basic grant of authority is needed, especially in view of the fact that some of the legislation under which disposition of surplus property is now being made is of limited duration. This title is likewise objectionable in that it fails to reserve to the contracting agencies power to dispose of termination inventory and to make any disposition of surplus property which in the judgment of the agency is required to facilitate the prosecution of the war. Unless the power to make such disposition is reserved the prosecution of the war would be impeded, and termination settlement greatly delayed.

It is likewise believed desirable that any pending legislation should clarify the relation of the contracting agencies and the disposal agencies and should indicate that the disposal agencies have responsibility to take physical possession of surplus property at the request of the contracting agencies.

The legislation is likewise defective in failing to define surplus property as property declared surplus by a contracting agency. The absence of such definition may create confusion and be harmful to the efficient conduct of the war.

Section 403 of the proposed enactment contains what appears to be an iron-clad proviso requiring surplus war property located outside of the United States or to be disposed of outside the United States, to be assigned for disposition to the Foreign Economic Administration. It is believed that this provision may interfere with military operations overseas and may prove otherwise impracticable.

Section 405 imposes upon the Director of the Bureau of the Budget the duty to receive and review the property requirements of Government agencies for the purpose of acquiring such property in their behalf from surplus stocks. This would seem to require screening by the contracting agencies of their entire program with the Bureau of the Budget and would seriously impede the procurement of the necessary munitions of war.

Section 406 imposes on each disposal agency the responsibility of organizing advisory committees and in this respect seems to duplicate facilities already available within the War Production Board.

Section 407 requires circularization prior to disposition of any surplus property of detailed inventories thereof to the Bureau of the Budget, the Smaller War Plants Corporation, and the Foreign Economic Administration. This is believed to be impracticable. Furthermore, this section appears to authorize the Bureau of the Budget to acquire property on behalf of the War Department and to commit its appropriations. The War Department does not believe that the Bureau of the Budget should be given operating powers of this description.

Section 408 contains provisions restricting the disposition of surplus property. Paragraph (a) requires all disposition to be made after advertisement and competitive bidding unless the head of the disposal agency certifies that disposal by some other means would better effectuate the policy of the act. Paragraph (b) prohibits sale or other transfer of surplus property unless the disposal officer certifies in writing to certain findings as to the economic effect of the sale or transfer. Paragraph (c) prevents the disposition of a plant or group of plants representing a cost to the Government of $5,000,000 or more until an opportunity is afforded the Attorney General to render an opinion on the subject. Paragraph (d) requires that every contract for the disposition of a plant shall reserve to the Government the right to rescind the contract in the event that the transfer fails to maintain the plan in operation for 3 years. Paragraph (f) requires the disposal officer to notify the Smaller War Plants

Corporation prior to disposition of any property. Taken altogether it is believed that these restrictions would effectively prevent any substantial disposition of surplus property.

Section 411 raises a number of difficult questions. It is not clear whether it intends to cover Government-owned extensions or additions to contractor-owned plants as well as wholly Government-owned plants; whether it intends to cover production of parts and components; whether it intends to forbid the disposition of plants in connection with war production; whether it intends to prohibit any temporary lease or use of such plants until Congress acts. The wisdom of such a prohibition seems doubtful.

Section 412 will likewise create serious difficulties. This provision may be sound with respect to entire plants but is obviously unsound if applied to property which is consumed or destroyed by being used and is unduly cumbersome for many other types of property. In addition many special types of tools, dies, and equipment designed for war production and many other special products for war uses will have no use or value for civilian purposes. The reduction of this property to scrap should be encouraged rather than restricted. Finally, in its application to military property such a provision might have extremely undesirable consequences. In this connection the War Department believes that surplus military property should not be disposed of without consultation with the War and Navy Departments.

All of the foregoing restrictions would, of course, be especially objectionable if made applicable to termination inventories or to the disposition of surplus property for purposes of facilitating war production.

With respect to title V of the proposed legislation, the War Department does not desire to comment upon the merits of the provisions therein contained. It does desire, however, to invite attention to the fact that the provisions of title V overlap in some respects the provisions of S. 1767, which has been passed by the Senate, and is now being given consideration by the House Committee on World War Veterans' Legislation.

Accordingly, the War Department recommends that legislation of the nature proposed be not enacted at this time.

This Department is unable to estimate the fiscal effect of enactment of S. 1823.

The Department has not been advised by the Bureau of the Budget as to the relation of this legislation to the program of the President.

Sincerly yours,

_____,
Secretary of War.

MAY 4, 1944.

Hon. JAMES E. MURRAY,
War Contracts Subcommittee, Committee
on Military Affairs of the United States Senate,
Washington, D. C.

DEAR SENATOR MURRAY: You have asked the War Department to comment on S. 1730, upon which public hearings are now being held. The War Department does not favor the passage of the bill in its present form.

Title I of the bill provides for the creation of an Office of Demobilization with broad powers over war production and reconversion. This office is to be separate from the Office of War Mobilization established by Executive Order 9347, dated May 27, 1943, but until the termination of hostilities is to be subject to the supervision, direction, and control of that office. Provision is made for a National Demobilization Board and for consultation with representatives of industry, labor, agriculture, and for public sessions with members of the general public.

While the bill places the Office of Demobilization under the supervision, direction, and control of the Office of War Mobilization during the war, we do not think that this arrangement is entirely sound. The process of war production and procurement and of contract termination and disposition of surplus property

are so intimately related during the war that the creation of a separate demobilization office, even under the Office of War Mobilization, is likely to raise practical difficulties. On the other hand, the creation of a statutory agency with power over all war production and reconversion problems is of doubtful wisdom. Such an agency would duplicate the functions now being performed by a number of agencies, including the Office of War Mobilization, Surplus War Property Administration, and the War Production Board. The War Department fears that confusion may result which would be harmful to the war effort.

The following specific comment is offered on the provisions of the bill:

Section 103: The War Department believes that it would be desirable to have the Demobilization Board composed of representatives of the Departments primarily interested in war mobilization and demobilization. This would insure close and constant coordination between the operating agencies and the Director.

Section 105 (c): It is questioned whether this section would not require too much time to be spent in consultation with various private organizations. The provision that the Director and the Board should hold public sessions is believed to be unworkable.

Section 106 (b): While the creation of a joint congressional committee seems desirable, its functions under subsection (b) are open to question. There can be no objection to frequent reports from the Director to the joint committee, but the requirement that he confer with the committee concerning matters of broad general policy and the provision for attendance by the committee or its representative at meetings of the Board are likely to inject the committee too much into the actual operations of the demobilization agency.

Section 202 (c): A complete survey of all Government property is impracticable and unnecessary for formulating programs for the disposition of surpluses. Any such inventory would involve serious administrative problems in view of the constant flow of war materials and the information obtained would be so out of date as to be useless for planning purposes. Adequate data for such purposes can be obtained without undue difficulties by sampling and other statistical methods.

Section 204: This entire section requires careful revision. In this connection the War Department recommends the adoption of the provisions of S. 1718 as redrafted and contained in the report of the Senate Military Affairs Committee.

Section 206: This entire section is believed to require recasting. Its provisions attempt to state certain very general policy considerations so definitely that they may affect the title to items of surplus property transferred. Paragraph (a) if literally construed seems to be impracticable. Paragraph (d) does not define the term "speculator," and might affect the title to property. Paragraph (e) might have the effect of requiring the Government to retain low-cost plants. Paragraph (f) might affect the title to property transferred. Paragraph (i) raises a number of difficult questions. It is not clear whether it intends to cover Government-owned extensions or additions to contractor-owned plants as well as wholly Government-owned plants; whether it intends to cover production of parts and components; whether it intends to forbid the disposition of plants in connection with war production; whether it intends to prohibit any temporary lease or other use of such plants until Congress acts. Likewise, paragraph (j) will create difficulties. This provision may be sound with respect to entire plants, but is obviously unsound if applied to property which is consumed or destroyed by being used, and is unduly cumbersome for many other types of property. In addition, many special types of tools, dies, and equipment designed for war production and many other special products for war uses will have no use or value for civilian purposes. Much of this property should be reduced to scrap without delay. Finally, in its application to military property such a provision might have extremely undesirable consequences. In this connection the War Department believes that surplus military property should not be disposed of without consultation with the War or Navy Departments.

The provisions of title 111 of the act have been the subject of much consideration by the Senate Special Committee on Post-war Economic Policy and Planning, as well as by your committee. The War Department believes that the provisions incorporated in the redraft of S. 1718 attached to the report of the Senate Military Affairs Committee are preferable to those contained in S. 1730.

The same comment may be made with reference to title IV of the bill.

The War Department has urged the speedy passage of legislation on this subject. It is believed that S. 1718, as now revised, incorporates the best thought and consideration which has been given to this subject, and it is believed that its enactment should be expedited and not delayed because further consideration may be desired with respect to other subjects covered by S. 1730. In addition to the passage of S. 1718, the War Department believes that legislation conferring clear authority on the contracting agencies to dispose of termination inventory and surplus property is desirable. If S. 1730 were revised so as to deal adequately with that subject its passage would be helpful.

Accordingly, the War Department recommends that S. 1730 in its present form be not enacted at this time.

This Department is unable to estimate the fiscal effect of enactment of S. 1730.

The Department has not been advised by the Bureau of the Budget as to the relation of this legislation to the program of the President.

Sincerely yours,

———— ————,
Secretary of War.

OFFICE OF WAR MOBILIZATION,
SURPLUS WAR PROPERTY ADMINISTRATION,
Washington, D. C., April 12, 1944.

HON. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate, Washington, D. C.

MY DEAR SENATOR REYNOLDS: By letter dated March 31, 1944, you have requested the views of this Administration with regard to S. 1815, to provide for distribution of surplus war materials through domestic lend-lease to States and their political subdivisions and instrumentalities thereof.

The principal purpose of the bill is to require that surplus war property, if not needed by any agency of the Federal Government, shall be disposed of to State governments or subdivisions or instrumentalities thereof by grant or loan whenever it can be used for various public purposes specified in the bill.

This subject is certainly one upon which the will of Congress should at some appropriate time be expressed by legislation. Congress may well feel that State governments and other tax-supported institutions should have preferential rights as to the acquisition of surplus war property. Such preferential rights, if granted, could involve a prior right to purchase before commercial buyers were given an opportunity, or, in addition, could involve a reduction in price or even an outright gift. Unless guided by an expression of congressional intent, this Administration would, of course, be in no position to go any further than to give tax-supported institutions a right to purchase, ahead of commercial purchasers, at the same price at which transfers could be made between agencies of the Federal Government. If any price reduction or gift is to be involved, such a policy can only be enunciated by Congress.

Since any such legislation involves a potential loss of revenue to the Federal Treasury, the desires of Congress should be expressed in the clearest terms. For instance, if it is desired that surplus Government property should be given to tax-supported institutions, this should be clearly stated. The terms "grant or loan" in the bill would appear to present a difficult problem for any administrator, in this connection.

In addition, it should be noted that numerous suggestions have been made, both in and out of Congress, as to various classes of prospective purchasers or donees of surplus property to whom Congress might deem it desirable to grant preferential rights of one sort or another. Among these may be mentioned returning veterans, prior owners of land acquired by the Government for war purposes, educational institutions, charitable institutions, and the like. It would seem impossible to administer any system of preferential rights which Congress may desire unless their relative priorities and the nature of their preferential rights are clearly set forth by legislation. For that reason, among others, this Administration would prefer to see legislation on the subject of the disposition of surplus war property deferred until time and experience have enabled it to make intelligent legislative recommendations on the subject.

The proposad bill exemplifies a second reason why it would seem preferable to handle the subject of surplus property disposal in a single comprehensive piece of legislation. If orderly disposal is to take place, it should be supervised by a single agency which can deal with all of the complex problems involved, rather than by separate agencies handling different but related parts of the problem. In other words, whatever agency Congress chooses for the administration of surplus property disposition on a policy level should be given full jurisdiction and responsibility. S. 1815, in setting up an agency to deal only with the distribution of surplus property to State governments, their subdivisions and instrumentalities, would appear to depart from this principle.

The Bureau of the Budget advises me that it has no objection to the submission of this report.

Sincerely yours,

W. L. CLAYTON, *Administrator.*

OFFICE OF WAR MOBILIZATION,
SURPLUS WAR PROPERTY ADMINISTRATION,
March 29, 1944.

HON. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs, United States Senate,
Washington, D. C.

MY DEAR SENATOR REYNOLDS: By two letters dated March 22, 1944, you have requested the views of this Administration with respect to two bills, S. 1775 and S. 1794.

The basic problem is whether, in the disposition by the Government of surplus land acquired for war purposes, a preferential opportunity to repurchase should be given to the former owners.

It is the position of this Administration that the granting of preferential treatment to any class of prospective purchasers of surplus Government property is exclusively a matter for congressional determination. Many conflicting claims for such treatment will be made, and those charged with the responsibility for disposal must have congressional guidance and must adhere to a policy of equal treatment for all in the absence of a congressional mandate to the contrary.

It is my personal view that Congress might wel lpass legislation designed to enable former owners to repurchase land which the Government has acquired from them for war purposes. I suggest, however, that there are a number of problems which should be considered in connection with any such legislation, and which the bills in question do not appear to take in account. Among these are the following:

1. After acquisition by the Government land may have been subjected to various types and degrees of improvement. In many instances land acquired from various owners will have been combined into one unit and structures ranging from barracks to large industrial plants erected. It is not believed that a statutory provision which would prohibit or retard the sale of such property as a unit would be in the public interest.

2. In numerous instances option provisions have bound the Government to sell existing plants, including the land on which they are located, to the contractors now operating them, if those options are exercised in accordance with their terms. It is presumably not intended to attempt to invalidate such options by the proposed legislation, and a statement that contract rights are to be respected would seem to be appropriate.

3. Other reasons of policy or of price, not now specifically predictable, may arise in which the public interest would not be served by a firm requirement to deal first with the former owner.

Because these problems do not seem to me to be susceptible of being covered by mandatory statutory language, particularly since it is impossible to foresee all of the specific situations which are likely to arise, I would suggest that any legislation on the subject should, within the limits of the policy set forth in the statutes, leave a considerable latitude of administrative discretion in the agency charged with disposal.

Certain other difficult problems exist which are treated differently in the two bills. S. 1794 bases the repurchase price on the price originally paid by the Government; this seems sound to me, since I think that the disposal agencies should at least be free to negotiate with others if the former owner is not willing to pay what he received for the property. The 90-day time limit in S. 1794 also seems to be preferable, since it would be undesirable to tie up the sale of surplus land for any extended period; in some cases even the 90-day period might be too long. As to the question whether the proposed legislation should apply to land, however acquired, as in S. 1794, or only to land acquired by condemnation, as in S. 1775, I express no opinion, but merely point out that somewhat different considerations may be involved in the case of a genuinely voluntary original sale to the Government.

It is difficult to estimate the administrative problem which would be involved in carrying out the provisions of either of the bills in question, but I am sure your realize that they would be very substantial. The Bureau of the Budget advises me that there is no objection to the submission of this report.

Sincerely yours,

W. L. CLAYTON, *Administrator.*

OFFICE OF WAR MOBILIZATION,
SURPLUS WAR PROPERTY ADMINISTRATION,
Washington, D. C., May 3, 1944.

HON. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
United States Senate, Washington, D. C.

MY DEAR SENATOR MURRAY: Referring to your letter of April 27, 1944, which discusses my report on Senator Lucas' bill in favor of former owners of land:

While my proposed statement before your subcommittee on May 5, 1944, does not go into any detail on this subject, I will be very glad to give you any views I have at that time. With your permission, however, I should like to defer any suggestions as to specific amendments to S. 1794 until after that meeting, since it is my hope, as I plan to testify, that such legislation as Congress may desire to enact as to preferences to be given to various classes of prospective purchasers can be put together into a single act, rather than being passed piecemeal.

Very truly yours,

W. L. CLAYTON, *Administrator.*

APRIL 27, 1944.

MR. WILLIAM L. CLAYTON,
Administrator, Office of War Mobilization,
Surplus War Property Administration, Washington, D. C.

DEAR MR. CLAYTON: Your report of March 29, 1944, relative to S. 1794 has been transmitted to my subcommittee. Your comments on the difficulties in effectuating the principles advocated by Senator Lucas in his bill are exceedingly welcome since they point out practical difficulties that will have to be faced before a measure of this type can be reported. I am looking forward to your discussion of the entire problem raised by S. 1794 in your testimony before the subcommittee on the 5th of May.

At the same time, I should appreciate your submitting to the committee such amendments to S. 1794 as will, in your opinion, make the measure entirely practicable.

Your cooperation in this respect will be greatly appreciated.

Sincerely,

JAMES E. MURRAY,
Chairman, War Contracts Subcommittee.

WAR DEPARTMENT,
Washington, D. C., February 23, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs, United States Senate.

DEAR SENATOR REYNOLDS: The War Department is not opposed to the basic principle of S. 1478, Seventy-eighth Congress, a bill to provide for the conservation and proper disposal of surplus war properties, and for other purposes, but is not in agreement with a number of its provisions.

Section 1 of this bill recites generally the reasons for its enactment; namely, to facilitate the prompt and maximum utilization of surplus war properties in such manner and under such conditions as will aid the maximum employment, the establishment of war veterans in their own business enterprise, the encouragement of small business concerns, and the solution of sectional economic problems.

Section 2 provides for the appointment by the President of an Administrator of Surplus War Properties.

Section 2 (b) provides that when the President or the head of any agency determines that any property of the United States is surplus to the needs or functions of the agency, all legal right, title, and interest to the property shall become vested in the Administrator and its custody and disposition shall be subject to his exclusive control. This section further provides, however, that the Administrator may utilize the facilities and services of the agency which acquired or controlled the property.

Section 2 (c) authorizes the Administrator to acquire from any executive department any information with respect to Government property controlled by the Department, and to require the Department to transfer to the Administrator any property which he determines to be surplus on the basis of such information. If the head of the agency declines to comply with the requirements, the Administrator shall certify his findings and recommendations to the President, who shall make a determination as to whether the property is surplus.

Section 3 provides that upon the acquisition of title to the property, the Administrator shall determine the uses to which it may be put, and determine whether it is suitable for retention and use by the United States. He may allocate property which he finds to be suitable among the departments and agencies of the Government.

Property not found to be suitable for use by the Government shall be disposed of by the Administrator who shall give preference in the disposition first to establish or aid war veterans in independent business, and, second, to establish or aid small business concerns. The Administrator is to determine what constitutes a small business concern.

The Administrator is authorized in selling property to veterans or small business concerns to arrange for the extension of credit to the purchaser in such manner as he determines will carry out the purposes of the act, and may direct other agencies of the Government to extend credit or otherwise participate in the transaction.

Section 4 provides that the Administrator shall establish rules and regulations binding upon all executive departments and agencies to enable him to carry out his duties and functions.

Section 4 (b) provides that the Administrator is authorized to use, manage, and operate all surplus property under his control in such manner and upon such conditions as will properly preserve or care for the property or otherwise carry out the purposes of the act.

Section 5 authorizes the appropriation of necessary funds.

Section 6 establishes the Surplus War Properties Committee, composed of five Members of the Senate, and five Members of the House, for the purpose of making a study of the problems of surplus war properties and of the operation of the act. The committee is required to report to the Congress not later than 6 months after the effective date of the act, to hold such hearings, and employ such assistants as it deems advisable.

Section 7 requires the Administrator to render monthly reports to Congress as to the properties acquired by him and the disposition thereof.

Section 8 defines surplus war properties as including all property, both real and personal, which was acquired or used in connection with the prosecution of the war, but not including properties requisitioned by the President for wartime operation by the Government as a result of a labor dispute or for noncompliance with any provision of law.

With respect to section 2 of the bill, which provides that the President shall appoint an Administrator of Surplus War Properties, the War Department favors the centralization in some agency of the Government of the responsibility for the disposition of surplus war materials and property, both real and personal. The Department is not at this time prepared to take any position with respect to the advisability of the creation of a new agency rather than the utilization of an existing agency of the Government, but it is considered essential in the interests of the prosecution of the war and for the proper performance of the functions of the War Department after the cessation of hostilities that any central disposal agency should operate with respect to War Department property in accordance with the following principles:

(*a*) Surplus would be defined as including all real estate and improvements thereof, all industrial materials and equipment, all military supplies and equipment, and all items of scrap and salvage, which the War Department reports to the central agency as no longer required to meet the needs of and responsibilities vested in the War Department.

(*b*) The War Department would not declare as surplus property (i) any real estate, plant, industrial materials, or industrial equipment needed for its own operation, (including reserves and stand-by facilities and equipment) or in the operations of contractors or subcontractors engaged in war production, (ii) items which may be disposed of as a part of contract terminations under policies established by appropriate authority, (iii) items of property held overseas which are determined by appropriate authority as desirable for disposal there and not for return to the United States, or (iv) any items of property required for such relief measures as are necessarily a part of military operations.

(*c*) The War Department would report promptly to the central agency such items as become surplus property under the above definition. The central agency would thereupon take possession, accountability and full responsibility for any further maintenance, utilization, removal, protection, storage or sale or other disposition of the property, the central agency to consult with the Department as to disposition of any property of special military significance. The War Department would retain the right to remove and store materials and equipment which must be promptly removed from its own premises or those of its contractors or subcontractors to permit immediate conversion of such premises to other uses, if and when the central agency was not prepared to move and store such property. The central agency would be authorized to utilize existing War Department facilities for the conveyance of title to surplus real estate and improvements thereof.

(*d*) The War and Navy Departments would retain for the duration of the war the right to exchange stores and property as they may determine necessary in prosecuting the war.

Paragraph 2 (c) of S. 1478 would not be consistent with the above principles as it would allow the Administrator of Surplus War Properties to make the initial determination that War Department property is in fact surplus to its needs. It is plain that no outside agency will be in a position to make a proper determination as to the need for military property and munitions of war. As a matter of sound administration, moreover, it is believed that the determination whether a particular item is no longer needed by a department or agency must remain the responsibility of the department or agency concerned.

It is not considered advisable that the provisions of section 3 with respect to preferences to be followed by the central agency in the disposition of property should be embodied in legislation. In most cases the requirement that the disposal agency sell property in accordance with a fixed preference would be impracticable of administration in that it would cause substantial delay in the disposition of the property, would create considerable administrative expense, and would

render it impossible for the central agency to exercise the discretion which will be essential to effect the sale of the many types of property which will be involved, in the best interest of the economy as a whole.

It is suggested that the provisions of section 3 (d) regarding the extension of credit to small business concerns and war veterans should be eliminated. Any appropriate aid to veterans should be provided by general legislation apart from the handling of surplus-property sales, and any Government assistance in industrial financing which may prove necessary should be handled as a problem of industrial reconversion in general and not as an adjunct of property disposition. In any event, provisions for the extension of credit should not be limited to preferred classes of purchasers, since some credit arrangement may be desirable in connection with any sale.

The provision in section 3 (d) that all other Government agencies must comply with any directives issued by the Administrator with respect to credit arrangements would be confusing as it would apparently override fixed policies or even the statutory authority of the other agencies.

As presently worded, S. 1478 provides that it shall take effect immediately upon enactment. In order to preserve the existing authority of the War Department to dispose of properties promptly in furtherance of the war effort it is believed that the measure should make clear that, for the duration of the present emergency, nothing therein contained shall alter or amend the existing disposal powers of the War Department.

The War Department is unable to estimate the fiscal effect of enactment of the proposed legislation.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

ROBERT P. PATTERSON,
Acting Secretary of War.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., December 7, 1943.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate, Washington, D. C.

MY DEAR SENATOR REYNOLDS: The Honorable James F. Byrnes, Director of the Office of War Mobilization, has referred to me the letter which you addressed to him on October 29, 1943, requesting the views of his office concerning S. 1478, a bill to provide for the conservation and proper disposal of surplus war properties, and for other purposes.

My letter to you of November 6, 1943, in connection with Senate Resolution 195 expresses quite fully the views of this office with respect to the continuing problem of equipment and supply management in the executive establishment.

I would reiterate that section 1 of H. R. 2795 now pending in the Senate, which would add a new title to the Budget and Accounting Act of 1921, would provide the essential legislative foundation for efficient management of our equipment and supplies, including the disposal of such surplus personal property as would accrue from the normal peacetime operations of the Federal Government. I would further urge that upon such a foundation the necessary special measures to insure wise handling of the war surpluses can be developed and better fitted into the general scheme of Government operations.

I am now convinced that because of the lapse of time, the growing urgency of the war surplus problem, and perhaps for other reasons, the approach to the war surplus problem contemplated in H. R. 2795; namely, through a special joint committee of the Congress which would explore the problem and develop the necessary policy guides, is no longer a practical approach. It would seem to me that the provisions of section 6 of S. 1478 which would establish a somewhat similar "surplus war properties committee" are subject to the same objections on the grounds of impracticability. I do not believe that there is any need or justification for creating within the executive branch of the Government any new agency or any central operating agency to dispose of the war surplus properties, real or personal. When and as disposal policies are determined the existing agencies such as the corporations in the Department of Commerce, the Procurement Division in the Treasury Department, and others, can be utilized very effectively in executing such disposal policies.

My suggestion would be that Congress establish an over-all policy board, comprised of representatives of the Government, industry, labor, agriculture, and the unorganized general pubic, to assemble the facts concerning probable war surpluses, to point up the questions of major policy arising therefrom, to report frequently to the Congress with recommendations for additional legislation which will undoubtedly be necessary in connection with some segments of the surplus inventories, and to guide the existing executive agencies in their disposal operations. Such a board would be necessary for perhaps 3 to 5 years following the close of the war. It is critically needed at this moment since very sizable surpluses of goods severely needed in our civilian economy are already appearing.

It would seem to me that provision for such a board might readily be written into H. R. 2795 in lieu of sections 3 and 4 of that bill as it is now before the Senate.

S. 1478 in its section 3 attempts to prescribe certain principles to be applied to the disposal of war surpluses. It provides first for allocation of such surplus property among the departments and agencies of the Federal Government. I note that in providing for such allocation the text does not make it clear that the receiving departments and agencies shall pay for such property from their available appropriations. To supplement their appropriations by donation of such surpluses, as happened following the last war, would not only induce wasteful requisitioning but would completely nullify the budgetary and appropriating practices of both the executive establishment and the Congress.

After Federal Government needs were taken care of, the bill would next make these surplus properties available to veterans and small businessmen. I am inclined to feel that after the needs of the Federal Government are met second consideration might well be given to State and local governmental needs since these agencies are also supported by the same general body of taxpayers. In general, I doubt that either the Congress or the Executive is prepared immediately to set out all the principles which should be applied to the disposal of these surpluses. I think such principles will evolve through the executive mechanism which I have suggested in the foregoing and through the normal activities of the various standing committees of the House and Senate.

Sound constructive action need not, in my judgment, await the complete development and enunciation of such principles. To whatever extent the Congress is prepared to express them, they also might well be written into H. R. 2795 with recognition that supplementary legislation will from time to time be found vitally necessary.

As in the case of my letter of November 6, I have again in this letter found it necessary to refer at some length to a bill pending before the Senate Committee on Expenditures in the Executive Departments. I, therefore, am sending a copy of this letter to Senator Lister Hill as chairman of that committee. Copy is being sent also to Director Byrnes of the Office of War Mobilization.

Very truly yours,

HAROLD D. SMITH, *Director.*

GENERAL ACCOUNTING OFFICE,
Washington, November 24, 1943.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate, Washington, D. C.

MY DEAR MR. CHAIRMAN: Further reference is made to your letter of November 11, 1943, acknowledged November 12, requesting the views of this office on bill S. 1478, Seventy-eighth Congress, entitled "A bill to provide for the conservation

and proper disposal of surplus war properties, and for other purposes." A companion bill, H. R. 3580, was introduced in the House of Representatives November 1, 1943.

The purpose of the proposed legislation, as set out in section 1 of the bill, is—

"* * * to facilitate the prompt and maximum utilization of all surplus war properties in such manner and under such conditions as will aid (a) maximum employment of the Nation's labor resources, (b) war veterans to establish or maintain their own business enterprises, (c) small business concerns to preserve and strengthen their competitive position in an economy of free enterprise, and (d) in solving such economic needs and conditions as may exist in particular geographical locations of the country."

Briefly, the bill would provide that the President, by and with the advice and consent of the Senate, shall appoint an Administrator of Surplus War Properties for a term of 4 years; that the Administrator may employ such officers and employees as necessary in carrying out his duties; that when the President or the head of any executive department or agency determines that "any property of the United States used, or held, in connection with the prosecution of the war, or otherwise," has become surplus, the title to such property shall vest in the Administrator and the property shall be subject to his exclusive control; that he may allocate such property among the departments and agencies of the Government and may sell or otherwise dispose of all such property found by him to be unsuitable for use by the United States "upon such conditions as will, in his judgment, best effectuate the purposes of this act, without necessary regard to the provisions of law relating to bidding and public advertisement and sale of Government property"; that in disposing of such property as found to be unsuitable for retention by the United States, the Administrator shall determine whether the same can be used "to establish or aid any war veteran in an independent business enterprise" or "to establish or aid a small business concern to maintain itself in business," and disposition of such property must not be "inconsistent with such determination"; that the Administrator may arrange for the extension of credit to such veterans or small business concerns by the Smaller War Plants Corporation or any other existing agency of the Government at a rate of interest not exceeding 3 percent per annum; that the Administrator shall establish rules and regulations to carry out his duties and functions; that during the period of his ownership and control of surplus property, the Administrator is authorized "to use, manage, and operate the same;" and that he shall render monthly written reports to the Congress with respect to the surplus property acquired and disposed of by him, together with his recommendations. The bill would authorize the appropriation of such sums as necessary or appropriate to carry out its purposes.

Further, the bill would establish a Surplus War Properties Committee to be composed of five Members of the Senate and five Members of the House of Representatives to study the matter of surplus war properties and "the operation of this act" with a view to recommending amendments, etc., which committee would be authorized to hold hearings and would be required to report to the Senate and House of Representatives not later than 6 months after the effective date of the act. The expenses of the committee would be paid from the contingent funds of the Senate and the House of Representatives.

Section 8 (a) of the bill defines "surplus war properties" as including—

"* * * any supplies, materials, equipment, plants, real estate or other property, tangible or intangible, owned or controlled by the United States or by or in behalf of any department, agency, corporation, or other establishment of the Government which was acquired or used in connection with the prosecution of the present war and which, pursuant to this act, is determined to be surplus to the need, function, activity, or project in connection with which it was acquired or accrued but shall not include any properties taken over or requisitioned by the President or under his authority pursuant to his emergency powers for wartime operation by the Government as the result of a labor dispute or for noncompliance with any provision of law or Executive direction."

In order to make clear the position of this office with respect to the subject bill, S. 1478, it seems desirable first to discuss briefly certain other proposed legislation which has been considered recently. This office, together with other governmental agencies, collaborated with the Committee on Expenditures in the Executive Departments of the House of Representatives in the consideration of bill H. R. 1610, Seventy-eighth Congress, which bill, as indicated in the hearings thereon held before that committee during February and March 1943, was introduced by Representative O'Leary for the primary purpose of complying with the suggestion of the President contained in his message to the Congress dated November 30, 1942, with respect to the more efficient utilization of materials, supplies, equipment, and other property in the possession or under the control of governmental agencies. As a consequence of such collaboration, there was introduced another bill, H. R. 2795, Seventy-eighth Congress, superseding H. R. 1610. The said bill H. R. 2795 passed the House of Representatives June 9, 1943, and is now pending in the Senate Committee on Expenditures in the Executive Departments. House Report No. 507, Seventy-eighth Congress, accompanying H. R. 2795, contains much information with respect to the general problems of utilization of Government property and the disposition of surplus property, together with a brief history of recent efforts to solve those problems.

The said bill H. R. 2795 is intended to make permanent provision for the more efficient utilization and disposition of Government property, other than land and buildings and facilities or fixtures appurtenant thereto, in time of peace as well as war, through existing Government agencies. However, in section 4 thereof, provision would be made for the establishment of a Surplus War Property Committee to be composed of five Members of the Senate and five Members of the House of Representatives for the purpose of studying the problem of war property, real and personal, expected to be surplus at the end of the present war, and reporting to the Senate and House of Representatives with its recommendations as to necessary legislation and administrative action relative to the disposition of such surplus property. In this connection it is stated at page 15 of the above-mentioned House Report No. 507—

"Recognizing that legislation necessary to deal effectively with these war surpluses should be enacted only after most thorough study and investigation, and recognizing also the urgent necessity of enacting the general program of property management provided by H. R. 2795, the committee has added sections 3 and 4 to permit enactment of the general program and at the same time provide for the necessary study of the war-surplus problem, and the development of legislation to deal comprehensively with that problem."

The subject bill, S. 1478, on the other hand, would establish a new Government agency (the Administrator of Surplus War Properties) apparently as a temporary measure for the disposition of surplus war property, real and personal—although it is noted that the bill would fix the term of the Administrator at 4 years, and that section 2 (b) refers to property "used, or held, in connection with the prosecution of the war, or otherwise."

It is to be observed, also, that the bill S. 1478 contains no provision directing or providing for the disposition of the moneys to be derived from the sale or other disposition of surplus property or for the adjustment of appropriations between departments or agencies in the event of transfer of surplus property from one department or agency to another. In this connection, attention is invited to the following pertinent provisions contained in the above-mentioned bill, H. R. 2795 (in the proposed new section 258, page 8 of the bill):

"SEC. 258. Where property transferred or disposed of under any provisions of this title except section 259 has been acquired by the use of funds appropriated from the general fund of the Treasury and such appropriated funds are not by law reimbursable from assessment, tax, or other revenue, all proceeds derived from the transfer or sale, lease, or other disposition thereof shall be deposited and covered into the Treasury as miscellaneous receipts. Where property transferred or disposed of under any provisions of this title except section 259 has been acquired by the use of funds other than those appropriated from the general fund of the Treasury or by the use of funds appropriated from the general fund of the Treasury which are by law reimbursable from assessment, tax, or other revenue, all expenses incurred in respect of such transfer or disposition shall be deducted from the proceeds (if any), the funds bearing such expenses reimbursed in like amount, and the balance of the

proceeds (if any) credited to the reimbursable fund or appropriation or paid to the agency releasing the property. This section shall not apply to the sale with the approval of a duly authorized representative of the agency concerned of any property in the custody of a contractor or subcontractor under a cost-plus-a-fixed-fee contract or subcontract which authorizes the crediting of the proceeds of such sale on the cost of the work described in such contract or subcontract."

Provisions similar to those above quoted appear essential in order to avoid unauthorized augmentation of appropriations, etc.

Summarizing, it is the view of this office that legislation of the character proposed in H. R. 2795, referred to above, is preferable to that proposed in the subject bill, S. 1478. In my report of May 5, 1943, to the chairman of the Committee on Expenditures in the executive departments of the House of Representatives on bill H. R. 2498, Seventy-eighth Congress, it was stated:

"The necessity for legislation of this character to enable the disposition of the vast stores of materials that will have accumulated and will have to be disposed of after the end of the present conflict is obvious; also, it is recognized that some general, well-organized plan of disposal should be in readiness when that time comes. However, it is not believed that there is a present urgency requiring immediate action in this respect."

In addition to providing permanent machinery for the more efficient utilization and disposition of Government materials, supplies, and equipment through existing Government agencies—a provision which seems most desirable—H. R. 2795 would provide for the careful study of the question of disposition of the war property which will be surplus at the end of the present war. On the other hand, the subject bill, S. 1478, would not provide such permanent machinery but would set up a new Government agency for the limited purpose of conserving and disposing of surplus war property—a problem which well might be the subject of further and intensive study before attempting a definite solution.

With respect to details of the bill S. 1478, the following suggestions may be made:

1. In section 3 (a), it is provided, in substance, that surplus property found by the Administrator to be unsuitable for use by the United States shall be sold or otherwise disposed of by him. It would seem desirable to include, also, such property as may be found to be in excess of the needs or requirements of the United States, as well as that found to be "unsuitable."

2. The proviso in section 3 (a), and section 3 (b), are as follows:

"* * * *Provided*, That upon each disposition of property found to be unsuitable for retention by the United States, the Administrator shall first determine whether and to the extent the same can be used (A) to establish or aid any war veteran in an independent business enterprise and (B) to establish or aid a small business concern to maintain itself in business.

"(b) No disposition of any such property shall be made which is inconsistent with such determination."

The precise duty and responsibility of the Administrator in this respect are not entirely clear, and the quoted language might be construed as requiring use of surplus property for the assistance of war veterans and small business concerns, irrespective of the interests of the United States. Probably, too, the word "the" immediately preceding the word "extent" in the above quotation (line 17, p. 4 of the bill) is intended to be "what".

3. In line 13, page 7 of the bill, the word "Statues" should be "Statutes".

For the reasons hereinbefore stated, I am unable to recommend favorable consideration of the bill S. 1478 at this time, pending further congressional action on broader legislation, such as H. R. 2795 above referred to; and if the subject bill S. 1478 is to be favorably considered for enactment at any time, I believe material amendments thereto should be made as hereinabove suggested.

Sincerely yours,

(Signed) LINDSAY C. WARREN,
Comptroller General of the United States.

SMALLER WAR PLANTS CORPORATION,
Washington, D. C., November 19, 1943.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate.

DEAR MR. REYNOLDS: I have your letter of November 11, enclosing a copy of S. 1478 entitled, "A bill to provide for the conservation and proper disposal of surplus war properties, and for other purposes."

The primary object of the proposed bill is to create a single agency for the purpose of carrying out broad congressional policies with respect to the disposition of surplus war properties. Among others, the bill is designed, as set forth therein, to preserve and strengthen the competitive position of small business concerns in an economy of free enterprise. It goes without saying that Smaller War Plants Corporation is wholeheartedly in accord with that purpose.

Subdivision (*d*) of section 3 of the proposed bill affects Smaller War Plants Corporation directly. It provides that the Administrator of Surplus War Properties, in selling or otherwise disposing of such property to small business concerns and war veterans, may arrange through the funds of Smaller War Plants Corporation, or any other existing agency of the Government, for the extension of credit to the purchaser or user of such property or for the making or guaranteeing of such other financial arrangements as, in the judgment of the Administrator, will carry out the purposes of the act. Smaller War Plants Corporation or any other such agency is directed to comply with the Administrator's directives issued under this section.

I approve the provisions contained in subdivision (d) of section 3. However, I believe that the bill should further provide that any directive issued by the Administrator to Smaller War Plants Corporation pursuant to section 3 (*d*) shall include in each case the terms and conditions upon which Smaller War Plants Corporation shall extend credit or make or guarantee any other financial arrangements. Such provision, I feel, will help to avoid any possible conflicts which might otherwise arise between the Administrator and Smaller War Plants Corporation as to such terms and conditions.

Sincerely yours,

ALBERT M. CARTER, *Acting Chairman.*

NAVY DEPARTMENT,
Washington, April 3, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Committee on Naval Affairs,
United States Senate.

MY DEAR MR. CHAIRMAN: The bill S. 1609 "to provide for the equitable disposal and effective utilization of Government-owned surplus machine tools, and for other purposes" was referred by your committee to the Navy Department with request for views and recommendation.

The purpose of the bill is to provide for the equitable disposition and effective utilization of surplus Government-owned machine tools, and thereby to aid the national defense, the preservation and establishment of small business concerns, international trade, and vocational training. To accomplish these purposes, the bill would establish a Machine Tool Commission consisting of nine members, one each to be designated by the Secretary of War, the Secretary of the Navy, the Chairman of the Maritime Commission, and the Chairman of the Board of Directors of the Defense Plant Corporation, one from the large metal-working industry, one from the smaller metal-working industry, one from the machine-tool industry, and two from the public at large. The Chairman and Vice Chairman would be appointed by the President from the members not designated by Government agencies. The bill would authorize and direct the Commission to determine what

machine tools are surplus to the needs and functions of the several Government departments and agencies, and its determination would be final and conclusive.

The machine tools determined to be surplus by the Commission would be disposed of as follows:

1. Tools specially designed for producing munitions and not readily replaceable from the open market would be retained or redistributed among the Federal agencies.

2. New and slightly used machine tools, if of superior design or condition, not retained or redistributed under (1), would be allocated for replacements at arsenals, navy yards, and similar plants.

3. Remaining new and slightly used tools would be made available to smaller metal-working concerns upon such terms as the Commission considers appropriate to maintain in business or establish new smaller metal-working concerns, with preference to war veterans. The Commission would be given power to arrange credit and guarantee financial arrangements. An interest rate of 3 percent is specified, and the Government would be given a right to repossess the tools within 10 years for war purposes. As a part of the disposition of the tools in this class, a survey of the machine-tool capacity and the potential capacity of the smaller metal-working concerns of the country would be made and published.

4. After the above dispositions, the remaining tools would be made available to public schools without charge, for use in vocational training.

5. Any tools not disposed of under any of the above provisions would be available for sale, exchange, lease, or other disposition to friendly nations and their nationals, subject to licenses to be issued by the Secretary of State.

The Commission would continue in existence for 3 years after cessation of hostilities, and any tools remaining at that time are to be broken up as scrap, by and at the expense of the Federal agencies having cognizance. The scrap thus generated would be sold on the domestic market and exportation would be prohibited.

It is the opinion of the Navy Department that machine tools should not be singled out for attention apart from other surplus property, and that the disposition of surplus property of all types should be under unified direction. The disposition of machine tools by an independent commission is considered likely to result in the adoption of conflicting policies with the attendant confusion and delay in carrying out industrial mobilization.

The provisions of the bill establishing preferences in favor of war veterans are considered unworkable in their present form. It is felt that the desired results can be secured to better advantage in legislation dealing primarily with the administration of aid to veterans.

The provision of the bill giving the Commission the right to determine which tools are surplus would prevent necessary transfers of machine tools essential to the war-production program. The bill also fails to make the prescribed dispositions of tools subject to the rights of contractors under existing facilities contracts.

Under the bill, machine tools could only be disposed of to smaller metal-working concerns, to public schools, or to friendly nations during the 3 years after the termination of the war and at the end of that time any tools not disposed of would be required to be scrapped. This would preclude any general disposition of such tools in the United States. It is believed that these provisions are unnecessarily restrictive, and that tools built for war production can be made available for more general domestic use on terms and under conditions that will protect the different Government interests involved.

In view of the foregoing, the Navy Department recommends against enactment of the bill S. 1609.

The Navy Department has been advised by the Bureau of the Budget that there would be no objection to the submission of this recommendation.

Sincerely yours,

JAMES FORRESTAL, *Acting.*

WAR DEPARTMENT,
Washington, April 6, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Military Affairs Committee, United States Senate

DEAR SENATOR REYNOLDS: The War Department is opposed to the enactment of S. 1609, a bill to provide for the disposition of surplus Government-owned machine tools.

The provisions of the bill of primary interest may be summarized as follows:

Section 1 states that the purpose of the bill is to provide for the equitable disposal and effective utilization of surplus Government-owned machine tools, in the interest of (*a*) national defense, (*b*) the encouragement of small business enterprises, (*c*) international trade, and (*d*) public education in skills connected with machine tools.

Section 3 establishes a Federal Machine Tool Commission of nine members.

Section 4 gives the Commission the right to obtain from a department or agency any information and data with respect to machine tools in the possession or control of such department or agency. The Commission shall then determine what machine tools, if any, are surplus to the needs and functions of such department or agency and such determination shall be final or conclusive. The Commission shall thereupon classify surplus machine tools as follows: Class A, tools continuously unused for a period not exceeding 1 year following their manufacture and prior to the date of classification; class B, tools used for not more than 7,200 hours; class C, tools not classifiable in class A or class B. No machine tools acquired by the Government more than 60 days after the termination of hostilities come within the statute.

Section 5 assigns a certain order of priority for the disposition of surplus machine tools.

Section 5 (a): All Government tools, of whatever classification, manufactured for the production of military or naval equipment, not readily replaceable from the open market, shall be retained or distributed among Government agencies, as the Commission shall prescribe. Such tools shall be retained until such time, not to exceed 20 years, as they become obsolete or abandoned.

Section 5 (b): Class A and class B machine tools, except under subsection (a), shall be disposed of to Government arsenals, navy yards, maintenance and repair facilities, shore establishments, and similar installations, as the Commission shall determine. No machine tool shall be so disposed of unless the Commission first determines that such tool is superior in design or condition to the one it is to replace.

Section 5 (c): Class A and class B machine tools, except under subsections (a) and (b), shall be disposed of to smaller metalworking concerns, as the Commission shall deem necessary or appropriate to maintain or establish any smaller working concern in business. The Commission shall give preference to war veterans. The Commission shall arrange for the extension of credit to the purchaser, the rate of interest not to exceed 3 percent. For the period of 10 years the Government may recapture any machine tool disposed of pursuant to this section, in the event of war or national emergency. "A smaller metalworking concern" is defined as "any independent, unaffiliated manufacturing enterprise which utilizes not more than 100 machine tools for not less than 75 percent of the number of man-hours involved in its total productive operations."

Section 5 (d): Class A, B, and C machine tools, except under subsections (a), (b), and (c), shall be made available without charge to public schools, to promote training and instruction in machine tools. The Commission shall prescribe the terms and conditions concerning the scope, character, and duration of the courses to be given.

Section 5 (e): Class A, B, and C machine tools, except under subsections (a), (b), (c), and (d), shall be made available for disposition to friendly nations and their nationals, if authorized by license issued by the Secretary of State.

Section 6 (a) limits the existence of the Commission to 3 years following the termination of hostilities. Within 60 days after such date the Commission shall make a final report of its operations. Within 60 days following the submission of the report all machine tools remaining on hand shall be broken up and sold as scrap metal.

Section 10 (b) imposes on the departments and agencies complying with the Commission's directives responsibility for all expenses and charges connected with the storage and shipment of Government-owned machine tools.

Section 12 states that the act shall take effect immediately.

The War Department is opposed to S. 1609, in principle, because the creation of a separate agency to dispose only of surplus machine tools is inconsistent with the basic policy of the Department that one central agency should handle the disposition of all surplus property. If there is justification for a Federal Machine Tool Commission, there is equal justification for a separate commission for each category of surplus property. A number of disposal agencies, each separately created in a particular statute, each with its own policies, rules, and regulations, will inevitably cause conflicting policies and administrative confusion. The War Department should not be forced to run the gantlet of a long line of agencies and commissions in order to dispose of its surplus property.

In general, S. 1609 conflicts with the following principles which the War Department considers essential to the sound operation of a central agency:

(*a*) Surplus property would be defined as including all real estate and improvements thereof, all industrial materials and equipment, all military supplies and equipment, and all items of scrap and salvage, which the Department reports to the central agency as no longer required to meet the needs of and responsibilities vested in the War Department.

(*b*) The War Department would not declare as surplus any real estate, plant, industrial materials, or industrial equipment needed for its own operation (including reserves and stand-by facilities and equipment) or in the operations of contractors or subcontractors engaged in war production, items which may be disposed of as a part of contract terminations under policies established by appropriate authority, items of property held overseas which are determined by appropriate authority as desirable for disposal there and not for return to the United States, nor any items of property required for such relief measures as are necessarily a part of military operations.

(*c*) The War Department would report promptly to the central agency such items as become surplus under the above definition. The central agency would thereupon take possession, accountability, and full responsibility for any further maintenance or utilization, removal, protection, storage, sale, or other disposition of the property, the central agency to consult with the Department as to disposition of any property of special military significance. The Department would retain the right to remove and store materials and equipment which must be promptly removed from its own premises or those of its contractors or subcontractors to permit immediate conversion of such premises to other uses, if and when the central agency was not prepared to move and store such property. The central agency would be authorized to utilize existing War Department facilities for the conveyance of title to surplus real estate and improvements thereof.

(*d*) The War and Navy Departments would retain for the duration of the war the right to exchange stores and property as they may determine necessary in prosecuting the war.

In particular:

Section 4 is objectionable in that it vests in the Commission sole and conclusive authority to make the initial determination which machine tools are surplus. The War Department feels that it must have authority to determine what is surplus to the needs and functions of the Department. In last analysis, responsibility for national defense is lodged with the War and Navy Departments; such responsibility cannot be exercised fully and properly, if an outside agency is permitted to say which facilities or which tools are no longer needed for war production and for national defense.

Section 5 (a) contains the confusing language that all tools specially manufactured for the production of military "equipment and which the Commission shall find are not readily replaceable from the open market" shall be retained or redistributed among Government agencies as the Commission shall prescribe, such machine tools to be retained no longer than 20 years. Does this mean that a machine tool cannot be retained if the Government can buy another in the open market? Does it mean that, no matter how unnecessary the tool, it cannot be disposed of, if the tool cannot be readily replaced from the open market? Must a tool be sold at the end of 20 years, no matter how excellent the tool and regardless of the tool's condition?

Section 5 (b) states that the Commission shall not allocate or dispose of Class A or class B machine tools to Government arsenals, navy yards, maintenance and repair facilities, shore establishments, and similar installations until the Commission first determine that the total is superior in design or condition to the tool it is to replace. This is open to the same objection as section 4: The Department must be the final judge of the design and utility of a machine tool used in war production. Moreover, enactment of such legislation would allow the disposal agency to interfere in questions which are primarily matters of internal management.

It is considered that the preference established in favor of veterans and the extension of credit to veterans, in section 5 (c), are not proper subjects of legislation in such a bill. It is suggested that a carefully worked-out program of aid to veterans, embodied in a comprehensive statute, would be sounder legislative policy that the sum total of piece-meal measures such as that set out in section 5 (c). So far as the preference is concerned, the War Department agrees with the purpose of fostering sales to veterans, but the provision is couched in mandatory language which would make administration impracticable; such a requirement would be expensive, burdensome, lead to delays, and deprive the agency of the discretion and flexibility essential to efficient management. So far as extension of credit is concerned, it is thought that credit functions belong in a separate agency.

Similarly, it is believed that the extension of credit to small metal-working concerns provided in section 5 (c) should be handled as a problem of industrial reconversion in general and not as an adjunct of property disposition. In any event credit should not be limited to certain classes of purchasers, since a credit arrangement may be just as desirable for nonpreferred purchasers as for preferred purchasers.

The definition of a "smaller metal-working concern" in section 5 (c) as "any independent, unaffiliated manufacturing enterprise" is inadequate, unless the terms "independent" and "unaffiliated" are qualified.

Section 5 (d) gives the Commission powers over local education hitherto unenjoyed by any such Federal agency. It is, at least, questionable whether the Federal Machine Tool Commission should have authority "to prescribe suitable terms and conditions concerning the scope, character, and duration of the courses to be given" in every public school anxious to use surplus machine tools.

Section 5 (e) allows the disposition of tools to friendly nations and their nationals if authorized by a license from the State Department, but no standards for the issuance of a license are provided in the bill.

It is pointed out that section 5 fixes an inflexible priority in favor of (1) Government agencies, (2) small metal-working concerns, (3) public schools, and (4) friendly nations. The bill makes no provision for the acquisition of surplus machine tools by anyone else, notwithstanding a prospective purchaser's need for such tools in reconversion and notwithstanding the fact that the very tools sought to be acquired may have been employed by the purchaser in his contribution to the prosecution of the war.

Under section 6, the existence of the Commission is limited to 3 years following the termination of hostilities and, within 60 days after the final report, all machine tools remaining on hand shall be broken up and sold as scrap. It is suggested that this may be a rash and radical rule to lay down. In view of probable needs for war reserves, as well as other important considerations which may exist, it is not considered advisable to legislate an inflexible provision for scrapping all surplus tools on hand at any specified time in the future.

Provisions as to accountability in section 10 (a) and other sections appear to be unnecessary in the light of existing laws relating to accountability.

Section 10 (b), making the individual agencies responsible for all expenses and charges connected with storage and shipment of any Government-owned tool runs counter to the War Department's concept of a disposal agency. The

central agency takes and disposes of the surplus property; the central agency should be responsible for storage and shipping charges.

As worded in section 12, S. 1609 takes effect immediately upon enactment. In order to preserve the War Department's present authority to dispose of property in furtherance of the war effort, it should be made clear in S. 1609 that prior to the termination of hostilities, nothing therein contained shall alter or amend the existing disposal powers of the War Department. Even after cessation of hostilities, the War Department must have final authority to determine what is surplus to the needs of the Department.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

WAR DEPARTMENT,
Washington, April 6, 1944.

HON. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
United States Senate.

DEAR SENATOR REYNOLDS: Reference is made to your request of February 3, 1944, for comments on S. 1680, a bill to provide for disposition of surplus war materials. The War Department is opposed to the enactment of this bill.

The bill relates to the disposition of all kinds of surplus property except land, buildings, or other real property, and provides that at the end of every 60-day period each Government agency shall transmit to Congress a detailed report on the amount of materials it has determined to be surplus, and that thereafter each agency shall proceed as quickly as possible to dispose of such surplus. The bill states that before disposing of surplus property each agency must circularize the other agencies to determine whether the property can be utilized by them. It is then stated that the agency holding the surplus property may assign it to any other governmental agency that may apply for it.

The bill also states that if no other agency is interested in the surplus property it shall be sold at a public sale to the highest responsible bidder after public advertisement. It is specifically provided that no property shall be disposed of at a price less than the cost to the United States of acquisition of the property.

The principal objections to the bill are (1) that it does not set up adequate administrative machinery to handle the problem of disposing of surplus property, and (2) that the price restriction contained in the bill prohibiting sales at less than the cost of acquisition, is impracticable and unworkable. The bill contemplates that excess materials will continue to be held in the possession of the procuring agencies and that disposition of the property will be made by them. The real need is for a central agency to take possession of surplus property and assume accountability and responsibility for maintenance, utilization, storage, and disposition of the property. It is not enough to require an agency to report surplus property, circularize other agencies before disposing of such property, and sell the property at public sale to the highest bidder.

One of the most important aspects of the surplus property question is the impact which release of a vast amount of Government-owned property will have on the civilian economy. The position of the War Department is that war materials can be infiltrated into our national economy with a minimum of disruption to the price structure and to independent business enterprise, if over-all supervision in accordance with uniform policies can be exercised by a central disposal agency. A central agency for the disposal of surplus property has been set up by the terms of Executive Order No. 9425, and this agency, or some agency similarly constituted, is best equipped to supervise the disposal of all surplus property. The proposed bill would, in effect, allow each agency to dispose of surplus property as it sees fit, except as to price. The inevitable result

will be lack of uniformity of policy among agencies, dumping where prices permit, mounting stocks where prices do not permit, and competition among Government agencies resulting in lower realizations to the Government and discrimination among purchasers.

Another important objection to the bill is the fact that restriction to sales at prices not less than cost is impracticable. The character of war production makes it inevitable that many items will cost far more to produce than they could possibly be worth for civilian use. When, as a result of changes in war strategy or improvements in weapons and matériel, contracts are changed or terminated or supplies on hand are rendered surplus or obsolete, many articles will have little use in their existing form. Many items will not bring their original cost because they were made for a specialized purpose not existing in general commerce, or were made of more valuable materials or required more precise and careful workmanship than are necessary for equivalent items in normal civilian use.

No good purpose would be served by holding and storing highly specialized items of property which can never be sold for a price equal to their cost. In fact, considerable harm can be done to the productive capacity of the Nation if material that could be used to meet post-war production demands is allowed to lay idle because it will not bring a price equivalent to its cost of production.

During the war the handling of surplus property is vitally related to war production. It is necessary for the War Department to utilize its manpower and its facilities to the maximum extent on matters directly related to the prosecution of the war. Any diversion of its personnel or facilities to storage and maintenance of surplus property, not salable because of a price restriction, would have an adverse effect on the performance of the procurement program.

The War Department is unable to estimate the fiscal effect of enactment of S. 1680.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

DEPARTMENT OF COMMERCE,
Washington, February 21, 1944.

HON. ROBERT R. REYNOLDS,
Chairman, Committee on Military Affairs,
Senate Office Building, Washington, D. C.

DEAR SENATOR REYNOLDS: This is in response to your request of February 3, 1944, for an expression of my views on S. 1680, a bill "To provide for the disposition of surplus war materials."

Section 2 of the bill requires, within 60 days of its enactment, a report to the Congress by the head of each agency of such war materials as are determined "to be surplus to its present and future needs," and further provides for the disposal of such surpluses "as rapidly as possible" under the provisions of the bill. I believe that it would be impossible in the time specified to determine the materials which would be surplus to future war requirements. Also, the rapid sale of tremendous quantities of surplus materials, as contemplated by this section of the bill, would be highly dangerous to our national economy. Established trade channels, especially small-business enterprises, might be injured beyond repair, and industry seriously handicapped in its effort to reconvert to peacetime production. Employment problems thus would be unnecessarily aggravated.

Section 3 of the bill requires each agency, after an effort to determine possible use of its surpluses by other Government agencies, to sell at public sale to the highest responsible bidder, but in no event at a price which is less than the cost to the United States of the acquisition of such material. While it is necessary that the financial interest of the Government be protected to the extent possible, it is believed that in many instances materials produced at high cost under the pressure of war requirements could not be sold by the Government without loss.

This would certainly also be true with respect to used materials. It would appear, therefore, that although section 2 provides for rapid disposition of materials the provisions of section 3 actually would operate to freeze the bulk of surplus materials now in the custody of the various Government agencies.

In view of the above, I cannot recommend enactment of the bill.

Sincerely,

JESSE H. JONES, *Secretary of Commerce.*

NAVY DEPARTMENT,
Washington, April 3, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman of the Committee on Military Affairs,
United States Senate.

MY DEAR MR. CHAIRMAN: The bill S. 1680, "To provide for disposition of surplus war materials," was referred by your committee to the Navy Department with request for a statement of views with respect thereto.

The purpose of the bill is to require each Government department, establishment, or agency to transmit to Congress, within 60 days after the date of enactment of the bill and every 60 days thereafter "a complete and detailed report" showing the amounts of war materials in its custody or under its control which are determined by the head of the agency to be surplus to "its present and future needs." The bill broadly defines "war materials" to include any Government-owned supplies, equipment, materials, or other tangible property other than real estate, acquired, held, or utilized for military or other purposes "directly or indirectly related to the war effort and suitable or adaptable for civilian use."

Upon reporting to the Congress, each agency would be required to proceed as rapidly as possible to dispose of the surplus war materials so reported. Before disposing of war materials, the agency would be required to circularize other agencies and to assign the war materials to any agency applying therefor.

Section 3(b) of the bill would require that any war materials not assigned to other agencies shall be sold by the agency having custody or control, at public sale to the highest responsible bidder, upon such terms and after such public advertisement as may be deemed in the public interest, but no such material shall be disposed of at a price which is less than the cost to the United States of the acquisition of such material.

Section 4 of the bill would require that all proceeds of sales made pursuant to the provisions of the bill shall be deposited in the Treasury of the United States to the credit of "Miscellaneous receipts" and a full report thereof shall be submitted annually to the Congress.

The definition of war materials contained in the bill is imprecise insofar as such materials are to be suitable or adaptable for civilian use. Almost any personal property acquired by the Navy may be adapted to civilian use, although the degree of adaptability would vary. Certain types of property, if scrapped, could be adapted to civilian use. Presumably, "civilian use" would include industrial use, but such is not clear from the bill and on the whole the definition needs considerable clarification.

The requirement that property be sold at competitive bidding at an amount not less than the price at which the material was acquired by the Government is particularly objectionable. This requirement of competitive bidding, with no authority to negotiate sales to specific purchasers, would nullify the present existing authority of the Navy Department to dispose of property where it is most needed to facilitate the prosecution of the war. Apparently, section 3 (b) of the bill would eliminate the Navy Department's authority under the First War Powers Act to sell property to contractors and others when necessary to facilitate the war, because the bill would require that the Navy Department dispose of "surplus" property only in accordance with its terms.

The absolute necessity that the Navy Department retain authority to dispose of property freely during wartime is set forth at some length in the letter of the Secretary of the Navy to the chairman of the House Committee on Expenditures in the Executive Departments, dated March 31, 1943, with reference to the bill H. R. 1610. A copy of that letter is enclosed.

The bill H. R. 2795, which also relates to the matter of disposing of surplus war property, recognizes that the Navy Department must retain for the duration of the present war the authority to dispose of property which was granted by the First War Powers Act.

The bill H. R. 2795 has been passed by the House and favorably reported by the Senate Committee on Expenditures in the Executive Departments. The present bill, S. 1680, is in direct conflict with the provisions of the bill H. R. 2795, which the Navy Department has consistently supported in both Houses of Congress.

The requirements that the Government obtain the full cost of surplus war materials, when coupled with the requirement for competitive bidding, would so hamper the Navy Department as to make it almost impossible to dispose of any property. Apart from the difficulties of selling property under such conditions, the requirement that the Government must receive the cost of the materials, would be an effective bar to almost all sales of property for which the Navy has no need in the prosecution of the war. This unrealistic requirement ignores the necessity of scrapping such surplus property to make it adaptable to civilian use and ignores also the deterioration and obsolescence of many types of Navy property.

In view of the foregoing, the Navy Department recommends against enactment of the bill S. 1680.

The Navy Department has been advised by the Bureau of the Budget that there would be no objection to the submission of this recommendation.

Sincerely yours,

JAMES FORRESTAL, *Acting.*

Senator MURRAY. This will conclude the scheduled hearings. Further hearings will be announced later on.

(Whereupon, at 11:50 a. m., the hearing was adjourned.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

TUESDAY, MAY 30, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE
OF THE COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to call, at 10:10 a. m., in room 357, Senate Office Building, Senator James E. Murray (chairman), presiding.

Present: Senators Murray, George, Guffey, and Ferguson, and Representative Gwynne.

Also present: B. M. Gross, staff director; Kurt Porchardt, counsel to the subcommittee; and Scott Russell, post-war committee.

Senator MURRAY. The hearing will come to order.

Mr. Lockwood is the first witness. Mr. Lockwood, will you come forward, please?

Before we open the hearing, I should like to say that today's hearing has been called to consider the problems involved in the termination of war contracts at the Brewster Aeronautical Corporation.

This subject is of particular importance to the War Contracts Subcommittee, because we are now engaged in preparing legislation dealing with the broad problem of conversion from war to peace and of synchronizing war-production cut-backs with plans for the resumption and expansion of civilian production. Two bills dealing with this subject have been under study by our committee for many weeks—namely, S. 1730, introduced by Senator George and myself, and S. 1893, introduced by Senator Kilgore. As announced in the subcommittee's report of May 12, it is our intention to bring before the Senate in the near future a bill which is based upon the best features of both these measures and upon many suggestions that have been offered by the witnesses appearing at our hearings. Toward that end, we are working in close cooperation with the Senate's Special Committee on Post-war Economic Policy and Planning, headed by Senator George.

Our witnesses at today's hearings will include Preston Lockwood, president of Brewster; Richard Frankensteen, vice president of the United Automobile Workers Union; Charles Wilson, Vice Chairman of the War Production Board; and representatives of the Navy and Army.

STATEMENT OF PRESTON LOCKWOOD, PRESIDENT, BREWSTER AERONAUTICAL CORPORATION, LONG ISLAND CITY, NEW YORK

Senator MURRAY. Will you give us your full name please?

Mr. LOCKWOOD. My name is Preston Lockwood. Do you wish me to give my residence?

Senator MURRAY. Everything pertaining to your official position with the corporation that you represent.

Mr. LOCKWOOD. I am president of Brewster Aeronautical Corporation, whose main office is at Thirty-fifth and Northern Boulevard, Long Island City.

I was elected president on May 17, 1944.

I have with me as other representatives of the company, D. C. Peacock, vice president, and Leo Gottlieb, counsel.

Senator MURRAY. Mr. Lockwood, have you any prepared statement that you wish to give at the opening of this hearing?

Mr. LOCKWOOD. No, sir; I have not. I had rather short notice, and we have been very busy in Long Island City.

Senator MURRAY. We have presented to you some questions which we wish to have you answer here this morning, and I shall ask you those questions now.

The first question is, when was the first Navy contract awarded Brewster?

Mr. LOCKWOOD. Before answering that question, may I ask if I shall have an opportunity to correct dates and figures later?

Senator MURRAY. Yes; you may supplement your testimony of today by any additional statement you wish to make to cover any matters that you are not prepared at the moment to answer.

Mr. LOCKWOOD. My dates and my figures may be approximate. They are from memory, some of them.

There was a Navy experimental order as early as 1934. In 1938, an experimental contract was awarded by the Navy to Brewster, and subsequently in that year further contracts, both experimental and production, were awarded by the Navy to Brewster, particularly the Buffalo fighter, and I believe it is a correct statement to say that by the end of 1938, practically all work of Brewster Aeronautical Corporation was for the Navy.

Senator MURRAY. What did your first contract provide? What was the purpose of that contract?

Mr. LOCKWOOD. One was for a fighter plane of medium range called the Buffalo, and the next contract was for a dive bomber; that is, the next contract for a plane was a dive-bomber contract for the British, the Dutch, and the Navy.

After we obtained the Buffalo contract and before we obtained the dive-bomber contracts, we had a large subcontract for Consolidated Aircraft Corporation for the making of outer wings for the PBY, now known as the Catalina.

Senator MURRAY. Were these contracts followed by others from the Navy?

Mr. LOCKWOOD. Having said that we received two dive-bomber contracts, the only contract of substance that followed was the Corsair contract, which is the subject of the present cancelation. There were additional orders under the original dive-bomber contracts.

Senator MURRAY. When were the plans made for the building of the plant at Johnsville?

Mr. LOCKWOOD. I can only say that I believe it was late in 1940, or early 1941, when that plan started. I think it was probably in 1941, because I know it was not finished until 1942. The bulk of the work seems to have been done in 1941. All of that was before my connection with the company.

Senator MURRAY. Do you know the conditions under which that plant was planned?

Mr. LOCKWOOD. No; I do not.

Senator MURRAY. Do you know who proposed it?

Mr. LOCKWOOD. The management of Brewster then was under the direction of Mr. James Work, whose title varied from that of president to chairman of the board during those years.

Senator MURRAY. Do you know what that plant cost the Government?

Mr. LOCKWOOD. The total D. P. C. loan on that plant now is about $8,500,000, and I should say that over $6,000,000 was fixed assets, that $6,000,000 being plant and the rest machinery and equipment.

Senator MURRAY. Has that plant proved to be well suited for the war-production program your concern had on hand?

Mr. LOCKWOOD. That is a question of judgment. In my judgment, yes. It is now an excellent plant.

Senator MURRAY. I understand that the Long Island plant of the Brewster concern was a leased plant, leased from private owners.

Mr. LOCKWOOD. That is not entirely correct. It is partly leased and partly owned. There are about a million square feet of space in Long Island City consisting of four units. The unit which Brewster owns, I think, has about 250,000 square feet.

Senator MURRAY. Was that plant constructed and equipped for efficient production?

Mr. LOCKWOOD. It depends upon what it was to produce.

Senator MURRAY. Was it suitable for the production program that your concern had on hand?

Mr. LOCKWOOD. Not as suitable as some other plants. The principal units were owned by Ford and by Pierce Arrow, and were originally constructed for the purpose of making automobile parts.

Senator MURRAY. Couldn't it be readily converted to the building of planes?

Mr. LOCKWOOD. It could be, and was, converted to the building of planes, but it did labor under the disadvantage of being in different units.

Senator MURRAY. Different units?

Mr. LOCKWOOD. Consisting of different units; that is, being not all under one roof, and being vertical—that is, a number of floors.

Senator MURRAY. What was the cost to the Government of the equipment in the Long Island plant?

Mr. LOCKWOOD. About a million and a half dollars, I should say, undepreciated.

Senator MURRAY. A million and a half?

Mr. LOCKWOOD. Between a million and a half and $2,000,000, without taking into consideration subsequent depreciation.

Senator MURRAY. Can you give us the number of employees that you had at each of these plants?

Mr. LOCKWOOD. Before the current lay-off we had a total of 12,250 employees, approximately 3,500 of whom were in Johnsville.

Senator MURRAY. What are the facts with reference to the efficiency or productivity at the Brewster plant?

Mr. LOCKWOOD. Well, to take one fact, that of man-hours, the man-hours currently employed in the manufacture of each Corsair are

about 9,500. In September and October, when they just got into real production on Corsairs, they were about 27,000 per plane direct productiev man-hours.

Senator MURRAY. How did that compare with production in other plants? Was that not considered a good production record?

Mr. LOCKWOOD. My information is that when you consider the number of Corsairs we had made—we had made about 600 Corsairs when the cancelation occurred. The man-hours which were required were probably less than the man-hours which certain other manufacturers required when they made their six hundredth Corsair. I don't know the man-hour figures currently for the other manufacturers.

Senator MURRAY. How many shifts did they run at the plant?

Mr. LOCKWOOD. You mean lately?

Senator MURRAY. Starting with the commencement of your operations.

Mr. LOCKWOOD. Well, we ran two shifts, most of the time, until about a month ago, when we reduced shifts at Johnsville to one shift, and the night shift in Long Island City was considerably curtailed.

Senator MURRAY. Why did you reduce the one shift at the Johnsville plant?

Mr. LOCKWOOD. Because we found we could meet our schedules with one shift.

Senator MURRAY. Prior to that you were not meeting your schedule, and you had a very unsatisfactory condition there, did you not, in your production?

Mr. LOCKWOOD. At one time, but not immediately prior to the reduction of that shift. We were meeting our schedules before we cut to one shift. The unsatisfactory condition was when we were making the three types.

Senator MURRAY. Three types of what?

Mr. LOCKWOOD. Three types of planes.

Senator MURRAY. And can you describe to us the situation there which created that unsatisfactory condition?

Mr. LOCKWOOD. The inherent difficultly in making three types of planes at one time, certain mistakes in planning and arrangement which were subsequently corrected, and a condition in which labor and management were not cooperating very well.

Senator MURRAY. To what extent does the present man-hour figure at your plant represent an improvement over the past performance?

Mr. LOCKWOOD. Well, the man-hours are now only about one-third of what they were when we really began on the Corsairs.

Senator MURRAY. What was your contract? Was it a cost-plus-fixed-fee contract?

Mr. LOCKWOOD. Yes, sir.

Senator MURRAY. And under that contract did you have an oversupply of workers there?

Mr. LOCKWOOD. Not for the production of the Corsair.

Senator MURRAY. Didn't you have any problem of inability to secure efficient work from the men because of the fact that they were overcrowded?

Mr. LOCKWOOD. That was when we were making three types and didn't know how many men were required and made other mistakes, as I said, in the planning.

Senator MURRAY. That was when the plant developed the bad reputation with reference to production?

Mr. LOCKWOOD. Yes, sir.

Senator MURRAY. Well, when did you begin to correct that?

Mr. LOCKWOOD. We began to correct that decidedly as soon as Mr. Kaiser became president, which was October 7, 1943.

Senator MURRAY. What was the cause of that unsatisfactory condition? Was it due to poor management, or what?

Mr. LOCKWOOD. It was due to a combination of facts. The management was not as successful in the planning as it might have been. Labor and management did not understand each other as well as they do now, and there was, as I say, the inherent difficulty in trying to make three different types of planes at once, in the same plants.

Senator MURRAY. That failure of understanding between management and labor was due largely to inefficient management, was it not?

Mr. LOCKWOOD. I wouldn't say largely due to it. I can't apportion the reason for that failure even in my own mind. It was due, at least partially, to management.

Senator MURRAY. Well, then, you feel that your plant was correcting the bad conditions there and was going along with a satisfactory production record when the cut-back began?

Mr. LOCKWOOD. Yes, sir.

Senator MURRAY. When was the company first notified of the cut-back?

Mr. LOCKWOOD. On Tuesday, May 16.

Senator MURRAY. Tuesday, May 16?

Mr. LOCKWOOD. During the course of a board of directors meeting, Mr. Kaiser was called to the telephone by the Navy Department, and when he returned he said he had been told there was to be an over-all cut-back in the fighter program.

Senator MURRAY. When was that cut-back to take place?

Mr. LOCKWOOD. He was not told at that time, and he was not told to what extent; at least, it was not repeated to us at the directors' meeting as to what extent or when the cut-back would take place, and to what extent it would affect Brewster. That was on Tuesday.

On Wednesday, we had an annual meeting of the stockholders. At that meeting, Mr. Kaiser read a statement to the stockholders in which he referred to the fact that he had been informed there was to be a cut-back in the over-all fighter program and that it would affect Brewster. We have copies of that statement.

Senator MURRAY. Have you got a copy of that statement?

Mr. LOCKWOOD. Yes.

(The statement referred to is as follows:)

MAY 17, 1944.

STATEMENT OF HENRY J. KAISER AT ANNUAL MEETING OF STOCKHOLDERS OF BREWSTER AERONAUTICAL CORPORATION

In a letter sent to the stockholders under date of March 11, 1944, the stockholders were given a summary of such information as was available concerning the principal developments affecting the company.

I am sure that you were pleased to learn of the great improvement in production and efficiency which has taken place. The production figures cannot, of course, be made public, but I am glad to be able to say that the production record achieved by the company, of which you were told in the March 11 letter, is being fully maintained. The company has continued to exceed the

airplane delivery schedules established by the Navy in spite of increases in schedule.

The excellent quality of the company's airplanes and its production record are receiving further gratifying recognition. On April 1, 1944, the War Production Board again congratulated the company upon its steady record of sustained production and particularly the new high achieved during March. The company's April showing was even better and brought another congratulatory telegram from the War Production Board in May. Just yesterday, the company received the following telegram from Vice Admiral John S. McCain, Deputy Chief of Navy Operations (Air):

"To the Men and Women of Brewster Aeronautical Corporation:

"A compilation by a national magazine shows that of the eleven top American aces in this war four flew Corsair planes. More of these famous pilots made their records in Corsairs than in any other plane Army or Navy together. These four aces knocked down 91 enemy aircraft. Their brilliant combat achievement is a tribute to you men and women who help build their superb fighter planes."

The company's steady increase in efficiency and decrease in production costs has also continued. Due to increased output and more efficient operations, direct labor man-hours consumed in the production of the Corsair fighter have been reduced from approximately 27,000 per plane during September 1943 to less than 9,500 per plane during the first week of this month. This naturally represents a material saving in costs.

Last October there were approximately 20,000 persons on the company's pay roll, including about 2,750 employed at the company's Newark plant, which has since been taken over by the War Department for the use of the Army Air Forces. At the present time, the company has about 12,250 employees.

There has been a reduction since last October of more than $2,700,000 in the annual executive and administrative pay roll.

The company's labor relations are stable. There has been no stoppage or labor dispute since the present management took office. Absenteeism, which was running around 13 to 14 percent 6 months ago, was down to about 5 percent at the end of April.

The marked improvement in the company's labor relations, and in its efficiency generally, was commended in a recent report to the War Labor Board. This report was submitted to the War Labor Board by its official representative and was approved by the Board. In speaking of the cooperation between the labor union and the management at Brewster, since October, 1943, the report stated:

"The union and the management have worked together in peace and harmony and have jointly, in sincerity, and understanding solved their mutual problems so that more and more airplanes have been produced at the Brewster plant."

Referring to the company's recent production record, the report stated:

"Here will be seen the concrete results of the intelligent spirit of understanding and cooperation which exists at Brewster today as between the company and the union. The record over the last 6 months is indeed one in which the company and the union can take pride."

The report to the War Labor Board also emphasized the reduction in man-hours per unit of production which was termed "nothing short of astounding."

The final meeting of the outgoing board of directors was held yesterday at the Johnsville plant of the company. After the meeting, my fellow directors and I went through the plant and I wish that all of the stockholders present at this meeting could have been with us. I think that you would have agreed that the company has at that plant as smooth-running, efficient, and satisfactory an operation as one could find anywhere.

The March 11 letter to stockholders outlined some of the problems which stand in the way of determining the company's financial position. Although progress has been made toward the solution of these problems, the company is still not in a position to issue financial statements. These problems and their present status are reviewed in a statement which has been prepared for distribution at this meeting and will be passed among you in just a few minutes. The statement summarizes the major open matters affecting the company's financial position.

Borrowings under the company's Regulation V loan, under which the company is authorized to borrow up to $55,000,000, stood at $24,200,000 as of May 16, 1944, as against $35,200,000 at March 1, 1944, and a high of $49,500,000 for 1944 to date. The loan, which is 100 percent guaranteed by the Navy Department matures on June 30, 1944.

It will not be possible to determine the results of the company's operations for the first quarter of 1944 until the books can be closed for the year 1943, but the company's operations are currently profitable.

Deliveries under the company's present fighter contract with the Navy Department would, according to present estimates, result in the completion of that contract by the end of this year.

While attending the directors' meeting at Johnsville yesterday, I was advised by telephone from Washington that the Navy Department, as a result of a study which has just been completed, has decided to cut back substantially the production of fighter planes. As a result, it now seems clear that the Navy Department will not place with the company any further orders for the Corsair fighter. It is also possible that the Navy may cut off deliveries by the company prior to completion of the present contrast. The extent, if any, by which deliveries under the present contract will be reduced is to be decided after further consideration by the Navy and consultation with the company.

The Navy Department has made it clear that the proposed action is being taken as the result of revision of over-all military requirements, and in no sense reflects any dissatisfaction with the company's performance or with the proposed new management of the company of which the Navy Department has been advised.

I shall recommend to the new management that they ascertain, at the earliest possible moment, whether or not other new business can be obtained immediately, either from the Navy or from the Army, and either as prime contractor or as subcontractor. New business is needed without delay, and unless the company's facilities are to be utilized for the production of military aircraft, the new management may wish to make plans for the use of the company's facilities in the manufacture of civilian aircraft.

In this connection, I am now working on plans for the organization of a nonprofit corporation to build and operate 5,000 airports and landing strips along the highways of the United States, to stimulate and encourage air travel. Under my plan, there will be an airport every 30 miles and a landing strip every 15 miles. The airports and landing strips will be completed within 6 months after construction begins. It is my hope that satisfactory arrangements can be made to put this plan into effect promptly after the invasion has been carried out and victory is assured.

If no military aircraft business is forthcoming for the Brewster Co., the new management may wish to give consideration to designing and preparing to build personal planes, and may even wish to adopt a plan for taking orders now for delivery after the war.

The statement regarding the company's financial position, to which I referred, will now be distributed. I believe that the March 11 letter, as supplemented by this statement and by the remarks which I have just made, summarizes for you all the information concerning the company which can appropriately be given at this time.

Senator MURRAY. When did you first learn of the actual terms of the cut-back?

Mr. LOCKWOOD. On Friday, May 19. There was a conference at the Navy Department between representatives of the Navy and representatives of Brewster.

Senator MURRAY. They came to the plant?

Mr. LOCKWOOD. No; at the Navy Department. There was a conference at the Navy Department. During the course of that conference, after some discussion, they told us in substance the terms of what was subsequently set forth in the termination notice which we received on Monday, May 22.

Senator MURRAY. Have you that termination notice?

Mr. LOCKWOOD. Yes, sir.

Senator MURRAY. You may put it in the record.

Mr. LOCKWOOD. There were two letters—the termination notice proper and a supplemental letter.

Senator MURRAY. They may be incorporated in the record.

(The two letters referred to are as follows:)

NAVY DEPARTMENT,
BUREAU OF AERONAUTICS,
Washington, D. C., May 22, 1944.

Subject: Contract NOa (s) 172—Termination notice.

BREWSTER AERONAUTICAL CORPORATION,
Long Island City, N. Y.

GENTLEMEN: You are hereby notified pursuant to section 24 (entitled "Termination") of contract NOa (s) 172, formerly contract NOs 90615, of the termination of said contract as hereinafter stated pursuant to a determination of the contracting officer that such termination is for the best interest of the Government.

From the date of receipt hereof you are directed to continue performance under the contract only to the extent necessary to make deliveries of airplanes at the rate of approximately 24 per week, and spare parts in the same proportions to airplanes delivered as are now called for by the contract, provided that this shall result in the delivery from the date of receipt hereof to and including July 1, 1944, of not more than 150 airplanes and proportionate spare parts The contract shall be terminated entirely on July 1, 1944, and all work in performance of the contract shall cease at the close of business on that date.

You are directed upon receipt hereof promptly to take the action required of you by section 24 (b) of said contract including the cancelation of all orders and subcontracts and the cessation of all work under the subject contract not necessary for the completion of the airplanes and spare parts called for hereunder.

Kindly acknowledge receipt hereof immediately.

Very truly yours,

D. C. RAMSEY,
Contracting Officer, Bureau of Aeronautics.

NAVY DEPARTMENT BUREAU OF AERONAUTICS,
Washington, D. C., May 22, 1944.

Subject: Contract NOa(s) 172—Termination
Reference: (*a*) Termination notice, contract NOa(s) 172, dated May 22, 1944.

BREWSTER AERONAUTICAL CORPORATION,
Long Island City, N. Y.

GENTLEMEN: Confirming discussions with your officials which began Tuesday, May 16, reference (*a*) notified you of the termination of the subject contract, which termination, however, contemplates the continued performance by you under July 1, 1944. This continued performance was limited to the manufacture and delivery by you of airplanes at the approximate rate of 24 airplanes a week from the date of the receipt by you of reference (*a*) until July 1 and also the continued manufacture and delivery by you of spare parts in the same proportion to airplanes delivered. In the event of a failure on your part to continue deliveries of airplanes and spare parts at the above-mentioned rate and at costs in substantial conformity with current costs, or in the event that for any other reason it becomes, in the opinion of the Navy Department, in the best interests of the Government to amend the terms of reference (*a*) to provide for an earlier termination date, you will be so notified by this Bureau.

The Bureau will be glad to discuss with you at your early convenience the status of miscellaneous projects undertaken in connection with contract NOa(s) 172, such as the work being done on airplanes for the British.

Very truly yours,

D. C. RAMSEY,
Contracting Officer, Bureau of Aeronautics.

Senator MURRAY. Under the terms of those notices, when were you required to put the cut-back into effect?

Mr. LOCKWOOD. Not later than July 1, 1944. The continuation of the contract until July 1, 1944, was dependent upon our delivery of approximately 24 planes per week with a proportionate number of spares, the total number of planes delivered not to exceed 150.

We had on that date delivered 600, so there were 150 more planes to be delivered.

Senator MURRAY. Can you meet that schedule?

Mr. LOCKWOOD. We have, and we believe we can.

Senator MURRAY. That would carry you then to July 1, would it not?

Mr. LOCKWOOD. Yes, only at Johnsville, really, because we are now working in Long Island City to cover shortages on some of the spares, but within 10 days we expect to be completely through our work in Long Island City to make the deliveries of the 24 and spares.

Senator MURRAY. Within a period of 10 days, you say?

Mr. LOCKWOOD. Yes; within a period of 10 days we expect to be finished with all our work in Long Island City connected with the delivery of the 24 planes, and a proportionate amount of spares.

Senator MURRAY. That means the plant at Long Island City would be completely closed, then?

Mr. LOCKWOOD. Closed so far as work on Navy business is concerned, with the possible exception of a small contract.

Mr. PEACOCK. A small contract for chemical bomb loads.

Mr. LOCKWOOD. That is new business, but we have got two or three odds and ends of contracts with the Navy in addition to the Corsair. They are entirely at Johnsville, and they don't amount to very much.

Senator MURRAY. That wouldn't require any extensive operations of the plant or require the continuance of the plant?

Mr. LOCKWOOD. No, sir.

Senator MURRAY. Then when these cutbacks are carried out, have you any other program with the Navy to continue the operations of the plant?

Mr. LOCKWOOD. We have no program with the Navy for continuing operations.

Senator MURRAY. Have they given you any understanding that they will in the future be expecting to give you additional work?

Mr. LOCKWOOD. No; they have not. On the contrary, they have said that at the present time they had no additional work for us.

Senator MURRAY. Well, have they called the situation to the attention of other services so that you might be able to secure contracts from some other direction?

Mr. LOCKWOOD. Not to my knowledge.

Senator MURRAY. Have you contacted the Army with reference to the possibility of securing any other contract work?

Mr. LOCKWOOD. We have.

Senator MURRAY. When did you contact the Army?

Mr. LOCKWOOD. On May 18 we sent a representative to Wright Field, and on May 19 various representatives of the company called on the Army headquarters at the Pentagon Building.

Senator MURRAY. What was the result of those efforts?

Mr. LOCKWOOD. I should like Mr. Peacock to carry on that part of the inquiry, please, because he conducted those negotiations.

BREWSTER AERONAUTICAL CORPORATION,
Long Island City 1, N. Y., June 5, 1944.

BERTRAM GROSS, Esq.,
Counsel, Subcommittee, Military War Contracts Committee,
Senate Office Building, Washington, D. C.

DEAR SIR: Referring to my testimony on Tuesday, May 30, 1944, before the Subcommittee on War Contracts, of which Senator Murray is chairman, of the Senate Military Affairs Committee.

Since my return to Long Island City I have had a careful check made as to the work which we subcontract on the F3A–1 (Corsair airplane). This check reveals the percentage of total man-hours represented by subcontracted items, from the beginning of the contract to be approximately 35 percent and at present approximately 33 percent.

Will you please use this letter to supplement my testimony or in any other way you might wish.

Yours sincerely,

BREWSTER AERONAUTICAL CORPORATION,
By PRESTON LOCKWOOD, *President.*

STATEMENT OF D. C. PEACOCK, VICE PRESIDENT, BREWSTER AERONAUTICAL CORPORATION

Mr. PEACOCK. Well, we saw General Jones and he was to refer the matter to Wright Field. We already had a man at Wright Field investigating the possibility of subcontracting Army work from the other plane manufacturers.

We have contacted a number of plane manufacturers throughout the country, and there is a possibility of obtaining a certain amount of subcontracts in rather a small way, but nothing of the magnitude of the eight or nine mililon dollars a month for the Corsair work which were doing.

Probably we might be able to build up, inside of 3 or 4 months, to one or two million dollars a month, but that would be the very most.

Senator MURRAY. That fact wouldn't make it at all possible for you to carry on your operations on the scale that you previously did?

Mr. PEACOCK. No; it would not, sir. What we found out is that it takes considerable time to develop these contracts. You have to work through Wright Field and through the contractors and work out the various terms of the contracts, and we are stymied on account of financing.

Senator MURRAY. All these efforts were carried on independently by your organization? You received no assistance whatever from any of the procurement agencies, enabling you to get additional work?

Mr. PEACOCK. As we have said, we talked to the Army and we talked to the War Production Board; the Chemical Warfare Division in New York have been working with us trying to get us some work, and the Army Air Forces in New York had a representative in our plant last week going over the facilities. All of the agencies in that line now are apprised of the fact that we do have available manpower and available space to build plane parts or any other small parts for war production.

Sentor MURRAY. Well, then, this cut-back or termination program was made when there was no other program to take its place provided by any of the procurement agencies?

Mr. PEACOCK. That is right.

Senator MURRAY. So that is was necessary for you, on your own behalf to find other contracts?

Mr. PEACOCK. That is correct.

Senator MURRAY. In other words, to be able to continue your plant?

Mr. PEACOCK. That is right.

Senator MURRAY. In other words, there was no program by the services provided to take the place of the existing contracts which you have.

Mr. PEACOCK. That is right. The fact that it requires considerable time to retool and to develop these contracts means that we will lose all of our supervision. When you lose your supervision, your organization is completely shot.

Senator MURRAY. When did you first consult with the War Production Board and the War Manpower Commission in connection with this problem that you have?

Mr. PEACOCK. We talked to the War Production Board on May 19.

Senator MURRAY. That was immediately following the notice of cut-back?

Mr. PEACOCK. Yes, sir.

Senator MURRAY. What did they say they could do for you?

Mr. PEACOCK. We saw C. E. Wilson first. He referred us to Beverly Murphy.

Senator MURRAY. Who is he?

Mr. PEACOCK. He is in the War Production Board. I don't know his capacity. An appointment was made with Mr. Henshaw, one of the vice presidents, to see Mr. Murphy on the following morning. He saw Mr. Murphy, and the question was talked about of converting the Johnsville plant for shell making. The Ordnance Department went to work and made a survey immediately.

Senator MURRAY. They had no plan already worked out for that purpose? It was a plan they were going to work out in the future?

Mr. PEACOCK. That is right.

Senator MURRAY. Did they indicate that they knew your contract was going to be terminated? Did they know in advance that your contract was being terminated?

Mr. PEACOCK. We were not told that.

Senator MURRAY. But they had no immediate plans, anyway, to take the place of the contract you have?

Mr. PEACOCK. That is right.

Mr. GROSS. Did they seem to have full information as to the reasons for the termination at the War Production Board?

Mr. PEACOCK. I think Mr. Wilson should testify to that.

Senator MURRAY. Well, how is that effort on your part working out?

Mr. PEACOCK. On getting business?

Senator MURRAY. Yes.

Mr. PEACOCK. Well, it is very difficult for the reason that we have no financing. All of the money is tied up in V loan. We can't take on additional business, Army business or Ordnance business, on the present V loan because the V loan is backed 100 percent by the Navy.

Senator MURRAY. If, at the time your contract was terminated, a program of future war production work had been presented to you, would your plant be in a position to go forward with the new work?

Mr. PEACOCK. Only if we had been given sufficient notice to permit us to go out and get subcontracts or other network and retool and reconvert over gradually, and retain our organization.

Senator MURRAY. If a program of new work was all ready for you, you would be able to undertake it then and be able to make the necessary adjustments there to take on the new work, would you not?

Mr. PEACOCK. That is right, but it would take at least 90 days to integrate it into the present production as the production faded out.

Senator MURRAY. It would take some little time to make that change-over?

Mr. PEACOCK. Yes, sir.

Senator MURRAY. In the meantime, would that cause you to lose any of your personnel, your important technical and skilled workers there?

Mr. PEACOCK. Well, it would depend upon the type of subcontracts you had as to the personnel that you retained.

Senator MURRAY. What is the situation at your plant now?

Mr. PEACOCK. Well, with regard to orders, it is simply this: We have one small $60,000 order on a cost-plus-fixed-fee as a subcontractor from the Goat Co. in Brooklyn. We have the letter of intent for manufacturing these bomb noses. It is very small, as it is an educational order. It didn't amount to much and will only keep twenty to thirty men busy, and six or eight of our hydraulic and mechanical presses busy, and that is all.

We have another prospect of one to two hundred thousand dollars worth of tool design and manufacture for Consolidated Vulte at Nashville, for which we expect to get the letter of intent today or tomorrow, providing that we can get proper financing some way and can go ahead.

Senator MURRAY. What is the extent of that contract?

Mr. PEACOCK. Between one and two hundred thousand dollars. It will last about 90 days.

Senator MURRAY. Then it is insignificant.

Mr. PEACOCK. It is very significant, because if we can get it in quick enough it will keep most of our tool personnel busy, because the minute we lose our tool makers, we can't get them back these days. They are just gone.

Senator MURRAY. When your contract was terminated, did you immediately notify your subcontractors?

Mr. PEACOCK. That was handled through termination; yes, sir.

Senator MURRAY. Have you many subcontractors?

Mr. PEACOCK. Two thousand, including the subcontractors and parts suppliers.

Senator MURRAY. What were they doing about the situation; do you know?

Mr. PEACOCK. No, I don't.

Senator MURRAY. Can you give us the dollar volume of the subcontracting which is done?

Mr. PEACOCK. You mean the items which we buy?

Senator MURRAY. The amount in dollars and cents of the subcontracts that you have.

Mr. PEACOCK. Do you mean now?

Senator MURRAY. Well, at the time of the contract termination.

Mr. PEACOCK. I am sorry; your question is not clear to me. The subcontracts that we were buying in from the outside vendors or the subcontracts that we had ourselves?

Senator MURRAY. The subcontracts you were granting to others. You have a large number of subcontractors, I understand.

Mr. PEACOCK. That is right.

Senator MURRAY. What do those subcontracts amount to in dollars and cents approximately?

Mr. PEACOCK. I should say approximately $20,000 a plane. That is approximate. I may be slightly off on that figure.

Senator MURRAY. Well, then, you did subcontract work also for other concerns?

Mr. PEACOCK. No; we don't do any. We did in Newark, but that was canceled out the first of the year.

Senator MURRAY. You say there is $20,000 a plane in subcontracts?

Mr. PEACOCK. That is right.

Senator MURRAY. How many planes per month would that be that you turn out?

Mr. PEACOCK. I don't know whether the Navy will let me disclose that figure.

Senator MURRAY. Very well. But, at any rate, it is a substantial subcontracting program which you have there?

Mr. PEACOCK. Yes, sir.

Mr. GROSS. What is the total cost of a single plane?

Mr. PEACOCK. Approximately 80 to 85 thousand dollars.

Mr. GROSS. You are selling them to the Navy at about that price?

Mr. PEACOCK. That is their present cost; that is correct.

Senator MURRAY. Now, as a result of this situation at your plant you have developed some difficulties there. Will you describe what the situation is at the plant now?

Mr. PEACOCK. I shall turn you over to Mr. Lockwood.

STATEMENT OF PRESTON LOCKWOOD—Resumed

Mr. LOCKWOOD. Do you mean yesterday and the day before with respect to the demonstrations by labor?

Senator MURRAY. Yes.

Mr. LOCKWOOD. Late Sunday night the leaders of the union informed us that they wished to work, that they were willing to work for nothing for Brewster in connection with any new business that Brewster might get because they recognized that the financing of the new business was a very difficult matter.

We said we would have to look into whether, under the applicable statutes, we could accept work for nothing even if it was otherwise practicable.

On Monday morning everybody came to work, including those who had taken a vacation for the last 2 days of the week before. When the termination notice came out, it was late on Monday, May 22. As promptly as we could act, we posted a notice to the effect that only those persons whose work was necessary to complete the 24 planes a week which we were to deliver, were to work, and that the rest of them could take a vacation without pay for the rest of the week, except to the extent that they had accrued vacation pay due them, and that

those would be paid for whatever period of time that vacation pay had been accrued.

When they came to work on Monday, yesterday, they stated that they were going to stay in the building when their shift was over, whether or not they were required to work to produce the 24 planes a week. They handed us a letter in the morning, a copy of which I have here.

Senator MURRAY. You might read it into the record.

Mr. LOCKWOOD. It is on the stationery of Local 365, United Automobile Workers of America, C. I. O., 21–28 Forty-first Avenue, Long Island City, New York 1, telephone Stillwell 4–7176–7177. There is a legend on the side as to the branch offices. I don't suppose you want me to read that. It is addressed to Mr. Preston Lockwood, president, Brewster Aeronautical Corporation, Long Island City, N. Y.

DEAR MR. LOCKWOOD: Our union knows the frustration you must feel, after having met schedules, exceeded schedules, and met the requirements of the Navy, to then, unceremoniously, with less than 48-hours notice, be told that all contracts are canceled. We recognize that such a procedure has given you no opportunity to secure other war contracts which would enable you to maintain a working force in the Brewster Long Island and Johnsville plants. Recognizing the financial structure of the company, we know that you are unable to maintain this working force long enough to enable them to make change-overs and secure additional orders.

Because the Navy is so obviously unfair, we refuse to accept the normal results of such termination. We, therefore, offer to remain at work (those of us who would be laid off in this termination) without pay to enable you to obtain other work which will aid in the war effort and keep intact a vital war-production plant. Discipline will be maintained; production will be met; and our every effort will be to assist you in keeping alive an organization which has become a part of our daily lives, an organization to which we have contributed and of whose record we are proud.

Looking forward to an immediate response, I am,

Sincerely yours,

RICHARD T. FRANKENSTEEN,
Vice President, International Union U. A. W., C. I. O.
ANGELO D. STORTI,
Chairman, Joint Shop Committee, Local 365, U. A. W., C. I. O.

Senator MURRAY. If you are able to negotiate new contracts, you would consider that a very generous offer on the part of the union?

Mr. LOCKWOOD. We would indeed, sir, and we do.

Senator MURRAY. Have the relations between the union and your concern been satisfactory?

Mr. LOCKWOOD. They have been very satisfactory since October 1943.

Senator MURRAY. Do you consider the union contract with your organization workable and satisfactory?

Mr. LOCKWOOD. I consider it very workable.

Senator MURRAY. Have you received any communications from the Navy or the W. P. B. commenting upon your production record?

Mr. LOCKWOOD. Yes, we have received a number of telegrams which I have here.

Senator MURRAY. You may read them into the record.

Mr. LOCKWOOD. The first one was dated January 8, 1944, and it is addressed to "The men and women of Brewster Aeronautical Corporation."

Your splendid achievement in producing 65 Corsairs 2 days ahead of your December schedule is worthy of commendation. By establishing this precedent, you have shown your determination to speed the delivery of more of these vital planes into the war zones where they are so urgently needed. This is a spirit which speaks well for the success of your "beat-the-schedule" campaign about to be inaugurated at Brewster. Keep up the good work.

C. W. WOODWARD,
Rear Admiral United States Navy,
Incentive Division.

The next telegram is dated January 11, 1944, and is addressed "To the men and women of Brewster Aero Corporation."

A Corsair shares the glory of Second Lieutenant Alvin J. Jensen, Marine fighter pilot who won the Navy Cross for his spectacular achievement of destroying 24 Jap planes on the ground at Kahili airfield. The only member of his squadron who managed to reach the objective through a driving rainstorm, Lieutenant Jensen dived through enemy antiaircraft to smash a group of 12 bombers, 4 dive bombers, and 8 Zeros. It should be a source of pride to every Brewster employee building these famous fighter planes that a Corsair has once more proved its superior speed and maneuverability in combat.

D. C. RAMSEY,
Rear Admiral United States Navy,
Chief of the Bureau of Aeronautics.

The next was a telegram dated March 3, 1944, and addressed to Henry J. Kaiser, Jr., Brewster Aeronautical Corporation, Long Island City, N. Y.

Was most favorably impressed by my visit to Johnsville yesterday. Conditions reflect general improvement in Brewster production situation. Your ability to exceed current schedules is gratifying. Authority is extended to increase production from four to five Corsairs a day by June. Keep up the good work.

D. C. RAMSEY,
Admiral United States Navy.
Chief of Bureau of Aeronautics.

The next telegram is addressed to "General Manager Brewster Aeronautical Corporation." It was dated March 3, 1944.

The Aircraft Production Board notes with pride that our confidence in your company's ability to meet your February schedule has been wholeheartedly proven as indicated by your fine production record for that month.

C. E. WILSON,
War Production Board, Aircraft Production Board.

The next telegram is dated April 1, also from C. E. Wilson, of the W. P. B. Aircraft Production Board.

The Aircraft Production Board recognizes your steady record of sustained production in recent months and congratulates you for your new high in March.

C. E. WILSON,
War Production Board, Aircraft Production Board.

The next telegram is dated May 15, 1944, signed by John S. McCain, vice admiral, United States Navy, Deputy Chief of Navy Operations. It is addressed "To the men and women of Brewster Aeronautical Corporation."

A compilation by a national magazine shows that of the 11 top American aces in this war, 4 flew Corsair planes. More of these famous pilots made their records in Corsairs than in any other plane, Army or Navy. Together, these four aces knocked down 91 enemy aircraft. Their brilliant combat achievement is a tribute to you men and women who help build their superb fighter planes.

JOHN S. MCCAIN,
Vice Admiral, United States Navy,
Deputy Chief of Navy Operations.

Senator MURRAY. In view of the satisfactory record you are making, there was no reason for the termination of the contract because of any defect in the production record at your plant?

Mr. LOCKWOOD. No reason whatsoever of that nature.

Senator MURRAY. Did you ever learn what the reasons were for this sudden termination or cut-back?

Mr. LOCKWOOD. I have a letter from Mr. Gates, Assistant Secretary of the Navy for Air, in reply to a letter which I wrote tim.

Senator MURRAY. Will you introduce both letters?

Mr. LOCKWOOD. They are quite lengthy.

Senator MURRAY. Read your letter to him first, and then his letter to you.

Mr. LOCKWOOD. My letter to Mr. Gates reads as follows:

Hon. ARTEMUS L. GATES,
Assistant Secretary of the Navy for Air,
Navy Department, Washington, D. C.

DEAR MR. GATES: The purpose of this letter is to confirm the results of the conference with the representatives of Brewster Aeronautical Corporation had with you and other representatives of the Navy Department on Friday, May 19, 1944, and to inform you of the decision reached by the board of directors of the company with reference to the question on which we undertook to report to you by Monday morning, May 22.

At our conference on Friday, the representatives of Brewster advised you and your associates that the company took the position that any termination or curtailment of the contract between the company and the Navy Department for the production of Corsair fighters would be unwarranted and gave you our reasons for this position.

You stated that the Navy Department had definitely decided to terminate the Brewster Corsair contract prior to completion, and that the only question open was the point of termination. You stated that this decision was part of a general program for cutting back fighter production, and was not due in any way to the retirement of Mr. Henry J. Kaiser from the management of Brewster nor to any dissatisfaction with the new management of Brewster elected at the annual meeting of May 17. You also stated that the Navy's action was not due in any way to any dissatisfaction with Brewster's current record of performance and you affirmatively commended that record.

The representatives of Brewster stated that, if there was to be a curtailment of the company's Corsair contract, it ought not to become effective prior to delivery of the one thousandth plane, with the rate of production somewhat reduced so as to give the company about 4 months in which to obtain and get into production on other war work.

You stated that the Navy Department was unwilling to accept a cut-off point as late as the one thousandth plane and was thinking in terms of termination at about the seven hundred and fiftieth plane. You also stated that the Navy Department would not be satisfied to delay completion of deliveries beyond July 1, which would mean that the planes would have to be delivered at the rate of about 24 per week during the period until July 1. You stated that if the company was unable, in view of the changed conditions, to deliver planes at this rate, the Navy Department would wish to terminate deliveries on or before Friday, May 26.

The company's representatives were asked to inform the Navy Department by 9:00 o'clock on Monday morning, May 22, whether the company believes that it will be in a position to deliver planes at the rate of 24 per week under the new conditions.

We also discussed at our conference on Friday the question whether the Navy Department would permit borrowings under the present V-loan or a modified loan for the purpose of maintaining a corporate organization to complete the liquidation of the company's terminated contracts. It was indicated that this would be permitted and that the company would be advised in due course as to the procedure for accomplishing this.

The representatives of the company also asked you whether the Navy Department would have any other work for which it would wish to utilize the facilities and organization of the company in replacement or partial replacement of the terminated fighter contract. You stated that the Department knew of no such other work at the present time.

We also asked you whether the Navy Department had made any plans for taking over and using for other purposes the Johnsville plant of the company, which is under lease from Defense Plant Corporation. You stated that the Navy Department had no plans at the present time for the use of the Johnsville plant and that we could properly assume that the Johnsville plant would be available to the company for other work.

At a special meeting of the board of directors of the company the question whether the company would be in a position to deliver planes at the rate of 24 per week under the new conditions was considered. The conclusion reached by the board of directors was that the company could not make any promise as to the number of planes which can be delivered under these conditions. The company, however, is eager to make every effort to meet the desires of the Navy Department with reference to the delivery of planes with a view to avoiding cessation of deliveries prior to the latest date acceptable to the Navy Department, i. e., July 1. In this connection, we should like to point out that the Navy Department could give its termination notice to become effective on July 1, with a reservation of the right to accelerate this date if thereafter the Department is not satisfied with the rate of delivery of planes or any other conditions with reference thereto.

We feel bound to state that the company has not been given any information which satisfies us that any curtailment of our Corsair contract is wise from the standpoint of the best possible utilization of the available manpower of the country or the most economical and effective prosecution of the war effort, and that we believe that the Navy Department's sudden action is inconsistent with sound termination procedure and unjust to our employees and stockholders. Nevertheless, the company is prepared to cooperate with the Navy Department in every way possible in carrying out the decisions reached by the Department.

Very sincerely yours,

BREWSTER AERONAUTICAL CORPORATION,
By PRESTON LOCKWOOD, *President.*

Yesterday, May 29, I received the following letter from Mr. Gates, dated May 26, 1944, from the office of the Assistant Secretary of the Navy for Air, Washington, D. C.:

DEAR MR. LOCKWOOD: This is to acknowledge receipt of your letter dated May 22, 1944, in which you state that its purpose is to confirm the results of the conference had between your company's representatives and representatives of the Navy Department and me on Friday, May 19, 1944, and to inform me of the decision reached by the board of directors of Brewster with reference to the question on which you undertook to report by Monday morning, May 22.

As regards the termination of the Corsair fighter contract, you have already acknowledged receipt of the notice of termination which was delivered by the Navy Department to your company on May 22, 1944, together with the accompanying letter signed by Admiral Ramsey.

As regards your references to borrowings under the V-loan I understand that Brewster has been requested to submit as early as possible, but not later than June 1, 1944, an estimate of anticipated overhead expenses applicable to the fighter contract during the period that that contract is being terminated. Upon receipt of these estimates, the Navy Department will be glad to consider this matter further with you.

As regards your reference to the use of the Johnsville plant, Admiral Ramsey has today telegraphed you on the subject.

With reference to the last paragraph of your letter in which you state that you have not been given any information which satisfies you that any curtailment of the Corsair contract is wise from the standpoint of the best possible utilization of the available manpower of the country or the most economical and effective prosecution of the war effort, you have been advised that the curtailment of your contract was due primarily to a change in military requirements and to an attrition rate for Corsair airplanes substantially less than had been anticipated. The reasons why the cut was concentrated at Brewster have also been given you, namely—the extent of the reduction in the Corsair program made it apparent that there would not be a sufficient number of airplanes produced to permit the efficient utilization of the plants of all three companies producing Corsairs.

A proportionate reduction for each company would have been so large that it would simply have meant that in all three companies production would have been disrupted, unit costs would rise for all three companies, and efficiency would fall in all three companies. The solution of the problem which would

have the least damaging effect on war production generally was, therefore, to concentrate the cut with one producer.

The Corsair was designed and developed by Chance Vought Aircraft Division of United Aircraft Corporation, which then made the necessary engineering information available to Goodyear Aircraft Corporation and Brewster to enable them to go into production. Chance Vought has acted as engineering adviser to the other concerns and has assumed responsibility for the week-to-week changes put into the airplanes by all three producers as dictated by combat needs. Chance Vought is developing several advanced and special performance versions of the Corsair, as well as conducting a number of experimental and development projects for the Navy Department.

Goodyear Aircraft Corporation, for its part, is developing a new fighter which will succeed the Corsair in its plant when production can be begun. Goodyear is also a subcontractor for parts of other essential Army and Navy airplanes.

It is apparent that during the development of the more advanced models at Chance Vought and Goodyear, a productive organization hust be kept intact in each plant so that an orderly transition to the new models can be made without loss of efficiency. A substantial cut in the Cosair production at either company would disrupt such productive organization and thus have an adverse effect on these projects. Too drastic a contraction of the work load at Goodyear would also damage the war work on which Goodyear is a subcontractor.

By contrast to the situation of Chance Vought and Goodyear, Brewster has no other work of importance to the war effort which would be affected by a termination of its contract for Corsair airplanes. It has the smallest output of any of the three. It is the highest cost producer of the three and suffers from the inherent weakness of operating in two plants situated at some distance from each other, at Long Island City and Johnsville, Pa. In addition, Brewster represented to the Navy Department that it would have considerable difficulty in completing its contract for Corsairs if it did not receive a further contract for airplanes, which was impossible in view of the reduction in over-all fighter requirements.

I would like to emphasize again that the cancelation of the Brewster contract was not brought about by dissatisfaction on the part of the Navy with either the management of Henry J. Kaiser or the new management which has just taken office.

Your offer to cooperate with the Navy Department in every way possible in carrying out the decision reached by the Department is appreciated.

Sincerely yours,

ARTEMUS L. GATES.

Senator MURRAY. Have you any comment to offer in connection with this correspondence?

Mr. LOCKWOOD. I have this comment, that I still think it would have been more economical and more effective if the full force of this over-all cut had not fallen on Brewster.

We are in a No. 4 labor market. The other companies making Corsairs are in a much more critical labor market. We have progressed so far in the making of these planes that, although I cannot give our cost figures exactly and cannot give them at all for the other companies, it would appear economical at least to finish the thousandth plane and then see where we stood.

We requested the Navy Department to make a careful study of comparative costs and see if we were not correct in our estimate.

I will ask Mr. Peacock to say a few words about that thousandth plane, and what it would have done for us.

Mr. PEACOCK. I made the statement before that the thousandth plane would have permitted us to retool to get additional business. That is the main point why we asked the Navy for the thousandth plane.

Mr. LOCKWOOD. We also feel that we could have made these advanced types of Corsairs as economically and as promptly as the other companies involved.

Senator MURRAY. If there had been a carefully prepared program of termination so as to permit your plants to be furnished with the new contracts, you would have been in a position to go forward at your plant and carry out any new production work that the services would require?

Mr. LOCKWOOD. We believe so.

Senator MURRAY. I will ask Senator George and Senator Ferguson if they have any questions.

Senator FERGUSON. No questions.

Senator GEORGE. No questions.

Senator MURRAY. Thank you for your statement.

Mr. Frankensteen is the next witness here.

STATEMENT OF RICHARD T. FRANKENSTEEN, VICE PRESIDENT AND DIRECTOR OF AIRCRAFT, UNITED AUTOMOBILE WORKERS, CONGRESS OF INDUSTRIAL ORGANIZATIONS, LONG ISLAND CITY, N. Y.

Senator MURRAY. Have you any preliminary statement you would like to make in connection with this situation?

Mr. FRANKENSTEEN. Yes; I have.

Senator MURRAY. You may proceed to give it.

Mr. FRANKENSTEEN. Well, all of us recognize the tremendous blow that hit this country at the time of Pearl Harbor. I should like to say that, from an industrial worker's standpoint, this Brewster situation fits in the same category as did Pearl Harbor. It is a blackout of post-war planning as far as the industrial worker can see.

I might point out that 9 months ago I was requested by the Navy, and given a No. 2 priority, to fly from the city of Detroit to Johnsville, Pa., to end a labor stoppage in a strike at the Johnsville plant. I flew into that situation. We ended it; and since that time I might point out that there has not been one single stoppage of production in the Brewster plant.

Mr. Kaiser stepped in as the management of this concern. I don't want to go into the background and castigate prior management or our own union in that situation. Let me just say that the situation was very bad prior to the entrance of Mr. Kaiser and the new attitude on the part of our people in that plant.

But in the last 9 months it has been exemplary and outstanding in its record.

I don't think that anything has so shaken the working people of this country as this termination of a major contract in a war period. The workers feel that if it can happen now, what can they look forward to in the post-war.

Just a few weeks ago the Navy issued a bulletin in which they commended the makers of the Corsair plane and told of the tremendous record that the Corsair had made, and yet overnight, without notice, without discussion with anyone, they terminate this contract.

My organization is the sole and exclusive bargaining agency not only for Brewster but for the other two suppliers of Corsair planes

to the Navy—Vought-Sikorsky at Bridgeport, Conn., and the Goodyear at Akron, Ohio.

I have had occasion to discuss this situation with the officers of both of the other producers. I might say that in Akron, Ohio, which is an acute labor shortage area, they have hired everyone that is available. I had the opportunity of going through the Goodyear plant just 4 weeks ago. At that time I sat with the vice president of that company and with some of the other officers of the company, as well as officers of our union, and I was told that their manpower situation was a very serious situation, that the new 26-year-old-draft idea was going to hit them very hard because they had so many young people in their plant.

I might say that the Navy intervened on behalf of many of those people and asked for deferments so as not to affect the manpower situation in the Goodyear plant. The manpower situation was that acute.

They have asked us—I believe it was Mr. Wilson—about importing Mexican labor into these situations and into Akron, Ohio, for the purpose of meeting production schedules. The same situation applies in Bridgeport, Conn., where we have a tremendous acute labor situation.

Yet they arbitrarily choose the New York area, a No. 4 labor area, in which to cut production.

We went along with a committee of our leaders to see Mr. Gates and Mr. Bayard, and the admiral sitting back there, to discuss this situation. We asked them to extend this contract by 250 planes. We said that if they would put 250 planes in this plant, that we would lend every effort, as we have been doing, to cooperate with the management in getting other work which would enable them to keep their organization alive.

We were encouraged with the interview and told that we would have an answer the next morning. I believe that our words carried some weight, at least to the point that they have given consideration to it, but the next morning we were told that they had decided to stay on their position.

Now, if their position was such that they couldn't give us or didn't give us a positive answer at that time, certainly there was some merit, at least of doubt, as to its advisability.

Now, maybe it is true that costs are greater in Brewster than in Goodyear or in Vought-Sikorsky, but I think this point should be made: Costs at this point of production in the Brewster plant are lower than at the similar point of production in either Vought-Sikorsky or Goodyear. They are producing their planes cheaper than in either of those places at a similar point of production.

Senator MURRAY. You would expect a further efficiency would develop at this plant?

Mr. FRANKENSTEEN. Very definitely. I think that if Mr. Kaiser had been allowed to remain or if his engineering management, which was left with this concern and was still there, had been allowed to continue, within the next few months they would have been the lowest-cost producer of Corsair planes in this country.

I don't want to involve personalities in this situation, but I cannot refrain from saying that we feel that the top navy is the Wall Street navy. They represent the Wall Street point of view, so much so that one of the top three men of the Navy Department, in our conference, made this statement to us: That he was very much concerned with our problem, recognized the seriousness of it, but was more concerned as to the small stockholders. I don't think that statement can rest very well with the working people of this country who are doing all in their power to turn out planes and other armament to win this war.

Senator MURRAY. Who made that statement?

Mr. FRANKENSTEEN. Mr. Gates.

I should like to read a letter which we have sent to the President of the United States, and the original letter to Mr. James Forrestal, Secretary of the Navy. This letter was dated as of yesterday:

MY DEAR MR. PRESIDENT: Completely ignoring the many interested Government agencies, the Navy Department has abruptly terminated Brewster Aeronautical Corporation contracts in Long Island City, N. Y.

The sole point at issue is the lack of adequate notice to either the 13,000 workers or other governmental bodies.

The following telegram was sent to the Secretary of the Navy:

"Hon. JAMES V. FORRESTAL,
"Secretary of Navy, Navy Department, Washington, D. C.

"MY DEAR MR. SECRETARY: The International Automobile Workers of the C. I. O. most respectfully but most insistently protest against the manner of Navy contract terminations—as exemplified by the method used in Brewster Aeronautical Corporation.

"Such a method renders nugatory all and any efforts to coordinate the Nation's manpower to the tremendous tasks facing it.

"It is most strongly represented that in view of previous cooperation asked of the International Union, United Automobile Workers-Congress of Industrial Organizations, and the Congress of Industrial Organizations, the action of the Navy Department approaches the point of breach of faith."

The further fact is, that unless the Congress of the United States is presumed by the Navy Department to be acting outside of its scope in creating other Government agencies to cope with just such problems, the action of the Navy must be construed as deliberately flouting the enacted legislation of that body. Neither Defense Plant Corporation nor Federal Housing Administration were notified, thus ignoring an investment in which millions of dollars of United States taxpayers' money is invested. It is bad finance and bad economics, and exhibits a complete indifference to the harmonious cooperation which existed in the past and which, it is most earnestly hoped, will be permitted to continue in the future.

Because of the difficulty in again assembling an industrial unit, the International Union, United Automobile Workers, with the full concurrence of the C. I. O., has asked the workers to cooperate with the management to the extent of standing by for work without wages until the management can ascertain if other work can be obtained.

In the meantime it is respectfully requested that the Secretary examine the political background of the Navy's action. Those in your Department initiating the action could not have been blind to the fact that termination of contracts are of the greatest political significance in this election year, particularly when it is demonstrated that the Department has not planned for or exhibited any consideration of the people thus thrust out of work.

I might add here that Mr. Hoover was defeated as President because of the unemployment problem of this country.

"The apparent motive of secrecy from other departments created by our great President to handle just such emergencies it is respectfully urged, merits your attention.

It would be most reassuring to be informed that the Navy's action was not precipitated by Navy Department people unfriendly to the President of the United States and to Senator Robert F. Wagner, of New York. Such a backdoor entrance into national politics, we feel sure, you would deplore in any department serving under our President.

"The international union, United Automobile Workers, and the Congress of Industrial Organizations respectfully request an early interview with the Secretary of the Navy with the intent of exploring the possibility of creating methods of termination other than those amounting to abrupt dismissal of 13,000 workers without notice.

"A mass meeting of Brewster workers and Congress of Industrial Organizations officials will take place on Thursday evening, 5:45 p. m., at Manhattan Center, New York City. You are cordially invited to attend and address this meeting to present your views of the reasons which underlie their dismissals."

Until the pattern of termination is clearly defined the workers are standing by in the plants without wages. It is most respectfully requested that the President review the problem and its many ramifications, all in a state of emergency by the reason of the Navy's unprecedented unilateral action.

Very respectfully,

PHILIP MURRAY,
President, Congress of Industrial Organizations.
RICHARD T. FRANKENSTEEN,
Vice President, United Auto, Aircraft-Congress of Industrial Organizations.

I have prepared a formal statement which embodies, I think, not only this situation but also takes into consideration the whole policy of terminations. We are tremendously concerned with the morale effect on the country of this situation.

I might just say in passing, that the other evening I sat down with the vice president of one of the largest industrial companies making airplanes and motors in this country, employing 185,000 people. He stated to me that this situation had scared every industrialist in the United States, because if such a policy of termination were allowed to be put into effect it would bankrupt every manufacturer of airplanes in the United States.

The policy is that serious, and certainly it follows that that means industrial unemployment and chaos for the workers of this country.

On Monday, May 22, the union received word from its Brewster local in Long Island that the Navy had suddenly ordered the termination of contracts at the Brewster plants. Thirteen thousand workers who have been making Corsairs were to lose their jobs, those at the Long Island plant within the following week, and those at Johnsville a month or so hence.

This action was taken by the Navy Department, or rather, by the Bureau of Aeronautics within the Navy Department, without notice to the international union, without advance notice to the company, without consultation with the War Manpower Commission, in the interest of minimizing employment dislocations, without consultation with W. P. B., or the War Department, concerning other uses of the plant and its trained labor, and, finally, without even adequate consultation with other parts of the Navy Department.

In short, this is a prime example of the anarchy in procurement programs which labor has warned against since 1941. An anarchy which has been compensated for during the war by imminent national danger, will overwhelm us in the transition to peace when integrated planning is necessary to meet even more imposing problems of coordination.

It is no thanks to the Bureau of Aeronautics that this big plant is not now completely idle or that the 13,000 workers are not completely without employment.

The decision was apparently made without adequate consultation even within the Navy Department. Our office in Washington called the Manpower Section of the Bureau of Aeronautics upon hearing word of the cut-back from our Long Island local. They had not heard anything about it, and called back later in the day, after talking with New York, to say that no workers had been laid off. They apparently had no information about impending lay-offs. Elsewhere in the Navy Department the information had seeped through but was considered highly confidential. Subsequently, I am glad to add, the manpower authorities at the Navy Department have been active in trying to arrange other jobs for the laid-off workers. And the U. S. E. S. has set up an office in the Brewster plant in order to assist in directing workers to other jobs. But this is another case of locking the stable after the horse is gone.

The union had to step in to force some action. I spent yesterday at the Long Island plant. We have arranged with the company for the workers to report for work each day until work is obtained. They reported yesterday and, I presume, were there again today.

I might say that this morning I talked with our people there and production was exceeding the normal, even though our people slept on benches and on the floor last night in the plant. Production was above normal as it was yesterday.

The Navy has been making Corsairs in four localities. The Brewster plant on Long Island has been making parts which have been assembled in Johnsville, Pa.; the Goodyear plant in Akron, and Chance-Vought in Bridgeport, Conn., have been making the completed plane. Why were the Brewster plants selected to absorb the full effect of the cut-back? The Navy's explanation is that their efficiency is lowest. This is true, though it has been rising rapidly and would probably approximate the level of the other plants by the end of the year. Moreover, the contract price at Brewster is below that in the other plants.

It is apparent that the Navy, in selecting the Brewster plants, has disregarded manpower considerations completely. The Long Island plant is in group IV labor-market area, whereas the Akron and Bridgeport plants—I have already described that—and I will not go into it.

Even if we agree that efficiency should be a ruling consideration in determining the location of cut-backs, it is still true that the procedure in this case did not take into account the problems of utilization of manpower. If the least efficient plants are to be cut-back in loose labor-market areas, then attention must be given to assuring that the workers are not permanently displaced and that alternative employment is available immediately. This would have been easy to arrange in the Queens area where the Brewster plant is located even if the Brewster plant itself were not utilized. There is a large amount of unused productive capacity which could be put to work again producing other war equipment or essential civilian supplies. In this connection I should like to quote from an editorial in yesterday's Washington News entitled "A Test Case for Reconversion." The editorial discusses the Brewster cut-back and urges the need for making full use of the plant, its equipment, and its manpower.

I quote:

> The Truman committee has recommended that surplus materials not required for munitions should be made available to manufacturers of civilian goods without delay, in order to avert unemployment where war plants shut down. This is just such a situation. The Brewster cut-back provides an opportunity for useful experiment in reconversion.

Secretary Forrestal appeared recently before the full Senate Military Affairs Committee to urge upon Congress the necessity for adopting national service legislation. It would appear from this and from earlier Navy support for national service legislation that the Navy is seriously interested in the manpower problem. How are we to reconcile this apparent interest with an action like that in the Brewster case? The Navy appears to be doing its best to defeat the voluntary manpower program which this union has supported and which thus far has worked by amazingly well despite the lack of over-all planning in the manpower field.

In yesterday's newspapers, Donald M. Nelson, Chairman of the War Production Board, announced that munitions production had fallen off in the month of April and that airplane production in particular was lagging. April plane output was 7 percent below the March level and 4 percent behind schedule. He says that we need more cooperation among labor, management, and the Government in order to prevent set-backs of any kind. I should like to ask in what respect the Navys' action at the Brewster plant contributes to pulling up our airplane output or to furthering the cooperation which Mr. Nelson urges. Actually the cut-back at Brewster is a set-back to the war program. Plant and labor are at least temporarily unused. I am not advocating that Corsairs be produced if not needed; I am advocating that the cut-back in their production be made after full consideration and consultation, so as to help rather than to hinder war production.

Senator MURRAY. You have been giving considerable study, I am sure, to the problems of the war production. Don't you think that if the Navy were doing its duty it would not be required to make a sudden termination of that kind?

Wouldn't they be able to survey the possibilities of the future, and when the time approached when they would have to discontinue the production of a particular item, a program could be worked out to prevent the plants from being made idle?

Mr. FRANKENSTEEN. Very definitely. I might say this. Mr. Gates and Mr. Forrestal, or one of them, told us that the rate of attrition was much better than expected—to which we all say, Thank God! But surely the Navy Deparement is able to ascertain whether there are losses in the field, they are able to know what is happening to their planes, and to know the uses of these planes in sufficient time so that surely 48 hours was not a proper notice of termination.

We offered other solutions. We suggested that they allow this plant to continue to the one thousandth plane—which would be 250 planes more—which they could take either from the volume of Goodyear or from Vought-Sikorsky, and still continue production without changing.

That part of the statement that was read as coming from Mr. Gates, we can't subscribe to. We know from talking with our own people, that in Akron their forces would not be dislocated if there

were to be a modification of the number of planes that they are now making, because they have many other types of work in those plants.

Senator MURRAY. Some time ago, we were alarmed and frightened by public statements to the effect that labor was unpatriotic, and we were not going to have the production that we should have to win the war. Now, we are told that we have too much production, and there has been this sudden stop of production without substituting any other work or without taking into consideration the necessity for bringing about some civilian production.

It seems to me that, in a situation of this kind, there should have been prepared long in advance a program of production for war purposes or for some civilian work to take the place of this terminating work.

Mr. FRANKENSTEEN. We certainly subscribe to that statement.

The handling of this situation is unfortunately consistent with the bungling which has characterized the handling of manpower problems throughout the war. During the defense period in 1940 and 1941, the lack of intelligent planning resulted, to an unnecessary extent, in the concentration of war contracts in a few large companies and in a few war centers. War production has suffered ever since because of the necessary migration and the resulting overcrowding, lack of adequate housing, and all the other accompaniments of congested areas.

Just on that point, again, the lack of foresight and the lack of knowledge on the part of top Navy officials as to the actual problems of manpower is amazing. One of the statements we were met with the other day was that these workers in the New York area, which was a noncritical area, could pick up and move to some other area, that the soldiers had to do that.

We pointed out that perhaps they think in terms of civilians as a pup-tent civilian army. These workers have families to think of. It isn't like taking care of themselves alone. They are faced with the inadequate housing situation, plus the fact that there may not be just one war worker in a family. It may be that in one home there are war workers in several plants. But that was Mr. Bayard's thinking, that these people could just pick up and go into a crowded area, and that because the soldiers did that the civilians could do it too.

We take second place to no one as to patriotism or as to our desire to produce the goods and win the war. We have been doing that on a voluntary basis, but such a complete lack of understanding certainly doesn't speak well for a person in charge of the labor policy for the Navy.

At that time the labor movement supported the program advocated by the Tolan committee which called for unified civilian control of war production in order to attain maximum efficiency. This program was opposed by, among others, the armed services, who preferred to handle production themselves.

During the years since Pearl Harbor the bungling has continued. There has been a notable lack of coordination among the manpower agencies, including in this category the War and Navy Departments, who felt themselves forced to get into the manpower picture because of the very lack of coordination and centralization which they had successfully opposed.

There has been no effective program for improving labor utilization despite the notorious waste of manpower, particularly in the shipbuilding and aircraft industries. Cost-plus contracts have put a premium on wastefulness and the lack of over-all planning has forced contractors to hoard labor in anticipation of expanded contracts.

In general, manpower problems have been handled on a fire-brigade basis—do nothing until you have a five-alarm fire—each emergency by itself. There was a tremendous furor about nonferrous metal mining even to the extent of furloughing soldiers; there is a similar situation now in the lumber industry. There have been campaigns to get in workers for the destroyer-escort program, for the landing-barge program, for submarine construction, and so on. Within the limitations of the lack of planning, the War Manpower Commission has done extremely well in meeting these emergency situations which, in most cases, were quite foreseeable and might never have arisen.

Recognizing the need for a planned approach to the manpower problem, the labor movement pushed for the adoption of the Kilgore war mobilization bill, S. 607. This bill, if enacted, would have gone a long way toward dealing with manpower problems on a reasonable basis of foresight, coordination and planning. Labor also urged the use of labor inspectors whose function would have been to report on cases of poor labor utilization. We did succeed in getting the present Office of War Mobilization by Executive order, but the Office has done nothing effective on the manpower front except to freeze wages and, by so doing, to make more difficult the work of the War Manpower Commission.

Despite the lack of a set-up such as the Kilgore bill proposed, we have muddled through and have made a magnificent production record. Output has not been as great as it might have been, it did not increase as rapidly as it might have increased, but the result is nevertheless one of which we can be proud. I think, however, that we should examine carefully the basic reason for this success. I believe it is one which will not prevail in the reconversion period ahead of us. If I am right, then coordination and planning is even more important now than it has been up to now.

Success in the manpower field, despite the bungling, has been due to the fact that we have had practically full employment. Workers have been willing to put up with poor labor utilization, with inadequate housing, poor transportation facilities, forced migration, and all the other results of our failure to think the problem through in advance. They have been willing to do so because of war needs and because jobs have been available. If one job was unsatisfactory, it was always possible to go to another. In the period that we are now entering, however, this situation will not prevail unless we quickly mend our ways.

There have been cut-backs and lay-offs occasionally throughout the war program, but most war industries were expanding, so workers who were laid off found useful jobs. Now the layoffs are more frequent, and are extending to all war industries. Half of the workers formerly employed in manufacture of small arms ammunition have been laid off. The Brewster lay-off closely follows a series of less publicized lay-offs in other aircraft factories, and will be followed by

larger lay-offs in other plane plants. Employment in shipyards has been declining, and there will be lay-offs in this industry as well. During the 6 months since last November, employment in the durable-goods industries dropped by more than 400,000, most of it in the munitions industries.

War production is no longer rising, and is actually lower than at the end of last year. This is not because of any labor shortage, or any inability of industry to produce more, but because the production of war materials has been much larger than their use, and much larger than their planned use in the coming invasion of Europe. The Army and Navy, finding it increasingly difficult to store inventories of many types of equipment, is reducing procurement and cutting contracts.

War production remains the most important activity on the home front. It is still of utmost importance to supply the Army with replacement weapons and ammunition, with the newest and best types of weapons, ships, and airplanes. However, the total level of war production will not increase, but will tend to go down.

Employment will decline even more rapidly. The efficiency of labor in munitions manufacture is rising rapidly. Constantly fewer workers are required for each plane, each ship, each shell.

I think that is best exemplified in aircraft production, where today many less workers are required to do identically the same work that was done previously, where mass production methods have come into use, and where learning to do the job has had its results.

Therefore, employment will continue to decline in the heavy industries, and more rapidly than it has so far.

There are no important branches of war production requiring more workers. Employment in both aircraft factories and shipyards will decline. Even in the manufacturing of landing craft, employment will decline, since production is already at peak levels. Increases in heavy artillery and shells for these big guns will merely compensate for lower production of other types of guns. Total employment on guns and ammunition will continue to decline. So will total employment on radio and radar equipment. Alleged shortages on railroads and other war-supporting industries are equally fictitious.

The characteristic of the present situation is that workers laid off by one war factory are no longer, as a rule, able to find work in others. Unemployment has not yet developed, largely because of the heavy rate of inductions into the armed forces. However, with the Army and Navy at peak strength, inductions are being cut in half, and may be cut further, while at the same time hundreds of thousands of older soldiers may be released to hunt for jobs.

If matters drift as they have been, many workers laid off during the remainder of the year will become unemployed; many others will be forced to take low-wage jobs of dubious value in beauty parlors, filling stations, as salesmen, etc.; many women who have patriotically gone to work, and want to continue, will be forced back into their kitchens.

But even more important to me is this thought: I am materially worried about a migration from aircraft plants. If workers feel that suddenly they are to be terminated and cast adrift, they are going to look for permanent places in civilian production. If they feel that the war is over—which certainly would be a very harmful thought to have made prevalent among the people of this country—if that were

allowed to be passed out, then certainly the migrations would be tremendous and the loss of production might very seriously affect this country.

Senator MURRAY. A proper program of war production would prevent the discontinuance of a plant of this kind and prevent that kind of thing developing in the country, if we were getting to the point where contracts were going to be terminated and people would be concerned about unemployment.

Mr. FRANKENSTEEN. That is right. Such a development would be quite dangerous for the still important war-production tasks ahead. Workers in danger of working themselves out of jobs will not produce as efficiently as workers with a reasonable degree of economic security.

And there are other factors at work. While labor has had its wages frozen by the Little Steel formula, it sees big business making tremendous profits. It sees big business opposing planning by the Government but doing a little post-war planning on its own account. Is it any wonder, therefore, that the individual worker becomes restive? He hears so-called hard-headed businessmen talk about getting labor back and down to normal after the war. He sees that failure on the part of the Government to do some bold constructive thinking will guarantee unemployment of upward of 15,000,000 workers after the war with which to get labor down to normal. It is conditions like these that breed wild-cat strikes.

Our union has a record of cracking down on unauthorized stoppages. Only last week our executive board, by unanimous action, removed the 15 officers of a local union on this account.

I might say in passing that we have had two-tenths of 1 percent lost time through strikes in our industry since Pearl Harbor. We are not bragging about the two-tenths, but we do think that the 99.8 percent certainly merits consideration rather than all of the attacks which we have had to suffer.

But I say to you, most earnestly, that control will become increasingly difficult so long as the Government, including the Congress, permits arbitrary cut-backs like that at Brewster. And I might add, as long as the N. W. L. B. continues to operate under its present methods and theories.

If they are to concentrate on war production, the workers require evidence that Government plans for demobilization assure them an orderly transition from wartime to civilian employment. Agreement on the need for doing something later will not satisfy them, no more than industry was willing to wait for a bill on termination of contracts.

Your committee has before it S. 1893, a bill introduced by Senator Kilgore and now sponsored by several other Senators on the Military Affairs Committee. This bill would provide an orderly procedure for handling manpower and other problems in the reconversion period and cancelations during the war. President Thomas, of my union, has already testified before your committee in favor of the general principles embodied in this bill. Let me indicate how this particular cut-back might have been handled were this bill already enacted.

The strategic decision to cut back production of Corsairs would have been made, as now, by the military authorities. But then, instead of an arbitrary decision by a single bureau, the incidence of the cut-back would have been agreed upon by a central agency which would

have taken into consideration the over-all needs of the war program, the importance of maintaining employment, and the possibilities of scheduled resumption of production for civilian use or for export. The decision with regard to the location of the cut-back would have been made by the War Production Board, in consultation with the War and Navy Departments, with regard to alternative uses of the plant for war and civilian purposes; with the War Manpower Commission with regard to minimizing the labor dislocations; and with labor and industry through industry and regional councils.

If any one of the procurement agencies had need of the facilities of the plant to be cut back, plans would have been made in advance for the change-over to the new product. If it proved to be impossible to use all the workers in the plant where it was decided that the cut-back could most advantageously be made, a program would have been immediately available for transferring them to other plants in the locality or in the industry. In the event that some delay was inevitable in getting the workers into new jobs, there would have been an adequate system of unemployment compensation to tide them over.

With the war-production program already on the decline, the maintenance of full employment will depend upon the carefully scheduled resumption of civilian production and upon production for export.

Many factories, particularly the smaller ones, where war employment has been falling for a year, could produce useful and necessary civilian items. They would thus help the war effort by improving the working and living conditions of the war workers. Careful attention must be given to the planning of such work. It does not further the war effort to do as W. P. B. recently did—to deny the Smaller War Plants Corporation a small steel allocation with which small plants might have produced needed consumer durables.

Similarly attention must be devoted to developing and scheduling production for export. Supplies of war materials, medical supplies, and food have been very meager to some of our allies, notably China and Yugoslavia. French North Africa and the liberated portion of Italy could become valuable adjuncts to the war effort with the supply of needed industrial equipment, farm machinery, et cetera. The same applies to increased supplies for Latin America, as a contributing factor to our long-run economic welfare and to cementing the unity of the hemisphere. Our great ally, the Soviet Union, wants prompt shipments of huge quantities of equipment and materials for restoring the vast reconquered territories. Supplies for our allies can take up a large part of the slack caused by reduced requirements for our own armed forces. However, it is well known that the W. P. B. and the Army, in spite of the growing surplus of United States capacity, continue to pursue a niggardly policy toward all F. E. A. requests and other Allied requirements.

I understand that your committee is working on a revision of the George-Murray bill, S. 1730, designed to accomplish these and similar objectives. Whatever bill you report should contain at least the following provisions essential to an orderly handling of the problems involved in assuring a reconversion which will take place without interference with the war program and without serious manpower dislocations:

First. There should be a central agency for war mobilization and adjustment. This agency should have full authority over both war production and the shift from war production to civilian production.

Second. Within the over-all office there should be an agency corresponding to the Bureau of Programs, as called for in sections 102 and 104 of the Kilgore bill. This central planning agency should be equipped with adequate technical and statistical assistance.

Third. It is essential that there should be an independent representative body consisting of representatives of industry, labor, and the public, with which the Director of the Office of War Mobilization and Adjustment shall consult on all basic policies. The Kilgore bill meets this requirement by proposing a national production-employment board. In the case of the current cut-back, the existence of such a board would insure that all aspects of the problem were fully considered. It would be able, for example, to recommend to the Surplus Property Administration what might be done about the Brewster plant so that it would be utilized more effectively.

Fourth. Provision should be made to strengthen the authority and effectiveness of the War Production Board in order to allow it to handle on a centralized basis the simultaneous problems of changing war production needs and reconversion to civilian production.

Moreover, provision must be made for more adequate labor representation with W. P. B. In the present situation the interest of the whole country, of the many businessmen who want to produce, of the smaller enterprises, of labor require that workers have a significant voice in production decisions, in allocation of materials, in establishing export and civilian goods programs.

There are at present two mechanisms through which labor has a very weak and indirect voice in such decisions. One is the system of labor advisory committees attached to the War Production Board, and the long-range public reconversion advisory committee set up last month by Mr. Nelson. This set-up is wholly advisory and remote from the real decisions.

The other is the new staff of the Production Executive Committee of W. P. B., under Mr. Wilson, on which labor has some representation through the Manpower and Labor Production Offices of the W. P. B. This staff has expressly been limited to advisory functions, and may not even get information on cut-backs until after the event.

Labor has the right to direct representation on the actual centers of policy making in war production, such as War Production Board and Production Executive Committee. If these agencies have such representation, and if they can exercise some supervision over the procuring agencies, which is not always the case today, the basis for a constructive adjustment of war-production cut-backs would be created.

Fifth. There should be a system of industry and regional councils representative of industry, large and small, and of labor. This would solve locally problems susceptible to a local solution. With such boards in operation it is inconceivable that the Brewster situation would have been handled as it was.

Sixth. War workers and war veterans should be treated alike so far as job placements and unemployment compensation are concerned. Every effort must be made to avoid the division between these two groups which reactionary forces are seeking to develop. And I might say that 300 veterans of this war, led by a legless veteran of this war, marched from the Brewster plant down to the mayor's office in the city of New York to protest against this arbitrary cut-back or termination.

We do so much talking about providing for these returning veterans, but there was a classic example of what many of these veterans will return to. Many others will return to find out their plant was completely liquidated.

No legislation will be satisfactory to our organization which provides separate treatment with respect to jobs for returning servicemen and for war workers. This applies to placement procedures and training opportunities.

7. The opportunity is at hand for the adoption of satisfactory emergency unemployment compensation measures. These are essential to an orderly transition period and will be steps toward the adoption of more permanent legislation such as that embodied in the Murray-Wagner-Dingell bill. Emergency legislation should include extension of coverage to workers now excluded from the State laws; substantially increased benefits with dependency allowances running up to $35 per week, and the provision that they may amount to as much as 80 percent of prior wages, and duration of benefits to range up to 52 weeks.

The labor movement is convinced that an orderly approach to the reconversion period is essential both for maintaining war production at the necessary pitch to insure a successful invasion, and for assuring the continuance of full production and employment as we shift back to civilian production. We believe that legislation is necessary to insure such an orderly transition period. Among the bills before your committee at the present time, S. 1893, comes closest to meeting the requirements of the situation as we see it.

Labor has opposed S. 1730 as originally proposed, not because of opposition to any of its specific features, but because the bill is based on the fallacious notion that what is necessary is to return to normalcy. A "return to normalcy" means unemployment for about 15,000,000 workers. Labor doesn't want that kind of "normalcy." Labor wants jobs not only for the present labor force but also for 10,000,000 servicemen. This will require not only planning, but a new sense of responsibility on the part of government and business.

If business means what it says—that it is planning for full employment—then it should have no objection to adequate unemployment compensation. Its costs will be negligible. The floor under consumer purchasing power which this would provide would serve to sustain industry wherever the need arose.

We ask that you report out S. 1893 or a bill which does not fall below the minimum standards provided in the Kilgore bill. I believe that under present circumstances such a measure would receive wide support not only from labor but from industry and from the administration.

In coming back to the Brewster situation, I want to express my appreciation that Senator Ferguson is here. I think that he can perhaps recognize what this does to the morale of our people of Michigan, where all of our people today are engaged in war production.

I think it is vital that some concrete action be taken, first, to have the Brewster situation, even if it may cost us some money and even

if it requires saving the Navy's face by putting in Army or private contracts.

Secondly, I think it is most important that this Brewster case serve to make a pattern wherein this type of situation that we have gone through and are facing today cannot recur in America during this war or after.

I certainly appreciate this opportunity of appearing, and I appreciate your committee's calling this meeting to bring the facts to light.

Senator MURRAY. Mr. Frankensteen, we were very glad to have you here. I think your testimony is very constructive, and your recommendations with reference to proper legislation to meet the problems of termination of contracts in post-war adjustments are of extreme importance.

The legislation which is to be prepared is to contain the best features of all of the bills that have been before us and perhaps additional provisions. I can't think of anything more important than this program of meeting problems that are going to come before us as the war terminates and as these contracts are being terminated, presenting problems that are very serious and dangerous to our country.

I want to thank you for your very fine statement here this morning. I think it will be very helpful to our committee.

The next witness is Mr. Julius Amberg.

STATEMENT OF HON. JULIUS AMBERG, SPECIAL ASSISTANT TO THE SECRETARY OF WAR

Mr. AMBERG. Mr. Chairman, the committee has asked us, of the War Department, three questions, and I have with me Maj. Gen. Bennett E. Myers, who is the Deputy Assistant Chief of the Air Staff, Material, Maintenance, and Distribution, who, under General Echols and the over-all command of General Arnold, has to do with the procurement of all aircraft for the Army.

The three questions are (1), whether the War Department was notified by the Navy Department of the impending cancelation at Brewster, and, if so, when; (2), whether the War Department is familiar with the facilities and manpower available at Brewster, and is interested in their use, and (3), if the War Department is interested in their use, what steps have been taken to employ such facilities and manpower.

General Myers will answer those questions, so far as they relate to the Air Forces, but before asking him to take my place, I have handed the committee, and will also put in the record, the order of General Somervell, of the Army Service Forces, of March 13, 1944, which sets forth the principles governing cut-backs on the part of the Army other than the Air Forces.

As you know, the Army Service Forces probably have had more experience with cut-backs than those in the aircraft production field, which has been expanding, and I just filed with the committee the rules that now govern the Army Service Forces in determining upon cut-backs.

Now, I understand that the same general principles are adopted by the Air Forces.

(The rules referred to are as follows:)

WAR DEPARTMENT,
ARMY SERVICE FORCES,
OFFICE OF THE COMMANDING GENERAL,
Washington, D. C., March 13, 1944.

Changes in production programs are necessary as the war progresses from one stage to another. It is vitally important that we make these changes if lives are not to be unduly sacrificed and the taxpayers' money is not to be spent for munitions which have become obsolete or semiobsolete due to changes in operational demand, enemy tactics, terrain, or climatic conditions. Such changes can have extremely serious consequences on the economy as a whole and upon living conditions and employment in particular areas. It is therefore essential that all reductions in programs and cancelations of contracts be given the most careful consideration. The Army Service Forces will adhere to the procedures described in the following pages in the implementation of changes in its programs.

BREHON SOMERVELL,
Lieutenant General, Commanding.

SUMMARY OF ARMY SERVICE FORCES CUT-BACK PROCEDURES

1. Requirements Division reduces required production with concurrence of Production Division and transmits revision to Technical Service involved.
2. Production Division advises Washington offices of War Manpower Commission and War Production Board of impending change, and of the names of all facilities which may be involved, together with a preliminary estimate of the total number of employees which may be released.
3. The Technical Service obtains recommendations of its district procurement offices as to plants to be cut back.
4. Decision is made as to specific plants to be cut back.
a. Minor cut-backs approved by operating personnel in Technical Service.
b. Major cut-backs approved by Technical Service Board of Review.
c. All cut-backs involving Government-owned facilities approved by Headquarters Board of Review and Under Secretary of War.
5. Upon approval of specific plan for implementation of cut-back:
a. District procurement offices notify regional offices of War Manpower Commission, local labor, and management; and, if cut-back is of major importance, release statement to press.
b. Washington headquarters of Technical Service notifies War Department Bureau of Public Relations, War Department Special Staff, Director of Matériel, Army Service Forces, and Industrial Personnel Division, Army Service Forces. Washington offices of War Production Board and War Manpower Commission are in turn notified by Army Service Forces Staff Divisions.
6. War Manpower Commission plans for other utilization of labor to be released.
7. War Production Board plans for other utilization of facilities to be released.

1. In order to obtain the most effective utilization of manpower, facilities, and materials, it is essential that the War Manpower Commission and the War Production Board be notified of any proposed cut-backs, with the names of the facilities which may be involved and their location, and the estimates of the number of people to be released, as much in advance of the effective date of the cut-back as possible. These agencies are then in a position to make plans for the use of the labor and to act promptly when the cut-back is implemented. The following is an outline of the Army Service Forces procedures which are in effect to achieve these objectives.

ADVANCE INFORMATION ON PROGRAM CHANGES

2. The Requirements Division, Army Service Forces, supervises periodic general revisions of the Army supply program in the light of the most recent available information as to troop basis and deployment, tables of equipment and allowances, stocks on hand, issues, replacement factors, etc., in accordance with A. S. F. Circular No. 67. In addition, interim changes in Army supply program objectives for specific items are processed whenever warranted. All proposed revisions in Army supply program objectives are reviewed in the Production Division from the standpoint of production feasibility. Such consideration includes an

examination of the reasonableness of the time and quantity objectives and of the effect thereof on facilities, materials, products, and components.

3. Information concerning approved program changes and as soon as available in the case of reductions, the names and locations of all facilities producing the items, and a preliminary estimate of the total number of employees to be released is disseminated at weekly meetings held by the Production Division. These meetings are attended by representatives of the Industrial Personnel Division, Army Service Forces, the Deputy Vice Chairman for Production, War Production Board, and the Bureau of Planning and Statistics, War Production Board, who participate in the discussions and obtain information required for their respective functions. The representative of the Industrial Personnel Division, Army Service Forces, obtains data relating to the probable effect on manpower for transmission to the War Manpower Commission. These meetings are also attended by the interested branch chiefs of the Production Division, through whose organizations data with respect to the effect of program changes on facilities, materials, products and components are transmitted to the various Industry Divisions in the War Production Board. This information is also forwarded to the following: Mr. Tudor Bowen, Director, Procurement Policy Division, War Production Board; Mr. H. E. Riley, office of the Vice Chairman for Manpower Requirements, War Production Board; Mr. Joseph D. Keenan, Vice Chairman for Labor Production, War Production Board; Col. Ralph F. Gow, Bureau of Public Relations, War Department; Maj. Bryce N. Harlow, Legislative and Liason Division, War Department Service of Supply.

BOARD OF REVIEW PROCEDURE

4. In connection with program reductions which involve more than one contractor and a substantial amount of production equipment or a substantial amount of employees, it is considered essential that every possible step be taken by the War Department to insure an equitable distribution of the cut-back among the contractors involved.

5. For this purpose each technical service has established a board of review consisting of not less than three officers of no lower grade than lieutenant colonel who have knowledge of production and procurement problems but who do not have primary responsibility for negotiations with War Department contractors.

6. In addition there has been established an Army Service Forces headquarters board of review consisting of the Director of Production Division as chairman, the Director of Industrial Demobilization, and Directors of Requirements, Readjustment, and Industrial Personnel Divisions. It is the responsibility of each member of the headquarters board of review to examine the recommendations of the boards of review of the technical services from the viewpoint of the mission, duties, and functions of his office or division.

7. When, in the opinion of the chief of a technical service, changes in the Army supply program are of a magniture that warrant such consideration, and in all cases where Government-owned facilities are involved, the chief of the unit, branch, or division of a technical service which has primary responsibility for the procurement of the item reviews all existing contracts and makes recommendations to the technical services board of review respecting the distribution of the cutback among the contractors. These recommendations are made after appropriate consultations with technical services district procurement offices. In selecting contracts to accomplish the necessary readjustment and curtailment of production the following factors are considered:

(*a*) The effect upon the available supply of labor. Cut-backs and cancelations in No. I and No. II labor areas will, depending upon the magnitude of the reduction, ease or terminate the difficulty of securing adequate labor for other war contracts.

(*b*) In order to carry out the intent of Public Law 603, smaller war plants defined as independent concerns with 500 wage earners or less, are retained in a program wherever practicable, likewise large contractors whose volume is reduced in a curtailment program are urged not to cut their subcontracting volume to small plants by an amount greater proportionately than their own reduction.

(*c*) The prospective alternative uses for the plants under consideration, including the possibility of their use in other war work, the desirability of retention in stand-by or their employment in other essential production. It may be advisable to make reductions in the contracts at facilities which are having difficulty in meeting desired schedules in order to enable such facilities to improve their performance on remaining contracts.

(*d*) Arrangements are made to maintain Government-owned facilities in which production is materially curtailed or terminated in standby until the productive capacity is clearly no longer required for military needs.

(*e*) Security considerations.

(*f*) The effect on public transportation; that is, accessibility to the sources of raw materials, components, depots, or storage facilities, and ultimate destination.

(*g*) The relative unit costs of production to the Government of plants producing the same item.

8. The recommendation submitted to the technical services board of review includes data on current and prospective requirements for the item under consideration and data by facilities showing maximum, current and proposed production rates, unit costs, labor areas, labor currently employed in total production at each facility and portion thereof engaged in production of item under consideration, estimates of labor to be released and other pertinent data including a concise summarization of reasons for recommendations with respect to adjustments in facility utilization.

9. A general policy has been established within the Army Service Forces to the effect that wherever practicable the reserve capacity of industry will be utilized in lieu of the production of reserves of complete end items. In order to implement this policy the February 1, 1944, Army supply program for certain items was adjusted to provide for a required production which was considerably lower than the computed need. This was done on the assumption that within a maximum of 6 months production could be increased to the rate which would, if continued for a period of 12 months, produce the computed figure. This policy requires that certain cut-backs be implemented in such a way as to retain reserve capacity which can be brought into production at a later date. This would contemplate the operation of some facilities at a reduced rate and in other cases their retention in a reserve condition. The recommendation to the technical service board of review will include detailed analysis of criteria used and reasoning applied to the choice of reserve facilities.

10. The technical service board of review considers the recommendations submitted in accordance with the foregoing paragraphs and forwards the proposals together with its concurrence or recommendations to the chief of the technical service. The chief of the technical service approves final determination of action to be taken and forwards the technical service recommendations to the headquarters board of review.

11. The headquarters board of review, in cases which involve the complete or partial shut-down of Government-owned plants presents the case with appropriate comments through the Director of Matériel to the Under Secretary of War for his consideration and approval. In cases which involve complete or partial shut-down of privately owned plants, the headquarters board of review returns the recommendations with appropriate comments or suggestions through the Director of Matériel to the chief of the technical service concerned.

INFORMATION CONCERNING THE RELEASE OF FACILITIES AND LABOR

12. After a decision has been made as to the specific plants to be cut back the Production Division is advised of the names and locations of the specific facilities to be affected, the estimated number of employees to be released by plants, by months, the percentage of employees to be released to total employed in each plant, and the date the War Manpower Commission and the War Production Board should be permitted to contact the manufacturers and discuss the utilization of labor and facilities to be released. This information is discussed at the weekly meeting of the Production Division and is sent to those listed in paragraph 3.

13. The district procurement office of the technical service having responsibility for the procurement involved notifies the regional office of the War Manpower Commission in the area in which affected plants are located of the cut-back. If the office making the notification has knowledge of subcontractors and suppliers who will be substantially affected, notification concerning these firms will also be transmitted to appropriate War Manpower Commission regional offices.

An official statement is prepared in the Washington headquarters of the technical service announcing the curtailment and the reasons for it. This statement is furnished to the War Department Bureau of Public Relations, the Legis-

lative and Liaison Division, War Department Special Staff, the Director of Matériel, the Industrial Personnel Division, Army Service Forces, the regional office of the War Manpower Commission, and the field office of the technical service where, if the cut-back is of major importance, a statement is released to the newspapers.

14. Certain areas have been designated by the Production Executive Committee of the War Production Board as critical labor areas, and production urgency and manpower priorities committees have been set up in these areas to balance manpower supply and requirements. Representatives of the War Production Board, the War Manpower Commission, and the procurement agencies make up these committtees. There are at present committees in 10 areas, and the plans are under way for the formation of somewhat similar committees in some 60 to 100 other areas. These committees are empowered to require plants which need additional labor to subcontract their work, either to points outside the critical area where a surplus of labor exists, or to firms in the critical area which have surplus labor, usually the result of a contract cut-back. When cut-backs occur in areas where they exist the planning for the use of the labor and facilities is done by these committees instead of the War Production Board and the War Manpower Commission acting independently. These committees are the only formal means in existence at present of obtaining coordination between the agenies on this question. The Production Division, Army Service Forces, provides the Army representatives on these committees with information respecting the effect of program changes on specific plants within the area covered by the committee.

REEMPLOYMENT OF LABOR, FACILITIES, AND EQUIPMENT

15. The information furnished to War Production Board and War Manpower Commission in accordance with the foregoing paragraphs is for distribution to their regional offices to enable planning for the utilization of the facilities and workers to be released.

16. Reemployment of labor released as a result of cut-backs is in part dependent on the reuse of facilities and production equipment coincidentally made available. In order to provide for the use of idle facilities in war production, the technical services submit to the Production Division a report covering all cut-backs which will result in the release of floor space which exceeds 50,000 square feet, production capacity exceeding $1,000,000 per month, or labor exceeding 200 persons. This report covers both private and Government-owned facilities and indicates floor area to be made available, a general description of the building and equipment, and the amount of labor released. Pertinent data derived from these reports are circulated to interested Government agencies including the Army Air Forces, War Production Board, Navy Department, Maritime Commission, Office of Defense Transportation, Defense Plant Corporation, and so forth. When requests are received from other agencies for the release of such idle facilities, consideration is given to the relative importance to the war effort of the use which is proposed. A general policy has been established to the effect that a facility will not be used for storage purposes when it is needed for war production by any agency.

17. When idle facilities and production equipment owned by the War Department have been duly circulated in acordance with established procedures and no use in war production has been developed, they are disposed of under the provisions of War Department Circular No. 8 or Procurement Regulation No. 7.

Mr. GROSS. Do you understand that the same general principles are being followed by the Navy Department?

Mr. AMBERG. I would not care to comment on that at all. I don't know one way or the other. I think that would be for the Navy to say, Mr. Gross.

Mr. GROSS. I would like to ask one question about these principles. On page 2 of the document it says:

In selecting contracts to accomplish the necessary readjustment and curtailment of production the following factors are considered:

and you list there seven factors, the first being the effect upon the available supply of labor.

Is that listed first because you regard that factor as being of particular importance?

Mr. AMBERG. Yes; it is. It isn't the only factor, and it may be that the use of facilities or some other of the six remaining factors here may outweight it, but it is the first one named, and the matter of the use of smaller war plants is the second one named.

Mr. GROSS. Under the first point, you say:

Cut-backs and cancelations in No. 1 and No. 2 labor areas will, depending upon the magnitude of the reduction, ease or terminate the difficulty or procuring adequate labor for other war contracts.

Mr. AMBERG. Yes.

Mr. GROSS. And it is your position that that is a dominant consideration?

Mr. AMBERG. It isn't entirely dominant if other factors outweigh it, but it is of prime importance.

Mr. GROSS. I note that the seventh factor is the relative unit costs of production to the Government of plants producing the same item. Can you explain that?

Mr. AMBERG. That is where the cost factor should be taken into consideration, whether the high-cost producer should be terminated first if you have a choice of terminating one of several. It is a factor, but it is the last factor named.

Mr. GROSS. By putting it last, you recognize, I take it, that there are other factors than the dollar factor which affect the war production considerations?

Mr. AMBERG. Yes; that is correct. As to one other matter, which is not an Air Force matter, the Ordnance Department is considering the possible use of the Johnsville plant in the heavy artillery program, which is one of the programs being set up at this time. The matter has not been entirely surveyed. It may be that the Navy will have some other interests or use for that plant. It depends partly on how soon we can get started there, and we could use the buildings and labor at the most, but I think not the equipment.

Senator MURRAY. When did you begin to give consideration to that?

Mr. AMBERG. I think during the last week or thereabouts.

If I may introduce General Myers, I would like him to take my place.

Senator FERGUSON. The services of the Army and Navy might cooperate to give notices of terminations so that such a problem could be looked into for a greater period than a week. For instance, here we have a cancelation taking effect almost immediately. But, if you get notice of it within a week, is there any way you have of getting notice immediately?

Mr. AMBERG. I said a week. It may be 10 days. Of course, until a cancelation is determined upon, you can't tell the other service about it, and General Myers will tell us just when we were notified. The endeavor is to determine upon it as far ahead as possible, and at once to notify the War Production Board and the War Manpower Commission, as well as the Navy; and, of course, sometimes that may not be carried out in practice as well as we hope. The termination may be a sudden one by reason of some change in plans.

Senator MURRAY. Has the Army laid out a carefully prepared plan which would enable them to forecast when they may reach a point

where it would become necessary to terminate contracts and be able to provide something to take their place?

Mr. AMBERG. Well, we have the Army supply program, which covers items other, I believe, than Air Force items, and which is changed regularly, I believe, every 6 months. Of course, there may be other changes in the meantime that are required. That is used as the program for the continuation of the contracts as well as their termination, and in an endeavor to change from one item to another. Under modern battle conditions, there are often sudden changes, and new items are required, or there are other items of which we find we have enough.

Senator MURRAY. That is the case where you will be changing the instrumentalities in the war and substituting something in their place. It seems to me that, where it is a mere discontinuance of production because of a surplus developing, they ought to be able to see long in advance that that condition is going to develop and to substitute something to take its place.

Mr. AMBERG. Well, if there is something else needed which the particular plant makes, we should be able to see it some distance in advance, but some changes—certain requirements from the theaters—come in very rapidly.

Senator MURRAY. Even then, don't you have things laid out that will be necessary to produce in connection with the war effort, which might be substituted?

Mr. AMBERG. Well, the other things, of course, have been planned also, and whenever a cut-back can be made up by a new contract of some kind, either for us or someone else, that is done. But in some cases, some of our plants have gone back to civilian production, such as farm machinery, for example.

STATEMENT OF MAJ. GEN. BENNETT E. MYERS, DEPUTY ASSISTANT CHIEF OF AIR STAFF, MATERIAL, MAINTENANCE AND DISTRIBUTION, WASHINGTON

Senator MURRAY. Will you give your full name and your title?

General MYERS. Maj. Gen. Bennett E. Myers, Deputy Assistant Chief of Air Staff, Material, Maintenance, and Distribution, Washington, D. C.

In answer to the first question, whether the War Department was notified by the Navy Department of the impending cancelation of Brewster—and if so, when—we were officially notified at the last Aircraft Production Board meeting, on Tuesday, May 23. There had been a warning on it a few days or a week prior to that, that there was some consideration being given to the cut-back in this instance by virtue of balancing the over-all naval-aircraft program.

Senator MURRAY. I understand that the Brewster Co. was notified on the 16th; you didn't receive the notification until the 23d.

General MYERS. The official notification, that is correct; but, as I stated, in the prior week, which was also the 16th, the Bureau of Aeronautics' representative at the Aircraft Production Board advised us that it was pending at that time.

The next question stated here is whether the War Department is familiar with the facilities and manpower available at Brewster and is interested in their use.

The answer to that is that we are familiar with the Brewster facilities. We are cognizant of their existence and of their having produced for the Bureau of Aeronautics.

Senator MURRAY. Are you able to state whether or not that plant is suitable or satisfactory for some production program of the War Department?

General MYERS. The plant is suitable for aircraft production. As far as the brick and mortar is concerned, it probably would be suitable for other production, provided the proper and adequate tools were installed and made available for whatever production may be put in there.

Senator MURRAY. What, if any, program of production has the War Department which might be carried on in this plant?

General MYERS. The Army Air Forces have no program for the utilization of this facility.

Senator MURRAY. Had you been asked by the Navy Department whether or not you had any program before they considered the cancelation of this contract?

General MYERS. I might explain that we have a very fine operating coordinate agency in what we call the Joint Aircraft Committee. That Joint Aircraft Committee is made up of representation from the Army Air Forces, the Navy Air Forces, the British, and the War Production Board, and through that committee we endeavor to plan and schedule the aircraft program as a whole. The program is submitted by that committee to the Aircraft Production Board, where it is approved.

Now, through the workings of this Joint Aircraft Committee we do keep informed of each other's plans for the whole aircraft program.

This happens to be the first instance where a utilization of a facility has developed to a point where it is not needed any more.

Senator MURRAY. It is not needed in the Army or in the Navy?

General MYERS. In the aircraft program for the manufacture and production of complete airplanes, such as they are doing now. I might add that the Army Air Forces have attempted to find prime contractors who could advantageously use the Brewster facilities for subcontracting work.

Senator MURRAY. You have in your program of production articles that could be produced at this plant?

General MYERS. We have articles that could be produced, but we already have all the facilities we need for our program.

It may be of interest to note here that we are now over our peak production, as the accomplishment of our program has been laid out.

Senator MURRAY. So that, with the existing facilities you have, you are easily able to take care of any future program you have?

General MYERS. That is quite correct, sir. The future programs will be in changing to new requirements. There are bound to be instances to come where we won't need to replace parts on an older type of plane, for instance.

The next question is, if the War Department is interested in their use, what steps have been taken to employ such facilities and manpower?

I have just stated that we are not interested in its use as the producer of airplanes. Our only interest would be if they can be of assistance in subcontracting through the prime contractors which we now have.

We, of course, are interested in the labor phase of it. We have plants in the New York area, such as the Wright Aeronautical plant, and with more particular reference to the Woodring plant, which is manufacturing a very important engine for us, who are very much in need of skilled mechanics. Through the War Manpower Commission we have the facility down there setting up a recruiting agency. That is our primary interest in the facility at the present time.

Senator FERGUSON. When did you start to recruit from the labor at Brewster?

General MYERS. Of recent moment, you mean? About 3 days ago.

Senator FERGUSON. When did the Air Forces meet or arrive at the peak of its production?

General MYERS. We met our peak production in March, by numbers of airplanes.

Senator FERGUSON. Are there any facilities being erected at the present time?

General MYERS. There are no new facilities being erected. There are some in process of erection. For example, we might be putting in, or finishing up a hangar at the Marietta plant of the Bell Aircraft Corporation.

Senator FERGUSON. When did you complete your building program, so far as aviation is concerned?

General MYERS. As I say, it isn't actually completed. There are continuing additions of machine tools and such things as the completion of hangars and runways that are now in process.

Senator FERGUSON. Is that also true of factory space?

General MYERS. I don't know of any case where there is any factory space that actually hasn't been completed.

Of course, that is a rather dangerous statement, because when you say factory space, there may be a hangar, an assembly hangar, or a service hangar that might be necessary, and some people might construe that as factory space. But factory space, as commonly considered—I know of no case of that.

Senator FERGUSON. Such as Brewster?

General MYERS. No, we aren't building like that at all.

Senator FERGUSON. When did you quit building space?

General MYERS. Well, I think the last plant that was built as was Brewster was probably all completed some time last year, in the middle of last year, I would say.

Senator MURRAY. Well, in view of the fact that you reached a peak of production some time ago, you will soon reach a situation where you have a surplus of facilities.

General MYERS. That no doubt will occur eventually.

Senator MURRAY. And then you will be considering the possibility of cut-backs and terminations in your production.

General MYERS. I have no doubt about it at all.

Senator MURRAY. What carefully laid out plans have you developed to meet that situation?

General MYERS. Well, of course we have a continuing process of adjustment in our program, carrying out the policy of the forces and augmenting by our own so-called aircraft requirements board, which is made up by the Chief of our Aircraft and all the assistant chiefs of staff, who laid out this long-range plan. That is now laid out through the medium of the Joint Aircraft Committee for the period of 1944 and the first 6 months of 1945.

Senator MURRAY. Do you feel that, as a result of the plans that you are working out, you will be able to avoid such an embarrassing situation as the one we are discussing here this morning?

General MYERS. That is our aim, sir. We are attempting to do that very thing, not only through the instrumentality of the Joint Aircraft Committee and Aircraft Production Board, but through the assistance of this new agency that Mr. Wilson has set up, a staff agency of the Production Board.

Senator MURRAY. When you find that you have no new production program to take the place of a program you are terminating, do you notify the War Production Board so that they may be able to make those facilities available for civilian production?

General MYERS. I don't notify them to make them available for civilian production. We notify them, both the War Production Board and the War Manpower Commission, that they are either going to be cut back or we are going to stop production.

Senator MURRAY. So it then becomes possible for them to lay out a program of civilian production which would prevent this sort of thing?

General MYERS. That would be possible.

I might add that this new staff committee of the War Production Board is just getting started. They just had their first meeting a couple of weeks ago.

Senator MURRAY. But you realize what a serious situation is confronting the country, and you are making a very serious effort to meet those conditions?

General MYERS. I am sure that every person in the Air Forces is thoroughly inoculated with the seriousness and import of laying out an adequate plan to prevent abrupt cut-backs and adjustments.

Senator MURRAY. Thank you.

Now, gentlemen, it is nearly 20 minutes after 12.

We have two more witnesses to be heard from. The Navy is to testify and also Mr. Charles Wilson, from the War Production Board, so I think we had better take a recess until 2 o'clock.

(Whereupon at 12:20 p. m., a recess was taken until 2 p. m., of the same day.)

(The committee reconvened at 2:15 p. m., pursuant to the recess.)

Senator MURRAY. The meeting will come to order.

Admiral Ramsey will be the first witness this afternoon. Admiral, you may give your full name to the reporter and the official position you occupy.

STATEMENT OF ADMIRAL DeWITT C. RAMSEY, CHIEF, BUREAU OF AERONAUTICS, NAVY DEPARTMENT

Admiral RAMSEY. Rear Admiral DeWitt C. Damsey, Chief of the Bureau of Aeronautics, Navy Department.

Senator MURRAY. Admiral, have you any statement that you wish to make preliminary to any questions we may wish to ask you in regard to this situation at the Brewster plant?

Admiral RAMSEY. Yes, sir. I would like to read a letter which was addressed to Mr. Patrick H. Drewry, of the House Naval Affairs

Committee, dated May 22. The reason for that communication arose from Mr. Drewry's previous association with the Brewster problem. This letter was prepared and delivered to him on May 22 and it was signed by Mr. Gates, Assistant Secretary of the Navy for Air.

May I proceed?

Senator MURRAY. You may proceed.

Admiral RAMSEY (reading):

MAY 22, 1944.

Hon. PATRICK H. DREWRY,
House of Representatives, Washington, D. C.

DEAR MR. DREWRY: Because of the continued interest of the subcommittee of the Naval Affairs Committee investigating the Brewster Aeronautical Corporation in matters affecting that corporation, I recently informed your committee of the proposed reduction by the Navy in the over-all production of fighter planes and stated that this reduction would affect Brewster most seriously.

At the time I told you that the Navy Department not only would not give any further contracts to Brewster but that the existing conract for Corsair fighter planes would be cut off at some time in the near future, the exact date being then under study by the Navy. I also stated that the schedules for other producers of Corsairs and of certain other fighter types would be cut back or slowed down. The savings which are estimated to result from this reduction in the fighter program will amount to approximately $180,000,000.

On Tuesday, May 16, the day before the annual meeting of the Brewster stockholders, I advised Mr. Henry Kaiser, Sr., that the decision had been reached to cut back the Brewster Corsair contract, that the date of the cut-back had not been fixed, but that it would be in July 1944. On the next 2 days representatives of the Bureau of Aeronautics discussed with Brewster officials in New York the best way to make the cut. On Friday, representatives of Brewster met with me and officials of the Bureau in Washington to discuss the termination. The decision was restated and Brewster was asked to maintain production until July 1, 1944, provided that this would be done at a satisfactory rate, in order that airplanes on the final assembly line could be completed. Brewster agreed to advise me on Monday whether this could be done. This morning I was advised that while Brewster could not make any promise as to the number of planes which can be delivered, it is eager to make every effort to meet these conditions.

The Navy Department has now formally advised Brewster that its contract has been terminated, to be finally effective on July 1, 1944. The work to be done in the interim will consist of the production of not to exceed 150 airplanes at a rate of approximately 24 airplanes a week. Goodyear Aircraft Corporation and Chance-Vought Aircraft Division of United Aircraft Corporation, the other two producers of Corsairs, have also been advised that their schedules will be cut back. As the revised schedules are confidential, I am not submitting them herewith. If you desire, I will furnish them to you separately.

In order that you may be fully advised in this matter I am setting forth the reasons underlying this decision.

Because, first, of the recent change in military requirements to which I referred in our recent talk, and because, second, the latest performance figures for Navy fighter-type airplanes show an attrition rate substantially less than the original estimate and even substantially below that set at the beginning of this year, the Navy has determined that it will not require continued production of Corsairs at the rates called for by the present contracts. In making this statement, I would like to point out the sharp contrast between the present situation and that of even a few months ago, when every effort was being made to accelerate the production of fighters. All the companies involved were urged to and did materially increase their production in response to the request of the Navy, which was dictated by military requirements as they then existed or could be foreseen. The critical period was the first 6 months of this year, and it is particularly due to the over-all success of our operations during this period that the Navy has been able to revise the attrition figure.

As circumstances have developed, if the rate of production were not substantially decreased, the Navy would have an excess of fighters over justifiable reserves. In other words, to state the case in terms of merchandising, it has been necessary in the past for us to build up our stocks on hand, and also to

care for replacements and replenishments. When the stocks on hand have been built up to a satisfactory point we do not thereafter need the same productive capacity to take care of replenishments and replacements only, as we did when we were doing this and building up our stocks as well. This called for an immediate reduction of the production schedules. Careful consideration was given as to how this should be carried out.

The reduction in the Corsair program is very substantial. As I have stated, I shall be glad to give you the figures separately. The extent of the reduction made it apparent that there would not be a sufficient number of airplanes produced to permit the efficient utilization of the plants of all three companies. A proportionate reduction for each company would have been so large that it would simply have meant that in all three companies production would have been disrupted, unit costs would rise for all three companies, and efficiency would fall in all three companies. The solution of the problem which would have the least damaging effect on war production generally was therefore to concentrate the cut with one producer.

The Corsair was designed and developed by Chance Vought Aircraft Division of United Aircraft Corporation, which then made the necessary engineering information available to Goodyear Aircraft Corporation and Brewster Aeronautical Corporation to enable them to go into production. Chance Vought has acted as engineering adviser to the other concerns and has assumed responsibility for the week-to-week changes put into the airplanes by all three producers as dictated by combat needs. Chance Vought is developing several advanced and special performance versions of the Corsair, as well as conducting a number of experimental and development projects for the Navy Department.

Goodyear Aircraft Corporation for its part is developing a new fighter which will succeed the Corsair in its plant when production can be begun. Goodyear is also a subcontractor for parts of other essential Army and Navy airplanes.

It is apparent that during the development of the more advanced models at Chance Vought and Goodyear a productive organization must be kept intact in each plant so that an orderly transition to the new models can be made without loss of efficiency. A substantial cut in the Corsair production at either company would disrupt such productive organization and thus have an adverse effect on these projects. Too drastic a contraction of the work load at Goodyear would also damage the war work on which Goodyear is a subcontractor.

By contrast to the situation at Chance Vought and Goodyear, Brewster has no other work of importance to the war effort which would be affected by a termination of its contract for Corsair airplanes. It has the smallest output of any of the three. It is the highest cost producer of the three, and suffers from the inherent weakness of operating in two plants situated at some distance from each other, at Long Island City and Johnsville, Pa. In addition, Brewster represented to the Navy Department that it would have considerable difficulty in completing its contract for Corsairs if it did not receive a further contract for airplanes, which was impossible in view of the reduction in over-all fighter requirements. It was, therefore, decided that the cut should be made by a termination at Brewster as of July 1, and smaller reductions in the production rates at Goodyear and Chance Vought. In making this decision, due weight was given to the fact that the labor situation is designated as less critical in the areas in which Brewster operates, but this was outweighed by the other considerations mentioned.

I am confident that the decision is amply justified by the fact that Chance Vought and Goodyear have been, and will be, able to make a more substantial contribution to the war effort than Brewster. In this connection, however, I would like to emphasize that the cancelation of the Brewster contract was not brought about by dissatisfaction on the part of the Navy with either the management of Mr. Henry Kaiser or the new management which has just taken office.

The Johnsville plant is leased to Brewster by Defense Plant Corporation. I do not know whether Brewster will be able to utilize this plant in war work, but if it cannot do so, I am sure the Bureau of Aeronautics can utilize it.

I shall continue to keep you informed of developments in this matter. The Navy Department will appreciate such suggestions or recommendations as your Committee may wish to give. I am sending a copy of this letter to Mr. Vinson and to Senator Truman.

Sincerely yours,

ARTEMUS L. GATES,
Assistant Secretary of the Navy for Air.

If I may, sir, I would like to supplement the reading of that letter with the reply sent by Mr. Drewry, dated May 23, as follows:

MAY 23, 1944.

HON. ARTEMUS L. GATES,
The Assistant Secretary of the Navy for Air,
Navy Department, Washington, D. C.

DEAR MR. GATES: On behalf of the subcommittee of the House Naval Affairs Committee investigating the Brewster Aeronautical Corporation, I am acknowledging the receipt of your letter of May 22, 1944, and replying thereto.

The committee commends your letter and the presentation of the reasons why the Navy Department decided to cut back the Brewster Corsair contract and cancel same as of July 1, 1944. The reasons which you give are, in the opinion of the committee, sound and sensible, and the committee thinks that the reasons influencing your decision are entirely proper and correct, and it approves in every particular of your action.

The final report of the subcommittee to the full committee will consist of your letter and this reply to same.

Permit me to thank you for your courtesy and attention and patience with the committee in the consideration of this important question.

Sincerely yours,

P. H. DREWRY.

Senator MURRAY. Admiral, you say it was impossible for you to see the need to make this quick cut-back or termination of the contract on the Corsairs?

Admiral RAMSEY. It would not have been reasonably accurate information, Senator, before it was actually foreseen because our field of aviation operations covers a wide area. We wish to get fairly accurate information from distant theaters of action as to the quality of our airplanes as compared with those of the enemy; in other words, to appraise the attrition losses accurately or as reasonably accurately as we can, and that factor alone was one of the predominating considerations which led to the cut-back in production.

Senator MURRAY. Were these Corsair planes used in both theaters of the war, in the Atlantic as well as the Pacific?

Admiral RAMSEY. They have not been actively used in the Atlantic theater except perhaps those that have gone to lend-lease, but not by our own forces.

Senator MURRAY. What is the picture in the Navy with reference to the requirements for airplanes in general?

Admiral RAMSEY. The general picture is a healthy one, sir. We feel that at the present time we have reached a point of productive capacity for aircraft and air frames and airplane engines in this country whereby the capacity exceeds the Navy's material requirements. In other words, we can now concentrate a little more on the quality of our products and delve a little more deeply into the field of experimentation and research than we could at a time when the problem was one of numbers primarily.

Senator MURRAY. That situation relates to planes in general?

Admiral RAMSEY. That relates to the planes that constitute and make up the Navy aircraft program. I cannot speak for the Army in that respect, sir.

Senator MURRAY. Then you are not planning any new development of fighter planes?

Admiral RAMSEY. Oh, yes, sir; we are. We are planning in the field of experimentation. We have new conceptions, new designs always coming along because, after all, the useful life of a modern airplane is short in this day of competition when you are under heavy enemy pressure.

Senator MURRAY. In the development of this program you will need facilities for the production of these new planes?

Admiral RAMSEY. In the majority of cases they will come along behind other models that are being produced elsewhere, in other plants.

Senator MURRAY. This is the only plant that you are completely discontinuing?

Admiral RAMSEY. That is true. This is the only plant in which we have completely wiped out a contract for this particular type of plane.

Senator MURRAY. You have not taken this action because of any dissatisfaction?

Admiral RAMSEY. Not at all, sir.

Senator MURRAY. There was no dissatisfaction with Kaiser's management or with the new management of the Brewster plant?

Admiral RAMSEY. Not at all, sir. It is primarily and purely a military evaluation; it is the result of a military evaluation.

Senator MURRAY. Of course, you recognize the effect of the cancelation on the workers at the plant?

Admiral RAMSEY. Yes, sir; we recognize that.

Senator MURRAY. And the need of some well-laid-out plan to take care of situations of that kind, where a contract is terminated and where thousands of employees are working?

Admiral RAMSEY. Yes, sir; and I think that the function of devising such a plan does not belong in the Naval Bureau of Aeronautics.

Senator MURRAY. That is no problem of yours?

Admiral RAMSEY. No, sir; it is a matter of my concern and interest but not my cognizance.

Senator MURRAY. What did you do before you announced the cancelation to have that problem taken care of by those whose problem it was?

Admiral RAMSEY. It may be helpful if I read off briefly the chronological order of events pertaining to the major issues here.

On Saturday, the 13th of May, the total number of airplanes required in the Navy fighter program was resolved. On Monday, the 15th, at the Aircraft Production Board meeting the representative of our Bureau advised that a cut-back in Brewster was very likely, and, in fact, in the whole program——

Senator MURRAY. What was that date?

Admiral RAMSEY. The 15th of May. In the afternoon of that day the decision was reached that Brewster would be cut off and no date was specifically set, but that would be a subject of further discussion.

Senator MURRAY. In determining that the Brewster plant should be the one to be cut off, what conferences were held by the proper authorities in the Navy to determine that question?

Admiral RAMSEY. I can say, sir, that conferences of various kinds were held throughout the Navy Department. Any personnel interested in the subject were given an opportunity to express an opinion and any thought in the matter; and, so far as level of interest was concerned, it went as high as the Secretary of the Navy. We had numerous conferences on it.

Senator MURRAY. Of course, I suppose you recognize the fact that

any inefficiency that may have existed in the plant was not necessarily due to any failure on the part of the workers to perform their task properly, but was due to poor management from the beginning?

Admiral RAMSEY. Originally, yes, sir; but there were labor difficulties, of course.

Senator MURRAY. There were labor difficulties?

Admiral RAMSEY. Yes, sir.

Senator MURRAY. There were no labor difficulties at the time of this action that you have taken?

Admiral RAMSEY. No.

Senator MURRAY. At that time the relations between the workers and the management of the plant were entirely satisfactory?

Admiral RAMSEY. To the best of my knowledge they were very satisfactory.

Senator MURRAY. And the efficiency of the plant was increasing?

Admiral RAMSEY. The efficiency of the plant was increasing; yes, sir. It had a long way to go because it was a relative improvement.

Senator MURRAY. As in the case of every plant, increased efficiency went forward with the task of production, and this plant, after being put under proper and efficient management, was advancing in its efficiency just as other plants had prior thereto?

Admiral RAMSEY. It was advancing in efficiency in its particular field, but I think it is only fair to say they had the simplest problem in the aircraft industry. They had only one kind of airplane to build, whereas other producers were saddled with a great many other equally important projects.

Senator MURRAY. What were the figures on man-hours per plane at the Brewster plant as compared with the other companies making the same plane?

Admiral RAMSEY. It was my understanding that you desire data as to the comparative figures on manpower, using 100 as a basis in order not to compromise the confidential figures. The comparative figures that you desire, sir, I can give as follows:

With Brewster on an index of 100 for man-hours, the comparative figure for Goodyear is 67 and the comparative figure for Vought is 47.

Senator MURRAY. And what was the figure for Brewster?

Admiral RAMSEY. That is the 100. Those are the latest figures on man-hours.

Mr. GROSS. For current production?

Admiral RAMSEY. Yes; theses figures in general apply to April and March.

Mr. GROSS. In other words, with Brewster using 100 hours per man in April, Goodyear using 67, and Chance Vought using 47?

Admiral RAMSEY. That is right.

Mr. GROSS. Brewster was on its six hundredth plane; is that right?

Admiral RAMSEY. Just about approaching it.

Mr. GROSS. And at what plane was Goodyear?

Admiral RAMSEY. They had built considerably more, about 1,200.

Mr. GROSS. Can you supply us the corresponding index figure for Goodyear at its six hundredth plane?

Admiral RAMSEY. About 82.

Mr. GROSS. What was the figure for Chance-Vought at its six hundredth plane?

Admiral RAMSEY. One hundred.

Mr. GROSS. In other words, Brewster and Chance-Vought were using the same amount of man-hours at their six hundredth plane?

Admiral RAMSEY. Yes; that is true. But I would like to supplement that statement by saying this and elaborating on what I said before, that they, the Chance-Vought and Goodyear people have a great many other projects to which their talents are being applied in other fields of production in the air-frame business, whereas Brewster had a single job to perform.

Mr. GROSS. If Brewster had continued, would you anticipate any reduction below the 100?

Admiral RAMSEY. Yes; I would.

Mr. GROSS. About how much?

Admiral RAMSEY. Well, that is speculation. That would be a mere guess, but I would say 90; 85 perhaps.

Senator MURRAY. That would be a mere guess on your part?

Admiral RAMSEY. That is true.

Senator MURRAY. Apparently the production there was handicapped as a result of defective management to start with.

Admiral RAMSEY. Well, I believe there were management difficulties; in fact, I know there were. There were also labor difficulties, sir.

Senator MURRAY. Of course, you always have labor difficulties where you have poor management; isn't that true?

Admiral RAMSEY. I should say yes, sir; I subscribe to that.

Senator MURRAY. If you had efficient management, intelligent management, and patriotic effort on their part to produce, you would have a better spirit of cooperation on the part of the workers.

Admiral RAMSEY. I think that is generally true, sir, except that the workers' attitude must have some bearing; I do not think it is entirely influenced by the management.

Senator MURRAY. Do you wish to infer that the workers in this plant were not patriotically endeavoring to fulfill their jobs?

Admiral RAMSEY. No, sir; far from it. As I say, I have nothing but praise for the conduct of this latter part of the contract. We have no quarrel with anybody.

Senator MURRAY. As soon as they got an able director there, and able management, they immediately began to show better results, better production.

Admiral RAMSEY. I would say from the time that Mr. Henry Kaiser took over the stewardship it was apparently very satisfactory, comparatively so.

Senator MURRAY. Prior to the issuance of this order discontinuing the contract, the workers had no notice whatsoever as to what was going to happen there?

Admiral RAMSEY. We were requested by the management, the new management of Brewster, not to make any announcements or release any publicity at all on this question over the week end. We met them on Friday and we were specifically asked not to make any announcements or release any information about this situation until they had had a chance to appraise the situation in their own light. It was my understanding also that they were anxious to solicit new business during that period.

Senator MURRAY. What was the reason announced for making this request?

Admiral RAMSEY. Well, as I remember, Mr. Lockwood's statement was he thought it would not be timely to get the word out among the ranks of the workers.

Senator MURRAY. He felt, I suppose, it would have a demoralizing effect upon the workers.

Admiral RAMSEY. That is my recollection of what transpired.

Senator MURRAY. I suppose you recognize that in carrying out these programs of cut-backs and cancelations the situation of the workers must be given consideration?

Admiral RAMSEY. Yes, sir.

Senator MURRAY. And insofar as possible these cut-backs should be determined far in advance, at least as far as it is humanly possible, so that adjustments may be made and the plants be given an opportunity to take on other work from other agencies or secure new contracts from the existing agencies?

Admiral RAMSEY. Mr. Chairman, I fully agree with that. But, I must say, sir, that war is a very uncertain thing and, after all, our problems of appraising the ability of our equipment to stand up under the shock of battle against the Japanese in the Pacific, have very large question marks attached to them at all times. Decisions are made in the Navy Department as soon as we can get enough realistic and factual data to support a sound change in the program. We try very hard to do that.

Senator MURRAY. There is the obligation, of course, to take into consideration the human problems connected with the situation and to avoid, as far as possible, any demoralizing effect upon the home front.

Admiral RAMSEY. That is true.

Senator MURRAY. That must be taken into consideration as well.

There seemed to be a tendency at the outset of the war, when we began the production program, to give no consideration whatever to the domestic situation. You had no program, for instance, to utilize the thousands of small plants that were going to be prevented from engaging in civilian production, and the attitude of some of the procurement agencies was that it was no problem of theirs. Of course, that was a very vital problem to the country, and, if we are fighting a total war, we have to take into consideration all these factors.

It seems to me in the termination of these contracts there is nothing more important than preventing a demoralization of the workers of the Nation by reason of these sudden terminations. If this is a problem we are going to be confronted with, our country is going to be thrown into a very serious state of chaos and confusion.

It seems to me you should have announced publicly some time in advance that this situation was liable to occur, and a program should have been laid out and announced to the workers of the country so that they might know with what they would be confronted.

Admiral RAMSEY. In this particular Brewster case, sir?

Senator MURRAY. Yes; and in all cases like it. It seems to me that there should have been some kind of program known to the country, and not a termination that comes out of the dark which is a complete surprise to these men working in the plant who have been patriotically endeavoring to perform their tasks and play a part in war production.

Admiral RAMSEY. Well, sir, it is my personal feeling that when, through a happy turn of events, it is indicated that a previous estimate

of attrition losses is altogether too high and we find planes available to us that would not otherwise have been available, then in the interest of the simplification of our logistic problems and to keep our operations fluid, and by that I mean our logistic operations, we certainly have to consider the problem of balance in our program; and right today, sir, I can assure you that in many categories of war equipment we are overproduced and we are paying a heavy price for it. We have to cut back. We have to delete obsolete equipment from our storehouses. We have to try to find more parking area for our planes. It has gotten to a point where I think that the continued production just for production's sake of equipment is an indefensible proposition.

I assure you that those who deal with strategy—and I do not by position, I merely implement plans—but those who deal with strategy, I am sure, are making almost a moment-to-moment appraisal of every development in an effort to achieve balance in our material programs. They will certainly give all the warning that they possibly can to those who are in a position to assist the workers to readjust themselves.

Senator MURRAY. Well, that tells a very flattering story for the production record of the American workers, doesn't it?

Admiral RAMSEY. It does, indeed, and we are very proud of it.

Senator MURRAY. Only a short time ago we were hearing many stories to the effect that the American worker was falling down and was unpatriotic, and that he was liable to lose the war as a result of his failure to make the proper contribution to the war effort.

Admiral RAMSEY. Mr. Chairman, of course, there have been unhealthy spots here and there in the over-all program, but in the main I think it has been a magnificent job all the way through, one of which the country can well be proud.

Senator MURRAY. And that being true, there was no basis or justification whatever for any slander upon the American worker for his part in the war production program?

Admiral RAMSEY. That is the furthest thing from our minds.

Senator MURRAY. Do you believe that the proposal to have 1,000 planes built rather than 750 is unreasonable?

Admiral RAMSEY. I do, sir.

Senator MURRAY. Two hundred and fifty additional planes, you think, would be an unreasonable number of planes to construct, though it would be a very great help in continuing this plant until something could be found for it to do?

Admiral RAMSEY. Well, sir, I have reason to believe that the Brewster management is trying, or was trying, to get additional business; and it was also my understanding that other positions in the New York area certainly could be made available to the workers there in the Long Island plant, and I was so informed and that the War Manpower Commission had this situation pretty well in hand.

Senator MURRAY. But they made no public pronouncement?

Admiral RAMSEY. I have not seen any, but I know Mrs. Rosenberg is fully cognizant of the situation.

Senator MURRAY. The workers of the plant have no knowledge of any program that is being, or was, worked out to utilize their services, so far as I know.

Admiral RAMSEY. I do not know definitely, I am not a good witness on that, sir. I do not know, but I think Mrs. Rosenberg, as I understand it, has taken a great interest in it.

Senator MURRAY. What was the basis for the requirement of producing at the rate of 24 a week instead of merely giving them the right to produce 150 additional planes?

Admiral RAMSEY. The Brewster Co. had virtually set their own schedules of production. We did everything we could to make their task reasonably easy for them, and they were producing at slightly above that rate when we set the 24 figure.

We feel, perhaps due to this termination, there might be some slight interference with their production which would not permit them to maintain the higher level which they had at the time the termination was made. Therefore, it was merely a compromise designed to assist them.

Senator MURRAY. The other two plants engaged in the production of these Corsair planes had other contracts that they were carrying along at the same time?

Admiral RAMSEY. Yes, sir; and very important contracts.

Senator MURRAY. Very important contracts?

Admiral RAMSEY. Yes, sir.

Senator MURRAY. There was no necessity for any cut-backs in that production?

Admiral RAMSEY. Oh, yes, sir; there is a necessity and a very vital and urgent necessity for cutting back production of both Goodyear and Vought.

Senator MURRAY. You mean as to their work outside of the Corsairs?

Admiral RAMSEY. No; not outside the Corsairs but only applying to Corsairs.

Senator MURRAY. I am asking you if you had other work in the other two contractor plants which was important and which they were engaged in carrying out under contracts which was important work.

Admiral RAMSEY. Yes, sir.

Senator MURRAY. They were also constructing the Corsair planes?

Admiral RAMSEY. That is true.

Senator MURRAY. Wouldn't it have been possible to curtail the production in those plants to a slight degree insofar as the Corsairs were concerned and allow this plant to continue with production?

Admiral RAMSEY. No, sir; it would not.

Senator MURRAY. Why not?

Admiral RAMSEY. Because the nature of those projects that are coming along behind the current production of the Corsairs require the personnel to remain without radical interference with their oganization, require the personnel to undertake the work on these new and improved designs.

Senator MURRAY. Well, if you were curtailing the production of the Corsairs in those plants, that would not interfere with their work on the other planes, would it?

Admiral RAMSEY. No, sir; but I am afraid when I get into this field of our experimental work that I had better go off the record. It is very difficult for me to explain what they are trying to do.

Senator MURRAY. I do not care to enter into the details of the situation. The fact is you have this other construction work in both plants?

Admiral RAMSEY. That is right.

Senator MURRAY. The personnel of those plants are busily engaged in that work. Couldn't they, then, have slightly curtailed their production of Corsairs and concentrate on this other work?

Admiral RAMSEY. We are doing that, we are reducing the number of scheduled planes for both Goodyear and Vought.

Senator MURRAY. You have already done that?

Admiral RAMSEY. Yes, sir; we have already notified them their schedules have been cut.

Senator MURRAY. To what extent are they cut?

Admiral RAMSEY. Well, I would rather not give you the exact figure, sir, but I think I can give you some general idea. Of the total curtailment in the Corsair program, only slightly over one-half of it is borne by Brewster. The rest is shared by Vought and Goodyear.

Senator MURRAY. Ordinarily when you undertake to make a cut-back or termination of a contract where there are a number of concerns engaged in that production, how do you determine which plant should have the cut-back?

Admiral RAMSEY. Well, this is a unique situation, sir. We have no other producer building the same type of airplane; that is, as in the case of these three producers.

Senator MURRAY. If you decide tomorrow, for instance, that you are going to make a cut-back or termination of a contract where there are half a dozen different plants engaged in that particular work, how do you determine which plant is to have the cut-back or termination?

Admiral RAMSEY. Well, every single factor would be taken into consideration: the manpower problem, whether it was a tight or loose market; the productive costs; the overhead; the management; all those factors would be taken into careful consideration.

I assure you, sir, we have no comparable problem as the one pertaining to the Corsairs. We have no comparable problem in our aircraft program.

Senator MURRAY. The first date on which you determined there would have to be a cut-back here was on the 15th of May, was it?

Admiral RAMSEY. About the 15th of May; yes, the 15th of May.

Senator MURRAY. When did you notify the War Manpower Commission or the War Production Board?

Admiral RAMSEY. The War Production Board was notified of the imminence of this cut-back on that same day.

Senator MURRAY. How did you notify them—by letter?

Admiral RAMSEY. We notified them through our representative on the Aircraft Production Board, sir. One of the officers of the Bureau of Aeronautics is a regular member of that Board. In addition, I think Mr. Wilson, who is here, will testify that Mr. Gates called him personally that same day and made the notification, but did not state at that time just when the termination would take place.

Senator MURRAY. When you determine to make a cut-back or termination, do you consult the War Production Board or the War Manpower Commission with reference to where the cut-back or termination is to be made?

Admiral RAMSEY. Not necessarily, sir, but we would certainly advise them, because it is of great interest to them, and we would give them all the advance notice we could. If a move on our part, or contemplated move, were to run counter to their wishes or policies, then we would probably change our tune.

Senator MURRAY. But you have no policy whereby they would sit in with you when you come to determine a cut-back or termination?

Admiral RAMSEY. We have very close liaison with them, sir.

Senator MURRAY. Answer the question. Do they sit in with you and determine where the cut-back or termination is to occur?

Admiral RAMSEY. No; they do not sit in with us.

Senator MURRAY. What is your policy with reference to giving notice of a contemplated cut-back; on whom do you serve that notice?

Admiral RAMSEY. In a case like that we would serve notice to the War Production Board, War Manpower Commission, United States Army Air Forces, with whom we deal practically every day in matters pertaining to such situations.

Senator MURRAY. When you are going to make a termination of a contract, you must know at some time prior to the date and the hour that you issue the order that a condition is developing whereby it will become necessary to make a termination, isn't that true?

Admiral RAMSEY. That is true.

Senator MURRAY. Well, why didn't you then, when you were confronted with that possibility, serve notice on those who were to be affected by the cut-back or termination that the situation was likely to develop?

Admiral RAMSEY. When you say on those who might be affected, may I ask who you mean, sir?

Senator MURRAY. On everyone concerned, in the country. You would want to let us know that there was going to be a situation where thousands of men would be thrown out of employment unless they had an opportunity to seek other employment or get other contracts.

Admiral RAMSEY. Well, that is a question of policy, sir, on which, perhaps, I am not qualified to render an opinion or really answer your question. The question of publicity releases and press releases, that sort of thing, is handled by another branch of the Navy Department.

Senator MURRAY. You can see, I am sure, that when the public is suddenly apprised of the fact that a cut-back is going to take place within 24 hours, it is going to have a serious effect upon a large number of workers in the country; it will have a serious effect upon the country itself; and the public should know something about it before it occurs.

Admiral RAMSEY. As I said, sir, a press release was gotten out on the Monday following our Friday conference, and a complete release, giving details of the cut-back, was released on the 16th of May.

Senator MURRAY. Was any effort made to find out whether or not any of the other procurement agencies might be in a position to furnish work to this plant?

Admiral RAMSEY. I knew that through our association with the Army on the Joint Aircraft Committee and also through a statement of Mr. Lockwood himself, who said that his representatives were in contact with the Army and others, seeking additional business, I felt that a part of it was being taken care of by the management themselves, and I also knew that the Army was giving consideration to putting in some shell ordnance production there. It was a tentative sort of study they were making.

Senator MURRAY. Of course, they had no advance notice so as to enable them to work out a program or contract for this plant?

Admiral RAMSEY. No, sir, they had not had very much notice, that is true.

Senator MURRAY. That is all, Admiral.

Mr. Wilson, you may state your name and official position.

STATEMENT OF CHARLES E. WILSON, EXECUTIVE VICE CHAIRMAN, WAR PRODUCTION BOARD

Mr. WILSON. Charles E. Wilson, Executive Vice Chairman, War Production Board.

Senator MURRAY. Mr. Wilson, you are, of course, familiar with this problem of cutbacks and termination of contracts.

I wish you would explain the function of your new cutback committee of the War Production Board.

Mr. WILSON. Well, I have a copy of the order which outlines the duties of the new staff of the Production Executive Committee, which is to undertake the general subject of cut-backs and reconversion.

Generally speaking, the function of this staff will be to receive information from the procurement agencies, notably the Army, Navy, and Maritime Commission, of prospective cut-backs, in an effort to reach a determination as to the best places to make cut-backs where there is a choice. In some of the cut-back cases or prospective cut-back cases there is an opportunity to make a choice of plants in geographical areas in which there would be less harm to the over-all economy. Sitting with this staff that will receive this information will be representatives of the Smaller War Plants Corporation, the Office of Civilian Requirements, the various vice chairman of the War Production Board, representing, for example, operations and material control. With first determining the activities that are to be cut back and then determining the particular plants at which the cut-backs will be made, they will be enabled to determine whether the facilities and the manpower made available can best be used.

I remind you that the Office of Civilian Requirements is represented and the operations service chairman is represented, and determination could be made right at that level as to some particular line of increased civilian requirements that could be installed in the cut-back facilities to use the manpower available. Indeed, that is the hope of the new plan which has just become operative, as you probably know.

Senator MURRAY. What is the make-up of that committee; who serves on it?

Mr. WILSON. I will be glad to give you the complete list. There is a representative of the Army Service Forces of the War Department; the Army Air Forces, War Department; the Office of Procurement and Material, Navy Department; Bureau of Aeronautics, Navy Department; Maritime Commission; War Manpower Commission; the Office of Programs, Vice Chairman of the War Production Board; Office of Operations, Vice Chairman; Office of Civilian Requirements, Vice Chairman; Office of Labor Production, Vice Chairman; Office of Manpower Requirements, Vice Chairman; the Office of the Chairman of the Smaller War Plants Corporation; the Office of the Vice Chairman of the War Production Board; the Office of Metals and Minerals, Vice Chairman; and such other agencies as the Executive Vice Chairman may from time to time designate as desirable.

Senator MURRAY. When was that committee set up, Mr. Wilson?

Mr. WILSON. The date of this is May 25, 1944.

Senator MURRAY. That was after this situation developed, was it not?

Mr. WILSON. That is right. I might say this had been in contemplation for quite some time. It is probably regrettable it was not operating when this came along. Indeed, the Army and Navy had been urging us in the War Production Board to get some such body functioning.

Senator MURRAY. Can you give us an estimate, in dollars and cents, of the extent of the cut-backs or terminations that have already taken place in the whole program of terminations?

Mr. WILSON. I could not give you that, Mr. Chairman. It is, of course, a matter of billions of dollars, but I cannot remember the exact figure.

Senator MURRAY. I have heard all sorts of figures, all the way from 5 or 6 billion to 12 billion.

Mr. WILSON. If I had to strain my memory, sir, I would say the $12,000,000,000 figure is more nearly right. That, of course, is for a variety of reasons.

Senator MURRAY. With respect to the aircraft program, you were on the coordinating committee?

Mr. WILSON. The Aircraft Production Board; yes, sir.

Senator MURRAY. Therefore you are in a position to know what is likely to happen in aircraft production?

Mr. WILSON. I have advice from the services as to what their cut-backs are likely to be; yes, sir.

Senator MURRAY. In the cut-backs and terminations that have already occurred, you had advance information, hadn't you, in most of those cases?

Mr. WILSON. You are speaking now to the point of aircraft only?

Senator MURRAY. Generally.

Mr. WILSON. Generally, we in the W. P. B. have received some advice; yes, sir. Until we had this new body operating, this staff of the P. E. C., we did not have a very good set-up for receiving advance advices of cut-backs.

Senator MURRAY. Of course, it is desirable that studies should be pursued by the procurement agencies to determine as far in advance as possible when cut-backs or terminations are going to occur.

Mr. WILSON. I think they will fully agree with you on that; I surely do, sir.

Senator MURRAY. What information did the Navy make available to you prior to the announcement of the Brewster cut-back?

Mr. WILSON. Exactly as Admiral Ramsey outlined to you. I have forgotten, but I think it was the 15th or 17th that I was advised by a representative of the Navy of this fact.

Senator MURRAY. Have you had any opportunity to study the situation at the Brewster plant so as to enable you to determine what other war-production work, if any, may be placed in that plant?

Mr. WILSON. Not a study at the plant; no, sir; but immediately following the announcement of this cut-back I met with the manager of the Brewster Co. He came to my office and told me of the pending cancelation. We discussed various possibilities for them to utilize their facilities and manpower. I arranged with them to have some

of our people, who know the possibilities better than others in our outfit, to help them in an endeavor to secure some other contracts from the Army, not the Navy, but from the Army.

I knew of some possibilities and tried to work that out for them.

Senator MURRAY. Nothing definite has yet been worked out?

Mr. WILSON. It has not to date. As a matter of fact, I am not sure that it is going to with respect to the main possibility; that is, of using he Johnsville plant for either an ordnance or shell operation.

Senator MURRAY. With your knowledge of the war-production program, is it possible that the Navy might use either one of these plants for some work other than the construction of planes?

Mr. WILSON. I would not know what to suggest as to any Navy items I know that are open. I am talking about an immediate proposition, and I do not know of anything to suggest that could be immediately put in beyond the items we have already suggested. We suggested a few items for the Long Island City plant, parts for some heavy bombers, and that is about the only opportunity, it seems to me, that arises and that we might suggest to them at the moment.

Senaor MURRAY. The war production program is by no means coming to an end is it?

Mr. WILSON. Far from it. The requirements of the services to the end of the year are approximately at the same rate of production as we have been running for the last quarter.

Senator MURRAY. And as a result of developments, it may become necessary to engage in some new production entirely; is that not so?

Mr. WILSON. I think you must assume, sir, that there will be cut-backs, there will be reductions and there will be increases, all dependent upon the progress of war and the changing requirements thereof.

Senator MURRAY. Do you think it would be an unwise policy, then, to immediately disband or close down any plant that is equipped and might be available for production that might become necessary in connection with the further prosecution of the war?

Mr. WILSON. I think we are going to be confronted with the necessity of doing that in some places; yes. Where a plant is set up for some specialized output, and if we are not adroit enough to find work that can go in there immediately and hold it open, I surmise there will be cases where it will be necessary to cut back and shut down. I hope it will be kept to a minimum number of cases but I can conceive that that time will come.

Senator MURRAY. Of course, it is always possible to convert any big manufacturing plant to meet some new production problem.

Mr. WILSON. Yes; if you give full weight to the element of time in that. You cannot convert aircraft-parts plant to a heavy-shell manufacturing plant very quickly, as you well know.

Senator MURRAY. But if you have no other plant, it would be much better to use a plant already in existence.

Mr. WILSON. By all means. In those two cases we tried to find the means of converting them.

Senator MURRAY. I think that is a very sound policy.

Mr. WILSON. I do not see how we can do otherwise.

Senator MURRAY. I do not think that the effort should be given up immediately.

Mr. WILSON. That is right.

Senator MURRAY. There should be a continued effort to find some possible way of utilizing that plant.

Mr. WILSON. We regard that as our No. 1 job, sir. No; I say that is our No. 2 job. Our No. 1 job is to get war munitions, and the second job is to see that we try to do that sort of conversion.

Senator MURRAY. Have you any advice to give or suggestion to make with reference to this problem that we have?

Mr. WILSON. You mean the specific Brewster problem?

Senator MURRAY. Yes.

Mr. WILSON. The only suggestion I have to make, sir, is that we prosecute this investigation as to the things we might put in there. It does not seem impossible to me that we find something in this case. It seems to me that should not be impossible, and it is quite possible. In the case of the Long Island plants, by reason of their nature, structure, and so on, I would assume there would be greater difficulty.

Senator MURRAY. That is not as big or as important as the other plant?

Mr. WILSON. I understood it was of greater importance, a great deal more important, because there are a great many people involved. After all, the human element deserves more consideration than plants.

Senator MURRAY. I thought the Johnsville plant was the larger one.

Mr. WILSON. I think not. I think the Long Island City plant has the larger number of people. I may be wrong on that, but I think that is so.

Senator MURRAY. You have no other comment to make on the situation?

Mr. WILSON. No, sir.

Senator MURRAY. Very well; thank you.

Mr. Stocking, of the War Manpower Commission, will you come forward and give your name and official title?

STATEMENT OF COLLIS STOCKING, CHIEF, REPORTS AND ANALYSIS SERVICE, WAR MANPOWER COMMISSION

Mr. STOCKING. My name is Collis Stocking, and I am Chief, Reports and Analysis Service, War Manpower Commission.

Senator MURRAY. You have a statement you wish to make?

Mr. STOCKING. No; I do not.

Senator MURRAY. You have no statement whatever?

Mr. STOCKING. No; I have some notes here that will touch upon some of the questions you raised, and if you wish, I will make some general observations.

Senator MURRAY. I would like to have you proceed and make any general observations you have. I am called to the telephone on an important matter, and will have to leave for a few minutes. You may proceed with your statement and I will be back as soon as I can.

Mr. STOCKING. As has been indicated by earlier witnesses, the determination to cut back production in the Brewster plant was made primarily on the basis of considerations other than manpower. We were officially notified of the cut-back on May 23.

We immediately proceeded to make arrangements to place the workers in other war production as promptly as possible. We notified aircraft companies throughout the country as to the availability of these workers, and made arrangements for them to send their representatives directly to the plant and to hire workers on the spot. There are about 11 companies that have representatives in the plant, beginning yesterday.

They have a demand for about 2,000 workers. In addition, there are 2 or 3 other important war producers in the general area that have orders for several thousand such workers. The first day, the placements or actual hiring amounted to about 402 workers. I have not gotten a report as to how the work is progressing today.

Mr. BORCHARDT. When was the Manpower Commission first notified of the pending termination?

Mr. STOCKING. May 23.

Mr. BORCHARDT. When did you send your representatives to the plant of Brewster?

Mr. STOCKING. It was done by the regional office, and so I am not sure what day they arrived. They opened this hiring center in the shop yesterday morning.

Mr. BORCHARDT. Would it facilitate the work of the Manpower Commission if the Commission received advance notice of any impending termination?

Mr. STOCKING. Yes.

Mr. BORCHARDT. I would suggest we wait until the Senator returns. He will be back shortly.

(Short recess.)

Senator MURRAY. You have concluded your statement?

Mr. STOCKING. Yes. Just as you were leaving I said we were officially notified of this on May 23. I have been informed since I made that statement that Mrs. Rosenberg, our New York regional director, had been informed of it on the 20th.

Senator MURRAY. You are now engaged in an effort to find work for these workers?

Mr. STOCKING. That is right. We have 13 employers with representatives in the plant now hiring workers directly, and there are 17 other employers who have their representatives in our offices in Long Island. They would be in the plant, but there is not enough space for all of them there.

Senator MURRAY. I understand the War Production Board is engaged in a serious effort to find other work for this plant and they might possible discover some production that could be assigned to this plant. Have you any other comments to make with reference to this situation, how it should be handled in the future?

Mr. STOCKING. Well, the question was asked of me after you left the room, if it would facilitate our work if we knew about these impending cut-backs in advance. Of course, it would. In some cases where the manpower factor is a very important one, we have something real to contribute in facilitating the transition from a cut-back of war production to civilian production. We are represented, as Mr. Wilson pointed out, on the staff committee of the Production Executive Committee of the War Production Board, and I share Mr. Wilson's hope and his optimism that this will bring about a much better situation in the future.

Senator MURRAY. Thank you very much for your statement.

The CHAIRMAN. If Mr. Frankensteen is still here, I would like to call him back to the stand.

Senator MURRAY. I would like to ask you, Mr. Frankensteen, after hearing the testimony here today, do you have any further statement which you wish to make for the record?

STATEMENT OF RICHARD T. FRANKENSTEEN—Resumed

Mr. FRANKENSTEEN. Yes; I would like to say that Justice Byrnes has just issued a statement which I believe will arrive here shortly. On the basis of that statement, which I do not want to quote before it arrives, I am going to instruct our people in the plant to leave the plant and return to their normal operations. I think the statement will explain the reason why I make that request. I understand from the statement that Justice Byrnes has asked that the Termination Committee meet tomorrow with Mr. C. E. Wilson to discuss ways and means of reutilizing this Brewster plant.

I should like to say, also, that I think this very exhaustive inquiry today proves the need of the action that has been talked about, that of establishing a form of procedure. We hope this Brewster case will serve as a warning to the Congress and Government that we cannot afford to continue to drift. We need immediate legislation setting up an Office of War Mobilization and Post-War Adjustment, and providing specific policies and procedures designed to avoid economic dislocations in the wake of large-scale cut-backs and contract terminations.

That is the only statement I wish to make until Justice Byrnes' statement arrives.

Senator MURRAY. Thank you, Mr. Frankensteen. I am in full accord with your statement and, as you know, my committee, the War Contracts Subcommittee of the Military Affairs Committee, is engaged in the study and preparation of such legislation as you have spoken about. We hope to have it ready at an early date. It is unfortunate that we did not have it ready long before this. But these problems are coming on us all of a sudden, and we are doing all we can to meet the problems.

Mr. FRANKENSTEEN. I appreciate that.

Senator MURRAY. This will terminate the hearing.

(Whereupon, at 3:35 p. m., the subcommittee adjourned.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

MONDAY, JUNE 12, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE OF THE
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to notice, at 10 a. m., in room 357, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senators Murray (chairman), Revercomb, George, Lucas, Kilgore, Austin, Vandenberg, and Shipstead.

Senator MURRAY. The committee will come to order.

Before calling upon Mr. Justice Byrnes, Director of War Mobilization, who will testify this morning, I wish to call attention to the fact that there is a widespread demand throughout the country for swift action on the legislation pending before this committee.

We are rapidly approaching the final stage of the war. Our troops are now engaged in the invasion of Hitler's Europe. While the possibility of protracted resistance by the German Army must be taken into consideration, an early victory is the fervent hope of every American.

Unfortunately, our plans for peace have not kept pace with the progress of the war.

Thus far, congressional action on post-war problems has been limited to veterans' legislation, which has just been agreed upon in conference committee, together with the legislation providing for the settlement of terminated contracts and the removal of termination inventories.

The contract termination bill does not deal with the subject of providing civilian production to take the place of production under war contracts as they are being cut back or canceled. The G. I. bill does not deal with the subject of providing employment—either for veterans or for labor as a whole.

While both of these bills are of great importance, it is most essential that the Congress promptly enact a broad post-war adjustment measure that will meet the problems we will be called upon to face and provide confidence in the future.

Such an act must include at least the following:

(1) A strong and effective Office of War Mobilization and Post-War Adjustment to formulate and carry out the plans that are needed to achieve post-war prosperity and full employment.

(2) Clear-cut policies and procedures for handling the curtailment of war production and the resumption of civilian production, with full and complete protection for workers and small businessmen.

(3) A strong and effective system of unemployment compensation to protect the living standards of American labor by providing for complete coverage of all workers and 52 weeks of substantial benefits over a 2-year period.

(4) Advance planning for a long-range housing program, and for a sound public-works program to be held in readiness to meet any possible development of unemployment.

(5) A constant check by the Attorney General, with regular reports to the Congress, on all trends toward the extension of monopoly or increased concentration of economic power.

The War Contracts Subcommittee has been working on this legislation for many months. We have had many weeks of public hearings and have consulted broadly with Members of Congress, Government administrators, and representatives of labor, industry, and agriculture.

The subcommittee is anxious to have the views of Mr. Justice Byrnes on this proposed legislation, before reporting to the full committee. The experience of Mr. Justice Byrnes as Director of War Mobilization, and as a legislator of long standing, eminently qualifies him to advise the committee on these measures.

Following the testimony of Mr. Justice Byrnes, the subcommittee will report to the full committee as promptly as possible.

Mr. Justice Byrnes.

STATEMENT BY JAMES F. BYRNES, DIRECTOR OF WAR MOBILIZATION

Mr. BYRNES. Mr. Chairman and gentlemen of the committee. Last December I discussed with you in executive session the problems of contract termination and the disposition of surplus property. I told you that, while waiting for the enactment of legislation which we agreed was essential, I would proceed as far as possible under existing law.

In December we established the Contract Termination Board. Mr. John Hancock has been acting as chairman. Progress has been made, but to operate efficiently legislation is necessary. The bill passed by the Senate provides the necessary machinery for contract terminations, and I hope it will soon be acted upon favorably by the House.

In February by Executive order there was established the Surplus War Property Administration. Mr. William L. Clayton was appointed Administrator. The experience of the Administrator should be helpful in the drafting by your committees of the bill providing for the disposition of surplus property.

The Baruch report recommended the establishment of a Work Director. By Executive order the Retraining and Reemployment Administration was established. Brig. Gen. Frank T. Hines was placed in charge of this work. He is making progress, and I understand has appeared before your committee as to certain phases of his work.

The Post-war Adjustment Unit established last fall has been under the direction of Mr. Bernard M. Baruch, with the assistance of Mr. Hancock. Having filed their report some weeks ago, they advised me there was no reason for the continuance of the Unit and requested that it be discontinued. This request was agreed to. Mr. Baruch continues as special adviser to the Office of War Mobilization, the position he has occupied since the establishment of the Office.

I have recited the status of these agencies under the direction of O. W. M. and concerned with the reconversion program before presenting to you my views as to the bill you have invited me to discuss, S. 1730.

When the Office of War Mobilization was created and until quite recently, the procurement agencies were engaged in developing many new programs. Now their programs, with a few exceptions, have reached a peak. The job is to maintain that peak. If the Congress intends to recess within the next 2 weeks, one would be an optimist to expect this bill to become law until after the recess. Certainly, by that time, the big task will be planning for demobilization. Should the bill then pass, I do not want to be immodest and assume that the President would offer to appoint me to the office the bill creates, but if, because I am Director of War Mobilization, he should do so, I feel that at that time the mobilization situation will be such I could decline to accept, and I would so decline.

I make this statement so you will know that any opinion I may express about the bill is not influenced by a personal interest in the office it creates.

I believe that the George-Murray bill which you have under consideration is a step forward in the right direction. It should help in the development of unified and consistent policies and programs for the post-war period without interference with the war effort.

As I understand the bill, it gives statutory authority to the Office of War Mobilization and Post-war Adjustment to exercise the war-mobilization powers now exercised by me under Executive order and, in addition, to exercise somewhat comparable powers in the field of demobilization and post-war adjustment. It is highly desirable that such important powers of direction and planning whether for mobilization or demobilization should be defined and confirmed by the Congress.

Extensive reorganization of Government agencies was necessary to build up effective governmental machinery for war. Extensive reorganization and consolidation of Government agencies will be necessary to streamline and simplify the governmental machinery for peace. Some of this remolding of governmental activity can be achieved under existing law, some of it will require legislation. It is important, in my judgment, to have an office like the proposed Office of War Mobilization and Post-war Adjustment with statutory authority to guide and supervise the development of over-all policies and programs in close cooperation with the Congress without itself directly taking on the burden of detailed administration.

I hope that you will retain, in the bill, provisions supplementing the existing Federal social-security legislation. These provisions should (1) induce the States to liberalize their unemployment insurance laws during the period of readjustment and demobilization, and (2) enable the States to secure reimbursement from the Federal Government to the extent necessary to prevent the State unemployment funds being unduly depleted by reason of the increased burdens imposed on such funds.

Assuming that Germany is still at war with us when we reach the fourth quarter of this year, we must expect cut-backs in some programs that will necessarily cause many persons to be unemployed in certain industries and in certain areas. When Germany surrenders, cut-backs

will probably increase, and when peace comes we must expect considerable unemployment. To lessen this unemployment, it is important, first of all, to provide for the intelligent conversion of industry to peace. If men are to be employed, we must have employers, but we must realize that, notwithstanding what we may do to facilitate reconversion, we are bound to have some unemployment. The extent of that unemployment is dependent upon too many factors for one to hazard an estimate.

My opinion is that if reconversion is handled intelligently, the unemployment will be of relatively short duration. I do not believe that we can leave entirely to industry or to local governments the burden of alleviating the distress that will result from unemployment caused by the cancelation of the contracts of the Federal Government.

If we agree that the Federal Government has a duty to perform, the question is, How shall that duty be discharged? Because I believe the unemployment will be of relatively short duration, I do not think the Congress should revive the Works Progress Administration. Nor do I think you should authorize the payment to employees of dismissal wages, to be charged up to contracts. That would offer relief only to a portion of the unemployed. It would mean the payment of a bonus to some employees who might get a job the following week while other employees might be unemployed for months. I believe that unemployment insurance should be our first line of defense.

In a speech in New York last April I expressed the view that existing State unemployment insurance laws were framed to meet local conditions of temporary unemployment and are not adequate to deal with the Nation-wide problem of reemployment. I stated that demobilization must be regarded as a national problem and its costs as part of the costs of the war. I suggested that the State unemployment insurance plans should be supplemented by Federal support to the extent necessary to give practically all workers, during the transition from war to peace, suitable unemployment benefits.

I am in substantial accord with the provision of the George-Murray bill on this subject. It is evident to me that an effort has been made to develop a plan which would most smoothly gear into the operation of existing State unemployment insurance laws. It does not propose, and it is not necessary, to federalize the State unemployment insurance laws for this purpose. By its terms the proposed legislation is limited to the emergency period, terminating 2 years after the cessation of hostilities, and requires specific and affirmative action of the Congress for its continuance.

In order that some States may not receive more favorable treatment than others, the bill wisely provides that the State laws be required to meet the following minimum standards during the period of transition from war to peace:

First, workers in covered occupations, of employers of one or more workers, instead of eight or more (as now provided by Federal law), must be eligible for unemployment benefits. This simply makes the incidence of unemployment insurance the same as old-age insurance. It is estimated that this would bring 3,000,000 workers now unprotected under the protection of the unemployment insurance laws.

Second, compensation for a minimum of 26 weeks of total unemployment within a benefit year must be provided. In some States, I am informed by Mr. Altmeyer, an unemployed person, no matter how long he is unemployed, can draw only a few weeks of benefits, and that about half of the States provide less than 17 weeks of benefits. Even in a good year like 1941, it is estimated that more than one-half of the claimants for unemployment compensation exhausted their benefits before they found employment. The present limitations on aggregate benefits are much too severe to carry us through a period of extensive reemployment.

Third, the maximum rate of compensation must not be less than $25 for a week of total unemployment. In 22 States no worker can now receive more than $15 a week in benefits regardless of his previous wages. That is not enough for workers accustomed during the war to earn $40 or $50 a week or even more. Since State laws were originally enacted, the cost of living has materially increased.

I had hoped that the G. I. bill would allow a maximum rate of $25 a week of unemployment benefits for our servicemen, but as a rate of $20 a week has been agreed to by the conference committee, I suppose that your committee will want to lower the requirement in this bill from $25 to $20.

The minimum requirements suggested by the George-Murray bill are not unreasonable in themselves, and they are certainly necessary to prevent an undue inroad on workers' purchasing power during the emergency period when an unusually large number of workers will be seeking reemployment.

The committee's plan provides that when the unemployment funds of a State are less than the amounts collected during the perceding year the State shall be entitled to have transferred from a Federal reinsurance fund to the State unemployment fund an amount equal to the unemployment compensation paid by the State in excess of 2.7 percent—the credit allowed to the States under the Federal unemployment tax—of the wages taxable under State law. This reinsurance by the Federal Government should not only induce the States to meet the minimum requiremens set, but should encourage them to broaden their coverage and, further, to liberalize their benefits.

As the States cannot be expected to make the necessary changes in their own laws before July 1945, I think a provision such as has been incorporated in section 305 of the bill is important and necessary. It will enable the States by agreement to make before July 1945, the payments which the bill seeks to require them to make after that date and will enable the States so agreeing to receive from the Federal reinsurance fund the additional costs of any such payments made prior to such date. This may be very important if, as we all hope, the German surrender occurs prior to July 1, 1945.

I have asked the advice of General Hines and Mr. Altmeyer on the bill's proposal. Both of them have gone over the proposal carefully and have discussed it with General Hines' policy board. Not being an expert on unemployment insurance legislation, I have had to rely on their experience and technical judgment. They are in general accord with the proposal but have suggested certain technical improvements in the bill. I will leave their suggestions with the committee. To avoid any fear of open-end liability in the Federal Government, I

would endorse their suggestion that the Federal Government be not required to underwrite State unemployment compensation in excess of 36 weeks of total employment in a benefit year or in excess of a weekly rate of $30.

I am also leaving with you a letter which Mr. Altmeyer prepared for me, giving data on the inadequacy of the benefit and financial provisions of the existing State Unemployment Compensation laws.

(The letter referred to, and accompanying data will be found at p. 274 of Mr. Byrnes' statement.)

Mr. BYRNES. I am glad to see that there has been inserted in the bill a provision to enable the United States Employment Service to bear the necessary cost of transporting war workers to their new work or their old homes. Workers should be helped to leave localities where there is no longer work for them That is rightly regarded as a part of the cost of demobilization.

I should also point out that there are a large number of Federal industrial workers who are not covered by the State unemployment insurance laws, and separate legislation will be necessary to provide necessary protection for them.

Unemployment insurance is our first line of defense against unemployment. If you can induce the States to utilize their great reserves in making more liberal allowances, I think you will be able to tide over the reconversion period, and you will have time, in the light of conditions then existing, to determine what you want to do about public works. However, if the allowances are inadequate, you will not have any time. The average weekly compensation of employees in manufacturing establishments is now $45. If such an employee, when out of a job is paid $15 a week, he will have to pay most of it for rent. When he gets through paying for rent, light, heat, insurance and medicine, he will have so little left for food that he will be demanding that the Federal Government provide work. I hope the appropriate congressional committees will now begin consideration of a program of public works which in an emergency can be promptly authorized. The Federal Works Agency has prepared a program for road construction and for Federal buildings. I am advised the National Housing Administration has submitted to your Post-war Committee suggestions as to housing plans.

I have discussed the human problem at some length because it is the most important. There can be no effective solution of that problem unless all phases of the demobilization program are carried out. It cannot be carried out until we get the necessary legislation. The program for the termination of contracts can only limp along until the enactment of the bill passed by the Senate some weeks ago. The machinery is prepared to have the field representatives of the procurement agencies instructed as to the policies Congress wants followed in such settlements. Plans have been made to bring from universities capable instructors who, after studying the procedure, can, when they return to their institutions in various sections of the country, instruct the accountants of corporations as to the policies and procedures. But neither the accountants of the Government nor the accountants of industry can be instructed until the policies are determined upon.

The extent of unemployment will be greatly aggravated by any delay in the settlement of contracts. If the settlements of thousands

of contracts are to be held up until there is a detailed audit, then we may as well immediately provide for a huge public works program.

Some few contractors may be found to be corrupt. When this occurs, they should be severely punished. But that we exaggerate the fears of contractors taking advantage of the Government in settlements, is evident from the record of settlements for the month of April. The War Department authorized the termination of 1,482 contracts; 598 contractors filed claims as a result of termination; 1,057 agreed to immediate settlement without filing any claim growing out of termination. The contractors took the position in most instances that if they received a payment as a result of a claim, by the time they got through with renegotiation and the payment of excess-profit taxes, the amount they received would not be worth the time and effort necessary to file a claim. They were satisfied to have the Government quit. The value of the items canceled, and for which no claims were made, amounted to $192,000,000.

When you provide for contract terminations you are not giving contractors something—you are simply providing for the Government to promptly pay what it owes. That's being honest. And, as always, honesty is the best policy. If we promptly stop production when it is no longer needed, we help the taxpayers. If we promptly pay what we owe, the contractor can promptly return to civilian production and provide jobs for workers.

In a progressive step to aid in the reconversion, the services have requested all their contractors to advise them the number of Government-owned machine tools in their plants that they would be interested in purchasing and the number that they can store. Through the Surplus War Property Administration, steps are being taken to enable the contractors to purchase now for future delivery such of these machine tools in their plants as they wish to acquire at prices to be fixed by the Administration and subject to the right of the Government to repurchase at the sale price if any future requirement by the Government should develop therefor.

Today we are prepared for war. But we are not unprepared for peace.

Looking to the collapse of Nazi Germany, the armed services are already far advanced programing the orderly demobilization of our soldiers and sailors and the largest possible release of our industrial plants and civilian population from military production.

Our fighting men are entitled to first consideration in any plan of demobilization. Their orderly release at the earliest possible moment, consistent with the effective prosecution of the war, has ever been the primary consideration of both the President and the Joint Chiefs of Staff. Fair standards for their discharge in such numbers as the defeat of Hitler will permit have already been established, not arbitrarily, but in a highly creditable democratic way. The soldiers and sailors themselves have been interviewed and their views have been followed as to both the standards to be used and the weight to be accorded these standards in fixing the order of demobilization of our servicemen. Our admiration for the men in the armed services is even further increased when we learn that 90 percent of those who were interviewed asked that those among them who had seen service at the fighting front be given a preferred consideration, and that fathers enjoy a priority over nonfathers in release from the services.

98534—44—pt. 7——2

It is the intention of the Government that all men in the armed services, as well as their families, shall understand thoroughly the standards to be followed in the demobilization of our soldiers. To this end there has already been prepared a moving picture setting forth the standards to be followed and the reasons for these standards. This moving picture and other methods will be used to show to our troops at home and abroad, and to their families at home, the entire plan of demobilization.

Similarly, comprehensive steps have been taken by the Army staff for the curtailment of military production immediately upon the collapse of Germany. The Army has already prepared a revision of its current supply program, to be put into effect with the surrender of Hitler. Substantial reductions in practically all categories of procurement are provided for. These revised procurement tables have already been made available to W. P. B. Broken down into categories, these tables put W. P. B. in possession of the exact knowledge of the amount of plant capacity that will thereupon be immediately available for transfer to civilian production. They are also broken down by regions, by States, and even by major cities.

While perhaps not as far advanced because they will not be affected to the same extent by the collapse of Germany, the other branches of our armed services are working toward this same goal and following similar procedures.

These revised tables of the Army will shortly be made available to its field offices. It is preparing even now to advise its contractors in the near future the amount of the proposed reduction in their orders of military production to be put into effect with the collapse of Germany.

The contractor himself can thus plan today for X-day and his own reconversion problems.

While we move to X-day—the collapse of Germany—there will be many adjustments in our military programs. In large part they will represent shifts in the production of essential military requirements. There has been established by the Army Service Forces a procedure which makes such adjustments in our military programs as orderly as possible. Each week there is held a meeting of the production committee of the Army Service Forces attended by representatives of W. P. B., W. M. C., and Smaller War Plants Corporation. This meeting indicates tentative general reductions contemplated in any of its programs and lists the contractors involved in such programs. Thereafter the program is reviewed by another board, a recommendation is made for a reduction of the program and the plants to be affected thereby. In selecting the plants to be cut back, cost, use of materials, performance, labor availabilities, transportation, and other factors are considered.

Before any cut-backs of actual contracts can be authorized, the proposed cut-backs must be submitted to the Military Cut-back Subcommittee of the Production Executive Committee of W. P. B. on which sit representatives of W. P. B., Army, Navy, and Maritime Commission. Immediately following the meeting, War Manpower Commission is advised of the tentative plans. The contractor and his labor representatives are given notice of the cut-back formally, and it is the rule in the Army that at least 30 days' notice in writing shall be given unless exceptional circumstances are presented.

The collapse of Germany will necessarily have a greater effect upon the program of the Army than it will upon the plans of the Navy. The war against Japan will prevent important cancelations by Navy. But Navy has a complete program as to what will be done upon the cessation of hostilities. The plans of the Navy are similar to those of the Army. And the completeness, the thoroughness of these plans is amazing. The Army and Navy have done a great job.

When contractors throughout the country, on the collapse of Germany, are directed by telegrams from Army representatives to make specific cut-backs, complete information about those cut-backs will already be in the hands of W. P. B.

W. P. B. cannot draw an exact blueprint of what it will do. In practical operation the contractor, advised of what will occur on X-day, will consult the representative of W. P. B. as to the raw materials that will be available to him for civilian production at that time. The function of W. P. B. will be to give him the information and on X-day release him from what they call the limitation order The purpose will be to release him from restrictions at the earliest possible moment.

W. P. B. is going to advise contractors in the next few days that, without waiting for X-day they should now place orders for such machine tools as they will require for civilian production. The machine-tool producers will be authorized to manufacture such machine tools whenever plant capacity permits.

The Production Executive Committee, of which Mr. Wilson is chairman, last week appointed a subcommittee composed of the procurement agencies, War Manpower Commission and Smaller War Plants Corporation. They are advised of proposed cancelations in an industry when they are first considered and before particular contracts are selected for termination. When a selection is made, this committee will canvass all procurement agencies to see if additional war work can be given the contractor. And this committee is now engaged in drafting uniform procedure, based on the efficient Army program for the termination of contracts.

Without going into further details, I wish to state that I feel confident that intelligent and detailed plans have been made for effective and prompt action on X-day. And these plans are being constantly perfected.

The Smaller War Plants Corporation is being given a more important part in the reconversion picture. I appointed its representative to the Contract Termination Board and the Policy Board of Surplus War Property Administration. In converting from peace to war the requirements of the armed services were such that smaller war plants, in many instances, were not utilized. Now we must assist them. When the European war ends we may have a more ample supply of steel. W. P. B. must allot to the armed services their requirements. If, for instance, that should be 20 percent, then before allotting the balance to the market, a small percentage should be set aside for small plants to assure they will not be denied materials because of the manufacturers' desire to prefer purchasers of large amounts. If we are to help small business provide jobs, we should give Smaller War Plants Corporation more authority and broader loaning powers.

I cannot too strongly urge upon Congress the enactment of the legislation without which all reconversion plans are ineffective. In addition to the contract termination bill, pending in the House, your committee is about to consider the bill providing policies for the disposition of surplus property. Plans for the administration of these policies are being developed by Mr. Clayton. If Congress promptly passes that bill, those plans can be put into immediate operation.

I have discussed only those bills constituting the reconversion program which are considered by this committee. I have one other suggestion as to legislation not within the jurisdiction of this committee, but affecting reconversion plans of the committee. Sometime ago tax experts of the Treasury began working upon data for post-war revenue legislation. I fully realize that it is impractical for Congress to consider revenue legislation that would not be enacted until there is a new Congress, but I know that Congress has an efficient corps of tax experts. I hope that the chairman of the Finance Committee and the chairman of the Ways and Means Committee of the House can direct the experts of the joint committee to commence work upon a post-war revenue bill. Treasury experts assure me they are ready to assist if desired. Recalling that it has always taken months for the preliminary work of a general revenue measure, I hope that that spade work can be done this summer and fall. War taxation should end with the end of the war. It is important that as soon as possible after X-day, there be a revision of the tax laws that will encourage capital to invest in industry. The knowledge that the Congress is working on a revision would encourage men to plan for the investment of capital and for the employment of people. As I understand it, that is the object of this bill, and the other bills in this reconversion program, to furnish real jobs to the service men and to the war workers of the Nation.

Let me conclude with one important note of caution that cannot be overemphasized. We are only on the threshold of the invasion of Europe. The destruction of Germany is distant. Our preparation of demobilization plans must not become an excuse for any relaxation of our present war production. For a long time to come war production must remain our major concern. But as we all labor unceasingly for victory, we can be heartened by the assurance that plans are being perfected to ease the transition from war to peace, to guard, so far as is possible, against unemployment and to give such stimulus as may be feasible to the revival of civilian production.

A representative of your committee, a staff representative, was kind enough to give me Saturday a suggestion of some questions. I think in the statement that I have read I was dictating Saturday, I covered many of them. There are several, however, that I would briefly refer to.

One of them is the appointment of your joint committee. I feel it is an excellent idea. I would love to see it tried; it is an experiment that I have always wanted to be given a fair opportunity to try. I have one recommendation and that is that the committee do all in its power to limit the size of the committee. My observation is this, that with a joint committee, when the membership is large, it is difficult for it to function.

Again, I have the idea that, after serving here, and serving in the executive branch of the Government, if the committee was small there would be a chance of establishing a relationship between the

executive branch of the Government and the congressional branch of the Government. It would be most helpful, and if the Administrator were a wise man, he would advise with the joint committee, not only on what he has done but on what he is thinking of doing, and the joint committee then could advise the members of the respective Houses—as I know it is done, not in formal meetings, but in their daily contacts, on what is being considered, and the result would be the establishment of a relationship that should be helpful, not only to the Congress but helpful to the executive branch of the Government in having its actions understood and not misunderstood.

As to the next question, as to the investigation for the purpose of eliminating and consolidating agencies, I am heartily in accord with that provision. Years ago I said that the nearest approach to immortality was a Government bureau. I have not changed that opinion. I do not think it makes any difference what party is in power, that is the fact.

In the last war, when I served on the Appropriations Committee of the House, I found a situation where, during the last war as in this war, quite a large number of agencies had been established, and I was amazed at the plausibility of the excuses and reasons given for the continuance of every one of those agencies; and also surprised at the support that those efforts received. It will require courage and determination, but it is essential that it be done, if you are going to restore Government to a peace basis.

The next question that I think is not covered is as to the Board, the advisory committee, which in this draft of the bill, as I get it from reading it Saturday, provides for the appointment of an Advisory Board of Industry, Agriculture, and Labor, and leaves to the discretion of the Director whether they should meet together or whether they should meet separately. I think that is wise. When you go to appoint a committee of that kind it is difficult to get a small committee. You go to appoint a representative of agriculture which has several organizations, they all want to be represented; you find the same thing in the labor field, and when you get to the field of industry, the same situation. It may be desirable for the Director to consult industry as to a problem purely industrial, industry alone, and that, as to a labor problem. If he has the discretion to, under this act, consult them, if he thinks it necessary to have them meet, have them meet together, but it would not require the summoning of an industry committee to set it upon the consideration of a problem which was purely agricultural and therefore the language, as drawn, it seems to me would be wise.

There is a provision in the bill as to the question of policy that prompts this question in this memorandum given me:

Is it not important to provide against a man who may be retained in the armed services simply to avoid unemployment?

I think it answers itself, but I think it would be wise to leave the language in the bill, because again you have a lot of human nature to deal with, and if, when proposels are made that you do just that very thing, it would be a lot of support to the Administrator, whoever he is, to have that provision in the bill. There is not any question of what is going to happen.

We cannot continue all of the plants that are now in production. Whenever you propose to discontinue, again, it is going to require courage.

We know from our experience what is going to happen back in the community where the plant is located. Some enterprising secretary of the chamber of commerce will go to the merchants in the city and ask if they are in favor of the continued prsperity of the community. There is but one answer to that, which is, "Yes," so they sign this telegram to the Governor, the Senator, and the Congressman. When the Governor gets it he says, "Well, it is not my responsibility; I will just send it up to the department." The Senator does the same thing, and the Congressman does the same thing.

When it gets down to the department, the gentleman there, who has been drafted from business, and who is there on leave, the responsibility is his; but when some able Representative in the Congress advises him that it is essential that this plant be continued, it is easy for him to say, "Well, after all, I don't levy the taxes upon the people; these gentlemen do, and if they think it is all right to continue it, and they are going to levy the taxes—I should like, in the first place, when I get back to my business, I might need their assistance in something, and who am I to say that the representatives of the people are wrong?" and he continues the establishment.

The trouble is in the lack of responsibility, that the Government may not do what it ought to do.

I think those are about all the provisions of the bill to which my attention has been called and which I did not discuss in the statement I submitted.

Senator MURRAY. I think you have answered the questions that the committee was interested in.

Mr. Byrnes, with reference to the Advisory Board that we are setting up, of course you recognize that many times an industrial question is of such a character that it may have a very serious effect upon labor and upon agriculture, and that in such instances agriculture or labor would have and need the right to be heard and have their advice considered.

Mr. BYRNES. Of course, and I assume that is why the committee, or the drafters of this bill, provided the language that they should have a meeting of all three groups to advise. Some problems cannot be separated, the interests of management and labor happen to be the same. Some problems, however, may be peculiarly ones for a group, and I assume your idea was that in such a case, that the Director could request the assistance of that group alone.

After all, it is for the purpose of giving the Director the benefit of advice, that he would know whom to go to and what source he can get the information from.

Senator MURRAY. I think the committee agrees with you that the most important feature of this legislation will be the unemployment-compensation features of the bill, because it is vastly more important that a program of that kind be sufficiently effective to take care of the unemployment situation that will undoubtedly result during the reconversion period. I believe you have covered that very fully in your prepared statement.

Senator VANDENBERG. At this point may I ask a question, Mr. Chairman?

Senator MURRAY. Yes.

Senator VANDENBERG. To clarify my thought on the subject, Mr. Byrnes, on page 4 of your statement you suggest that the maximum rate of compensation must not be less than $25 a week for total unemployment; then you suggest that you have come down to $20, in order to parallel the G. I. bill; then over at the top of page 5 you suggest that the Federal Government be not required to underwrite State unemployment compensation in excess of 36 weeks of total employment in a benefit year or in excess of a weekly rate of $30.

What is the relationship between the $20 on page 4 and the $30 on page 5?

Mr. BYRNES. Well, it says not less than $20; the maximum rate that Michigan fixes, for instance, should not be less than $20. That would be one of the standards added to those now existing in the law. The thought that occurred to me then was that it would be all right to make that standard, but then Michigan might say that "if we are to be given a guaranty from the Federal fund that was not less than the maximum, but we will say $40, that they go up to $40," then you would have to pay. There ought to be some break-up from that. That occurred to me after the first rate statement. You say here, now, in Michigan the maximum should not be "less than $20", but suppose another State says $30 or $40—it says "not less than", but it does not say "nor more than." I think that you ought to give some thought to it. It is not in the bill, but it is contained, however, in the statement which I am going to leave with you from either General Hines or Mr. Altmeyer to whom I submitted the proposal for a technical analysis and a criticism. I believe it was Mr. Altmeyer really that first suggested that you might want to put some brake in that language. I am going to leave the letter with the committee. It will be helpful to you when you do get to consider it.

(The analysis submitted by Mr. Altmeyer is as follows:)

FEDERAL SECURITY AGENCY,
SOCIAL SECURITY BOARD,
Washington, D. C., June 9, 1944.

Hon. JAMES F. BYRNES,
Director, War Mobilization,
The White House, Washington, D. C.

DEAR JUSTICE BYRNES: You will find enclosed a memorandum analyzing the statements made by the State representatives before the Senate Committee on Post-War Economic Policy and Planning. I was unable to obtain the statement made by Paul A. Raushenbush, of Wisconsin, but I assume that it was along the same lines as the other statements.

In connection with the question of minimum benefit standards, you may be interested in a statement made by the South Carolina Unemployment Compensation Commission in a small monthly news sheet which it issues. I am enclosing an excerpt, from which you will notice that the commission makes the statement that:

"Uniformity of coverage, minimum benefits, and uniform eligibility requirements would result in no more federalization of unemployment compensation than the uniformity of weights and measures.

"Human needs vary very little, if any, from State to State."

The South Carolina Commission stated that "The maximum benefit amount should be variable in accordance with the ability of the States to pay." However, with a Federal guaranty of solvency it might very well be that the commission would also favor maximum benefit amounts.

In my letter of June 2, I stated that in some States an unemployed person can draw only 2 or 3 weeks of benefits. I also stated that in 9 States, including Texas, the average maximum period for which workers could receive beneffts was less than 12 weeks, although the State laws might provide that some persons could get as much as 16 weeks.

The explanation of these statements is as follows:

In 17 States, the duration of benefits is uniform for all eligible claimants. This is the situation, for instance, in South Carolina where every eligible unemployed person is entitled to receive 16 weeks of benefits. In the 34 other jurisdictions, however, the duration of benefits varies in relation to past earnings. For instance, in Oregon the maximum duration of benefits is 16 weeks but in order to receive the full 16 weeks of benefits at $15 per week, it is necessary to have received $1,440 in wages in the preceding year. A person who received less than this amount in wages in the preceding year would receive anywhere from 3 up to 16 weeks, depending upon the amount of wages earned. The average maximum duration in 1941 and 1942 in Oregon was only 10 weeks.

In Texas, the maximum duration of benefits is 16 weeks. However, the duration is not uniform but varies with the amount of wages earned in the preceding year. Some persons are entitled to draw only 4 weeks of benefits. Because of the fact that many persons are not eligible to draw the full 16 weeks, the maximum duration in 1942 averaged only 11 weeks. This explains why 66 percent of all beneficiaries exhausted their benefits in Texas in 1940–41 before becoming reemployed.

Sincerely yours,

A. J. ALTMEYER, *Chairman.*

ANALYSIS OF TESTIMONY OF STATE UNEMPLOYMENT COMPENSATION ADMINISTRATORS BEFORE SENATE COMMITTEE ON POST-WAR ECONOMIC POLICY AND PLANNING

I. PRESENT STATE BENEFITS ARE ADEQUATE

State representatives presented some testimony to show improvement in benefit provisions as contrasted with the provisions suggested by the Committee on Economic Security in 1935 and as contrasted with the original provisions in their own State laws. However, they did not present any testimony to show that their present benefit provisions are actually adequate as compared with the wage loss sustained. The material already furnished shows that on the average only one-third of the weekly wage loss is being compensated and that even in a relatively good year, such as 1941, 50 percent of the unemployed workers exhausted their benefit rights before they found another job.

As regards the proportion of weekly wage loss which is compensated under the present benefit provisions, the proportion is less than it was in 1941 because of the fact that maximum weekly benefit provisions have not been raised as much as earnings have increased.

As regards the exhaustion of benefits because of limitations on duration, it is probable that even with the increased duration provided by some State legislatures the rate of exhaustion will be higher than it was in 1941 because of the greater amount of unemployment that will prevail.

The amount of benefits paid in the various States has no consistent relationship to the wage loss sustained. That is to say, individuals with identical wage histories receive widely varying benefits depending upon the State in which they worked. Reference to table 1 will show the wide variation that exists.

Neither do the maximum benefit provisions in the present State laws bear much relationship to the wage levels in the various States, as evidenced by the fact that the maximum weekly benefits are higher in Georgia and Louisiana than in Ohio and Oregon. Moreover, the proportion of unemployed workers paid at the maximum weekly rate varies greatly (see table 2). The significance of the proportion of workers being paid at the maximum weekly rate lies in the fact that the larger that proportion is the more inadequate the weekly benefit rate is in terms of wage loss sustained. During 1943, 45 percent of all beneficiaries received the maximum weekly benefit provided under State laws.

Another indication of the lack of relationship between benefits paid, wage levels, and wage loss is contained in table 3 attached showing that the average weekly benefit in relatively low-wage States is sometimes higher than the average weekly benefit paid in relatively high-wage States.

The foregoing comparisons raise considerable doubt as to the validity of the argument that the variations in the State laws are due to variations in conditions. They also raise considerable doubt as to the validity of the companion argument regarding the virtue of State experimentation, since the experimental approach should not consist of irrational variation.

II. FEDERAL AID NOT NEEDED

In making the argument that Federal aid is not needed, most witnesses drew very little distinction between a system of Federal subsidies to reimburse the States for a fixed proportion of all benefits paid or for the extra cost of benefits supplemental to those provided by State law, and the proposal to guarantee the solvency of State funds. Their argument that they need no Federal aid now should be accepted. However, no one can determine at this date what individual States may need Federal assistance during the post-war reconversion period, since this will be dependent upon the amount and duration of post-war unemployment.

In passing judgment on the argument that the State reserves are adequate, consideration should be given to the fact that any State fund can remain solvent if its eligibility provisions, its disqualification provisions, and its benefit provisions are such that relatively little benefits are paid out in proportion to wage loss sustained. Thus, Claude Williams, president of the Interstate Conference of Employment Security Agencies and chairman of the Unemployment Compensation Commission of the State of Texas, asserted that their trust fund was solvent, although Texas has one of the least adequate laws.

Mr. Williams also made the argument that low-wage earners exhaust their benefit rights in larger proportions than high-wage earners because they voluntarily remain unemployed in larger numbers (pp. 992 and 1009). Mr. Williams' argument was that they had an incentive to remain unemployed voluntarily since their weekly benefit amounts to more than 60 percent of their earnings, while in the case of high wage earners the weekly benefit amounts to only one-third or one-fourth of their earnings. The validity of Mr. Williams' conclusion as to the reason for the higher rate of exhaustions of benefits by the low-paid workers is open to question, since data concerning duration of unemployment, collected before there were any unemployment compensation laws in this country, showed conclusively that the relatively unskilled workers, who are the low wage earners, had longer spells of unemployment than the more skilled and high-paid workers. The correct conclusion is that the inadequate duration provisions of the Texas law bear even more severely upon the low-wage earner than upon the high-wage earner.

Another reason why many States may not exhaust their reserves is that 11 States provide for reduction in benefits when the reserves reach a certain level. Such a provision of course, reduces the protection of the system at the time that it is needed most in order to remain technically solvent.

Certainly the illustration that Mr. Williams gives (p. 1024) that State trust funds aggregating $6,000,000,000 means that 25,000,000 unemployed persons can draw $240 each before the individual State reserves are exhausted is unsound, since these individual State reserves do not represent a consolidated and commingled fund.

III. INFLEXIBILITY OF UNIFORM FEDERAL BENEFIT STANDARDS

A number of witnesses argued that uniform benefit standards meant the benefit provisions would not be adaptable to varying State conditions. Apparently they failed to distinguish between a uniform benefit standard and a uniform benefit amount. The proposed benefit standards would not require the States to pay uniform amounts to all persons regardless of their previous wages. They would require that the States pay a percentage of weekly wage loss, up to a given maximum amount per week and they would require that all eligible persons be paid benefits for a maximum number of weeks so long as they are unemployed. However, the terms of eligibility would be determined entirely by the States so that short-term and very casual workers could be excluded by the States from eligibility. What these witnesses fail to take into account is that so long as benefits are related to wage loss they will be automatically adjusted not only to varying wage levels throughout the States but to varying wage histories of individuals as well.

It is interesting to note that while Mr. Williams opposes Federal minimum benefit standards, he advocates Federal maximum benefit standards, which logically he ought to consider fully as restrictive and unreasonable. Thus, he says, "This Congress might consider encouraging perhaps the incorporation in State laws of a provision that when a man makes $200 or $300 a month he is not entitled to draw any unemployment compensation" (p. 1008).

98534—44—pt. 7——3

The argument that uniform benefit standards are unsound cannot rest upon the assumption that such standards do not take into account varying economic conditions. It can only rest upon the assumption that individuals in similar circumstances do not have the same human needs. The necessity for individuals in similar circumstances being treated similarly is, of course, greatly increased by the interstate migration that has taken place since the war began. The great extent of this migration was established by various witnesses. Thus, Mr. Williams stated that Texas now has 229,913 workers who came from outside the State (p. 1017). Many of these workers will want to return to their home States, and the State in which they are working will want to encourage them to do so. When they do so, they will find themselves living next door to other workers with identical wage histories who will be receiving greatly varying benefits.

IV. FEDERALIZED ADMINISTRATION

All of the witnesses failed to distinguish between minimum benefit standards prescribed by Congress and Federal administration of unemployment compensation. The minimum benefit standards proposed would not interfere with State administration in the least. In contrast, the present standards already incorporated in the Social Security Act deal entirely with administrative requirements. Therefore, so far as interference with State administration is concerned, the benefit standards proposed constitute less of an interference than the present standards.

The resolution passed by the Governors at their recent conference is specifically directed against Federalization of the administration of unemployment compensation but does not specifically oppose benefit standards, although the governors may have also had that in mind (pp. 1128–30).

V. A STATE RESPONSIBILITY

Most of the witnesses assumed that unemployment compensation was entirely a State responsibility which the States had voluntarily assumed and would continue to meet unaided by the Federal Government. They failed to take into account that it is entirely due to the enactment of a 3 percent Federal unemployment tax by the Congress that the States now have unemployment compensation laws. Only one State had enacted such a law prior to the date that Congress undertook consideration of the enactment of the Social Security Act, and that State (Wisconsin) advocated the enactment of such a Federal act in order to protect itself from unfair interstate competition by the States that had failed to act.

None of the State representatives advocated the repeal of the present Federal unemployment tax. On the contrary, they recommended that it be extended to include employers of one or more and maritime workers in order to enable the States to extend the coverage of their own laws accordingly.

It would seem that so long as the States are willing that the Federal Government shall levy a Federal unemployment tax and to permit their employers to offset State contributions against the Federal tax, they should be willing to permit the Congress to lay down such conditions as the Congress considers necessary to insure the adequacy of the benefits payable, especially if the Congress is willing to guarantee the solvency of the individual State funds.

TABLE 1.—*Percent of wages compensated under 10 State unemployment compensation laws assuming individual earned $1,000 in wages in year prior to becoming unemployed*

	Percent benefits are of previous earnings
Five States paying high percentage of previous wages:	
1. Utah	40
2. Alabama	30
3. Massachusetts	30
4. Illinois	28
5. Nevada	27
Five States paying low percentage of previous wages:	
1. South Dakota	19
2. Kentucky	19
3. North Carolina	19
4. Maine	21
5. Mississippi	21

TABLE 2.—*Percent of benefit payments compensated at the maximum amount payable under 10 State unemployment compensation laws, 1943*

State	Maximum unemployment compensation benefit	Payments at maximum, percent
5 STATES WITH HIGH PERCENT OF PAYMENTS AT THE MAXIMUM		
1. Nevada	$15	85
2. Oregon	15	82
3. Washington	15	72
4. Arizona	15	72
5. Rhode Island	18	69
5 STATES WITH LOW PERCENT OF PAYMENTS AT THE MAXIMUM		
1. North Carolina	15	5
2. Maine	18	7
3. Kentucky	16	10
4. Delaware	18	18
5. South Carolina	15	25

TABLE 3.—*Average wages in 10 States in relation to average unemployment compensation benefits*

State	Average total unemployment compensation benefit, first quarter of 1944	Average weekly wage, third quarter of 1943	Percent average benefit is of average wage
5 STATES PAYING HIGH PERCENTAGE OF AVERAGE WAGES			
1. Utah	$18.96	$39.68	48
2. South Carolina	11.08	24.12	46
3. Mississippi	11.10	24.31	46
4. Louisiana	14.76	33.68	44
5. Florida	13.56	32.88	41
5 STATES PAYING LOW PERCENTAGE OF AVERAGE WAGES			
1. Maine	9.25	39.93	23
2. North Carolina	7.23	26.15	28
3. Kentucky	10.88	33.38	33
4. South Dakota	9.74	29.13	33
5. Iowa	11.34	32.37	35

EXCERPTS FROM THE NEWS AND REVIEW, APRIL 1944

(Published monthly by the South Carolina Unemployment Compensation Commission)

LOOKING TOWARD UNIFORM COVERAGE

Workers everywhere will be interested to learn that all the States are thinking in the terms of uniform coverage, as is in the csae of old-age benefits. Some propose one "take-out" of a workers' envelope which would include withholding tax, old-age benefits, and unemployment contributions. Such a procedure would simplify the work of the employer and make less painful the extraction from the employee's envelope.

We feel that a man who works for an employer with seven employees deserves benefits to the same degree as a man who works for an employer with eight employees.

We also feel that coverage should be uniform, that there should be a minimum weekly benefit amount in all the States, but that the maximum benefit amount should be variable in accordance with the ability of the States to pay.

Such uniformity would not interfere with State administration of unemployment compensation activities, but, on the other hand, would simplify administration, as well as lessen the work of all concerns operating in more than one State.

Uniformity of coverage, minimum benefits, and uniform eligibility requirements would result in no more federalization of unemployment compensation than the uniformity of weights and measures.

Human needs vary very little, if any, from State to State.

OFFICE OF WAR MOBILIZATION,
RETRAINING AND REEMPLOYMENT ADMINISTRATION,
Washington 25, D. C., May 30, 1944.

Memorandum for Director James F. Byrnes.
Subject: Proposed bill for unemployment-insurance benefits.

On May 11, 1944, we furnished you a copy of proposed bill to provide supplemental assistance to the States, Territories, and possessions, and the District of Columbia, to afford unemployment-insurance benefits during the post-war adjustment period to Federal employees and to war workers with inadequate coverage, and for other purposes.

The Policy Board of the Retraining and Reemployment Administration has had this proposed bill under consideration. Enclosed is a copy of the bill as revised and considered by our Board at its meeting yesterday. A copy of the bill and a statement of explanation (also enclosed) is to be sent to each member of the Board for thorough study and analysis before further consideration.

In view of your interest in unemployment-insurance benefits, I am glad to bring these developments to your attention as requested by the Administrator.

C. W. BAILEY,
Acting Executive Assistant to the Administrator.

A BILL To assist the States in improving and extending their systems of unemployment compensation, to assure the full payment by States of unemployment compensation during the transition and post-war periods, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Unemployment Reinsurance Act."

SEC. 2. (a) Effective July 1, 1945, section 1607 of the Internal Revenue Code is amended by striking out subsection "(a)" thereof and substituting the following:

"(a) Employer.—The term 'employer' means any person who, at any time during the taxable year, employed one or more individuals in employment."

(b) The amendment effected by subsection (a) shall not alter the liability of any individual under section 1600 of the Internal Revenue Code with respect to wages paid by him prior to July 1, 1945.

SEC. 3. (a) Effective July 1, 1945, section 1603 (a) of the Internal Revenue Code is amended by changing the period at the end thereof to a semicolon and adding the following subsections:

"(7) Compensation shall not be denied to any individual, by reason of exhaustion or cancelation of his benefit rights, until he has been paid an amount equal to compensation for 26 weeks of total unemployment within a benefit year.

"(8) The maximum rate of compensation payable under such law, including any allowance to or on account of dependents, shall be not less than $25 for a week of total unemployment."

(b) Section 1603 (c) of the Social Security Act, as amended, is further amended by adding to the end thereof the following: "The Board shall not certify any State law hereunder on December 31, 1945, unless it has previously approved such law as meeting, from and after July 1, 1945, the requirements of subsection (a) of this section, as herein amended, and shall not so certify any State law on December 31 of any ensuing taxable year unless it has previously approved such law under subsection (a) of this section, as herein amended."

SEC. 4. (a) Section 904 (a) of the Social Security Act, as amended, is further amended by inserting, immediately before the period at the end of the second sentence of the subsection, the following: "* * * or deposited pursuant to appropriations to the Federal Unemployment Reinsurance Account."

(b) Section 904 (e) of the Social Security Act, as amended, is further amended by inserting, after the words "a separate book account for each State agency", the following: "* * * the Federal Unemployment Reinsurance Account."

(c) Section 904 of the Social Security Act, as amended, is further amended by adding, at the end of the section, the following new subsections:

"(g) The Secretary of the Treasury is authorized and directed, prior to audit or settlement by the General Accounting Office, to make transfers to and from the Federal Unemployment Reinsurance Account and the account of any State in the Unemployment Trust Fund in accordance with certifications made by the Board pursuant to section 1201, not exceeding the amount on deposit in the Federal Unemployment Reinsurance Account at the time of such transfer.

"(h) There is hereby authorized to be appropriated to a Federal Unemployment Reinsurance Account in the Unemployment Trust Fund a sum equal to the excess of taxes collected prior to July 1, 1943, under title IX of this Act and under the Federal Unemployment Tax Act over the total unemployment administrative expenditures made prior to July 1, 1943; and there is hereby authorized to be appropriated to such account for the fiscal year 1945 and for each fiscal year thereafter (1) a sum equal to any excess of taxes collected in the preceding fiscal year under the Federal Unemployment Tax Act over the unemployment administrative expenditures made in such year, and (2) such further sums, if any, as may be necessary to carry out the purposes of section 1201. As used in this subsection, the term 'unemployment administrative expenditures' means expenditures for grants under title III of this Act, for the administration of that title by the Board, and for the administration of title IX of this Act and of the Federal Unemployment Tax Act by the Department of the Treasury and the Board. For the purposes of this subsection there shall be deducted from the total amount of taxes collected prior to July 1, 1943 under title IX of this Act, the sum of $40,561,886.43 which was authorized to be appropriated by the Act of August 24, 1937 (50 Stat. 754)."

SEC. 5. The Social Security Act, as amended, is further amended by adding at the end thereof the following new title:

"TITLE XII—REINSURANCE OF STATE UNEMPLOYMENT FUNDS

"SEC. 1201. (a) In the event that the balance in the unemployment fund of a State on June 30, 1945, or on the last day in any ensuing calendar quarter, does not exceed a sum equal to the total contributions collected under the unemployment compensation law of the State during the calendar year immediately preceding such day, the State shall be entitled, subject to the provisions of subsections (b) and (c) hereof, to have transferred from the Federal Unemployment Reinsurance Account to its account in the Unemployment Trust Fund an amount equal to the unemployment compensation paid out by it in the calendar quarter following such day, which is in excess of 2.7 per centum of the total wages, paid during such quarter, subject to State law.

"(b) The Social Security Board is authorized and directed, on application of a State agency, to make findings as to whether the conditions for the transfer of moneys provided for in subsection (a) hereof have been met; and if such conditions exist, the Board is directed to certify to the Secretary of the Treasury, from time to time, the amounts for transfer in order to carry out the purposes of this title, reduced or increased as the case may be, by any sum by which the Board finds that the amounts transferred for any prior quarter were greater or less than the amounts to which the State was entitled for such quarter. The application of a State agency shall be made on such forms, and contain such information and data, fiscal and otherwise, concerning the operation and administration of the State law, as the Board deems necessary or relevant to the performance of its duties hereunder.

"(c) In determining the amount to be certified for transfer, under this section, to the unemployment fund of a State the Board shall not take account of so much of any unemployment compensation paid by a State to an individual (including allowances, if any, paid to or on account of his dependents) as is—

"(1) in excess of an amount equal to compensation for thirty-six weeks of total unemployment in a benefit year; or

"(2) in excess of a weekly rate of $30."

SEC. 6. Sections 3, 4, and 5 of this Act, and the amendments made thereby, shall cease to be effective at the end of the second full calendar year after the termination of hostilities in the present war as declared by Presidential proclamation or concurrent resolution of the Congress.

Briefly stated, this bill (Federal Unemployment Reinsurance Act)—

(*a*) Amends the Federal Unemployment Tax Act to cover employers of one or more workers, instead of eight or more.

(*b*) Makes it a condition of approval of a State unemployment compensation law (and, therefore, a condition of obtaining a credit against the Federal tax and obtaining Federal funds to support the State law) that such law provide compensation for a minimum of 26 weeks of total unemployment within a benefit year and provide that the maximum rate of compensation shall not be less than $25 for a week of total unemployment.

(c) Sets up a separate reinsurance account in the Federal unemployment trust fund and authorizes appropriations to that account in an amount equal to the excess net tax receipts under the Federal unemployment tax collections over the aggregate of administrative grants to States under title 3 of the Social Security Act and the expenses of the Social Security Board and the Bureau of Internal Revenue in administering titles III and IX of the Social Security Act and the Federal Unemployment Tax Act. It also authorizes appropriation of such additional funds as may be necessary to make good the Federal guaranty provided therein. When the unemployment funds of a State are less than the amounts collected during the preceding calendar year the State shall be entitled to have transferred from the reinsurance account to its account in the unemployment trust fund an amount equal to the unemployment compensation paid by the State in a calendar quarter in excess of 2.7 percent of the wages taxable in the quarter under State law.

The Social Security Board would certify to the Secretary of the Treasury the amounts to which a State is entitled and the Secretary of the Treasury would make the appropriate transfer to the moneys to the account of the State in the unemployment trust fund.

(d) Would not require the Federal Government to underwrite State unemployment compensation payments when they are for weeks in excess of 36 weeks of total unemployment in a benefit year, or in excess of a weekly rate of $30.

(e) Excepting the amendment to the Unemployment Tax Act relating to coverage of employers of one or more, would cease to be effective at the end of the third full calendar year after the termination of hostilities.

Senator VANDENBERG. Are you prepared to recommend a figure in respect to appropriate unemployment compensation rate and the period of time it should run?

Mr. BYRNES. Do you mean the benefits?

Senator VANDENBERG. Yes.

Mr. BYRNES. Well, I think it ought to be limited. I understood this bill was specifically limited to 2 years, isn't it?

Senator VANDENBERG. No. I mean, are you prepared to recommend a rate?

Mr. BYRNES. Well, I think in this standard you fixed it at 26 weeks.

Senator VANDENBERG. At what rate?

Mr. BYRNES. No; I would not, I would only put that maximum, I think I would follow as the drafter of this bill was following, the idea of leaving to the States the determination of the eacxt amount in each State; that you would interfere as little as possible with the provisions of the States. If a State says it would pay up to 50 percent of the earnings of the man, that you would not interfere with them, I believe it is going to be hard to get the support of the States for any Federal supplemental plan, or any kind of plan. I know their reasons, they fear that if, in the event the Federal Government now comes into the picture, that they might not leave the picture. I know that they are sincere in their thinking.

Therefore, I think in this bill we should try to interfere as little as possible with the provisions of the State law.

I think the drafters have done a very good job in that respect. If you limit it to 2 years and we can give to them the assurance that it is affirmative action, then we have a starting point.

What is the alternative to this suggestion? I cannot think of one. If anyone has got a better one, I would like to know it.

The States have that machinery; it is the only machinery that could be put in operation immediately, and notwithstanding this specific provision that it is limited to 2 years, you would have a chance to get a representative committee and if we do not do it, and my mind goes back to what happened in 1930, as I recall it, when we got Nation-wide unemployment, and there were lots of us who

believed the States should handle it, and we submitted requests to the States.

But as the unemployment increased, there came from the States a demand that the Federal Government take charge of the problem. The very men who today say that they do not want the Federal Government to interfere have reason for thinking it. There is so much employment that nobody is bothered. But let unemployment come and let people go to doors and ring the bell and ask for relief, they will go to the telegraph office and telegraph to the Senators and Congressmen to save the situation, to do something about it.

And in the absence of anything, and with millions of people unemployed, they would have even a stronger case than they had back in 1930. I fear that there would be demands for activities that would not be wise.

Senator VANDENBERG. I agree with you completely, that you cannot interfere with the States in the amount of compensation because the States will rebel if you try that.

I think you misunderstood my question when I asked you whether you had come to any conclusion in your own mind as to what would be a fair rate of compensation, and over what period.

Mr. BYRNES. I thought 26 weeks, and then the provision that the maximum of any State should not be less than $25, as fair. Now since reading the conference report on the other bill, I don't think you can do that. Therefore, I say $20.

Senator VANDENBERG. So your answer is $20 for 26 weeks?

Mr. BYRNES. Yes.

Senator GEORGE. Twenty-six weeks in a benefit year?

Mr. BYRNES. Yes, I am afraid that when a veteran's benefit is fixed at $20—if you put it at what I think it should be, and even have suggested that we do it—to write into the bill, if that suggestion is allowed, you will have a terrible time explaining to that veteran——

Senator GEORGE. It is incomprehensible that we would allow that situation, where a civilian worker would get a greater benefit than a returning veteran.

Mr. BYRNES. It cannot be done. This G. I. bill gives discharge pay, and it gives 2 years in theory, as I understand it, and gives other things, you got a bad job but, in the first place, it cannot be done, it would not be fair.

Senator MURRAY. We have several members of the Senate Subcommittee on Post-war Policy and Planning here. I would like to have them ask any questions they have.

Do you have any, Senator George?

Senator GEORGE. I don't think I have any.

Senator AUSTIN. I would like to identify a paragraph in the bill marked S. 1730 to which your last testimony refers. Does it refer to the $30 guarantee in 5 (a), which appears on page 17, where the amount is left blank, and a certain number of weeks is left blank. Do you have the bill before you?

Mr. BRYNES. Yes, Senator.

Senator AUSTIN. Well, there is a clause there, beginning at line 11, the compensation for total unemployment, including any allowance, and so forth, shall be computed at rates which the said Unemployment Compensation Committee may certify, averaging not less than (blank) percent of the previous wages.

Is it there where the first limit should appear, $20, at the end, or the paragraph marked (a), beginning at line 18, compensation shall not be denied to any individual by reason of the exhaustion or cancelation of his benefit rate until he has been paid an amount equal to compensation of (blank) weeks—there?

Mr. BYRNES. Yes.

Senator AUSTIN. You would put in the 26?

Mr. BYRNES. Yes, that is right.

Senator AUSTIN. All right.

Mr. BYRNES. May I say to you I see now here my previous statement. It was possible I misunderstood—I saw the previous draft of this bill.

Senator GEORGE. The previous draft contains the figures.

Mr. BYRNES. The previous draft contains the figures, but I was discussing those figures and not the language to which Senator Austin has called my attention, which did leave the amount blank.

Senator VANDENBERG. As I understand you, you consider that it is absolutely indispensable that we should proceed to conclude the legislation with respect to contract termination and plant clearance which has passed the Senate and is pending in the House, we should proceed with, and we should conclude it, regardless of any of these other things, that is the first job, and it must be done at once.

Mr. BYRNES. That is the most important job we have. I cannot emphasize it too strongly. I have spent so much time up here that I do not like to complain about delays in Congress, because when you have got 500 men, you have 500 minds, you are going to have a difference of opinion. But the situation is, in these departments, the failure of the Congress to act upon that bill, to put a brake upon the whole machinery, it is an effective brake in some instances, and in some instances it is just because the men say, "Well, there is not any use going on with that until Congress acts."

Therefore, it is limping along. Now, I can refer to the fact that in the War Department 1,400-some contracts in the month of April were authorized to be terminated but in every instance the man in the field has no facts as to what the policy is going to be. He is doubtful as to whether he is proceeding in a way that this bill may not next week determine to be wrong, consequently, it is of the first importance that something be done.

There has been much talk about one case, the Brewster case last week, that was not a typical case. When I read the discussions of the case, I am glad to say that it was not a typical case. As I have outlined in this statement, months ago the Army went to work on the preparation of its plans for the cancelation, and the detailed planning is, as I said in the statement, truly amazing. Now the Army, of course, has the big job of cancelation. The Navy has not. The Brewster case was the first, according to the officials of the Navy whom I turned to for information about it, it was the first large cancelation. The Navy, I think, was absolutely justified in the cancelation of the contract; they were not justified in canceling it without greater notice to the Long Island plants, but it was not due to any lack of policy on it, because, in my opinion the difficulty, that failure, was due to this fact.

We knew about the 15th of May, notice was given to Mr. Kaiser by the officials that it would probably happen, and later to management there was given a notice that within 30 days it would be canceled.

That was following the general policy of the War Department, which has been followed in the War Department in the cancelation of many contracts where there are eight or ten thousand men put out of employment in the manner I have indicated, and where it has been properly explained, and ample notice given we have not heard a thing about it. But when the Navy canceled the Brewster contract and gave 30 days' notice, they overlooked in their first cancelation this very important fact, that in Pennsylvania, Johnsville, there was an assembly plant that had about 4,000 men; over here in Long Island, where they make the parts, there were about 9,000. Those Long Island plants were going ahead with their work, they had on hand parts that had to be brought over here to Johnsville to be assembled. It would take 30 days to assemble those parts.

Therefore, unless they stopped the Long Island plants promptly, they would have so many parts being turned out there it would have run for 60 days over in Johnsville.

When you gave Johnsville 30 days' notice, you cut these people off without any notice over there.

When I had gotten together the representatives of the Department, I came to the conclusion that that was the real trouble with the cancelation. But it was an unusual and not a typical case. I directed the holding of a meeting of this Contract Termination Board, because I had advised the chairman of that committee here that I wanted to find out the facts on what the Army and Navy had to say.

I learned that W. P. B. did know of the intended cancelations, the tentative cancelation, and they have made some efforts, I was told by the chairman, to see if they could get the Ordnance Department to use the plants, when they found that there was not sufficient notice given to these 9,000 people over here, but they were unsuccessful. I called them together and then I directed them to endeavor to see if it could be used for other purposes, because we had not given those 9,000 people in the Long Island plants the notice that the other people had gotten and that, under the policy adopted, all people will get.

Therefore, we ought to have done something. I sent a letter to all of the agencies confirming my oral direction at that meeting, and I should like to put a copy in the record.

(The letter referred to is on file with the committee.)

Mr. BYRNES. I directed the procurement agencies to take prompt action to clear every proposed contract cut-back and we set up the policy that in such contract terminations cut-backs shall not be made effective until such clearances are obtained. That is a policy that the committee was established for, and which is entirely suited to our procurement agencies, and it means only this, that in the procedure that I have outlined, a clear statement of that procedure is given so that this committee—Mr. Wilson is chairman, and representatives of the procurement agencies, Manpower and the Smaller War Plants are on it, they know of the tentative discussion in the industry as a whole over in the Army, and they know of the specific determinations of these contracts.

And then, in accordance with the other portion of this letter, they canvass the Government agencies, to see if there is any other use for them, for war purposes for for governmental purposes. And in addition, that they should not clear it until this notice that I have described has been given to both labor and to management.

Now as a result of my investigation I learned what I had assumed, that after the original informal discussion when they sent the formal notice, they required that it be placed on the bulletin board, they required that it be explained to labor. They advised labor the probable time when it will be done, and when they have done that, they have had no trouble. I do not think that the W. P. B. or the Army could be expected to do more than carry out that policy. Whenever it fails, it is the failure of administration.

Senator VANDENBERG. Well, what I was getting at, Mr. Byrnes, is this: No matter how successful your organization administratively may be, to reconvert the Congress is called upon to take steps of a fundamental legislative nature before there can be any adequate reconversion program, recess or no recess. That is immediate, instant, and unavoidable for the Congress, is it not?

Mr. BYRNES. I appreciate your stating it in so forceful a manner, because I would think it an awful thing if Congress, before it recessed, did not pass that bill. It would be a responsibility that I do not think the Congress should take, because the contract, the armed services can say we have all the machinery that I have described to complete the job, they are waiting for the policy to be determined by the Congress, and I don't think any quarrel between any officer of the Government, Comptroller General or anybody else and the Congress, should hold this up. It ought to be settled, one way or the other.

Senator VANDENBERG. Thank you. That is all I want to find out. I think it applies, not only to S. 1718, but also in some amount to S. 1780.

Mr. BYRNES. I think that too is correct, because there is a tendency, a mistaken tendency, I think, to believe that the contract termination bill is a help to the contractor, and that something should be done at the same time to relieve the distress that follows unemployment, and I think it would be a great help if Congress could find it possible to act. But, as I said before, I am not an optimist about that.

Your bill, I see no reason why it should not be put through.

Senator GEORGE. If we get after that, and it passed the Senate, there would be some assurance that it would have prompt action.

Mr. BYRNES. Yes. I must say that as to the surplus property bill, I have turned over to representatives of the executive department who are on the Policy Board Committee, Mr. Clayton, they have conferred with the representatives of your committee here and the drafting members, who have, in my opinion, been doing a splendid job, they have ironed out a lot of the details so that the bill you have for disposition of surplus property has the approval of all the agencies involved, and of the Surplus Property Administrator. I understand from him that you are considering holding a joint meeting on Friday of this week.

Senator GEORGE. That is correct.

Mr. BYRNES. Because of the character of the bill I had hoped that that might be put through. The Administrator has caused the country to be divided up into regions in order to permit a report as to surplus property. He has gone ahead with the details as far as he can. But again there are matters of such importance which are matters of policy that, in the absence of action by the Congress, they are really terribly handicapped.

If the Congress could make some progress on that bill, it would be a great help.

Senator LUCAS. How many contracts have been terminated up to date?

Mr. BYRNES. I cannot tell you the exact number, but there are more in the month of May. When you get the figures—I have not got the figures for the month of May, but I have for April, and in that month, 1,450. I saw it here the other day, but the figures have gone out of my mind.

Senator MURRAY. I understand it is somewhere in the neighborhood of $14,000,000,000.

Mr. BYRNES. In dollars.

Senator MURRAY. 14,000 contracts.

Senator LUCAS. Now those are being terminated under Executive orders?

Mr. BYRNES. Yes.

Senator LUCAS. What portion of those terminated contracts are being reconverted to either civilian or other war work?

Mr. BYRNES. They are shifting, as I said, to other war work.

Senator LUCAS. Pending the termination of contracts?

Mr. BYRNES. Returning to civilian production.

Senator LUCAS. Yes; they have continued, even though you do not have this legislation. The W. P. B. and other agencies are not going to await this legislation.

Mr. BYRNES. No.

Senator LUCAS. In terminating contracts.

Mr. BYRNES. I would say in April, 1,450. I have described what happened with them because we agreed it was quite significant that when we were discussing——

Senator LUCAS. I appreciate the necessity for Congress laying down the broad policy but the fact that Congress does not act will not keep the war agencies from a continuation of the termination of these contracts, and reconverting them, as they have done in the past.

Mr. BYRNES. Yes, sir; just about what they have done in the past, but that has not been satisfactory, and here is the reason, that there are lots of provisions in that bill that you pass which gives to the armed services authority that is essential to induce termination. The armed services have even issued a poster, a little pamphlet with pictures—I think General Somerville prepared that, which gives to the contractor information as to where he should go to start termination, and it is a pictorial story of the cancelation of a contract, because it is difficult for the contractor to know. It involves the small contractor. I understand that the bill has been reported out of the Rules Committee in the House. I don't know whether that is correct or not.

Senator GEORGE. That is right. They have given a rule. They hope to take it up this week.

Mr. BYRNES. I would like to ask, Mr. Chairman, in the course of this social security discussion, if I could leave with the committee the letters to me from General Hines and Mr. Altmeyer with the suggestions?

That may be of some help.

(The letters referred to are as follows:)

FEDERAL SECURITY AGENCY,
SOCIAL SECURITY BOARD,
Washington, D. C., June 2, 1944.

The Honorable JAMES F. BYRNES,
Director of War Mobilization,
The White House, Washington 25, D. C.

DEAR JUSTICE BYRNES: This is in answer to your request for data on the inadequacy of the benefit and financial provisions of the State unemployment compensation laws. The major weaknesses of existing State laws are the limited duration of benefits, the low maximum weekly benefit amounts, limited coverage, unduly restrictive disqualifications, and a failure to distribute over the country the excessive financial burden which will fall on certain States in the post-war period.

The most serious inadequacy of State unemployment compensation laws is the limited period during which benefits can be drawn. In some States an unemployed person can draw only 2 or 3 weeks of benefits. Even in the rather good year 1941, for the country as a whole, one-half of all claimants were still unemployed when they had exhausted their benefit rights. In 36 States over 40 percent of the beneficiaries used up all their benefits; in 3 States over 60 percent exhausted all rights. Many workers remained unemployed for long periods after exhausting their benefits. In many States a consistently high proportion of workers have exhausted all their benefit rights in recent years. In Texas, for example, 66 percent of the beneficiaries exhausted all benefits during 1940–41.

Duration of benefits is limited not only by the generally low maximum number of weeks for which benefits can be drawn, but also by an additional limitation of benefits to a fraction of a worker's annual earnings. As a result of these limitations, the average maximum period for which workers could be eligible in 1940 was less than 12 weeks in 9 States, including such States as Texas, New Jersey, and Connecticut. Changes have been made in duration provisions since 1941; still the picture is one of inadequacy. Some States, such as Texas, have made no changes in duration of benefits. At the present time benefits are limited to a maximum of 16 weeks or less in 28 States.

The average weekly benefits of about $12.60 for 1942 and $13.80 for 1943 was only about one-third of the average weekly wage. The inadequacy of the weekly benefit amount is primarily due to the low maximums provided under the State laws. In 22 States no worker can receive more than $15 a week in unemployment compensation, regardless of his previous wages. This maximum, and even the highest maximum weekly benefit amount in any State ($22), automatically limits all better-paid workers to less than 50 percent of their wages. This situation is in sharp contrast to the situation under State workmen's accident compensation laws. A comparison with those laws indicates that 32 States pay higher rates for accident compensation than for unemployment compensation.

Even liberal benefit provisions can be nullified by disqualifications which deny access to benefits. There is an unmistakable trend toward more severe penalties for disqualification. The function of disqualifications is shifting from limiting benefits to workers unemployed through no fault of their own to limiting payments to cases where the employer is at fault. For example, a worker may have good personal cause for leaving a particular job. In 1938, good personal cause would justify a quit and permit a worker to draw benefits in all but 4 States. At the present time, however, 20 States limit good cause for voluntary leaving to "good cause attributable to the employer."

There is also an increasing tendency to cancel outright the benefit rights which would have been available during the period of disqualification or to cancel all benefit rights resulting from the employment which terminated under a disqualifying condition instead of temporarily disqualifying a worker. In 1938, there were 8 State laws which reduced or canceled benefit rights for 1 or more disqualifying acts; in 1940 there were 14; in 1944, the number of such States has increased to 28.

Another major weakness of unemployment compensation is its limited coverage. Only 13 States cover employers of one or more workers. If coverage for unemployment compensation were made the same as for old-age and survivors' insurance, some 3,000,000 persons would be added under the unemployment compensation program. Nearly 200,000 merchant seamen covered for old-age insurance still lack protection against unemployment which many of them are likely to suffer in the post-war period. Another major group of workers who have no unemployment compensation protection are 2,000,000 wartime workers in the Federal Government, mostly working in arsenals, depots, and navy yards.

One of the anomalies of the present system is that benefits are especially inadequate in many States with relatively large reserves. For example, in Oregon, whose law contains one of the most restrictive duration provisions in the country, the reserve fund at the end of 1943 was large enough to pay benefits at the maximum duration in that State to 85 percent of the covered workers employed at the end of September 1943. North Carolina's reserve is large enough to pay benefits to 88 percent of the workers employed at the end of September 1943, yet the average weekly benefit amount in this State ($7.10 in 1943) has for a number of years been the lowest in any State. In other States, in which the reserve funds are relatively less adequate, contributions which would otherwise enable payment of more adequate benefits are being lost because of experience rating. In Michigan, for example, the estimated average contribution rate during 1943 was only 1.6 percent of taxable pay rolls.

We have at the present time a grand total of over $5,000,000,000 in the State unemployment compensation reserve funds. These reserves will probably be considerably greater before the end of the war. It would cost $5,000,000,000 to provide unemployment benefits at $20 a week for an average of 20 weeks for 12,500,000 unemployed workers. Therefore, it might appear at first glance that our total reserves would be more than sufficient to provide fairly adequate benefits during the post-war transition period. However, it must be emphasized that this is not a single pooled fund and that the probable drain on the 52 separate reserves will vary greatly. Richard A. Lester, an economist employed by the Committee for Economic Development, has estimated that between one-third and one-half of the total reserves are completely sterile in the sense that that portion would not be used even if 12,500,000 workers became unemployed and drew all the benefits to which they were entitled under present laws. That is to say, because of the fact that unemployment varies widely from State to State and because of limitations on the amount of benefits payable to individuals, many States will have untapped reserves although other States may have completely exhausted their reserves and ceased to pay benefits. Calculations made on various economic assumptions indicate that from 38 percent to 65 percent of the total reserves will still be unused when the first States become insolvent.

In 1940, $518,000,000 was paid out in unemployment benefits. However, Prof. Sumner Slichter, an eminent Harvard economist and consultant to the Committee for Economic Development, has estimated that the wage loss during that years was $7,000,000,000, so that only 7 percent of the actual wage loss was offset. Mr. Lester estimates that if there is no change in present provisions, unemployment compensation payments would not compensate for more than 10 percent of the wage loss from unemployment during the post-war transition period.

The New York Joint Legislative Committee on Industrial and Labor Conditions made a special study of unemployment compensation, issued in 1943, which included a field survey covering 11 States across the country, and reached the conclusion in its report that "the benefit provisions of the State laws cannot be said to be adequate to meet fully the needs that will arise if unemployment succeeds the cessation of hostilities. * * * It does not seem possible that in the remaining time [before the war ends] most State unemployment compensation laws will be sufficiently extended and improved to intensify sufficiently the degree of protection against wide-spread unemployment. The search for a solution to the problem must, therefore, proceed in other directions."

I am attaching three tables which I hope will be of value. If you wish any additional information, please let me know.

Sincerely yours,

A. J. ALTMEYER, *Chairman.*

Number of States having specific provisions in State unemployment compensation laws

	January 1940	January 1944
Coverage of employers of 1 or more employees	11	13
Maximum weekly benefit $15	42	22
Maximum duration of benefits 16 weeks or less	42	28
Benefit rights canceled or reduced for voluntary leaving, misconduct, or refusal of suitable work	14	27

Significant provisions of State unemployment compensation laws, June 1, 1944

Prepared for ready reference and comparison purposes. Because of the impossibility of giving qualifications and alternatives in brief summary form, the State law and State employment security agency should be consulted for authoritative information. In general, the State laws cover employment in most types of business and industry, except employment for railroads which is covered by a separate Federal law]

State and type of fund[1]	Size of firms covered (number of employees)	Eligibility	Weeks of initial waiting period	Weekly benefit rate total unemployment	Maximum payment per week	Minimum payment per week	Weekly benefit rate partial unemployment	Duration in 52-week period (lesser amount below applies)	
								Total amount of benefits (proportion of wages)	Maximum number of weeks payable
Alabama: Pooled; experience rating effective April 1941; employee contributions determined by experience rating.	Employer of 8 or more in 20 weeks.	30 times w. b. a. including $39.01 in 1 quarter.[3]	1	1/26 of high quarter's wages, established by table in law.	$15	$2	W. b. a. less wages in excess of $2.[2]	1/3 in 4 quarters	20
Alaska: Pooled	do	25 times w. b. a	2	1/20 of high quarter's wages.	16	5	W. b. a. less wages in excess of $5.	do	16
Arizona: Pooled; experience rating effective January 1942.	Employer of 3 or more in 20 weeks; also all employers liable to Federal tax.	14 times w. b. a	1	50 percent of full-time weekly wage.	15	5	W. b. a. less wages in excess of $3.	1/6 in 8 to 12 quarters	14

								Total amount of benefits (proportion of wages)	Maximum number of weeks payable
Oklahoma: Pooled; experience rating effective January 1942.	Employer of 8 or more in 20 weeks.	22 times w. b. a.	1	1/20 of high quarter's wages.	16	6	W. b, a less wages in excess of $2.	1/3 in 4 quarters	16
Oregon: Pooled; experience rating effective July 1941.	Employer of 4 or more in any 1 day in any calendar quarter with pay roll of $500.	$200	2	6 percent of high quarter's wages.	15	10	do	1/6 in 4 quarters	16 D
Pennsylvania: Pooled; experience rating effective January 1944.	Employer of 1 or more in 20 weeks.	$50 in each of 2 quarters in base year.	2	1/25 of high quarter's wages, established by table in law.	[16] 18	8.00	No provision	27 to 56 percent in 4 quarters, accordingt of schedule of wage classes.[17]	16
Rhode Island: Pooled; employee contributions 0.5 percent of wages up to $3,000.[18]	Employer of 4 or more in 20 weeks; also all employers liable to Federal tax.	$100	1	Established by weighted table in law.	18	6.75	W. b. a. less wages	20 to 34 percent in 4 quarters, according to schedule of wage classes.	
South Carolina: Pooled; experience rating effective January 1942.	Employer of 8 or more in 20 weeks.	40 times w. b. a. (30 times if w. b. a. is $4).	1	1/26 of high quarter's wages, established by table in law.	15	4.00	W. b. a. less wages in excess of $1.	Uniform duration	[5] 16
South Dakota: Employer reserve; earnings pooled; experience rating effective January 1940.	Employer of 8 or more in 20 weeks; also all employers liable to Federal tax.	$120	1	Based on schedule of annual wages.	15	7.00	W. b. a. less wages in exess of $2.	do [10]	[5] [10] 16
Tennessee: Pooled; experience rating effective July 1944.	Employer of 8 or more in 20 weeks.	30 times w. b. a. (25 times if w. b. a. is $5).	1	1/26 of high quarter's wages, established by table in law.[19]	15	5.00	W. b. a. less wages in excess of $3.	do	[5] 16
Texas: Pooled; experience rating effective January 1941.	do	8 times benefit rate for 2-week period.	1	1/13 of high quarter's wages (for 2-week period).	[2] 30	[20] 10.00	2-week benefit rate less wages, plus $4.	1/5 in 4 quarters	8 times benefit for 2-week period.
Utah: Pooled	Employer with $140 or more wages payable in 1 quarter.	30 times w. b. a.	1	1/20 of high quarter's wages.	20	5.00	W. b. a. less wages in excess of $3.	Uniform duration	[5] 20

Vermont: Pooled; experience rating effective January 1941.	Employer of 8 or more in 20 weeks; also all employers liable to Federal tax.	do	2	Established by weighted table in law.	15	6.00	do	do	[5] 18
Virginia: Pooled; experience rating effective January 1941.	Employer of 8 or more in 20 weeks.	25 times w. b. a.	1	1/25 of high quarter's wages, established by table in law.	15	4.00	W. b. a. less wages in excess of $2.	1/4 in 4 quarters	16
Washington: Pooled	Employer of 1 or more at any time.	$200	1	1/20 of high quarter's wages.	15	7.00	W. b. a. less wages in excess of $3.	1/5 in 4 quarters	16
West Virginia: Pooled; experience rating effective January 1941.	Employer of 8 or more in 20 weeks.	$250	1	Based on schedule of annual wages.	18	7.00	According to time lost on basis of schedule.	Uniform duration	[5] 16
Wisconsin: Employer reserve; earnings pooled; experience rating effective January 1938.	Employer of 6 or more in 18 weeks or annual pay roll of $6,000; also employer with a $10,000 quarterly pay roll.	14 weeks' employment.	2	Schedule of average weekly wage.	20	8.00	W. b. a. less wages	From any 1 employer's account, 1 week's benefit to each 2 weeks of employment not exceeding 40 weeks within 52 weeks preceding close of employment.	
Wyoming: Pooled; experience rating effective January 1942.	Employer of 1 or more in 20 weeks, and with $150 or more wages payable in 1 quarter.	25 times w. b. a. including $70 in 1 quarter.	2	1/20 of high quarter's wages.	20	7.00	W. b. a. less wages in excess of $3.	1/4 in 4 quarters	16

[1] Annual wages in excess of $3,000 per worker excluded from employer contributions except in Nevada.
[2] W. b. a.—abbreviation for "weekly benefit amount."
[3] Individual must have worked less than 160 hours and earned less than $120 during the 3 weeks preceding unemployment.
[4] Lower maximum rates and duration are provided when balance in the fund is less than 2 percent of the pay roll for 3 years ending with the base period for the benefit year.
[5] Uniform duration.
[6] $20 effective April 1, 1944.
[7] Partial benefits are reduced by 1/5 of w. b. a. for each normal work day during which the individual is unable to, or unavailable for, work. Also in Illinois an eligible individual
[8] Or full-time weekly wage.
[9] Effective June 13, 1944.
unemployed for 6 or less consecutive days, shall be paid benefits equal to 1/5 of the w. b. a. for each such day, less any wages payable during such period.
[10] Benefit duration for lower wage classes is less.
[11] Lesser of $200 or 30 percent of base period wages if such wages are less than $800.
[12] No partial benefits paid, but earnings not exceeding $5 are disregarded.
[13] $15 maximum w. b. a. and maximum duration of 16 weeks (7) if fund fails to equal or exceed $8,000,000 for 2 consecutive months.
[14] Benefits are paid for each accumulation of 4 "effective days." "Effective day" is defined as the 4th and every subsequent day of total unemployment in a week in which not more than $24 is paid to the individual.
[15] Actually, in accumulation of 8 "effective days." See footnote 11 above.
[16] $15 if fund equals less than 1½ times highest amount of benefits paid in any 12 consecutive months.
[17] 24 to 48 percent in 4 quarters if fund equals less than 1½ times highest amount of benefits paid in any 12 consecutive months, according to schedule of wage classes.
[18] Employees pay in addition 1 percent into cash sickness compensation fund.
[19] Rate is 1/20 and 1/25 of high quarter's wages for 2 lowest weekly benefit amounts ($5 and $6).
[20] For 2-week period.

[1] Require employment of specified minimum number of workers in at least 20 weeks except where otherwise stated.
[2] The dollar amount represents the minimum earnings requirement; where the wage qualification is a multiple of the weekly benefit rate, the multiple is shown in parentheses.
[3] The qualifying wages must have been earned in a 1-year base period in all States except the following: Arizona, 3-quarter base period; Missouri, 2-year base period; Oregon, 1-year base period that may be extended up to 2 years.
[4] Adjusted for duplication arising from employment of individuals in more than 1 State.
[5] Based on 34 States.
[6] Based on 24 States.
[7] Law provides for maximum contribution rate of 2.7 percent.
[8] Data not available.
[9] Experience rating not in effect in 1943; contribution rate is 2.7 percent.
[10] Or 50 percent of full-time weekly wage.
[11] State changed from individual to uniform benefit year; therefore, comparable data not available.
[12] Lower maximum rates and duration are provided when balance in the fund is less than 2 percent of the pay roll for 3 years ending with the base period for the benefit year.
[13] Data relate to operations under provisions which since have been liberalized; the presently included statistics are the latest available.
[14] Maximum $250.
[15] Experience rating became effective July 1, 1943.
[16] Estimated by State agency.
[17] Or full-time weekly wage, whichever is the lesser.
[18] Less than 0.05 percent.
[19] Benefit duration for lower wage classes is less.
[20] But services for employers not subject to Federal unemployment tax and located outside the corporate limits of a city, village, or borough of 10,000 population are excluded.
[21] Or twice the square of the weekly benefit amount, whichever is greater, and including earnings in either case of 5 times the weekly benefit amount in some quarter other than that of highest earnings.
[22] $15 maximum weekly benefit amount and maximum duration of 16 weeks if fund fails to equal or exceed $8 million for 2 successive months.
[23] Benefit years ending July–December 1942.
[24] Day base plan in effect since November 30, 1942, whereby benefits are paid for accumulations of 4 "effective days" of unemployment instead of weeks of unemployment.
[25] Benefits are paid for each accumulation of 4 "effective days." "Effective day" is defined as the fourth and every subsequent day of total unemployment in a week in which not more than $24 is paid to the individual.
[26] For nondisqualified claimants filing on or after Oct. 1, 1941; 12.0 for disqualified claimants.
[27] Rate is 1/20 and 1/25 for weekly benefit amounts of $5 and $6.
[28] Or where employer's records do not permit accurate count, if total annual pay roll is $6,000 or more.
[29] Duration depends on continuity of unemployment and number of base-period employers.
[30] Annual table.

Mr. BYRNES. I would also like to put into the record a statement which has been given to me by Mr. Nelson. I was asking him about exactly what action had been taken by the W. P. B., and he gave me a statement of those items, and I would like to include that statement as to reconversion activity of the W. P. B. It may be of some value.

(The statement referred to is as follows:)

RECONVERSION ACTIVITIES OF THE WAR PRODUCTION BOARD

(June 10, 1944)

This memorandum summarizes the activities of the War Production Board to date in connection with reconversion of American industry from the production of munitions of war to the production of products and equipment of primary value to civilians and the basic economy.

Among the problems to which the Board has addressed attention are: (1) Determination of the priority of civilian items; (2) readying the controls of the War Production Board—Comtrolled Materials Plan, L orders, M orders, etc.—for handling of the reconversion process; (3) anticipation of the danger of post-war distress of certain industries that either have a long lead factor of planning and order-placing, or that have expanded to such a point that the domestic market for their products is not likely to employ their full productive capacity; (4) disposal of surplus materials in the hands of plants; (5) arrangement for adequate War Production Board participation in the selection of plants whose contracts will be terminated under cut-backs of military programs; (6) identification of the issues of equity among competitors within each industry which arise if some of the competitors are to remain in war production and others are to be freed for civilian production; (7) legal issues as to both the adequacy of statutory authority for operation of the necessary governmental controls over the reconversion process, and the use of industry advisory committees in reconversion work without violation of the antitrust laws; (8) questions of manpower controls and policies, both with respect to the necessity of avoiding interference with military production and with respect to such specialized labor problems as seniority rights, dismissal wages, and avoidance of work stoppage.

CONSIDERATION OF GENERAL POLICY

On December 3, 1943, Mr. Nelson submitted to Mr. Bernard Baruch a notebook of material reviewing the activities of the War Production Board on demobilization and post-war problems. A month earlier, November 4, to be exact, Mr. Wilson, Executive Vice Chairman of the Board, outlined to Justice Byrnes the problems that will have to be met as American industry turns from war production to its civilian tasks; in the same letter he outlined certain basic principles that he felt were fairly noncontroversial. Mr. Nelson, in writing Mr. Baruch on December 3, stated that he subscribed quite thoroughly to Mr. Wilson's analysis.

General policy problems have been examined and commented on at hearings of various congressional committees. The board has also undertaken an examination of the basic policy issues, and has decided a number of them, at meetings of the War Production Board, the Production Executive Committee, the Requirements Committee and Program Adjustment Committee, the Procurement Policy Board, the Coordinating Area Production Urgency Committee, the Operations Council, and the Order Clearance Committee.

At the War Production Board on November 30, 1943, for instance, Mr. Nelson determined, without objection, that—

"Hereafter as manpower, facilities, and materials become available in any given area, it shall be the policy of the War Production Board to authorize the production within that area of additional civilian goods, provided such production does not limit production for programs of higher urgency."

And on January 11, 1944, the Board unanimously decided that—

"The War Production Board's present policies respecting restrictions on new construction and facilities should continue in effect until the probable future course of the war makes it certain that a relaxation will not injure the war effort."

From time to time the Board has considered other policy matters regarding reconversion. For instance, on February 22, the Board considered the views of the Domestic Laundry Equipment Advisory Committee on reconversion problems, particularly as they related to timing of resumption of production and protection of the competitive positions of individual companies.

The Planning Division for the last half year has concentrated on developing estimates of alternative war-production programs after the termination of hostilities in Europe; on studying the effects of cut-backs, on the supply of raw materials, facilities, labor, and transportation; and on developing patterns for the utilization of released resources in civilian production. The first preliminary report on this subject, War Production and Civilian Output After Victory in Europe, was based on an over-all cut in munitions production within the year, following termination of hostilities in Europe, by somewhat over 25 percent. A considerably more detailed series of reports has just been completed under the following titles: Reduction of War Programs and Release of Resources, Pattern of Civilian Use of Released Resources, Policy Problems in Reexpansion of Civilian Production. These reports proceed on the assumption of an over-all cut of somewhat over 30 percent. Because of the possibility that cuts may actually be larger than the services now anticipate, the Planning Division is working on a third report assuming an over-all cut of about 50 percent. This report should be ready in about a month. The Board will then have an analysis of the pattern of war production and civilian supply for what appear to be the lower and the upper range of probable cuts in war production after victory in Europe. These over-all studies are being supplemented by a more detailed analysis of the situation in a few key industries, the first of which (dealing with the automobile industries) is already well under way.

The Progress Division has continuously followed current developments in the field of reconversion and has reported on them in its monthly reports to the War Production Board. Thus, in its January and March reports there was presented a detailed estimate of resources that might be released before the end of the European War, and the amount and pattern of reconversion that could be effected by putting them to use.

Within the Statistics Division, the Facilities Utilization Section has assembled a considerable amount of basic statistical material on the facilities of manufacturing industries, with particular emphasis on the relationship between the normal production and the war work of individual plants. The Construction Section is assembling the plans of the various claimants regarding construction projects and has made estimates of the probable volume of construction, including machinery installed in factories for 1945 and 1946. The Materials Branch has done work on the supply-demand situation in important raw materials after X day.

ADVISORY COMMITTEE FOR CIVILIAN POLICY

With the collapse of the European phase of the war, it is expected that a substantial portion of the Nation's productive capacity will be released. In order that necessary readjustments may be made without interfering with war production, there was created on April 14 an Advisory Committee for Civilian Production that brings to focus in the War Production Board the representative views of all major segments of the economy. It is the function of this committee to explore and consult with the Chairman of the War Production Board concerning the basic over-all policies that should be adopted to guide the country through the difficult period of declining military requirements. The primary object of these policies is to: (1) complement necessary military production with the maximum output of civilian goods; (2) maintain full employment; and (3) guide the economy through the transition period with a minimum of disturbance and dislocation in established relationships affecting industry, labor, and the public.

This committee as presently constituted consists of:

The Chairman of the War Production Board, who is chairman of the committee.
Mr. Eugene Meyer, editor and publisher of the Washington Post.
Mr. Gordon Rentschler, chairman of the board of the National City Bank, New York.
Mr. Eric Johnston, president of the United States Chamber of Commerce.
Mr. Philip Murray, president of the Congress of Industrial Organizations.
Mr. William J. Kelly, president of the Kelly-O'Leary Steel Works, Chicago.
Mr. William L. Green, president of the American Federation of Labor.
Miss Ruth O'Brien, of the Bureau of Human Nutrition and Home Economics, Department of Agriculture.

Other members will be designated as it becomes desirable to broaden the representation.

PROGRAMING OF CIVILIAN PRODUCTION

One of the most difficult problems in reconversion is the identification of those programs for civilian production that should have priority in any gradual resumption of civilian production that becomes feasible. The office of the Program Vice Chairman, commencing in November 1943, has been endeavoring to obtain from claimant agencies full statements, with justifications, of additional or enlarged programs that might be put into effect as additional productive resources become available. The subsequent tightening of the general manpower position and adoption by the War Production Board of a "hold the line" policy toward all but the most essential nonmilitary program expansions, prior to the clarification of military operations in Europe, somewhat delayed compilation of the programs requested by the Program Vice Chairman. However, these programs are now being submitted, and will be studied to determine their relative urgencies, and to determine whether they should be implemented before X-day as military cut-backs permit, or should be held in readiness until that day. The more urgent of these programs are being referred to the industry divisions for detailed analysis and preparation of specific subprograms.

At the same time, the Office of Civilian Requirements is making comprehensive studies to determine what should be produced for civilians, and the relative urgency of need. Through field surveys the office currently ascertains the existing national inventories of consumer products, and the estimates by consumers and dealers of the products and services that are most needed as war requirements decline. A particular concern of the Office has been the problem of equity among distributors of civilian products; this is an especially acute problem during the period when civilian items to be distributed are scarce, but will probably continue to need careful analysis for the whole reconversion period.

CONSULTATION OF INDUSTRY AND LABOR ADVISORY COMMITTEES

Meantime, Mr. Nelson has made it clear that industry advisory committees are to be consulted. On January 14, 1944, General Administrative Order 2–141 was issued, requiring that:

"No new limitation or conservation order, or amendment of an existing order which will result in a substantial change in the rate of operations of an industry shall be submitted for clearance without prior consultation with the proper industry advisory committee or committees of the industries to be affected. Every attempt should be made to consult the industry advisory committee as early as is practicable."

Even before this order, industry advisory committees were considering reconversion and resumption problems. Attention is directed to the following committees, and the first date upon which they gave such consideration:

Domestic Electric Appliance Industry Advisory Committee, September 17, 1943.
Domestic Laundry Equipment Industry Advisory Committee, December 3, 1943.
Domestic Vacuum Cleaner Industry Advisory Committee, January 13, 1944.
Mechanical Household Industry Advisory Committee, January 21, 1944.
Automobile Industry Advisory Committee, April 17, 1944.

The committees have rendered advice on such problems as the development of plans for obtaining machine tools, the economical minimum rate of civilian production and minimum operating costs, the division of authorized civilian production among the manufacturers, determination of the models to be produced, methods of distribution, and procedures for joint Government-industry planning for reconversion.

Over the past 6 months, labor advisory committees have also been consulted on reconversion matters. There are listed below the committees that have thus been called together, and the dates of their first meeting for this purpose:

Flatiron Labor Advisory Committee, December 30, 1943.
Machine Tools Labor Advisory Committee, January 21, 1944.
Domestic Mechanical Refrigerator Labor Advisory Committee, April 25, 1944.
Domestic Laundry Equipment Labor Advisory Committee, April 26, 1944.
Automobile Labor Advisory Committee, April 27, 1944.

MODIFICATION OF CONTROL ORDERS

Although the Board's long-range planning has been oriented with reference to a substantial cut-back in military programs coincident with victory in Europe, the Board has necessarily had to face the fact that the combined factors of the easing materials situation and the long deferment of certain essential civilian needs make certain resumption programs desirable at present; the same factors make it feasible to approach a relaxation of certain orders that are no longer needed—such as those that result in inferior products through requirements of substitution of materials, or those that handicap freedom of choice by manufacturers without making substantial contributions to war production. We have been conscious of a further factor: the value of gaining experience in reconversion problems by initiating limited experiments with the resumption of production of a very few civilian items.

Among the resumed or enlarged programs for civilian purposes are farm machinery (begun July 1, 1943), commercial trucks (begun January 1, 1944), railroad equipment (begun in 1943, but accelerated in 1944), piston rings (April 1944) and rubber tires; and domestic electric flat irons (begun February 24, 1944).

In addition, approximately 70 orders of the War Production Board have been modified in the last few months so as to permit resubstitution of materials formerly used in the manufacture of products; in such use these materials will replace the less satisfactory substitutes that have been forced upon manufacturers as a result of conservation or standardization and specification orders of the Board. In every instance where the Board has so modified its orders, the objectives have been one or more of the following: (*a*) Labor saving in fabrication; (*b*) substitution of less scarce for more scarce material; and (*c*) improvement of product. An example of action along this line is the modifications made following special studies concerning the possibility of saving the now critical wood and paper through reversion to the use of metals.

More important in the long range, perhaps, are the comprehensive studies of the orders issued by the Board under its priority powers. Approximately 600 reports have been obtained from administrators of orders; in each of these reports some 60 items of information are provided, many of them directly concerned with problems of reconversion. Through the tabulation of the results of this extension survey, it is now possible to turn immediately to all of the orders restricting aluminum or all of the orders providing a quota on production of end products. At the same time, this reference list includes specific recommendations as to action to be taken with regard to modification and revocation of each order upon occurrence of substantial military cut-backs.

LABOR PROBLEMS

Since manpower has become the most critical of the Nation's productive resources, it has been particularly important for the Board to orient its current resumption programs with reference to this factor, and not simply with reference to the availability of materials and facilities. Accordingly, all resumption proposals have received severe scrutiny at the Program Adjustment Committee, Requirements Committee, Order Clearance Committee, and other clearance points to ensure that, if approved, the resumption of production would not interfere with urgent military and civilian programs by diverting labor therefrom. The policy and procedure governing the relation of resumption programs to labor availability have been announced in General Administrative Order 2–154, which reads in part:

"No resumption or expansion of production shall be authorized in any No. 1 labor area except after clearance through and approval by the regular or modified area production urgency committee, where established, and where not established, as approved by the Executive Vice Chairman.

* * * * * * *

"No resumption or expansion of production shall be effected in any No. 2 labor area except to the extent that such production is approved by the appropriate Vice Chairman."

Exceptions regarding smaller plants are discussed below.

The War Production Board is working closely with the War Manpower Commission and other agencies in a general program designed to meet the manpower shortage, particularly with a view to assuring that high urgency programs received full priority over the less essential types of production. The elaborate mechanism

through which controls of this character are exercised is not described here, since it has in the past been concerned mostly with procurement agency contracts, rather than with civilian production problems; however, it should be recognized that this mechanism will be most important, as evidence already indicates, in guiding the selection of plants that might be allowed to revert to production of civilian goods.

SMALLER PLANTS

Implicit in the whole problem of reconversion, and particularly the problem of current limited resumption of civilian production, are the respective roles of small and large plants. The War Production Board has taken the position, and issued appropriate instructions to implement its views, that there should be less stringent restrictions on the reentry of smaller plants into civilian production than exist in the case of the large plants of the nation.

This policy has been applied most specifically in General Administrative Order 2.154, which, as noted above, required that no resumption or expansion of production be authorized in group 1 or 2 labor areas without specific approval of an appropriate Vice Chairman of the Board, or of an area production urgency committee. The order specifically provides that "Establishments in the west coast area employing 50 or less, and establishments outside of the west coast area employing 100 or less, are excluded from this policy."

LEGAL PROBLEMS

There are, of course, a number of legal questions that need to be settled before we can be confident of the adequacy of control mechanisms and procedures. At Mr. Nelson's request, the general counsel has been exploring these questions both with his own staff and with the Department of Justice. A proposal for the extension for 1 year of the Second War Powers Act is now before Congress. Consideration has been given to the adequacy of this Act for reconversion purposes. Antitrust aspects of the use of industry advisory committees in the reconversion process have also been studied.

PRODUCTION EXECUTIVE COMMITTEE STAFF

Effective May 25, there was created within the mechanism of the Production Executive Committee a staff consisting of representatives of the military services and the Maritime Commission, together with representatives of the several Vice Chairman areas of the War Production Board, and the War Manpower Commission. It is the function of this staff to inquire into any feature of production, including its scheduling and the scheduling of components, and to make available all pertinent information with respect to coordinated adjustments for the resumption, expansion, or curtailment of production. Pursuant to a directive from the Office of War Mobilization, contract cut-backs and terminations proposed by the procurement agencies will not become effective until cleared through this mechanism. Under the procedures adopted, the recommendations of the Production Executive Committee staff, when unanimous, will bind the procurement agencies. When the staff is divided, the Production Executive Committee will resolve the conflict and render a binding decision. The Production Executive Committee Staff, aided by War Production Board research staff and full time members of the Army Service Forces, Army Air Forces, Navy Bureau of Aeronautics, Navy Office of Procurement and Material, and the Maritime Commission, is currently meeting three times a week to consider adjustments in military programs. To expedite the handling of adjustments arising out of cut-backs and terminations, the service representatives are physically located on the premises of the War Production Board.

Mr. BYRNES. I should like to take the liberty of calling one other matter to your attention, on the discussion of this legislation. I have a statement of the major war-related statutes terminating at specific dates. The reason I have referred to it is that there are two acts that, according to the statement given me by the Budget Bureau, will expire June 30. The record shows no action to continue them. I am not even advised as to whether you deem it necessary to do it, but of course it might be helpful if I would include in the record those statements showing the war-related statutes terminating June 30 and those also that terminate December 30, so that you may refer to them.

Senator VANDENBERG. What are the two to which you refer?

Mr. BYRNES. There is a bill that has passed the Senate and is pending in the House relating to the power of the President to requisition property for defense of the United States.

The Price Control Act, we know about.

The power of the President to requisition export military materials for use of the United States, that expires June 30. That is one of the bills which, according to the record, nothing has been done to continue.

The other one is the power of the R. F. C. to institute condemnation proceedings.

Then, there is a bill for export control which is a Senate bill pending in the House.

Senator VANDENBERG. The Senate record would appear to be pretty good.

(The statement referred to is as follows:)

MAJOR WAR-RELATED STATUTES TERMINATING AT SPECIFIED DATES

(Prepared by the Budget Bureau)

June 30, 1944: Power of President to requisition property for defense of United States expires. Requisitioned property to be returned by December 31, 1944 (Public Law 104, 78th Cong., 50 U. S. C. App. 721). S. 1748 pending in House.
June 30, 1944: Emergency Price Control Act expires (Public Law 729, 77th Cong.; 50 U. S. C. App. 901). S. 1764 and H. R. 4941 pending.
June 30, 1944: Power of President to requisition export military materials for use of United States expires (Public Law 643, 77th Cong.; 50 U. S. C. App. 711).
June 30, 1944: Export control expires (Public Law 638, 77th Cong.; 50 U. S. C. 701). S. 1826 pending in House.
June 30, 1944: Power of Reconstruction Finance Corporation to institute condemnation proceedings expires (Public Law 506, 77th Cong.; 15 U. S. C. 606 (b)).
December 31, 1944: Farm labor supply legislation expires (Public Law 229, 78th Cong.; 50 U. S. C. App 1351–1355; Public Law 229 not yet codified).
December 31, 1944: War use of silver expires (Public Law 137, 78th Cong.; 31 U. S. C. 734 (c)).
December 31, 1944: Second War Powers Act, titles I to IX, inclusive; XI and XIV expires (Public Law 507, 77th Cong.; 50 U. S. C. App. 645).
January 20, 1945: Authority of President to appoint Under Secretary of War expires (Public Law 891, 76th Cong.; 5 U. S. C. 181 (a)).
May 15, 1945: Alternate date for expiration of Soldiers and Sailors Relief Act (Public Law 861, 76th Cong.; 50 U. S. C. App. 584).
May 15, 1945: Selective Training and Service Act expires (Public Law 783, 76th Cong.; 50 U. S. C. App. 318).
June 30, 1945: Commodity Credit Corporation expires (Public Law 240, 78th Cong.; 15 U. S. C. 713).
June 30, 1945: Lend-lease expires; contracts may be carried out to July 1, 1948 (Public Law 304, 78th Cong.; 22 U. S. C. 412 (a), 22 U. S. C. 415 (b)).
June 30, 1945: Interstate petroleum pipe-line authority expires (Public Law 103, 78th Cong.; 15 U. S. C. note prec. 715).
June 30, 1945: Operation of stabilization fund expires (Public Law 42, 78th Cong.; 31 U. S. C. 822 (a)).
June 30, 1945: Federal Surplus Commodities Corporation expires (Public Law 634, 77th Cong.; 15 U. S. C. 713 (c) and note).
July 1, 1945: Additional safeguards to radio communications on United States ships expire (Public Law 97, 78th Cong., 47 U. S. C. 353 note).
July 1, 1945: New war housing insurance authority expires (Public Law 159, 78th Cong., 12 U. S. C. 1738).
July 1, 1945: Emergency Farm Mortgage Act expires (Public Law 91, 78th Cong., 12 U. S. C. 1016).
July 1, 1945: Succession of Smaller War Plants Corporation terminates, except for purposes of liquidation (Public Law 603, 77th Cong., 50 U. S. C. App. 1104).
July 1, 1946: Federal Housing Administration limit for insuring mortgages (Public Law 159, 78th Cong., 12 U. S. C. 1709).

January 1, 1947: Soil Conservation and Domestic Allotment Act expires (Public Law 374, 77th Cong., 16 U. S. C. 590h (a)).
January 22, 1947: Disaster Loan Corporation and Electric Home and Farm Authority (Public Law 108, 77th Cong., 15 U. S. C. 601 k–1, 701 to 712).
July 1, 1947: New Federal Housing Administration insurance of financial institutions expires (Public Law 159, 78th Cong., 12 U. S. C. 1703).

Senator MURRAY. Mr. Byrnes, you mentioned a communication from Mr. Baruch suggesting the liquidation of his office. Do you care to submit that statement to the committee?

Mr. BYRNES. I have no objection to doing it. I haven't got it here. I will send it to you.

Senator MURRAY. Very well.

(The letter referred to is as follows:)

OFFICE OF WAR MOBILIZATION,
ADVISORY UNIT FOR WAR AND POST-WAR ADJUSTMENT POLICIES,
Washington 25, D. C., May 12, 1944.

Hon. JAMES F. BYRNES,
Director, Office of War Mobilization,
Washington, D. C.

DEAR JUSTICE BYRNES: By May 15, the records of our office should be in such shape that we can end our work in keeping with our report on War and Post-war Adjustment Policies, February 15, last.

We think we should inform you that while much has been done in carrying out the program recommended by us and approved by you, on some matters of importance, administrative or legislative acton still is lacking. It is 3 months since the issuance of the report. For the good of all of us, but mostly for the sake of our soldiers and sailors, let us hurry, hurry, hurry not only in winning the war but in being ready for the peace. Delays jeopardize both these objectives.

The Nation still is months away from being prepared to meet the great adjustments that will come on that unknown X-day when one of our enemies is defeated. Further delays and inactions can only make our readiness ever more distant and will turn the adventure in prosperity that lies within our grasp into an adventure in adversity.

The concern expressed in this letter should not be taken as reflecting any speculation as to an early end of the war. The collapse of the Axis in Europe, according to present outlook, should permit the demobilization of a substantial part of our armed forces and a good part of war industry. If this transition is to be handled without unnecessary unemployment, without further inflation and chaotic confusion, the Government must be ready for the swiftest action, regardless of when the X-day of Germany's defeat falls. The machinery should be set up and tested; the policies and programs developed in advance.

Moreover, these preparations, in the general tightening up of the war machine which they require, would improve the current conduct of the war.

We summarize briefly what has taken place on the more important fields covered in our report:

1. On the human side of demobilization, which is the most important of all of the aspects of demobilization, there was promptly created by Executive order the post of Retraining and Reemployment Administrator to correspond with our recommendation for the creation of a so-called Work Director. This Work Director was to be charged with developing a detailed program for dealing with the many aspects of the whole human side of demobilization and the Administrator has been proceeding sympathetically with this objective and with progress.

The problem is most difficult, most important and most urgent. It will aid the Work Director if Congress will name one committee in each House or a joint committee for both Houses to work on this enormous problem, as was recommended in our report. This will speed the prompt care for veterans in every respect and for workers with jobs for all.

2. Equally swift action was taken in the creation by Executive order, for the time being, of the post of Surplus War Property Administrator for bringing this pressing problem under immediate effective control. The post is in good hands with good progress being made. A great deal remains to be done, of course, but the work is being pressed aggressively.

The Surplus Administrator, we are informed, will soon be in a position to begin discussing possible legislation. It will be most helpful if Congress centralizes its interests in this field.

3. While there has been much discussion, we are aware of no effective action for the setting up of adequate organizational machinery and determining policies to insure the cancelations of war contracts being properly planned in advance. This is vital in order to minimize the disruptive effects on communities of haphazard cancelations and so that cancelations are handled in ways which contribute to greater war efficiency and to the quickest possible reconversion of industry to peacetime production and employment.

Definitive action in this field is needed as a war measure which can contribute to easing manpower and other mobilization problems.

4. Nor do we know of any action taken thus far in the way of coordinated machinery for working with the armed services in the preparation in advance of an X-day reconversion program that is to be ready for immediate use whenever X-day comes. The purpose of this recommendation was to insure against being caught unprepared by a sudden collapse of Germany. Unless we are ready, such chaos and confusion could result as to seriously obstruct the final victorious offensives against Japan.

In both this matter of the planning of cancelations in advance and the preparation of the X-day program, there has been no action even though appropriate letters were sent by your office to the War Production Board, and the armed services were ready to proceed.

5. In the field of the settlement of terminated war contracts, a detailed administrative program for speeding settlements, while fully protecting the public, has been drawn up and requires principally the enabling legislation by the Congress.

The Senate has passed a bill which has our approval, as well as that of all of the procurement agencies. A similar bill is now before the House, having been endorsed unanimously by the Special House Committee on Post-war Economic Policy and Planning. Both bills cover the legislative needs for contract settlement.

As you are aware, prompt enactment of contract settlement legislation is badly needed both for winning the war and for returning to peaceful prosperity with jobs for all. When a war contract is terminated, in effect, the plant is shut down entirely or partially. To reopen that plant for new and full employment, the terminated contract must be settled. That is, the plant must be cleared of Government-owned property, work in process, and inventories, to make room for new equipment and materials, and the contractor paid what the Government owes him—no more—so he has the money to buy new materials and equipment and to start up new pay rolls. How much unemployment there will be in the reconversion period will depend largely on the speed—or delay—in contract settlement.

Already more than 20,000 war contracts have been terminated. Neither existing legislative authority nor administrative machinery is adequate for dealing with these current terminations, let alone the great volume of contracts that will be canceled following a major change in the war.

It is the subcontractor and his suppliers—in general, the small businessmen—who stand most exposed today in the contract settlement picture. Legislation is needed to permit the Government to settle directly with subcontractors and to speed payment to them in other ways, to develop the possibilities of company-wide type of settlements, which may greatly speed the whole settlement machinery.

Legislation is needed to permit the establishment of a Nation-wide system of interim "T" loans for any and all war producers while awaiting settlement. Again, these "T" loans are needed primarily for the smaller businessmen whose limited liquid assets are largely tied up in their war production.

6. Action is still waiting on the recommendations in our report for financing aid to small business—for the Federal Reserve banks being empowered to make $500,000,000 in loans to small business and for the extension of the authority of the Smaller War Plants Corporation to make loans for reconversion purposes as well as for war production. These two measures were to supplement the existing lending authority of the Reconstruction Finance Corporation and the great reservoir of private capital waiting to be tapped and which can stimulate employment.

7. The various war powers which expire soon and which are needed both for the prosecution of the war and for the return to peace will have to be extended. The first one in order of expiration, the price-control law, is not under consideration by Congress. Before the year is over the priorities and allocations power on which the functioning of the War Production Board rests, and the requisitioning power of the President will both expire.

8. The development of post-war housing programs, the designing, engineering, and planning in advance of worthwhile public works, to be put on a shelf for use if needed, has still to be accomplished.

9. Also, the drafting during the war of a post-war tax bill, to be put on the shelf until after the war, which shall have as one of its major objectives the widest possible employment through the stimulation of enterprise capital.

All these matters are now in the hands of Congress where they properly should be, as well as many questions of importance not taken up in our report such as the problems of agriculture, foreign trade, matters going into the treaty of peace—all of which have a profound effect on employment. It is out of the mills, mines, farms, and factories now engaged in war production that the bulk of post-war jobs must come, and we felt that the first thing was to arrange for the speediest shifting of these vast productive resources from war to peace. All of the recommendations in our report were designed to bring about this speed which is our most effective weapon against the twin enemies of unemployment and inflation.

Mr. Hancock is ready to stay on as acting chairman of the Joint Contract Termination Board for the time being. In closing our work, we would like to thank you for the opportunity to serve.

Sincerely yours,

BERNARD M. BARUCH.
JOHN M. HANCOCK.

Senator MURRAY. The pending legislation, I think, recognizes the absolute need for these policies and procedures that you mention with reference to the termination of contracts. You will notice that at the bottom of pages 10, 11, and 12, it undertakes to set up a production adjustment committee such as you have mentioned, comprising the various procurement agencies, as well as other Federal agencies interested, or affected by contract termination, and it sets up the policies and procedures that should be followed in connection with the termination of those contracts.

I believe that you have looked over these provisions. Do you think that they comply with what would be required in that direction?

Mr. BYRNES. Yes; it seems to me that it is sufficient particularly to enable whoever is appointed to fill the office to do the jobs you are interested in. I do think this, that there is not any use to establish it and place the responsibility in the individual unless you give him the power, as responsibility without power or power without responsibility is a dangerous thing. They are just a two-way stream.

I think the bill—I think the definitions of the purposes are amply broad to enable any individual charged with the responsibility to carry it into effect. I think this, as long as you keep in this bill the thought that it is a policy-making agency—if there ever was put into it a provision that makes it an administrative agency, then it would be most unfortunate. That office will start to grow no matter what the views of the man at the top may be. Whenever he accumulates a large staff, and the staff is authorized to plan, in odd moments they will plan for the continuance of the bureau, and whenever you give an individual office the authority of administration, you cannot help it, human nature being the same, there is a tendency to expand activities.

I have found, as Director of War Mobilization, that by having a small staff—I think my appropriation is $140,000 out of which I pay the expenses of the Baruch post-war group—of course quite a number of those gentlemen did not draw any compensation—but the point I make is that as long as it is a relatively small organization working through the other agencies, it can direct policies, but whenever it goes into administrative work it becomes a competitor of the other agencies and the troubles commence. It should not be allowed to.

I have had many very important persons try to urge me during the last year to embark into the administrative field, but my life would be even unhappier had I consented to go along with them.

Senator MURRAY. You observed also, I presume, that the provisions of this bill require the Attorney General to make surveys for the purpose of determining whether or not there is any expansion of monopoly or undue concentration of business, and to report periodically to the Congress on those matters.

Mr. BYRNES. Yes; I do not see any objection to it. I think they ought to do it.

Senator REVERCOMB. May I ask one question?

Senator MURRAY. Yes.

Senator REVERCOMB. You ask about keeping a small organization. I think this bill, S. 1730, provides for the employment of a director and the appointment of an assistant director. Do you think it is necessary to provide in the bill for the appointment of an assistant director?

Mr. BYRNES. Well——

Senator REVERCOMB. Or would you leave the organization of the office of the Director?

Mr. BYRNES. I was going to say I see no reason, if you left it to the Director, let him exercise whatever discretion needed, I don't know but what it would be better. I think I would do that. Let him determine that, and fix the salaries. If he has a small office, what is the necessity of making an inflexible statement? I think it is all right.

Senator VANDENBERG. Mr. Byrnes, are you prepared to discuss at all the so-called Kilgore bill in its latest form?

Mr. BYRNES. No, I am not; although I know that it was the Kilgore report that first advocated the establishment of an over-all agency upon which the Office of War Mobilization order was really based. I do not know, I have not compared the bills. They differ, I know that. It has an unemployment compensation feature in it, because I have heretofore discussed it with the Senator, but I would not be in a position to discuss it at this time, because I have not it before me, and I am not familiar with its details, so I would rather let someone who is familiar with it discuss it.

Senator KILGORE. May I ask, Mr. Chairman, as to how far Justice Byrnes got in his discussion before I came in?

Mr. BYRNES. He thought he had finished.

Senator KILGORE. I was not here, and I did not hear it. Just before I ask my questions—how many contract agencies are there of the Government now that have the power to terminate contracts, do you know?

Mr. BYRNES. Well, no; I would not attempt to go out of the big agencies. I confess that I have discussed that with you, the Army, Navy, and the Maritime Commission.

Senator KILGORE. Well, as a matter of actual fact, is not the Army so decentralized that there are some 10 separate procurement agencies there, all of whom have the power to make—terminate contracts?

Mr. BYRNES. I think there are. I don't know whether it is 8 or 10.

Senator KILGORE. And the Navy and Maritime Commission, of course, have only one; and the Treasury Procurement, of course, has one—that makes a total of about twenty-some-odd agencies with termination power.

I had discussed with a number of people, and I want to get your opinion on it, on the idea of unit cut-back, rather than contract termination. In other words, unit cut-back—for instance, let us say that it was decided by the Army that they had already contracted for too many jeeps, more than they were going to need, due to change in the strategical situation, wouldn't it be better for them to advise the central office that they were going to reduce their contract, say by 5,000 units, rather than by just saying, "We are going to cut out X factories in this program," and let some central office that is aware of the entire industry picture decide what factories should be cut out and what factories should be reduced as a program requirement.

Mr. BYRNES. Well, I have understood from the Army, for instance—of course, that is the big agency, the big contracting agency——

Senator KILGORE. Yes.

Mr. BYRNES. That its production committee has been considering that question, considering all of them, and then after considering the over-all, general question, and character and tentative decision, that they refer it to what they call a technical committee for determination as to the individual plants, after hearing all the interested procurement officials. I wonder if that does not carry out the idea that you have in mind, that they did constitute a central office.

Senator KILGORE. That is within the Army.

Mr. BYRNES. Yes.

Senator KILGORE. Now, does the Navy have the same set-up?

Mr. BYRNES. The Navy, as I said before, according to the information that is given to me, is following the Army procedure, because it does not cancel many contracts as compared with the Army and may not have the same exhaustive procedure that the Army has—but you mean an interdepartmental agency?

Senator KILGORE. Yes.

Mr. BYRNES. No; I have never considered that with them.

Senator KILGORE. Do they have such a thing between the various procurement departments?

Mr. BYRNES. Not that I know of. What they advise me is that the Production Committee put a limit upon its action and advises the Navy as to what it is doing, and the Navy advises the Army, and the Maritime Commission the same.

Senator KILGORE. And they advise after they have made the decision.

Mr. BYRNES. Yes; I know of no interdepartmental committee that passes upon the respective procurement agencies' recommendations.

Senator KILGORE. Yes; so that we have what might be called a curative treatment after the decision is made, rather than a prophylactic treatment, preventing mistakes in decision, is that right?

Mr. BYRNES. You will have a decision by the Army as to the Army needs, and a statement for the Navy and Maritime Commission to determine whether that is a mistake.

Senator KILGORE. The point I am getting at is this, that unless the whole thing is centrally planned, is there not danger that too many plants may be shut down in one area suddenly?

Mr. BYRNES. I agree.

Senator KILGORE. And wreck the area, whereas other areas may go right ahead without shut-down or curtailment and with a proper spread of manpower such areas could be kept working.

Mr. BYRNES. I must say that I mentioned before you came in, during the discussion of what was done as a result of the directive of mine, that in the Production Executive Committee which Mr. Wilson is Chairman of, and a representative from each of the agencies, the procurement agencies, I directed them that there should be no cancelation of contracts until it is cleared, and before it is cleared it shall be submitted to this committee where there is a consideration there. That committee is about what you have in mind, if it functions as directed.

Senator KILGORE. That is such a committee.

Mr. BYRNES. Yes.

Senator KILGORE. Now, isn't it also a fact as this progresses we are going to have to have some control over the W. P. B., so that this decision will be keyed with W. P. B.?

Mr. BYRNES. W. P. B.?

Senator KILGORE. For civilian requirements.

Mr. BYRNES. For that purpose, a W. P. B. representative, Mr. Wilson, is Chairman of the Committee.

Senator KILGORE. Yes. Now, then, I want to ask you this queston, because I have asked about a dozen people the same question: In your opinion——

Mr. BYRNES. What did the other 11 answer?

Senator KILGORE. Is not the reconversion problem worse than the conversion problem? Isn't it bigger?

Mr. BYRNES. Well, oh——

Senator KILGORE. In other words, we could build plants and fill in gaps on conversion, but reconversion is a different proposition.

Mr. BYRNES. It is a different proposition; yes, sir. I do think, however, that I have more confidence in American industry and if, when the time comes for cancelation, we release the restrictive controls in the problem before them, they will find a way to reconvert it that we never dreamed of.

Senator KILGORE. I think so.

Mr. BYRNES. That is a hope.

Senator KILGORE. But don't you believe that government is going to have to do the planning?

Mr. BYRNES. I think there are a lot of fellows in this country who can do their own planning.

Senator KILGORE. I mean, make the plans that will permit industry——

Mr. BYRNES. Release industry and let industry take care of itself. There will have to be a lifting of the restrictions on business that you are talking about.

Senator KILGORE. That is right.

Mr. BYRNES. Yes.

Senator KILGORE. And we are getting to such a rate now that we are going to have some pretty heavy change-overs.

Mr. BYRNES. Yes; as long as the war is on, and as long as there is a question of shortage of material, shortage of manpower, it is far more serious than it will be in the days following the war. I believe, so far as material is concerned, in the days following peace, we are going to find that money is not the only thing that is hoarded in this world, that there is some material that has been hoarded by the very careful and prudent fellow.

Senator KILGORE. And that manpower has been hoarded, too.

Mr. BYRNES. Yes; I was going to put manpower third.

Manpower, material, and money, and whenever they find that peace has come, and they think that the restrictions are off, they are going to bring it out.

Senator KILGORE. That is right.

Mr. BYRNES. And put it on the market.

Senator KILGORE. That is like the fellow in Jersey that bought a ton of sugar, he was not the only hoarder, but he is going to have to put that sugar on the market after the war is over or go broke.

At the same time, if you just start shutting plants down without a central plan, there is the liability of running into that situation——

Mr. BYRNES. Oh, yes.

Senator KILGORE. Whereby each plant knows what it can do, but does not know the way to get the information from the balance of industry.

Mr. BYRNES. Let me say—you were not here. If you will be good enough to read the statement I read, the prepared statement, I tried to present what I was advised by the Army with reference to—and the W. P. B., as to the plan they now have to accomplish the purpose you have in mind. Then, after you have read it, I would like to have your suggestion on it, because you have given study to the question. I have outlined it at some length in my statement.

Senator KILGORE. But you do agree that the contract termination question must be planned?

Mr. BYRNES. Absolutely.

Senator KILGORE. And it must be keyed with conversion?

Mr. BYRNES. Absolutely.

Senator KILGORE. And that we must have a program that will give them information that we have got in order that they may go back into industry with some assurance industry will be profitable.

Mr. BYRNES. Absolutely, and it should be given to them at the earliest possible date, without waiting for X-day.

Senator KILGORE. And a factual survey should be made to see that they are understood.

Mr. BYRNES. Right; I agree; that is right.

Senator KILGORE. The reason I say that, it so happens that two different departments shut a plant down in my State at one time, and they not only wrecked that town, they wrecked every citizen in it. The thing that was done, it was unplanned. One plant being shut down would have allowed the town to go ahead, but two plants, wrecked the town. The Navy shut down one plant and the Army shut down the other. Neither one knew anything about it. When they both wanted to shut down nobody knew anything about it except the people themselves.

Mr. BYRNES. How long ago?

Senator KILGORE. Some time ago. They had their money in both cases.

Mr. BYRNES. Under the plan they now have there would be no reason for it. It would just be a violation of the policy they have adopted and the plan they say they will follow. Of course, that sometimes occurs, but under the plan they now have adopted and say they are following, it could not occur.

Senator KILGORE. Well, now, do those plans contemplate a conference with the central agency prior to——

Mr. BYRNES. To cancelation?

Senator KILGORE. Cancelation.

Mr. BYRNES. Yes.

Senator KILGORE. And notice to the factory long enough in advance so that they can start making their arrangements for reconversion?

Mr. BYRNES. I have said, Senator, that they even intend, within a very short time, to advise through their field representative, say to the contractor in West Virginia, that when it comes, "you will get a telegram reading as follows, and that will mean that such-and-such a percent of your contract is canceled, or it is all canceled," and they will discuss it with him, and that service will be undertaken within the next 30 days. When that is done then the manufacturer would have some opportunity to plan himself as to what he is going to do, whenever the thing comes.

Senator KILGORE. The W. P. B. is going to be required to give the necessary release?

Mr. BYRNES. Yes, he has got to ask the W. P. B. for a release of the limitation order. I don't think you will find the fellow hesitating to ask for it. However, that burden won't be much.

Senator KILGORE. Some of them may find that they won't need it.

Mr. BYRNES. The determination of that question, in some cases where there is an acute manpower shortage in an area, a certain manufacturer is working upon important war contracts and he is in a position to do further war work, it is bound to make some hardship when that decision is made, but everything should be done; as I have said, I am convinced that, while nothing is perfect, that great progress has been made toward lessening those hardships, particularly in recent weeks, which is very encouraging. They are profiting by the mistakes.

Senator KILGORE. Don't you think the Brewster plant had something to do with that, the shutting down of the Brewster plant brought home this situation?

Mr. BYRNES. I have already discussed that. As a matter of fact, it did not cause, because that is a case of administration, not of policy. It was a question—I have gone over it, it was not a typical case, but it did do this, it did call, in rather spectacular way, attention to the fact that there was not sufficient notice. One reason I have gone into it at this time at some length, the Navy said it was their first large cancelation, they gave 30 days' notice, but they gave it to the assembly plant, they did not give it to the Long Island plant which had the parts. They had been trying to find, as a matter of information, I know, Senator, that you are especially interested in it—at my request Mr. Wilson has been endeavoring to see if the Corsair plant could utilize the parts from the Long Island plant so that they could continue to manufacture during the 30 days the assembly plan could cut off. Well, they found that in the other plant manufacturing Corsairs, that the design had been changed.

The question arose as to whether any part of the parts manufactured at Long Island could be utilized in these plants. Engineers were sent for, they looked at them and they said they wanted to take the spare parts out and actually try them on the machines and they would report this afternoon. The engineers were sent, I think to Ohio, so that Mr. Wilson is quite hopeful of being able to advise you today——

Senator KILGORE. Well, the trouble there, you will find, I think has been each plant has its own detail, some of them cut on the bias, some put flounces on, and some just sew it together.

Mr. BYRNES. That is exactly what happened.

Senator KILGORE. And the result has been that you could not exchange these prefabricated parts between the plants, because each plant has been permitted to use its own detailed drawings although the general design is exactly the same.

Mr. BYRNES. That is because of changes in design, I am informed, which make it necessary to see if the part can be used.

Senator KILGORE. All right, thank you.

Senator MURRAY. That will conclude the hearing.

(Whereupon, at 12:20 p. m., the hearing was concluded.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

FRIDAY, JUNE 9, 1944

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The committee met at 11:40 a. m. in the committee room, Capitol, Senator Robert R. Reynolds (chairman) presiding.

Present: Senators Reynolds (chairman), Hill, Downey, Truman, Kilgore, Murray, Bridges, and Gurney.

The CHAIRMAN. We have before us this morning two bills that we will consider in relation to one another. They are S. 1730, the Murray-George bill, to create an Office of Demobilization; and S. 1893, the Kilgore bill, to provide for the establishment of an Office of War Mobilization and Adjustment.

(S. 1730 and S. 1893 are as follows:)

[S. 1730, 78th Cong., 2d sess.]

A BILL To create an Office of Demobilization, establish general policies for the operation of that Office, provide for the settlement of claims arising from terminated war contracts, provide for the disposal of surplus Government property, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—ADMINISTRATION OF THE ACT

OBJECTIVES OF THE ACT

SEC. 101. The Congress hereby declares that the objectives of this Act are—

(a) to facilitate maximum war production during the war and to expedite reconversion from war production to civilian production as war conditions permit;

(b) to insure the fullest possible employment in private industry during the perod of transition to civilian production after the cessation of hostilities and thereafter;

(c) to provide for the coordination of governmental controls necessary for orderly transition from war production to civilian production, and for their relaxation at the earliest feasible time;

(d) to insure the orderly disposition and maximum economic use of surplus Government property;

(e) to insure all war contractors, small and large, speedy and equitable final settlement of claims under terminated war contracts and adequate interim financing until such final settlement;

(f) to use all practicable methods compatible with the foregoing objectives to prevent improper payments and to detect and prosecute fraud;

(g) to insure uniformity among Government agencies in basic policies and administration with respect to termination settlements, interim financing, surplus property disposition, and plant reconversion;

(h) to accomplish all of the foregoing in a manner to preserve and strengthen the American system of free competitive enterprise and prevent monopoly and monopolistic practices.

OFFICE OF DEMOBILIZATION

SEC. 102. (a) There is hereby established the Office of Demobilization, at the head of which shall be the Director of Demobilization. The Director shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive compensation at the rate of $15,000 per annum. The term of office of the Director shall be 2 years.

(b) The Director may, without regard to the civil-service laws, rules, and regulations and the Classification Act of 1923, as amended, employ and fix the compensation of such Deputy Directors and other officers and employees, and may make such expenditures for supplies, facilities, and services, as may be necessary to carry out the provisions of this Act.

SEC. 103. There is hereby established within the Office of Demobilization a National Demobilization Board, which shall be composed of seven full-time members. The Director shall act as Chairman of the Board, and shall appoint the members of the Board and fix their compensation and terms of office. The Board shall advise and assist the Director in the performance of his functions under this Act, and shall perform such other duties as the Director may prescribe. Any Deputy Director shall be eligible to serve as a member of the Board.

SEC. 104. The Director, in consultation with the Board, shall develop and coordinate unified programs, conforming to the objectives and policies prescribed in this Act, for dealing with the termination of war contracts and interim financing, the disposal of surplus property, and other problems relating to industrial reconversion and demobilization; and shall carry out the other provisions of this Act.

SEC. 105. (a) Until the termination of hostilities in the present war, as proclaimed by the President or by a concurrent resolution of the two Houses of Congress, the Office of Demobilization and the Director shall exercise all powers and authority and perform all functions under this Act under the supervision, direction, and control of the Office of War Mobilization, established by Executive Order Numbered 9347, dated May 27, 1943, and of the Director of War Mobilization. Thereafter the Office of Demobilization and the Director shall be subject only to the general direction and control of the President.

(b) The Director shall exercise his powers and authority to the fullest extent practicable through the personnel and facilities of contracting agencies and other established Government agencies. Subject to subsection (a), the Director may issue such directives on policy or operations to other Government agencies, and such regulations as may be necessary to carry out the provisions of this Act. Each such agency shall execute such directives, and conform to such regulations, and may make such further regulations as it deems necessary to carry out the provisions of this Act or any regulations of the Director.

(c) The Director shall consult with representatives of industry, large and small, labor, agriculture, and the heads of interested Government agencies, to the extent necessary to familiarize himself with the problems of all segments of the economy. From time to time, the Director and the Board shall hold public sessions to afford members of the general public reasonable opportunities to express their views concerning the formulation and operation of demobilization programs under this Act.

SURVEILLANCE BY CONGRESS

SEC. 106. (a) There is hereby established a Joint Congressional Committee on Demobilization (hereinafter called the "joint committee") to be composed of three Members of the Senate to be appointed by the President of the Senate, and three Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. In case of any vacancy in the membership of the joint committee, a new member shall be appointed in the same manner as an original appointment, but until the vacancy is filled, the remaining members shall perform the functions of the joint committee. The joint committee shall select a chairman and a vice chairman from among its members.

(b) The Director shall confer with the joint committee from time to time concerning matters of broad general policy, and shall report to the joint committee not less frequently than every thirty days with respect to general policy decisions made by him. The joint committee, any of its members, or any person designated by it for such purpose, may attend any meetings of the Board.

(c) The expenses of the joint committee under this section shall be paid out of the contingent funds of the Senate and House of Representatives, one-half to be disbursed by the Secretary of the Senate and one-half to be disbursed by the Clerk of the House of Representatives, upon vouchers signed by the chairman.

REPORTS TO THE CONGRESS

SEC. 107. (a) In January, April, July, and October of each year, the Director shall submit to the Senate and House of Representatives a quarterly report on the exercise of his duties and authority under this Act, the status of surplus property disposal, contract terminations, termination settlements, interim financing, and such other pertinent information on the administration of this Act as will enable the Congress to evaluate its administration and the need for amendments and related legislation.

(b) The Attorney General is directed to make surveys for the purpose of determining any factors which may tend to eliminate competition, create or strengthen monopolies, injure small business, or otherwise promote undue concentration of economic power during and after the period of reconversion. The Attorney General shall submit to the Congress within ninety days after the approval of this Act, and as such times thereafter as he deems desirable, reports setting forth the results of such surveys and making recommendations for the enactment of legislation concerning methods, plans, and procedures designed to stimulate and strengthen the system of private competitive enterprise.

TITLE II—DISPOSITION OF SURPLUS WAR PROPERTY

BASIC POLICY

SEC. 201. It is the policy of the Government to provide—

(a) for expeditious removal from the plant of any war contractor upon the termination of any war contract, of all materials allocable to such terminated war contract, for which the Government is responsible;

(b) for handling and disposing of surplus Government property so as to preserve and strengthen the American system of free competitive enterprise, to promote full employment, and to prevent monopoly.

FORMULATION OF PROGRAMS

SEC. 202. In order to carry out these policies the Director shall—

(a) formulate a complete program (1) for converting to peacetime production, as rapidly as possible after the end of hostilities, any Government-owned plants which will not be needed for national defense and are capable of use for peacetime production, and (2) for facilitating the most economic use or disposition of Government-owned plants which are not needed for national defense but are not capable of use for peacetime production;

(b) formulate a complete program for the handling, storage, control, and disposition, in accordance with this Act, of all contractor-owned materials for which the Government will be responsible upon the termination of war contracts;

(c) cause a complete survey to be made of all Government property and to gather such information with reference to inventories in the hands of private industry to provide information necessary for the formulation of such programs.

SURPLUS PROPERTY AGENCY

SEC. 203. The Director may designate one or more Government agencies to take charge of the handling, storage, control, and disposition of materials and surplus Government property in accordance with this title and may delegate to such agency or agencies some or all of the authority and discretion conferred upon him under this title and title IV of this Act.

DAMAGED PAGE(S)

REMOVAL OF MATERIALS ON TERMINATION

SEC. 204. (a) Subject to regulations of the Director, each contracting agency shall provide—

(1) for the submission by the war contractor to the contracting agency of statements, in such form and detail as it may prescribe showing the materials allocable to a terminated war contract for which the Government is responsible;

(2) for the removal of such materials by the Government within thirty days after the submission of such statements or within such longer period as the war contractor may agree;

(3) for the removal and storage of such materials by the war contractor at the risk and expense of the Government upon its failure so to remove them.

(b) No termination settlement shall be postponed or delayed for the purpose of disposing of materials allocable to any terminated war contract for which the Government is responsible.

(c) In order to facilitate their prompt removal and orderly disposition, the Director is authorized, subject to section 207, to take title to and possession of any materials of any war contractor, which are allocable to any terminated war contract and for which the Government is responsible, or to regulate the dispostion of such materials.

(d) Where Government-owned machinery, tools, equipment, or other property have been installed in any privately owned plant for the performance of one or more war contracts, the Government agency responsible shall promptly remove such property from such plant upon termination or completion of such war contracts, unless arrangements have previously been made for their retention by the war contractor.

DISPOSITION OF SURPLUS PROPERTY

SEC. 205. (a) Subject to regulations of the Director, each Government agency shall determine what property in its possession and control is surplus to its needs and responsibilities and shall promptly report all such surplus property to the Director. The War Department, Navy Department, and Maritime Commission, respectively, shall have sole and exclusive authority to determine what property in their possession and control is surplus to their needs and responsibilities, but the Director may determine that any property in the possession or control of any other Government agency is surplus to its needs and responsibilities.

(b) Subject to the provisions of this Act, the Director may dispose of any surplus property acquired by him or reported to him, by sale, exchange, lease, transfer, or other disposition, upon such terms and conditions as he deems proper, and may prescribe regulations to govern the disposition of such surplus property by other Government agencies.

SEC. 206. The following principles shall govern the disposition of surplus property under this Act:

(a) No property reported as surplus by any Government agency shall be disposed of to the public until it has been determined, under regulations of the Director, that such property is not needed by any other Government agency.

(b) Surplus materials shall be disposed of expeditiously and so as to use their economic value, but shall not be disposed of at times or in quantities such that the civilian market cannot absorb them without unduly disturbing the economy, or that factories producing them are forced to close down. Any surplus materials which cannot be disposed of domestically within a reasonable time without disrupting the economy shall be sold abroad, if this can be done without also unduly disrupting the domestic economy.

(c) So far as practicable, surplus materials shall be disposed of in quantities that will permit their acquisition by small purchasers.

(d) Surplus property shall not be sold to speculators and, so far as practicable, shall be distributed through regular distribution channels.

(e) Any surplus Government-owned plant suitable for peacetime production shall be disposed of unless its operation will result in production by the industry of substantially more goods than the market can absorb at reasonably competitive prices.

(f) No Government-owned plant shall be disposed of in a manner to creat monopoly, strengthen any existing monopoly, or otherwise foster monopoly. Such plants shall be disposed of so as to foster and encourage competitive enterprise and small business.

(g) Where compatible with the policies prescribed in this Act, surplus Government-owned plants shall be disposed of by sale; but where sale is not feasible, a plant may be leased for a period sufficiently long to determine the effect of its operation upon the economy.

(h) Any valid contract provision covering any Government property shall be respected in the disposition of such property.

(i) No Government agency shall dispose of any Government-owned plants for the production of aircraft, synthetic rubber, aluminum, magnesium, or steel, or any Government-owned shipyard or pipe line, unless such disposition is required by a valid contract provision in effect upon the enactment of this Act. The Director shall prepare a study of such plants and facilities and report to Congress his recommendation for their disposal.

(j) No surplus Government-owned plant or other surplus property shall be destroyed without a prior determination by two-thirds vote of the Board concurred in by the Director (1) that the plant or property is of no value or (2) that the destruction of the plant or property is required in order to avoid substantial injury to the industry or industries concerned. Any surplus property shall be reduced to scrap or disposed of as scrap only in accordance with regulations of the Director.

SEC.207. Nothing in this Act shall limit or affect the authority of the War Department, Navy Department, or Maritime Commission, respectively, to take over any materials allocable to any of their terminated war contracts or to dispose of such materials for the purpose of war production, or to authorize any war contractor to retain or dispose of such materials for the purpose of war prduction.

SEC. 208. The acquisition of materials under this Act by any Government agency shall not be subject to the provisions of section 3709 of the Revised Statutes or of any other law or regulation requiring advertisement or competitive bidding in connection with the acquisition of supplies or other property by Government agencies.

TITLE III—WAR CONTRACT TERMINATIONS

ADVANCE NOTICE

SEC. 301 (a) In order to facilitate the efficient use of materials, manpower, and facilities for war and civilian purposes, it is the policy of the Government to provide war contractors with notice of termination of their war contracts as far in advance of the cessation of work thereunder as is feasible and consistent with the national security.

(b) To carry out this policy, subject to regulations of the Director, each contracting agency shall—

(1) provide war contractors, to the fullest extent feasible, with notice of termination of any war contract at least thirty days in advance of the cessation of work thereunder;

(2) permit the completion of work in process under a terminated contract wherever such completion will result in a saving to the Government;

(3) permit the continuation of work under a terminated contract for the purpose of avoiding injury to plant and material; and

(4) protect war contractors against any additional costs and expenses resulting from any failure of the contracting agency to give notice of termination at least thirty days in advance of the cessation of work under the terminated contract.

(c) The Director shall have no authority under this Act to regulate or control the classes of contracts to be terminated by the contracting agencies, but shall consult and advise with the contracting agencies with a view to coordinating their procurement and termination programs, pooling of their requirements, working out methods and plans for cut-backs in production without termination, and assisting in planning the procurement and termination programs to best effectuate the policy of this Act.

SETTLEMENT OF TERMINATION CLAIMS

SEC. 302. (a) It is the policy of the Government to insure to every war contractor fair compensation for the termination of any war contract, including reasonable expenses incident to termination and settlement, reasonable expenses of removing and storing materials, and such allowance for profit on the work done on the uncompleted part of the contract as is reasonable under the circumstances, plus interest on the termination claim in accordance with subsection (c) of this section. Where any war contract does not provide for such fair compensation at the time of its termination, the contracting agency, subject to regulations of the Director, shall amend such war contract by agreement with the war contractor, or shall authorize, approve, or ratify an amendment of such war contract by the parties thereto, to provide for such fair compensation.

(b) Subject to regulations of the Director, any contracting agency may settle any termination claim under any war contract by agreement with the war contractor or by determination of the amount due on the claim without such agreement, or by any combination of these methods. Where any such settlement is made by agreement, it shall be final and conclusive and shall not be reopened, annulled, modified, set aside, or disregarded by any officer, employee, or agent of the United States, or in any suit, action, or proceeding, except (1) to the extent otherwise provided by the terms of the settlement; (2) for fraud; (3) upon renegotiation to eliminate excessive profits under the Renegotiation Act, unless exempt or exempted thereunder; or (4) by mutual agreement. Where any such settlement is made by determination without agreement, it shall likewise be final and conclusive to the same extent, unless the war contractor appeals, submits to arbitration, or brings suit in accordance with section 307 of this Act.

(c) Each contracting agency shall allow and pay interest on the unpaid balance of any termination claim under a prime contract at the rate of 3 per centum per annum for the period beginning sixty days after the date of filing of the claim, in substantially the form prescribed under this Act, and ending with the date of final payment, except that (1) if the contractor unreasonably delays the settlement of his claim, payment of interest shall be suspended for the period of such delay, and (2) if interest on any advance payment or loan, made or guaranteed by the Government, has been waived for the benefit of the contractor during the period after termination, the amount of interest so waived shall be deducted from the interest otherwise payable hereunder. In approving, ratifying, authorizing, or making termination settlements with subcontractors, each contracting agency shall allow interest on the termination claim of the subcontractor on the same basis applicable to a prime contractor. The Director may prescribe regulations to govern the computation of interest under this subsection.

SEC. 303. (a) The Director, by regulation, shall prescribe policies to govern the settlement of termination claims. Subject to regulations of the Director, each contracting agency shall establish methods, suitable to the conditions of various classes of war contractors, for determining fair compensation for the termination of war contracts on the basis of actual, standard, average, or estimated costs, or of a percentage of the contract price based on the percentage of completion of work under the terminated contract, or on any other basis, as it deems appropriate.

(b) Where, in connection with the settlement of his termination claim by a contracting agency, any war contractor makes settlements of the termination claims of his subcontractors, the contracting agency shall limit its review of such settlements with subcontractors to the minimum amount compatible with the public interest. Subject to regulations of the Director, any contracting agency (1) may approve, ratify, and authorize such settlements with subcontractors upon such evidence, terms, and conditions as it deems proper; (2) shall vary the scope and intensity of its review of such settlements according to the reliability of the war contractor, the size, number, and complexity of such claims, and other relevant factors; and (3) shall authorize war contractors to make such settlements with subcontractors without review by the contracting agency, whenever the reliability of the war contractor, the amount or nature of the claims, or other reasons appear to justify such action. The Director shall prescribe policies and standards to govern the contracting agencies in approving, ratifying, and authorizing such settlements in order to insure that their review of such settlements for these purposes is limited or omitted to the maximum extent compatible with the public interest. Any such settlement of a subcontract approved, ratified, or authorized by a contracting agency shall be conclusive and binding upon the United States to the same extent as a settlement under subsection (b)

of section 302 of this Act, and the war contractor making it shall not be liable thereon except for his own fraud.

(c) Subject to regulations of the Director, any contracting agency shall exercise supervision or control over payments to prime contractors on account of termination claims of subcontractors to such extent and in such manner as it deems necessary or desirable to insure the receipt of the benefit of such payments by the subcontractors.

(d) The Director, by regulations, shall prescribe policies and methods for the settlement by any contracting agency of some or all of the termination claims of a war contractor under contract with one or more (1) bureaus or divisions within a contracting agency, (2) contracting agencies, or (3) prime contractors and subcontractors, to the extent he deems such action necessary or desirable for expeditious and equitable settlement of such claims. The Director may assign any war contractor to a contracting agency for such settlement.

(e) Subject to regulations of the Director, any contracting agency may settle directly termination claims of subcontractors to the extent that it deems such action necessary or desirable for the expeditious and equitable settlement of such claims. In making such termination settlements any contracting agency may discharge the claim of the subcontractor by payment or may purchase such claim, and may agree to assume, or indemnify the subcontractor against, any claims by any person in connection with such claim or the termination settlement.

(f) Whenever the insolvency or bankruptcy of a war contractor, or termination of his war contract for default deprives his subcontractor of fair compensation for the termination of a subcontract, the contracting agency concerned may make such additional payment to such subcontractor as is necessary to provide such fair compensation. The Director shall prescribe standards, terms, and conditions to govern the exercise of this authority, and may direct such payments in such classes of cases as he deems proper.

INTERIM FINANCING

SEC. 304. (a) It is the policy of the Government to insure adequate interim financing, within thirty days after application therefor, to every war contractor having a termination claim or claims, pending their settlement.

(b) In order to carry out this policy, the Director, by regulations, shall prescribe methods for providing to any war contractor during the period between termination and settlement of one or more war contracts—

(1) interim financing under this Act representing not less than 90 per centum of the amount of his termination claim or claims, after deducting all liabilities to subcontractors and such advances, partial payments, and loans, previously made or guaranteed by the Government, as are available to such war contractor upon substantially the same terms and conditions as interim financing under this section;

(2) such additional interim financing as the Director deems necessary or desirable.

(c) The Director, by regulations, shall prescribe (1) the types of estimates, certificates, or other evidence to be required to support such interim financing; (2) the terms and conditions upon which such interim financing shall be made; (3) the classes of cases in which such interim financing shall be refused; and (4) such methods of supervision and control over such interim financing as he deems necessary or desirable to assure adequate and speedy interim financing to subcontractors of the war contractor.

(d) Whenever the amount of the termination claim or claims as stated by any war contractor for the purpose of obtaining interim financing under this section exceeds the amount finally determined to be due on such claim or claims, and the war contractor thereby obtains interim financing in excess of the amount he would otherwise have obtained, the war contractor shall be liable to the United States for a penalty on such excess interim financing. The contracting agency shall determine the amount of such excess interim financing, subject to regulations of the Director. The penalty shall be computed at the rate of 12 per centum per annum and for the period from the date such excess interim financing is received to the date on which such excess is repaid or extinguished. The obligation to pay such penalty and to repay any interim financing under this section shall constitute a debt due to the United States within the meaning of Revised Statutes, section 3466 (31 U. S. C., sec. 191).

(e) Subject to regulations of the Director, each contracting agency shall allow advance payments, previously authorized in connection with the performance of a war contract, to be used for expenses related to the termination settlement of such contract, to such extent and upon such terms as it deems appropriate.

(f) Subject to regulations of the Director, no interim financing made by any contracting agency under this Act shall extend beyond the settlement of the termination claim or claims of the war contractor involved, and such period thereafter as the contracting agency deems necessary for the liquidation of such interim financing in an orderly manner.

SEC. 305. (a) Subject to regulations of the Director, any contracting agency may make partial payments to any war contractor on account of any termination claim or claims, and may authorize, approve, or ratify any such partial payments by any war contractor to his subcontractors.

(b) Where any partial payment is made to any war contractor by any contracting agency or by another war contractor under this section, the provisions of subsection (d) of section 304 shall apply to such payment. Any excess payment shall be treated as a loan from the Government to the war contractor receiving it, and shall be payable upon demand. Where the partial payment was made by a war contractor and authorized, approved, or ratified by the Government, the war contractor making it shall not be liable for any excess payment in the absence of fraud on his part and shall receive payment or credit from the Government for the amount of such excess payment.

SEC. 306. (a) Subject to regulations of the Director, any contracting agency is authorized—

(1) to enter into contracts with any Federal Reserve bank, or other public or private financing institution, guaranteeing such financing institution against loss of principal or interest on loans, discounts, or advances or on commitments in connection therewith, which such financing institution may make to any war contractor or to any person who is or has been engaged in performing any operation deemed by such contracting agency to be connected with or related to war production, for the purpose of financing such war contractor or other person in connection with the termination of one or more such war contracts or operations;

(2) to make, enter into contracts to make, or to participate with any Government agency, any Federal Reserve bank or private financing institution in making loans, discounts, or advances, or commitments in connection therewith, for the purpose of financing any such war contractor or other person in connection with the termination of such war contracts or operations.

(b) Subject to regulations of the Director, any such loan, discount, advance, guaranty, or commitment in connection therewith shall be secured, if the contracting agency concerned deems it reasonably practicable, by either assignment of, or covenants to assign, the rights of such war contractor or other person in connection with the termination of such war contracts or operations, or in such other manner as the contracting agency may prescribe.

(c) Subject to such regulations as the Board of Governors of the Federal Reserve System may prescribe with the approval of the Director, any Federal Reserve bank is authorized to act, on behalf of the contracting agencies, as fiscal agent of the United States in carrying out the purposes of this Act.

(d) This section shall not limit or affect any authority of any contracting agency, under any other statute, to make loans, discounts, or advances, or commitments in connection therewith or guarantees thereof.

APPEAL

SEC. 307. (a) Whenever any war contractor has submitted a termination claim, in substantially the form prescribed under this Act, to the contracting agency responsible for settling it, and such claim has not been settled by agreement with the contracting agency, or only a part of such claim has been so settled, the contracting agency shall prepare written findings of the amount due on such claim or the unsettled part thereof, and shall deliver a copy of the findings to the war contractor within sixty days from the date of a demand for such findings by the war contractor.

(b) Whenever any war contractor is aggrieved by the findings of a contracting agency or by its failure to make such findings in accordance with subsection (a) of this section, he may, at his election—

(1) appeal to the Appeal Board or an umpire in accordance with subsection (d) of this section; or

(2) submit such claim or such part thereof, to arbitration, in accordance with subsection (e) of this section; or

(3) bring suit against the United States for such claim or such part thereof, in the Court of Claims or in a United States district court, in accordance with subsection (20) of section 24 of the Judicial Code (28 U. S. C. 41 (20)).

(c) Any proceeding under subsection (b) of this section shall be governed by the following conditions:

(1) A war contractor shall not be required to appeal from such findings within the contracting agency concerned before proceeding under subsection (b) of this section, but may do so in his discretion.

(2) If a war contractor does not initiate proceedings in accordance with subsection (b) of this section within ninety days after delivery to him of the findings by the contracting agency, or in case of failure to deliver such findings, within one year after his demand therefor, he shall be precluded thereafter from initiating any proceedings in accordance with subsection (b) of this section, and the findings of the contracting agency shall be final and conclusive, or if no findings were made, he shall be deemed to have waived such termination claim.

(3) Notwithstanding any contrary provision in any war contract, the Appeal Board, umpire, arbitrators, or court shall not be bound by the findings of the contracting agency, but shall treat such findings as prima facie correct, and the burden shall be on the war contractor to establish that the amount due on his claim exceeds the amount allowed by the contracting agency. The Appeal Board, umpire, arbitrators, or court may increase or decrease the amount allowed by the contracting agency.

(4) When a war contractor has initiated such proceedings by one method under subsection (b) of this section, he shall be precluded from initiating proceedings by any other method thereunder.

(5) Any such proceedings shall not affect the authority of the contracting agency concerned to make a settlement of the termination claim or any part thereof, by agreement with the war contractor at any time before such proceedings are concluded.

(d) (1) The Director shall appoint an Appeal Board composed of not less than three and not more than nine members, to sit in the city of Washington, and one or more umpires to sit in each judicial district, to hear appeals under this section. The Board may sit in sections of not less than three members. The Director shall designate the members of the Appeal Board and the umpires, and shall fix their term of office and compensation.

(2) The Director shall prescribe the practice and procedure to govern proceedings before the Appeal Board and the umpires, or may authorize the Appeal Board to prescribe such practice and procedure. The Appeal Board and any umpire shall have power to compel the attendance of witnesses and the production of evidence in accordance with regulations of the Director. Subject to the direction of the Director, the Appeal Board shall supervise the proceedings of the umpires, but shall have no power to review their decisions or refer to them cases filed with the Board. The decision of the Appeal Board or of any section of the Board, or of an umpire, shall be final and shall not be subject to review by any court or other agency.

(e) When a termination claim is submitted to arbitration in accordance with this section, the arbitration proceeding shall be governed by the United States Arbitration Act to the same extent as if authorized by an effective agreement in writing between the Government and the war contractor for such arbitration upon the conditions specified in subsection (c) of this section.

(f) Whenever any dispute exists between any war contractor and a subcontractor regarding any termination claim, either of them, by agreement with the other, may submit the dispute—

(1) to the Appeal Board or an umpire in accordance with subsection (d) of this section;

(2) to a contracting agency for mediation or arbitration in accordance with regulations which shall be prescribed by the Director.

(g) The Director shall prescribe regulations to carry out the provisions of this section.

COURT OF CLAIMS

SEC. 308. (a) For the purpose of expediting the adjudication of termination claims, the Court of Claims is authorized to appoint not more than twenty commissioners in addition to those provided for by the Act of February 24, 1925 (ch. 301, 43 Stat. 964), as amended by the Act of June 23, 1930 (ch. 573, 46 Stat. 799), and the provisions of said Acts shall apply to such additional commissioners in all respects as if they had been appointed thereunder without limitation as to nature of duties which they may be called upon to perform.

(b) The Attorney General, under such rules as the Court of Claims shall prescribe, may cause any and all persons with legal capacity to sue and be sued, wherever located, actually to be notified, or on specific order of the court, to be notified by publication, and if within the jurisdiction of the United States, at the discretion of the Attorney General, to be served with subpena, to appear as a party or parties in any suit or proceeding of any nature whatsoever pending in said court and to assert and defend their interests, if any, in such suits or proceedings, within such period of time prior to judgment as the Court of Claims shall prescribe. Upon failure so to appear, any and all claims or interests in claims of any such person against the United States, in respect of the subject matter of such suit or proceeding, shall forever be barred and the court shall have jurisdiction to enter judgment pro confesso upon any claim or contingent claim asserted on behalf of the United States against any party who, having been duly served with subpena, fails to respond thereto, to the same extent and with like effect as if such party had appeared and had admitted the truth of all allegations made on behalf of the United States. Upon appearance by any party pursuant to any such notice or subpena, the case as to such party shall, for all purposes, be treated as if an independent proceeding had been instituted by such party pursuant to section 145 of the Judicial Code, as amended, and as if such independent proceeding had then been consolidated, for purposes of trial and determination, with the case in respect of which the notice or subpena was issued, except that the United States shall not be heard upon any counterclaims, claims for damages or other demands whatsoever against such party, other than claims and contingent claims for the recovery of money hereafter paid by the United States in respect of the transaction or matter which constitutes the subject matter of such case, unless and until such party shall assert therein a claim, or an interest in a claim, against the United States, and the Court of Claims shall have jurisdiction to adjudicate, as between any and all adverse claimants, their respective several interests in any matter in suit and to award several judgments in accordance therewith.

(c) The jurisdiction of the Court of Claims shall not be affected by this Act except to the extent necessary to give effect to it, and no party shall recover judgment on any claim, or on any interest in any claim, in said court which such party would not have had a right to assert if this section had not been enacted.

PERSONAL FINANCIAL LIABILITY

SEC. 309. (a) Whenever any payment is made from Government funds to any war contractor or other person as a partial or final payment of the amount due on any termination claim or pursuant to any loan, guaranty, or agreement for the purchase of any loan entered into by the Government, no officer or other Government agent authorizing or approving such payment or settlement, or certifying the voucher for such payment, or making the payment in accordance with a duly certified voucher, shall be personally liable for such payment in the absence of fraud or bad faith on his part. In settling the accounts of any disbursing officer the General Accounting Office shall allow any such disbursements made by him notwithstanding any other provisions of law.

(b) For the purpose of making termination settlements or interim financing any Government agency is authorized, subject to any regulations prescribed by the Director, to rely upon such certificates of war contractors as it deems proper and to permit war contractors and other persons to rely upon such certificates without financial liability in the absence of fraud on their part.

THE GENERAL ACCOUNTING OFFICE

SEC. 310. The General Accounting Office is authorized to examine all records of any contracting agency relating to the settlement of any termination claim after the final settlement of such claim. Any other provision of law notwithstanding, the function of the General Accounting Office with respect to any termination settlement made, authorized, ratified, or approved by a contracting agency shall be confined to an examination of the records of the contracting agency for the purpose of determining (1) whether the settlement payments to the war contractor were made in accordance with the terms of settlement, and (2) whether such records or other information warrant a reasonable belief that the settlement was induced by fraud. Whenever the General Accounting Office believes that any settlement was induced by fraud, the Comptroller General of the United States shall report all of the facts relating thereto to the Congress, to the Director, to the Department of Justice, and to the contracting agency concerned, but shall not suspend or withhold, or direct, or require any contracting agency to suspend or withhold, by set-off or otherwise, any amounts owing to the war contractor by the United States under such settlement or otherwise and shall not suspend credit to any disbursing officer for any disbursements made by him under such settlement. In any such case the contracting agency on its own initiative may, or upon order of the Director shall, take such action as it deems appropriate to recover or withhold payments to such war contractor.

DEFECTIVE, INFORMAL, AND QUASI CONTRACTS

SEC. 311. (a) Where any person has arranged to furnish or furnished to a contracting agency or to a war contractor any materials, services, or facilities related to the prosecution of the war, relying in good faith upon the apparent authority of an officer or agent of a contracting agency, a letter of intent, written or oral instructions, or any other request to proceed from a contracting agency, the contracting agency shall pay such person fair compensation therefor subject to regulations of the Director.

(b) Subject to regulations of the Director, whenever any formal or technical defect or omission in any prime contract, or in any grant of authority to an officer or agent of a contracting agency who ordered any materials, services, and facilities might invalidate the contract or commitment, the contracting agency (1) shall not take advantage of such defect or omission; (2) shall amend, confirm, or ratify such contract or commitment without consideration in order to cure such defect or omission; and (3) shall make a fair settlement of any obligation thereby created or incurred by such agency whether expressed or implied, in fact or in law, or in the nature of an implied or quasi contract.

(c) Where a contracting agency fails to agree on a settlement of any claim asserted under this section, the dispute shall be subject to the provisions of section 307 of this Act.

(d) The Director shall require each contracting agency to formalize all such obligations and commitments within such period as the Director deems appropriate.

TITLE IV—GENERAL PROVISIONS

RECORDS, FORMS, AND REPORTS

SEC. 401. (a) The Director shall establish policies for such supervision and review within the contracting agencies of disposition of property, termination settlements, and interim financing as he deems necessary and appropriate to prevent and detect fraud and to insure uniformity in administration. For this purpose he shall prescribe the records to be prepared by the contracting agencies and by war contractors or purchasers in connection with such disposition, settlements, and interim financing. He shall seek to reduce the amount of record keeping, reporting, and accounting in connection with the disposition of property, the settlement of termination claims, and interim financing to the minimum compatible with the reasonable protection of the public interest. Subject to regulations of the Director, each contracting agency shall prescribe forms for use by war contractors in connection with disposition of property, termination settlements, and interim financing to the extent it deems necessary and feasible.

(b) The Director shall require the Government agencies performing functions under this Act to prepare such information and reports regarding disposition of property, terminations of war contracts, settlements of termination claims, and interim financing, as he deems necessary to assist him in appraising their operations or to assist him or other Government agencies in performing their functions under this Act, and may prescribe the terms and conditions upon which such information and reports shall be made available to other Government agencies.

The Director may require any Government agency to furnish such information under its control as he deems necessary for the performance of his functions under this Act.

(c) The Director, by regulations, shall provide for making available to the War Production Board, the War Manpower Commission, and any other interested Government agency, such advance notice and other information on cutbacks in war production resulting from terminations or failures to renew or extend war contracts, as he deems necessary and appropriate.

(d) The Director shall report to the Department of Justice any information received by him indicating any fraudulent practices in connection with disposition of property, termination settlements, and interim financing, and may require the Department of Justice or any other Government agency to make such investigations as he deems necessary or desirable to detect fraud in connection therewith. Whenever he determines that the facilities of existing agencies are inadequate for that purpose, he may establish a unit in the Office of Demobilization to supplement and facilitate the work of existing agencies for that purpose.

PRESERVATION OF RECORDS; PROSECUTION OF FRAUD

SEC. 402. (a) Until five years after the termination of hostilities in the present war is proclaimed by the President, or five years after the final settlement of a war contract involving $5,000 or more, or after the making of any contract for the disposition of property, whichever is the later, except to the extent authorized by the Director, (1) no natural person shall willfully secrete, mutilate, obliterate, or destroy, or cause to be secreted, mutilated, obliterated, or destroyed, any records of a war contractor or purchaser which relate to the negotiation, award, performance, payment for, renegotiation, interim financing, or cancelation or other termination, of such war contract, or disposition of such property, and (2) no corporation shall fail to preserve all such records within its possession, but a corporation shall not be liable for the accidental nonnegligent loss or destruction of records The Director may prescribe regulations for the destruction of any such records upon such terms and conditions as he deems appropriate. Any war contractor or purchaser shall allow any officer or agent of any interested Government agency, the General Accounting Office, or any committee of Congress reasonable access to such records. As used in this subsection, the term "records" includes (but is not limited to) books, ledgers, checks and check stubs, pay-roll data, vouchers, memoranda, correspondence, inspection reports and certificates, and interoffice reports and communications. Upon conviction for violation of any of the provisions of this subsection, any corporation shall be fined not more than $50,000 and any natural person not more than $10,000 or imprisoned for not more than five years, or both.

(b) The first section of the Act of August 24, 1942 (56 Stat. 747; title 18, U. S. C., Supp. II, sec. 590a), is amended to read as follows:

"The running of any existing statute of limitations applicable to any offense against the laws of the United States (1) involving defrauding or attempts to defraud the United States or any agency thereof whether by conspiracy or not, and in any manner, or (2) committed in connection with the negotiation, procurement, award, performance, payment for, renegotiation, interim financing, or cancelation or other termination, of any contract, subcontract, or purchase order which is connected with or related to the prosecution of the present war, or the disposition of property, shall be suspended until five years after the termination of hostilities in the present war as proclaimed by the President, or five years after the final settlement of such contract, subcontract, or purchase order, whichever is the later. This section shall apply to acts, offenses, or transactions where the existing statute of limitations has not yet fully run, but it shall not apply to acts, offenses, or transactions which are already barred by provisions of existing law."

(c) (1) Every person who makes or causes to be made, or presents or causes to be presented to any officer, agent, or employee of any Government agency any claim, bill, receipt, voucher, statement, account, certificate, affidavit, or deposition, knowing the same to be false, fraudulent, or fictitious, or knowing the same to contain or to be based on any false, fraudulent, or fictitious statement or entry, or who shall cover up or conceal any material fact, or who shall use or engage in any other fraudulent trick, scheme, or device, for the purpose of securing or obtaining, or aiding to secure or obtain, for any person any benefit, payment, compensation, allowance, loan, advance, or emolument from the United States or any Government agency in connection with the termination, cancelation, settlement, payment, negotiation, renegotiation, performance, procurement, or award of a contract with the United States or with any other person, and every person who enters into an agreement, combination, or conspiracy so to do, shall forfeit and refund any such benefit, payment, compensation, allowance, loan, advance, or emolument received as a result thereof and shall in addition pay to the United States the sum of $2,000 for each such act, and double the amount of any damage which the United States may have sustained by reason thereof, together with the costs of suit.

(2) The several district courts of the United States, the District of Columbia, the several district courts of the Territories of the United States, within whose jurisdictional limits the person, or persons, doing or committing such act, or any one of them, resides or shall be found, shall, wheresoever such act may have been done or committed, have full power and jurisdiction to hear, try, and determine such suit, and such person or persons as are not inhabitants of or found within the district in which suit is brought may be brought in by order of the court to be served personally or by publication or in such other reasonable manner as the court may direct.

(d) The provisions of section 35–A of the Criminal Code (18 U. S. C., sec. 80) shall apply to any statement, representation, bill, receipt, voucher, roll, account, claim, certificate, affidavit, or deposition made or used or caused to be made or used for any purpose under this Act or under any regulations pursuant to this Act.

OTHER FUNCTIONS OF THE DIRECTOR

SEC. 403. In addition to his other functions under this Act, the Director shall—

(a) prepare a study to determine the extent to which it will be necessary to continue price controls, rationing and allocation of materials, with a view to relaxing those controls at the earliest possible time, and shall report his recommendations thereon to Congress as promptly as possible;

(b) promote the training of personnel for property disposal, for termination settlement and interim financing by contracting agencies, war contractors, and financing institutions;

(c) collaborate with the Smaller War Plants Corporation in protecting the interests of smaller war contractors in obtaining fair and expeditious termination settlements, interim financing, and other reconversion financing;

(d) promote decentralization of the administration of termination settlements and interim financing by fostering delegation of authority within contracting agencies and to war contractors, to the extent he deems necessary and feasible.

MISCELLANEOUS PROVISIONS

SEC. 404. (a) Subject to regulations of the Director, each contracting agency shall have authority (1) to make any contract necessary and appropriate to carry out the provisions of this Act, (2) to amend by agreement any existing contract, either before or after notice of its termination, on such terms and to such extent as it deems proper; and (3) in settling any termination claim, to agree to assume, or indemnify the war contractor against, any claims by any person in connection with such termination claims or settlement. This subsection shall not limit or affect in any way any authority of any contracting agency under the First War Powers Act, 1941, or under any other statute.

(b) The Director, by regulations, shall prescribe the amount and kind of evidence required to identify any person as a war contractor, or any contract, agreement, or purchase order as a war contract for any of the purposes of this Act. To the extent provided in such regulations, any determination, made in accordance with such regulations, that any person is a war contractor, or that any contract, agreement, or purchase order is a war contract, shall be final and conclusive for any of the purposes of this Act.

(c) There are hereby authorized to be appropriated such sums as may be necessary for administering the provisions of this Act.

(d) All policies and procedures relating to disposition of property, termination of war contracts, termination settlements, and interim financing, prescribed by the Director of War Mobilization or any contracting agency, and in effect upon the effective date of this Act, shall remain in full force and effect unless and until superseded by regulations prescribed by the Director in accordance

with this Act, or by the contracting agency with the approval of the Director.

(e) Nothing in this Act shall be deemed to impair or modify any war contract or any term or provision of any war contract, which is otherwise valid, without the consent of the war contractor involved.

USE OF APPROPRIATED FUNDS

SEC. 405. Any contracting agency is authorized—

(a) to use for the purposes authorized in this Act any funds which have heretofore been appropriated or allocated or which may hereafter be appropriated or allocated to it, or which are or may become available to it, for such purposes or for the purposes of war production or war procurement;

(b) to use any such funds appropriated, allocated, or available to it for expenditures for or in behalf of any other contracting agency or corporation for the purposes authorized in this Act;

(c) to determine by agreement, joint estimate, or any other method authorized by the Director, the part of any expenditure made pursuant to subsection (b) hereof to be paid by each contracting agency concerned and to make transfers of funds between such contracting agencies accordingly. Transfers of funds between appropriations carried upon the books of the Treasury shall be made by the Secretary of the Treasury in accordance with joint requests of the contracting agencies involved.

DELEGATION OF AUTHORITY

SEC. 406. (a) The Director may delegate any authority and discretion conferred upon him by this Act to Deputy Directors or the head of any Government agency, and may authorize successive redelegations of such authority and discretion, upon such terms and conditions as he may prescribe.

(b) Subject to any limitations imposed by the Director, the head of any Government agency may delegate any authority and discretion conferred upon him or his agency by or pursuant to this Act to any officer or employee of such agency or to any other Government agency, and may authorize successive redelegations of such authority, and discretion.

(c) Any two or more Government agencies may exercise jointly any authority and discretion conferred upon them individually by or pursuant to this Act.

(d) Nothing in this Act shall prevent the Director from exercising any authority conferred upon him by any other statute.

DEFINITIONS

SEC. 407. As used in this Act—

(a) The term "prime contract" means any contract, agreement, or purchase order entered into by a contracting agency and connected with or related to the prosecution of the war; and the term "prime contractor" means any holder of one or more prime contracts.

(b) The term "subcontract" means any contract, agreement, or purchase order connected with or related to the performance of any prime contract or of any other subcontract; and the term "subcontractor" means any holder of one or more subcontracts.

(c) The term "war contract" means a prime contract or a subcontract or both; and the term "war contractor" means any holder of one or more war contracts.

(d) The terms "termination", "terminate", and "terminated" mean the termination or cancelation, in whole or in part, or work under a prime contract for the convenience or at the option of the Government (except for default of the prime contractor) or of work under a subcontract for any reason except the default of the subcontractor.

(e) The term "material" includes any article, commodity, equipment, accessory, part, assembly, or product of any kind.

(f) The term "Government agency" means any executive department of the Government, or any administrative unit or subdivision thereof, any independent agency in the executive branch of the Government, and any corporation owned or controlled by the United States, and includes any contracting agency.

(g) The term "contracting agency" means any Government agency which has been or hereafter may be authorized to make contracts pursuant to section 201 of the First War Powes Act, 1941, and the Reconstruction Finance Corporation and its subsidiaries, and the Smaller War Plants Corporation.

(h) The term "termination claim" means any claim by a war contractor under a terminated war contract.

(i) The term "interim financing" includes advance or partial payments, loans, discounts, or advances or commitments in connection therewith, and guarantees of loans, discounts or advances or commitments in connection therewith and any other type of financing related to termination settlements.

(j) The term "Director" means the Director of Demobilization.

(k) The term "person" means any individual, corporation, partnership, firm, association, trust, estate, or other entity.

(l) The term "property" means any supplies, materials, equipment, facilities, plants, real estate and improvements, or other property owned by the United States or by any Government agency.

(m) The term "surplus property" means any property which has been determined to be surplus to the needs of the Government agency in possession or control of it, in accordance with title II of this Act; and the terms "surplus materials" and "surplus plants" mean any materials or plants owned by the United States or by any Government agency and so determined to be surplus property.

(n) The term "purchaser" means any person who acquires surplus property by purchase or by lease or in any other manner.

SHORT TITLE

SEC. 408. This Act may be cited as the "Industrial Demobilization Act of 1944".

[S. 1893, 78th Cong., 2d sess.]

A BILL To provide for the establishment of an office of War Mobilization and Adjustment, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—DEVELOPMENT AND EXECUTION OF WAR MOBILIZATION AND POST-WAR ADJUSTMENT PROGRAMS

SEC. 101. The Congress hereby declares that the objectives of this Act are—

(a) To achieve the necessary war production which is indispensable to the speediest victory through the maximum mobilization and utilization of the Nation's natural and industrial resources and of the manpower not in the armed forces, and through the wartime stabilization of the civilian economy;

(b) To insure that the great momentum of the war mobilization which is bringing victory to our arms will not be lost, but will be reconverted into a peacetime transition program providing for full production, full employment at adequate wages, and full consumption in a steadily expanding civilian economy with rising standards of living for all; and

(c) To provide for the development of a unified program to secure the foregoing objectives, and the necessary coordination of the activities of the Federal agencies engaged in or concerned with: Production, procurement, distribution, or transportation of military or civilian supplies, materials, and products; economic stabilization; war production cut-backs; settlement of claims under terminated war contracts; disposition of surplus war property; resumption and expansion of civilian goods production; the training and placement of returning servicemen and civilian workers in war and peacetime industry and agriculture; and other programs affecting war mobilization and peacetime production and employment.

SEC. 102. (a) There is hereby established the Office of War Mobilization and Adjustment (hereinafter called the Office), at the head of which shall be the Director of War Mobilization and Adjustment. The Director shall be appointed by the President, with the advice and consent of the Senate, and shall receive compensation at the rate of $15,000 per annum.

(b) There is hereby established in the Office a Bureau of Programs headed by a Chief, who shall be appointed by the President, with the advice and consent of the Senate, and shall receive compensation at the rate of $12,000 per annum.

(c) The following Administrations are hereby created within the Office of War Mobilization: The Surplus War Property Administration and the Retraining and Reemployment Administration. Each of these Administrations shall be headed by an Administrator, appointed by the President, with the advice and consent of the Senate; and each shall receive compensation at the rate of $12,000 per annum.

(d) The Director, the Chief of the Bureau of Programs, and the several Administrators, except as herein otherwise provided, may employ and fix the compensation and define the authority and duties of such officers and members, and may make such expenditures for supplies, facilities, and services as may be necessary to carry out the provisions of this Act. All appointments shall be made in accordance with the provisions of civil-service laws and regulations and Classification Act of 1923, as amended, except that expect technical and professional personnel may be employed without regard to these laws and regulations where deemed desirable by the Director, the Chief of the Bureau of Programs, or the several Administrators, as the case may be.

SEC. 103. (a) It shall be the function of the Director, subject to the direction and control of the President—

(1) to unify the programs and activities of Federal agencies engaged in or concerned with: Production, procurement, distribution, or transportation of military or civilian supplies, materials, and products; economics stabilization; war production cut-backs; settlement of claims under terminated war contracts; disposition of surplus war property; resumption and expansion of civilian goods production; the training and placement of returning servicemen and civilian workers in war and peacetime industry and agriculture; and other programs affecting war mobilization and peacetime production and employment; and

(2) to issue such directives on program, policy, and operations to the Federal agencies as may be necessary to carry out the programs developed and the policies established by the Office under this Act. It shall be the duty of all such agencies and departments to execute such directives, and to supply such data and make such progress reports to the Office as the Office may require.

(b) The Office may perform the functions, exercise the powers, authority, and discretion conferred on it by this Act through such officials and such agencies and in such manner as the Director may determine.

SEC. 104. It shall be the function of the Chief of the Program Bureau, subject to direction and control of the Director—

(1) to review the programs of the several Federal agencies which are subject to the direction of the Office and to recommend to the Director such modifications as are deemed necessary to assure fulfillment of the objectives of this Act;

(2) to make periodic progress reports to the Director which shall assess current performance on approved programs;

(3) to require Government agencies performing functions under this Act to prepare such data and reports as are necessary to permit the review of the programs and the making of the progress reports required in this section;

(4) to evaluate and report on current and projected public and private activities affecting war mobilization and peacetime full production and employment, and survey continuously the necessity for additional programs or legislation as will achieve the objectives of this Act. The surveys shall include (without being limited thereto) programs and measures for public works, housing, taxation, industrial and regional development, expansion of foreign trade, social security, and the maintenance of competitive enterprise; and

(5) to consult and cooperate with State and local governments, industrial, labor, agricultural, and other groups (national and local) concerning the fulfillment of the objectives of the Act.

(b) The Office shall transmit to the Senate and House of Representatives within three months after the approval of this Act and thereafter at intervals not exceeding three months a summary of the progress reports, program reviews, surveys, and legislative and other recommendations prepared by the Bureau.

SEC. 105 (a) There is hereby created within the Office a National Production-Employment Board (hereinafter called the Board) consisting of three representatives of industry, three representatives of labor, three representatives of agriculture, and three representatives of the consuming public, who shall be appointed by the President: *Provided*, That each member of the Board may designate an alternate to sit and act for him. The Board shall elect a chairman from among its own members and shall, by a majority vote of its members, determine its rules of procedure, except as otherwise defined by this Act, and the powers conferred on the Board by this Act may be exercised by a majority vote.

(b) It shall be the general function of the Board, and each member individually, to endeavor to secure maximum cooperation and participation of the American people in war mobilization and post-war adjustment, and to provide the Office with such advice and guidance as the members deem will promote the objectives of this Act. The Board and each individual member thereof shall have full access to all data in the Office bearing on the effectiveness and adequacy of War Mobilization and Post-War Adjustment.

(c) The Chief of the Bureau of Programs shall serve as the executive secretary of the Board. He shall prepare, under the direction of the Board, such reviews of programs, reports, and studies as the Board may request, and for these purposes shall exercise on behalf of the Board the full facilities of the Office and the powers conferred on the Office by this Act. The Board may make to the Congress, to the Director, the several administrators of the Office, and to other Federal officials performing functions subject to the direction of the Office, such recommendations relating to legislation, policy, and operations as it may deem necessary to fulfill the purposes of this Act. All such recommendations and all reports and studies issued by the Board shall be supplemented by such statements or comments as any individual member may wish included.

(d) The Director, the several administrators of the Office, the Chairman of the War Production Board, and such other Federal officials performing functions subject to direction by the Office as shall be designated by the Board, shall meet with it at least once a month and shall consult and advise with it on all basic policies and programs which are subject to direction by the Office;

(e) All Federal agencies performing functions subject to the jurisdiction of the Office shall, with respect to policies, programs, and operations affecting industrial segments or geographical areas, consult and advise with joint councils which shall be representative, in the particular area or industrial segment, of industry, large and small, labor, and wherever appropriate, agriculture. All such industrial segment or area joint councils shall be appointed by the Director, with the advice and consent of the Board.

(f) All appointments of members or alternates to the Board, and of members of the area and industry to the joint councils, may be made without regard to any of the provisions of law with respect to the appointment and compensation of employees of the United States. Members and alternates of the Board and of the joint advisory councils shall serve without remuneration, except for per diem allowances as shall be prescribed by the Director, not to exceed $25 each day spent in the actual performance of duty, plus necessary traveling and other expenses incurred while so engaged.

(g) The Office shall provide for the Board an adequate technical and clerical staff which shall serve under its immediate supervision. The Director shall appoint, with the advice and consent of the consumer representatives, a consumer's counsel who shall, together with such staff as he may need, serve under the supervision of the consumer representatives in providing the Board with full information on the effect of current and projected programs and policies on consumer interests.

TITLE II—WAR PRODUCTION CHANGES AND RECONVERSION

SEC. 201. Subject to the direction and control of the Office, the Chairman of the War Production Board shall—

(a) Review the military production programs of the several Federal procurement agencies for the purpose of coordinating such programs and synchronizing curtailments with the resumption of civilian goods production;

(b) Establish unified policies and programs for the expansion, transfer, and curtailment of military production and for the resumption and expansion of

civilian production covering specific products, firms, industry segments, and geographical areas;

(c) Develop programs for the curtailment of military production and industrial reconversion based upon assumed military developments on stated dates.

SEC. 202. The Chairman of the War Production Board, or the official to whom he shall delegate the authority and responsibilities set forth in section 201, shall advise and consult with a Production Program and Reconversion Committee, which shall consist of one representative each of the following: War Department, Navy Department, State Department, Maritime Commission, Foreign Economic Administration, War Manpower Commission, Office of Price Administration, Smaller War Plants Corporation, Office of Civilian Requirements, the vice chairman for Labor Production and Manpower Requirements, and such other representatives of such Federal agencies as the Chairman of the War Production Board may designate.

SEC. 203. In order to enable the War Production Board effectively to discharge its responsibilities under this title, each Federal procurement agency shall continuously survey its material and product requirements and shall report to the War Production Board as soon as practicable every projected change in its procurement program, including the award of new contracts and the modification, transfer, or termination of contracts previously awarded. The procurement agencies shall supply such other data as the War Production Board shall require for the purpose of this title. The procurement agencies shall maintain such records and make such reports to the War Production Board as the Board may require to appraise the compliance of the procurement agencies with the programs and policies established by the Board.

SEC. 204. In formulating programs and policies for war production and reconversion, the War Production Board and the Production Program and Reconversion Committee shall, so far as practicable, give effect to the following objectives:

(a) Necessary war production for our armed forces and those of our allies shall be expedited and maintained without impairment.

(b) Curtailments of war production shall be programed so as to permit the utilization without delay of the released manpower and facilities in the production of other war products or civilian goods.

(c) Resumption and expansion of production of specific civilian items shall, so far as practicable, be in the order of essentiality to the domestic civilian economy and to the needs of reconstruction abroad.

(d) Subject to the overriding requirements of war production, full consideration shall be given to the production and manpower resources of the industrial segments, geographic areas, and concerns affected by curtailment and reconversion programs. The small business contractor shall not be discriminated against in the termination of contracts because of slightly higher costs of production, nor shall small business concerns, if war contracts are not available to them, be prevented from entering civilian goods production fields merely because larger concerns in the same fields are still engaged in war production. Resumption of civilian goods programs shall give particular consideration to smaller business concerns, especially in those fields which have been most adversely affected by the necessities of war production.

SEC. 205. The Chairman of the War Production Board may establish special boards for the purpose of hearing appeals from decisions of the War Production Board with respect to production curtailment and reconversion on the grounds of discrimination.

TITLE III—DISPOSITION OF SURPLUS WAR PROPERTY

SEC. 301. It shall be the function of the Administrator of the Surplus War Property Administration (hereinafter in this title referred to as the Administrator and Administration, respectively), subject to the direction and control of the Director—

(a) To handle and dispose of surplus war property upon such terms as he shall deem necessary, subject to the provisions of this Act;

(b) To have general supervision and direction of the transfer of any surplus war property in the possession of any Government agency to any other Government agency;

(c) To assign surplus property for disposal by the fewest number of Federal agencies practicable and to centralize in one disposal agency responsibility for the disposal of all property of the same type or class;

(d) To prescribe regulations and issue directives necessary to provide, so far as practicable, for uniform and wide public notice concerning surplus property available for sale, and for uniform and adequate time intervals between notice and sale so that all interested purchasers, large and small, shall have a fair opportunity to buy; and

(e) To prescribe regulations and issue directives necessary to effectuate the provisions of this title; and no Government agency shall transfer or dispose of surplus war property in contravention thereof.

SEC. 302. The Administrator shall regularly advise and consult with a Surplus War Property Committee. The committee shall be composed of one representative each of the State Department, Treasury Department, War Department, Navy Department, Justice Department, Reconstruction Finance Corporation, Smaller War Plants Corporation, United States Maritime Commission, War Production Board, Office of Price Administration, Bureau of the Budget, War Food Administration, Federal Works Agency, Civil Aeronautics Board, and the Foreign Economic Administration.

SEC. 303. Each Government agency shall submit to the Administrator such information and reports with respect to surplus war property in such form and at such times as the Administrator shall direct. When requested by the Administrator, a Government agency shall execute such documents for the transfer of title or for any other purposes or take such steps as the Administrator shall determine to be necessary or proper to transfer or dispose of surplus war property or otherwise to carry out the provisions of the Act.

SEC. 304. In formulating regulations and directives governing the handling and disposition of surplus war property, the Administrator and Committee on Surplus War Property shall give effect to the following objectives:

(a) Aid maximum war production by facilitating the transfer of property which may be surplus in one Government agency to meet the requirements of other Government agencies;

(b) Promote full production and employment of labor and natural resources in all sections of the country;

(c) Aid small business concerns to achieve and maintain maximum production and to preserve and strengthen their competitive position in an economy of free enterprise;

(d) Aid ex-servicemen to establish and maintain their own small business enterprises;

(e) Avoid economic dislocations resulting from uncontrolled dumping of such surpluses;

(f) Discourage monopolistic practices and insure fair prices to the consumers;

(g) Sell such surpluses in such quantities and on such terms as will discourage disposals to speculators or for speculative purposes;

(h) Establish and develop foreign markets through the programed exports of such surpluses; and

(i) Obtain the highest return for the Government consistent with the foregoing objectives.

SEC. 305. The Administrator may perform the functions and exercise the powers, authority, and discretion conferred on the Administration by this Act by such officials and such agencies and in such manner as the Administrator, subject to the provisions of this Act, may determine. In carrying out the purposes of this Act, the Administration may utilize the services of any other Government agency.

SEC. 306. Each disposal agency, immediately upon assignment thereto of any surplus property and before undertaking disposal to the public, shall transmit detailed inventories thereof to the Bureau of the Budget, the Smaller War Plants Corporation, and the Foreign Economic Administration, which agencies shall have priority in acquiring such surplus for the purposes and in the order and manner following:

(a) The Bureau of the Budget shall have the right to acquire any surplus property for transfer to any Government agency which needs it. Such transfer shall be made upon such terms and with such charge to the appropriation of the transferee for the value thereof as the Bureau of the Budget shall prescribe in accordance with existing law.

(b) The Smaller War Plants Corporation, subject to the authority of the Director, shall have the right to acquire any surplus property for sale or other transfer to small business when in its judgment such acquisition is required to carry out the policy of the Act to preserve and strengthen the competitive position of small business.

(c) The Foreign Economic Administration shall have the right to acquire any surplus property in the United States for sale or other transfer abroad in such quantities as the head of the agency charged with the disposal of such property and the Foreign Economic Administration shall agree upon.

SEC. 307. The Administrator may prescribe regulations to provide for the disposition of surplus property to States, political subdivisions thereof, and tax-supported institutions as follows:

(a) Surplus property which has been acquired by the Federal Government for school, classroom, or other educational use may be transferred to the Office of Education in the Federal Security Administration for donation to tax-supported educational institutions.

(b) Surplus property for which the estimated cost of handling, storage, and sale would exceed the estimated proceeds of commercial sale, may be donated to States, political subdivisions thereof, or tax-supported institutions.

(c) Any surplus property may be sold or leased to States, political subdivisions thereof, or tax-supported institutions at discounts not to exceed 50 per centum of the sale or lease value thereof, as the case may be.

SEC. 308. (a) Whenever surplus property proposed for sale or other transfer to private interests shall comprise a plant or group of plants or other property representing an original cost to the Government of $1,000,000 or more, the Administrator, before consummating the sale or transfer shall cause to be published in the Federal Register the terms and other pertinent circumstances of the proposed sale or transfer and shall request the Attorney General to render an opinion in writing whether, in his judgment, the proposed sale or transfer will encourage monopoly or undue concentration of industry or commerce, or restrain competition substantially. If the Attorney General shall find that such proposed sale or transfer will encourage monopoly or undue concentration of industry or commerce, or restrain competition substantially, the Administrator shall not consummate the proposed transfer. If the Attorney General shall fail to render an opinion within thirty days of receipt of a request therefor (or within such additional period not to exceed sixty days which he may specifically request) the Administrator may proceed with the proposed sale or transfer on his own responsibility. The failure of the Attorney General to render an opinion shall not be construed as a bar to prosecution for violation of the antitrust laws.

(b) Every contract of sale (or other transfer) of the property referred to in subsection (a) shall contain suitable provisions prohibiting subsequent transfers within a period of three years next succeeding the effective date of the contract unless such subsequent transfer is approved by the Administrator. Before approving an application for subsequent transfer, the Administrator shall refer the matter to the Attorney General as required in subsection (a) of this section.

(c) Every contract for the sale, or lease for two years or more, of a plant shall be made upon the condition that the purchaser, lessee, or transferee, and their transferees, if any, shall maintain the plant in substantial operation and production for a period of two years next succeeding the effective date of the contract, and that upon breach of such condition, the Government may recover the plant upon return of the consideration due.

(d) Every agency engaged in the disposition of surplus property shall maintain in each of its disposal offices full records of its inventories of surplus property and of each of the disposal transactions negotiated by such office and shall make such records available for inspection by the public.

(e) At least ten days before advertising for bids or posting notice of sale or transfer by other means, every disposal agency shall notify the nearest regional office of the Smaller War Plants Corporation of the proposed terms of disposal specifying the minimum quantities on which bids or offers will be received and the credit terms, if any, for the purpose of permitting the Smaller War Plants Corporation to advise the disposal agency if, in its judgment, the proposed terms discriminate against small business purchasers.

SEC. 309. No option to purchase or otherwise acquire Government-owned property which is held by any person shall be honored except in strict conformity with the price and other terms of such option. In the event of failure validly to exercise such an option, the property shall be disposed of in accordance with the applicable provisions of this Act.

SEC. 310. No Government agency shall dispose of any Government-owned plant for the production of aircraft, aircraft parts, synthetic rubber, aluminum, magnesium, or steel, or any Government-owned ship, shipyard, or pipe line, which represents an original cost to the Government of $1,000,000 or more: *Provided*, That the Administrator may authorize the lease of such surplus property for a term not to exceed three years in accordance with the provisions of section 308. The Administrator shall prepare a report on the alternative means of disposal of such property and shall submit such report together with his recommendations to Congress.

SEC. 311. Except as may be otherwise provided by existing law, all proceeds from the sale or other disposition of surplus property under this Act shall be deposited and covered into the Treasury as miscellaneous receipts.

SEC. 312. The Administrator shall transmit to Congress in January, April, July, and October of each year a report of operations under this Act, including regulations, orders, and directives of the Administrator, and summaries of each disposal in which the property involved represented an original cost to the Government of $1,000,000 or more.

TITLE IV—RETRAINING AND REEMPLOYMENT OF WAR WORKERS AND RETURNING SERVICEMEN

SEC. 401. The Congress hereby declares that the objectives of this rule are—

(a) To facilitate the most effective mobilization and maximum utilization of the Nation's manpower in the prosecution of the war;

(b) To maintain maximum employment in the transition from war to peacetime production;

(c) To provide for the coordination of the demobilization of servicemen with employment opportunities under a policy of demobilizing servicemen as rapidly as the military situation permits;

(d) To provide necessary training of ex-servicemen and war workers; and

(e) To provide the necessary economic assistance to returning ex-servicemen and war workers in connection with transfer, training, and reemployment.

SEC. 402. It shall be the function of the Administrator of the Retraining and Reemployment Administration (hereinafter referred to as the Work Administrator), subject to the discretion and control of the Director, to establish a unified reemployment program covering recruitment, training, transfer, and placement of returning servicemen and workers in war ind civilian production. The reemployment program shall include provision for compiling full detail on declining and increasing employment opportunities (by industrial segments, geographic areas, and plants) resulting from curtailment in war production and resumption of civilian production; for placement of workers in appropriate employment; and for interim financing of workers, including returning servicemen, pending placement in accordance with the authority of this title. The Work Administrator shall prescribe regulations and issue directives to Federal agencies necessary to effectuate the objectives of this title and all such Federal agencies shall be governed by these.

SEC. 403. The Work Administrator shall consult and advise with a Committee on Retraining and Reemployment, consisting of one represenative from each of the following: Department of Labor, Veterans' Administration, War Manpower Commission (for the War Manpower Commission and the Federal Security Agency), War Production Board, Selective Service System, Civil Service Commission, War Department, Navy Department, and such other Federal agencies as the Work Administrator may designate.

SEC. 404. (a) The War Production Board and other agencies having data on production changes and employment opportunities shall furnish the Work Administrator full information on current and projected schedules of military and civilian production in such detail as the Work Administrator shall deem necessary.

(b) The Director of Selective Service, with the assistance of the War and Navy Departments, shall furnish data on current and projected rates of discharge of servicemen providing such details concerning the servicemen as the Work Administrator may deem necessary and is practicable for the Selective Service and the War and Navy Departments to furnish. It shall be the duty of the War and Navy Departments to anticipate so far as practicable, the forward programs of demobilization of servicemen, and to cooperate with the Director of the Selective Service System and the Work Administrator in furnishing full data on such demobilization.

SEC. 405. The Work Administrator may perform the functions and exercise the powers, authority, and discretion conferred on him by this Act through such officials and such agencies and in such manner as the Work Administrator, subject to the provisions of this Act, may determine. In carrying out the purposes of this Act, the Administration may utilize the services of any other Government agency.

SEC. 406. In order to facilitate the recruitment, training, transfer, and placement of workers and ex-servicemen, the Work Administrator is hereby authorized to pay the cost of transportation of workers and ex-servicemen, including transportation of dependents and household effects, from their last previous residence to new jobs, in accordance with such regulations as may be prescribed by the Work Administrator: *Provided*, That such transportation allowances shall not exceed the allowances provided for Government employees in the Standard Government Traveling Regulations, as approved by the President.

SEC. 407. (a) In order to give effect to the objectives of this title the Work Administrator is authorized to provide to any person vocational free education or training, of not more than six months of full-time study or its equivalent in part-time study.

(b) Every person, while he is receiving vocational education or training on a full-time basis, shall be entitled to receive a maintenance allowance at the rate of $50 a month if he has no dependent, $75 if he has one dependent, and $100 if he has two or more dependents. The Work Administrator may provide for maintenance allowances, under such conditions and in such amounts as may be prescribed by regulations, to servicemen and civilian workers receiving education or training on a part-time basis; but no such allowance shall be paid to any person receiving training on the job other than under an approved apprenticeship program.

(c) The Work Administrator shall from time to time make available information respecting the need for general education and for trained personnel in the various trades, crafts, and professions. He shall make educational and vocational guidance generally available.

SEC. 408. Section 2 of the Mustering-Out Payment Act of 1944 is amended to read as follows:

"SEC. 2. Mustering-out payment for persons eligible under section 1 shall be made in equal monthly installments. The first installment shall be paid at the time of final discharge or ultimate relief from active service, and the remaining installments shall be paid in successive months thereafter. Each installment shall be at the rate of $100 if the member of the armed forces has no dependent, $125 if he has one dependent, and $150 if he has two or more dependents. All persons shall be entitled to two installments plus an additional installment for each year of active service or major fraction thereof. Any person who has served outside the continental limits of the United States or in Alaska shall be entitled to a further additional installment."

SEC. 409. (a) Every unemployed person who qualifies under the provisions of section 410 of this Act shall, within 1 week after registration with a public employment office designated by the Work Administrator, be entitled to placement in a suitable job or shall be entitled to "interim placement benefits" whose payment shall be administered in accordance with section 410. Such benefits shall be at the rate of $20 for each week of total unemployment if such person has no dependent, $25 if he has one dependent, $30 if he has two dependents, or $35 if he has three or more dependents: *Provided*, That in the case of a person other than an ex-serviceman, the maximum benefit paid shall not exceed 80 percent of his regular weekly earnings, as defined by the Work Administrator; *Provided, further*, That any qualified person shall be entitled to reduced benefits for periods of partial unemployment in such amounts as the Work Administrator shall prescribe on the basis of the approximate proportion borne by such person's partial unemployment to total unemployment: *And provided further*, That no benfits for partial unemployment shall be paid in excess of an amount which when added to the person's earnings during the period of partial unemployment for which paid benefits on account of partial unemployment shall exceed eight-fifths of the benefits he would receive for total unemployment for such period.

(b) No payment for "interim placement benefits" shall be made under this title to any person for any period unless (1) he registers with and continues to report to a public employment office, or other agency designated in regulations of the Work Administrator, and (2) he is available for suitable work: *Provided, however*, That the conditions contained in (1) and (2) of this subsection shall not be applicable during periods of illness or disability.

(c) The Work Administrator shall by regulation prescribe disqualifications, in such cases and under such conditions as he finds will promote the purposes of this Act, for leaving suitable work voluntarily and without good cause, for failure to apply for suitable work, and for failure to accept suitable work when offered. No such disqualification shall be for a period of more than 5 weeks.

(d) No work shall be deemed suitable for the purposes of this section, and benefits shall not be denied under this Act to any otherwise qualified employee for refusing to accept work if—

(1) the position offered is vacant due directly to a strike, lock-out, or other labor dispute;

(2) the remuneration, hours, or other conditions of work offered are substantially less favorable to the employee than those prevailing for similar work in the locality, or the rate of rumuneration is less than the union wage rate, if any, for similar work in the locality;

(3) as a condition of being employed he would be required to join a company union or to resign from or refrain from joining any bona fide labor organization;

(4) acceptance of the work would require him to engage in activities in violation of law or which, by reason of their being in violation of reasonable requirements of the constitution, bylaws, or similar regulations of a bona fide labor organization of which he is a member, would subject him to expulsion from such labor organization; or

(5) acceptance of the work would subject him to loss of substantial seniority rights under any collective-bargaining agreement between a bona fide labor organization and any other employer.

(e) In determining whether or not any work is suitable for an employee for the purposes of this Act, the Work Administrator shall consider, in addition to such other factors as he deems relevant, (1) the current practice, recognized by management and labor with respect to such work; (2) the degree of risk involved to such employee's health, safety, and morals; (3) his physical fitness and prior training; (4) his experience and prior earnings; (5) his length of unemployment and prospects for securing work in his customary occupation; and (6) the distance of the available work from his residence and from his most recent work.

(f) For the purposes of this Act, no voluntary leaving of work shall be deemed to have been without good cause if the Work Administrator finds that such work would not have been suitable for the purposes of this section of this Act.

(g) No payment shall be made under this section to any person for any period for which he receives vocational education or training allowance under this title.

(h) Any officer or agency of an employer, or any employee representative, or any employee acting in his own behalf, or any person whether or not of the character hereinbefore defined, who shall willfully fail or refuse to make any report or furnish any information required by the Work Administrator in the administration of this title, or who shall knowingly make or aid in making or cause to be made any false or fraudulent statement or report when a statement or report is required to be made for the purposes of this title, or who shall knowingly make or aid in making or cause to be made any false or fraudulent statement or claim for the purpose of causing benefits or other payment to be made or not to be made under this title, shall be punished by a fine of not more than $10,000 or by imprisonment not exceeding one year, or both.

(i) Any person who violates any provision of this title, the punishment for which is not otherwise provided, shall be punished for each such violation by a fine of not more than $1,000 or by imprisonment not exceeding one year, or both.

SEC. 410. (a) The following shall be eligible for the "interim placement benefits" prescribed in section 409:

(1) Any ex-serviceman.

(2) Any person who within twelve months prior to his first application for such benefits was employed—

(i) ninety days in a Federal agency;

(ii) ninety days as an officer or member of the crew of a vessel on the navigable waters of the United States; or

(iii) one hundred and eighty days in agricultural labor.

(3) Any person who at the time of the first application is a "qualified employee" as defined in section 3 of the Railroad Unemployment Insurance Act as amended.

(4) Any person who at the time of first application for benefit would be eligible for unemployment compensation by virtue of his or her earnings under the laws of a State, in "covered employment," if all other qualifications were waived: *Provided, however*, That such State has arranged with the Work Administrator

to pay and administer the "interim placement benefits" prescribed in this title, either by contract, or through the provisions of State law or through such provision as the State or State unemployment compensation agency, may make effective as agent of the Federal Government. For purposes of this subsection "covered employment" shall include employment subject to the unemployment compensation law of such State, and, upon election by such State to administer, any or all of the following classes of employment:

(i) in establishments of less than eight persons not covered by a State unemployment compensation law,
(ii) In State and local governmental agencies,
(iii) in nonprofit organizations, and
(iv) in domestic work.

(5) Any person, in a State which has failed within six months after the enactment of this Act to make an arrangement in accordance wtih the preceding subsection, with the Work Administrator, and who within twelve months prior to his first application for such benefits had earned not less than $150 in employment covered by title II of the Social Security Act (providing old-age and survivors insurance benefits): *Provided*, That such person's benefits shall be subject to the reduction, in accordance with the regulations of the Work Administrator, on account of any unemployment compensation paid him or payable to him by a State agency for the same period of unemployment.

(b) Payments of "interim placement benefits" to persons in categories (1), (2), and (5) shall be made through such agencies as the Work Administrator shall designate, including any Federal agency and any State or State unemployment compensation agency, which has arranged to administer benefits to persons in category (4); payments to persons in category (3) shall be made through the Railroad Retirement Board; and payments to persons in category (4) shall be made through the respective States which have arranged with the Work Administrator to make such payments pursuant to section 410 (a).

(c) The Work Administrator shall from time to time certify to the Secretary of the Treasury for payment to such States or State unemployment compensation agencies as administer the payment of benefits under this title pursuant to this section, with respect to such periods as the payment of such benefits is so administered, advances, grants, or reimbursements, equal to all disbursements of benefits pursuant to this title, minus 50 per centum of the amount of unemployment benefits that would have been payable had this title not been enacted as determined under the unemployment compensation law of such State as of the date of the enactment of this Act.

The Railroad Retirement Board shall from time to time certify to the Secretary of the Treasury for payment to the railroad unemployment insurance accounts in the unemployment trust fund the amounts by which payments by it under this section exceed 50 per centum of the amounts which would have been payable under the provisions of the Railroad Unemployment Insurance Act in effect at the time that this Act was approved.

The Work Administrator shall certify from time to time for payment to a State or State unemployment compensation agency, or for credit to the Railroad Unemployment Insurance Administration fund such amounts as he determines (i) are equal to administrative expenses theretofore reasonably incurred by such State or the Railroad Retirement Board in the administration of any of the provisions of this title by arrangement with the Work Administrator, and (ii) have not been included in the basis of any previous certification under this paragraph.

All persons otherwise eligible in accordance with this title for "interim placement benefits" shall be eligible during the period beginning thirty days after the day of enactment of this Act until twenty-four months after the cessation of hostilities: *Provided*, That such benefits shall be available to a serviceman discharged from or relieved from service after the termination of hostilities for a period of twenty-four months following his discharge.

TITLE V—MISCELLANEOUS

SEC. 501. As used in this Act—

(a) "Government agency" means any executive department, independent establishment, agency, commission, board, bureau, division, administration, office, service, independent regulatory commission or board, and any Government-owned or Government-controlled corporation.

(b) "Surplus war property" and "surplus property" mean any property, real or personal, including but not limited to plants, facilities, equipment, machines, accessories, parts, assemblies, products, commodities, materials, and supplies in the possession of or controlled by any Government agency, whether new or used, in use or in storage, which are in excess of the needs of such agency or are not required for the performance of the duties and functions of such agency and which are determined, subject to the authority of the Office of War Mobilization, to be surplus by such agency.

(c) "Disposal agency" means any Government agency which has been assigned the operating function of disposing of surplus war property by the Administration.

(d) "Tax-supported institution" means any scientific, literary, educational, public health, or public welfare institution which is supported in whole or in part through the use of funds derived from taxation by the United States, the District of Columbia, or any State or any political subdivision thereof, any Territory or possession of the United States, or any political subdivision of any such Territory or possession.

(e) "Disposal" means sale, conditional sale, or lease, for cash, credit, or other property; donation; or any other transfer.

(f) "Ex-servicemen" shall include all persons who served in active duty in the military or naval forces of the United States on or after September 16, 1940, and has been relieved or discharged from such active duty on conditions other than dishonorable.

(g) The term "State" shall include the several States, the District of Columbia, and the Territories of Hawaii and Alaska.

SEC. 502. There are authorized to be appropriated such sums as may be necessary or appropriate to carry out the purposes and provisions of this Act.

SEC. 503. The provisions of this Act shall become effective immediately, unless otherwise provided in the Act, and unless otherwise provided shall be terminated twenty-four months after the cessation of hostilities.

SEC. 504. If any provision of this Act, or the application of such provision to any person or circumstance, is held invalid, the remainder of this Act or the application of such provision to persons or circumstances, other than those as which it is held invalid, shall not be affected thereby.

"SEC. 505. This Act may be cited as the 'War Mobilization Adjustment Act of 1944'."

The CHAIRMAN. Before we hear from Senator Murray, may I read a letter from Senator George to the committee?

(The letter referred to is as follows:)

UNITED STATES SENATE,
SPECIAL COMMITTEE ON POST-WAR ECONOMIC POLICY AND PLANNING,
June 8, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Senate Military Affairs Committee,
Washington, D. C.

DEAR SENATOR REYNOLDS: I understand that the Military Affairs Committee tomorrow expects to consider S. 1730 and S. 1893, which deal with substantially the same subjects.

As you know, the Post-war Committee has had extended hearings on the subject covered by both bills. It has just concluded a series of hearings on unemployment compensation.

The Post-war Committee will meet tomorrow—June 9—for the purpose of studying the testimony in reference to unemployment compensation and to study the various proposals that have been made with reference to amendments to the unmployment compensation act.

The so-called G. I. bill is now before the conferees and I hope that the conference report on that bill may be ready in the near future. I do not believe it is wise or possible to frame legislation on social security until the final form of that bill is known.

The Post-war Committee will also give study next week to a proposal of Mr. W. L. Clayton with reference to the form of surplus property disposal legislation. It also will consider certain suggestions that have been made in reference to the creation of an Office of Demobilization.

The Post-war Committee's study of all of these subjects should be complete in the very near future, and I hope it will be possible for the Military

Affairs Committee to defer any final consideration of these bills until it can give consideration to the studies of the Post-war Committee.

I recognize the urgent necessity of having legislation on these subjects and I feel very strongly that Congress should not take any extended recess until such legislation is passed, but I do not feel that the short additional time required for the Post-war Committee to complete its studies can be other than helpful.

Sincerely yours,

WALTER F. GEORGE, *Chairman.*

The CHAIRMAN. All right, Senator Murray.

(Discussion regarding the handling of S. 1730 and S. 1893.)

Senator MURRAY. Mr. Chairman, what Senator George says there is quite true. The subject of the proper legislation on the disposal of surplus property is very important and will require very considerable study yet before we can have a bill that should be presented to the Senate.

Mr. Clayton has suggested a bill, but his bill doesn't spell out the program at all, and would really constitute a sort of blank-check proposal for him to handle the problem of disposal of surplus property.

I think that we need a very carefully prepared bill on that, and for that reason I have left it out of S. 1730. I think that it should be separate legislation. The provisions in S. 1893, covering this same subject, I think are inadequate, and I feel it would be very unwise to adopt the provisions that are contained in S. 1893.

The same is true with reference to unemployment compensation. The George committee has been holding hearings on that and is holding a hearing today, at which time they intend, I think, to determine what their views will be on that subject. I think that is one of the most important parts of this legislation.

Now there are two bills, S. 1730 and S. 1893. S. 1730 was presented by Senator George and myself, and S. 1893 was presented by Senator Kilgore. Both bills are before our subcommittee and I think that we should delay having the subcommittee make a report to the full committee until Senator George concludes his meeting today and gives us some advice on what he thinks should be done.

The CHAIRMAN. Are there any comments by any of the members of this committee?

Senator GURNEY. Senator Murray has asked that we delay action, so there isn't anything we can act on.

Senator KILGORE. Mr. Chairman, I would like to get some consideration of the two bills by the committee, and I was going to suggest that we take them up in executive session next week. There have been no hearings on S. 1893; in fact that bill has not been before Senator Murray's subcommittee or any subcommittee. It is still before the full committee, I am informed by the clerk. I didn't know that until yesterday, when the clerk so informed me.

With reference to the question raised on that, I prepared an amendment to the bill which incorporates Mr. Clayton's suggestions in his report, or rather his suggestions on surplus property, taken verbatim from his report, adding thereto only the penalty clause which he suggests should be added.

Frankly, we are going to have repetitions of this Brewster matter, and plenty of them, unless we get this contract termination or reallocation under centralized control in some way, and get it speedily; we are

going to have a lot of trouble on our hands, over manpower in particular, and various other things.

(Discussion off the record.)

Senator KILGORE. I should like, next week, to have a discussion of the two bills. I have a reprint of S. 1893 here, with the amendments that have been suggested by various people, and it has been joined in by five other members of the Military Affairs Committee.

The CHAIRMAN. Senator Murray, will you please repeat your suggestion for the benefit of the members of the committee?

Senator MURRAY. I suggest that we defer taking any action this morning on these two bills and await the results of Senator George's meeting today. I understand that he is preparing a report from his committee in which he will embody, I suppose, the ideas of his committee with reference to these various problems. It seems to me, inasmuch as the Senate has set up his committee for the purpose of studying these post-war problems, that this committee should listen to what he has to say. It seems to me that any legislation that we might recommend, which would go counter to their recommendations, would meet with very serious opposition.

What we want to do is to get some legislation here which we can pass, and that is what I want. I am not interested in whether my bill, S. 1730, in which Senator George and I joined, is accepted or not. I would just as soon have it rejected, if that is the sentiment of this committee.

There has been considerable pressure brought to bear on me with reference to the other bill. Telegrams were sent by the unions all over the State of Montana, in which they demanded that I reject this bill and accept the other bill. I am, of course, in an embarrassing position. I joined with Senator George in presenting S. 1730, and I don't like to cold-bloodedly run out on him and accept another bill which I don't think is as good as the bill we have presented here.

I would like to call attention to a few differences between the two bills.

The surplus property provisions, left out of S. 1730, are carried in S. 1893. That is to say, they have provisions in S. 1893 for surplus property.

Now, the reason that we left them out is that the problem of developing the backward areas of the country and protecting the small businessman and the small farmer is still being worked out by the Smaller War Plants Corporation. We are cooperating with the Smaller War Plants Corporation in working out a bill on the disposal of surplus property which will be really effective and which will protect the small businessman and not allow their property to all get into the hands of the big speculators of the country. If you are going to have a bill that is going to carefully handle that subject it has got to be carefully prepared.

Now, with reference to the power of the Director who is to be set up under these two bills, which propose to set up a Director, S. 1730 has one set of ideas on that and S. 1893 has a different set of ideas.

S. 1730 gives the Director power to carry out only those plans that are authorized under existing laws, including the War Powers Act. Where such plans are not authorized by law he must come to the Congress for legislation. It does not extend the War Powers Act into the reconversion period.

S. 1893 gives the Director power to carry out any plans that he develops. That is equivalent to the extension of the War Powers Act into the reconversion period.

S. 1730 sets up advisory boards for various groups, and provides for joint meetings of those boards. Senate bill 1893 sets up an over-all board to coordinate with the Director. In other words, the board would have equal power with the Director. It would seem to me that if you set up a board that is going to have equal power with the Director, you are going to have nothing but conflict. The Director ought to be in supreme control and the board should be merely advisory to him. Of course, the board would have a powerful influence. A well-selected board would be able to perform a very important service in advising the Director, but the Director should be the man in control of the program.

Title II of S. 1730 has to do with cut-backs in war production, cut-backs and cancelations. It spells this out in detail based on our experience and study of the *Brewster case.* It provides for a full advance notice of contract terminations and cut-backs so that they may be able to prepare to handle the situation when the cancelation comes around; and it provides for the development of plans for other production, or for the utilization of the plants in civilian production, if possible. It provides full and specific protection for small business. It also protects against continuation of war contracts merely for the purpose of keeping the men working. When it becomes necessary to terminate these contracts they ought to be terminated. They ought not to be compelled to continue the production of war materials when they don't need them any more.

Senate bill 1893 covers this subject only in general terms; it doesn't spell it out at all; whereas, S. 1730 spells it out very carefully, and I call your attention to pages 10, 11, and 12 of S. 1730, which deal with this subject.

On pages 10, 11, and 12 we go into the thing in detail, providing exactly how this subject of termination of war contracts should be handled, and if these provisions were in effect, there could be no *Brewster case.*

Senator HILL. Mr. Chairman, may I ask the Senator a question?

The CHAIRMAN. Senator Hill.

Senator HILL. I quite agree with what the Senator suggested about the George committee. We certainly want to have the benefit of their suggestions and recommendations. It wouldn't be wise in any way for this committee to try to get ahead of the George committee. But as I understand the parliamentary situation, the George committee has no power to report legislation. Any legislation on this subject, as I understand it, will come out of this committee and must come out of this committee. The George committee will make its recommendations and report, but this committee is going to share responsibility with the George committee; we are going to have a very great responsibility on us in the disposition of these billions of dollars' worth of war property.

I can't think of a more important responsibility, so far as the postwar world is concerned, so far as anything except something directly connected with the war is concerned, than this; and I don't know why this committee shouldn't begin at least to think about this thing and consider this thing and discuss it.

What do you think of that, Senator Murray?

Senator MURRAY. I think that is right.

Senator HILL. We are going to have a tremendous responsibility. After all, when the bill comes out it is going to be this committee's bill.

The CHAIRMAN. Have any of you any idea when the George committee will submit its report, its final report?

Senator MURRAY. I believe next week.

Senator KILGORE. I was about to join with Senator Murray in requesting that we take no action now or discuss either bill today, but fix a date, if possible, next week, and as early as possible next week, when we can have both sides presented. That is my idea.

The CHAIRMAN. Suppose we sit next Tuesday, then.

Senator BRIDGES. When is the George committee report coming out?

Senator KILGORE. I understand it will be today.

Senator MURRAY. I believe it will be next Thursday.

Senator BRIDGES. I don't think we ought to hold our committee meeting until we have that report and have a chance to study it.

Senator MURRAY. They are having a meeting today at which they are going to formulate their ideas on unemployment compensation. They have been holding hearings on that for the last week, and now they are going to get together and determine what their position is going to be in connection with unemployment compensation. Then they intend to prepare a report, but I don't believe the report will be ready until late next week.

Senator HILL. What do you think, Senator Murray, and you Senator Kilgore—our regular meeting day is Friday—what do you think about letting this go over until next Friday? Does that suit you?

Senator KILGORE. The only reason I feel that it should be set for a special day is that we always have an agenda on Friday.

Senator HILL. Put this down first on Friday.

Senator KILGORE. Then you throw everything out which is on the agenda, and we always have a regular bunch of work to go through, just as we have today. If we have it on a special day, with just one matter on the agenda, we are much better off.

Senator HILL. My thought would be to put it down for next Friday and not consider anything else that day.

The CHAIRMAN. Suppose that I call the meeting immediately after the report is submitted by the George committee—how would that be?

Senator HILL. That would be all right.

The CHAIRMAN. Then if they submit it on Tuesday, we can hold the meeting on Wednesday; if they submit it Wednesday, we will hold it Thursday. Is that satisfactory?

Senator HILL. Yes.

The CHAIRMAN. If that is no objection, then, the meeting will be called immediately after the submission of the George report.

(Whereupon, at 12:10 p. m., consideration of S. 1730 and S. 1893 was concluded for the time being.)

98534—44—pt. 8——3

MOBILIZATION AND DEMOBILIZATION PROBLEMS

WEDNESDAY, JUNE 14, 1944

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The committee met, pursuant to notice, at 10:45 a. m., in the committee room in the Capitol, Senator Robert R. Reynolds (chairman) presiding.

Present: Senators Reynolds (chairman), Wallgren, Kilgore, Murray, and Austin; also Senator Pepper.

Also present: Mr. Herbert Schimmel, of the Kilgore subcommittee staff, and Mr. B. M. Gross, of the Murray subcommittee staff.

The CHAIRMAN. The committee will come to order.

Mr. Mayor, we know how busy you are and we are very desirous of having your observations and comments.

If you have a paper prepared that you prefer to read for the benefit of the committee it will be all right; if you prefer to talk extemporaneously we will be glad to have you do so.

Would you prefer that we inquire as you go along or would you prefer to wait until at least you have finished your preliminary statement?

Mr. LAGUARDIA. I think questions will be very helpful.

The CHAIRMAN. At any time?

Mr. LAGUARDIA. Yes.

STATEMENT OF HON. FIORELLO LaGUARDIA, MAYOR OF NEW YORK CITY

Mr. LAGUARDIA. Mr. Chairman and members, I appreciate this opportunity. I have testified on the subject several times before committees of the Senate and the House.

I want to make one point, and that is that definite, specific, legislation on contract termination and provisions for transformation to peacetime industry cannot be enacted too soon.

Such legislation cannot be premature for the simple reason that, if there is no need for it, it is there ready to be used. And at the peace it will take some time to build the necessary machine to administer this gigantic job, and it will be a gigantic and difficult one.

We all know that it took several months before we got into full wartime produtcion. When we did get into full wartime production things started to happen on all fronts. We acquired the offensive and are maintaining it.

We will require time to shift back into normal peacetime conditions, and we are apt to face some very difficult periods.

A great deal of thought and serious consideration has already been given to war contract termination. The proposals made seem to be fair and equitable to industry.

There has been to date no specific plan offered to care for the human element, that is, the war workers and workers in industry generally, and the discharged veterans, discharged soldiers and sailors.

We have never been confronted with a more difficult problem, yet that should not deter us from facing it courageously and solving it constructively.

All the stability sought to be maintained through an equitable contract-termination policy or plan will be entirely destroyed if no provision is made for the workers in these plants and industry.

In other words, the job is only half done if the Government provides first, notice of termination; second, inventory; third, payment for that inventory; fourth, payment of completed or semicompleted production, immediate settlement of the 90 percent, or whatever it may be, and review, if desired on the part of the contractor.

What will happen?

A contractor naturally will immediately terminate activities and shop around for bargains before he resumes production, and in many instances he may not resume at all. He may wait.

He may wait to see what the situation may be; what taxes are going to be; and it will grow progressively, and the number of unemployed will increase.

Senator KILGORE. Mayor LaGuardia, hasn't it been your experience that unemployment is always progressive; if you get any large group unemployed the very lack of consuming power there makes more people unemployed?

Mr. LAGUARDIA. Absolutely. And, strange as it may seem, it isn't only contagious but it is infectious.

In other words, if we have large unemployment in New York City you will feel it out in Iowa, you will feel it down South; cotton, agriculture feel it immediately, and you get started into a vicious circle and it just topples over.

I lived through that very difficult period, gentlemen.

I assumed office as mayor in January 1934.

We had reached a peak around '36 where we had 360,000 cases on relief; average 3 to a case, and a million people were on relief.

The Kilgore bill faces this problem squarely and seeks to set up specific legislation to care for it and the machinery to carry out its provisions.

I think that is more satisfactory than leaving it to an Executive order.

I think Congress will be happier about it, and specific responsibility will be placed in the administration provided in the bill.

The bill is, of course, susceptible to being perfected before it is reported out.

The task requires the very best personnel available in the entire country, because so much depends upon it.

Now, the costs of carrying out the provisions of the bill may seem at first blush to be great, but, gentlemen, I can assure you, from the experience we had during the period of unemployment, that if Congress fails to act the cost to the country——

Senator KILGORE (interposing). Do you mean just the administrative cost?

Mr. LAGUARDIA. No; I mean the cost of carrying it out.

Senator KILGORE. Yes.

Mr. LAGUARDIA. The cost to the country will be from 20 to 50 times more than to do this intelligently and constructively.

First, there is a definite agency of Government set up, with the power to maintain stability in employment and prevent a sudden and complete break-down of the purchasing power of the people.

Senator KILGORE. Mayor LaGuardia, isn't that very fact one of the prime essentials of getting our private industry to functioning quickly? With the buying power to purchase their products there is going to be the incentive to come back quickly; isn't that right?

Mr. LAGUARDIA. There must be no interruption in that buying power and, though it may seem costly, it will not be, because we are creating wealth as we maintain it.

Therefore I think, if power is given for the intelligent termination of contracts and provision for continued employment, that a great deal of the money which would otherwise be needed for relief or unemployment allowance would not be used.

Therefore it seems to me that the Army, the Navy, and other war-procurement agencies of the Government should be left intact and with all the powers they have now, to continue orders, to increase orders, for the prosecution of the war.

We should leave them alone on that entirely.

When any contract reaches the point that the procurement agency may reasonably know that they will need no more of that given product, it should serve notice on the administration provided in the Kilgore bill, notice that orders will not be increased and that within a given amount of time it may start to reduce the production.

That sets the machinery in motion for that particular plant or yard or factory, in the hands of the administrator, and that plant then starts to prepare for gradual transformation to peacetime production, civilian needs; or if it is producing anything that can normally be used and is needed for civilian use in peacetime, it can continue to produce that during the time that its employees are being placed elsewhere or it, the plant, adjusts itself to the new conditions.

Now, I want to make one point clear, because it will become very important.

A great deal of thought is given now to surplus supplies and material, and I will discuss that later, because you will find that disposition of surpluses will conflict with everything you have in mind in this bill.

But any material or supplies or product that goes into production after notice that it isn't any longer needed for war purposes, then it becomes available for normal needs through regular channels of trade.

That will, in and of itself, to a large extent pay for the cost of the transition period of that particular plant.

Let me explain:

Take such products as aluminum bricks, cement, textiles, that we know we need, we know the world needs, production should continue.

A few days ago in New York City notice was given to the aluminum plant of termination of contract.

Now, aluminum is aluminum, and that plant produces aluminum in bricks.

Rather than throw 3,000 men out of work suddenly and paying them unemployment insurance, if they continue to make that aluminum there will be a market for it sometime somewhere, and you have reduced your cost of taking care of those people in the transition period.

That aluminum stored away will be more useful to us than the silver that we now have stored away.

I don't want to irritate any of my western friends on that.

Senator WALLGREN. As a western friend I will say that I think aluminum will surpass silver in some of the uses for it.

Senator KILGORE. Isn't there a tremendous market for aluminum in the way of kitchen utensils and other requirements?

Mr. LAGUARDIA. Yes.

I wouldn't mark that as available. We might have to store it, we might have to keep it, and we may be very happy to have it, provided of course that the raw material is available.

And that is what I mean by continuing production in any given commodity or product that will be needed for civilian consumption in peacetime.

Now, it is evident that in many instances that will not be possible.

Where, for instance, a plant is making tanks, if they convert to tractors it will take some time; and those men should be employed to make that transition or that transformation of the plant.

Where they are making fighter planes or artillery, guns of one kind or another, obviously we cannot store that up.

And, therefore, we must provide for the workers of that plant just as we provide for the money that is invested in that plant.

No one suggests that a contractor should be left high and dry with a cold notice of termination. Everyone recognizes the necessity of an equitable, fair, and just adjustment.

And that applies equally true, and for the very same reasons, to the men who are working on a weekly or monthly wage.

Now, the Kilgore bill recognizes that responsibility and it provides frankly for unemployment compensation during a given period.

Now, gentlemen, unless we do that, what will happen?

The men, the workers, will go on the present unemployment compensation, which is not enough, in many instances, and not of sufficient duration.

Then that reduces the purchasing power, and other activities will be hit, adding to the problem; and then one day we will realize we are back to relief and W. P. A.

That is enormously expensive.

I am certain that the cost of carrying out the provisions of this bill and tiding over that critical period will be much less than the cost of W. P. A. plus local relief.

That went into billions of dollars.

And, nothing is produced.

Now, I strongly recommend that wherever possible production be continued for useful purposes, even if the time of weekly employment

must be reduced, to the amount provided for unemployment wages.

Therefore, you will have something, you will have wealth back of the cost of taking care of these people.

Senator KILGORE. Mr. Mayor, I would like to ask you a question there on that point:

In this question of cut-backs there are frequently a number of plants making the same items, probably dealing with various procurement agencies, one plant with one procurement agency, another plant with another.

Don't you think the system of cutting back production by central control so that the cut-backs may be allocated where they can be most easily adjusted rather than this cutting plants completely, is a better system?

Mr. LAGUARDIA. Oh, of course. The cutting plants completely is going to cause chaos in the industry and in the labor field. There is no question about it.

Senator KILGORE. And that must be centrally controlled.

For instance, if they have contracts for 2,500 planes of a definite type made in five plants, a central agency selecting a cut-back of plane number rather than a complete stoppage of one or two plants to meet the cut-back.

Don't you think that is the best system?

Mr. LAGUARDIA. Yes. Even though it costs a little more.

Senator KILGORE. Yes.

Mr. LAGUARDIA. Now, all this is just cost of the war.

Gentlemen, after the war ends you will see the enormous amount of material that will be declared surplus—guns, cannon, tanks, planes, everything.

The Army and Navy must not be criticized for that. That is their job. They must provide sufficient weapons and supplies and transportation to meet every possible military situation, with no thought of the end of the war at any given time. They have to assume that they have to continue.

Senator KILGORE. In other words, they have to look at the blackest side of the picture all the time.

Mr. LAGUARDIA. Absolutely. And they shouldn't be criticized for that; although we are going to see that what we are going to have on hand will be fantastic.

They should be praised for it.

Part of that cost is to keep our country going, and, relatively, it will not be so large, but it will look big in figures.

Now, gentlemen, we are spending about $266,000,000 a day for the war.

I believe it will take, oh, I would say, at least 70 percent of a year's cost of the war for the first year following the end of the war, with a gradual tapering down.

That includes also a public-works program, and I would like to go into that as a concomitant of the purpose and scope of the Kilgore bill.

Senator KILGORE. Now, on that line, you spoke of surplus guns and tanks which we know we are going to have.

We are also going to have surplus valves and screws and bolts and things of that kind on hand.

Isn't it then your opinion that the disposal of property should be directed by the same agency, so that it will go into building up industry rather than curtailing the building back up of private industry by dumping it on the market?

Mr. LaGuardia. Senator, I would have but one short paragraph in this bill on surplus, on disposition of surplus supply, and I would strike everything else out.

I would say: "The director is hereby authorized to dispose of surplus supply in any manner not inconsistent with the intent and purpose of this bill."

And I now predict, gentlemen—I lived through this after the last war—I say now, and, perhaps no one on this Hill and no one in the country will agree with me, I say whatever provision you make for disposal of surplus supplies—if it really provides for the sale of that surplus—the Congress of the United States will stop that sale within 6 weeks after it starts.

Now, may I say what happened after the last war?

I hardly got my clothes out of camp and came back to the House when all sorts of plans for the disposal of surplus supplies were offered, and we started off with a bang. Everybody was going to buy an automobile, and food was available and machinery was available. And, lo and behold, industry woke up and said "stop it."

Not a single automobile or truck was brought back from the other side, not a locomotive was brought back. Very little of anything was brought back at all; and we had depots and warehouses all over this country, gentlemen, for years afterwards. We couldn't do anything else.

Now, the whole purpose here is to reestablish production.

We will need some of those valves, we will need some of the material that you have, we will need all the surgical instruments and medical supplies that you will be able to give us; but that should be limited to Federal Government, State government, and political subdivisions of the State government.

Senator Kilgore. I want to interrupt at that point with this idea to see what you think of it:

We will take the shipyards, for instance, we know what they are going to face. Most of those workers are what we call construction workers. And there are certain other industries that have been built up with construction workers. The quickest thing to get started with is construction. And certain of these supplies can be administered to getting production to rolling until new supplies can be made.

Isn't that right?

Mr. LaGuardia. If it goes direct into creating or producing other commodities.

Senator Kilgore. That's right.

Mr. LaGuardia. But not to any intermediary channel of trade.

Senator Kilgore. That's right.

Therefore it should be used on your public-works program, to start out with.

Mr. LaGuardia. As mayor I say, yes; give all you can to me; but if I approach this with any thought of the economy of the country, I say don't give me all I am going to ask for.

But what we produce in the transition period, that ought to be made available.

Senator Kilgore. Yes.

Mr. LaGuardia. And that will have quite a tendency in even preventing a post-war inflation if we place that on the market at a just price.

So please be very careful in the provisions for the sale of surplus supplies, because you will save yourselves the trouble of amending the law after the war ends.

Now, to take care of the hundreds of thousands of men and women in shipyards, navy yards, and purely military production, we must have, ready to go, gentlemen, immediately after the war, a vast public-works program.

For the first year you ought to give us at least 5 days or 6 days of the cost of the war, excluding provisions already made for the highways and roads; and for the second year at least 20 days; and then you can taper off in a 5-year program.

Now, when I say it must be ready to go, it takes 1 year to 18 months before you can get started.

I am ready. New York City is ready. I am not bluffing. We are ready. We are spending $30,000,000, taking a chance.

If nothing happens, I guess I will go back to my own home State of Arizona.

But there are the plans, and they do cost money.

The Federal Government hasn't anything yet, gentlemen. No State has anything yet. They know what they want to do, and I don't know how many of the States have complete post-war programs ready to start construction. They all have lists of projects they would like to do.

You will remember, Senator, when we started P. W. A., the Federal grants and loans, it took a year, a year and a half, before they got started on it.

I got in under the wire because we went ahead and had plans ready. You cannot get these plans overnight.

When I speak of a post-war program for New York City, I mean city government program and private industry.

The city program would be about $1,300,000,000. And we will work up to 420,000 men employed every day in the beginning of the third year.

The private industrial and business post-war program, deferred maintenance, expansion, and new work, is about $1,600,000,000.

I think you would find the same proportion would hold throughout the country, and you can get a pretty good idea of what is needed, taking New York City, private and city government, at $2,900,000,000.

Now, none of this work is capricious, every bit of it is necessary or we wouldn't have invested our money in engineering and architectural plans.

That is necessary to take care of these workers that are in plants that in all likelihood will not be transformed.

Senator Wallgren. How long do you think it will take for prices to level off? I think it will continue for some little time after unemployment is started; will it not?

Mr. LaGuardia. I wish I could answer that question. If I could, I would go down the Avenue and ask for Morgenthau's job. That is a problem.

Senator Wallgren. It is a problem.

Mr. LaGuardia. I think in food, gentlemen, we are going to be very tight immediately after we wipe the Nazis out in Europe.

Now, we are committed, we are definitely committed, we have told the people of the occupied countries, "You will see the difference between Nazi occupation and occupation of the United Nations," and those people have been under considerable hardship and the demands for food and clothes and medical supplies are going to be very, very great.

Because of military necessity we haven't been able to transport these things yet.

Only part of the countries have been liberated, but that call is going to come.

Senator Wallgren. Well, then, if it does come because of our commitments, it means that the people in the areas are going to be pretty well taken care of.

Mr. LaGuardia. They have to be taken care of.

We can do everything in the world for industry, we can provide generously for severance pay and unemployment insurance, and we have to take care of the farmer.

Senator Wallgren. Yes; but he is just automatically taken care of.

Mr. LaGuardia. If there is this demand—not the demand. I hate that word. If there is the ability to buy enough that the people need to eat. That is the trouble——

Senator Kilgore (interposing). That, Mr. Mayor, is the farmers' point as expressed, usually, that, if we don't have a wave of unemployment and with the conditions in Europe as they are, they see no troubles ahead for them. They are going to be taken care of naturally.

Mr. LaGuardia. Yes.

I think we won't have any troubles about surpluses for some time to come and, by that time, we ought to have sense enough to know how to deal with surpluses on a world basis.

Senator Wallgren. Then the immediate problem is the war worker.

Mr. LaGuardia. Exactly.

Now, I don't think I ought to take the time of the committee on some of the changes, but I would like to submit some proposed correcting provisions, particularly where——

The Chairman (interposing). Mr. Mayor, will you pardon me a moment?

I understood you to say New York City was ready for the unemployment period.

You are ready for the unemployment that will come after the war; that is to say, you have drawn plans and have engineers working so that you may have development of the various structures in the city of New York that you deem necessary to provide employment for men who will lose employment after the war?

Mr. LaGuardia. If I have the money, Senator. I haven't got the money.

The Chairman. I understand. The program is already prepared?

Mr. LaGuardia. Yes.

Senator Kilgore. And the details are prepared.

The Chairman. I understand that some of the cities have gone into the matter in quite a detailed manner as you have.

What I was wondering was this:

Is there any Government organization or any national organization that has made it its business to ascertain of the States, the cities, the towns, counties, and political subdivisions of the United States how far they have gone in preparing for unemployment?

Mr. LaGuardia. Yes; the Federal Works Administration.

The Chairman. I didn't know that.

Mr. LaGuardia. You will find a detailed report of that in Major General Fleming's testimony before Fritz Lanham's committee, Public Grounds and Buildings, in the House.

The Chairman. Have you read that report?

Mr. LaGuardia. Yes.

The Chairman. Would you tell the committee what your opinion is in regard to the percentage of the population for the areas that have already prepared their plans to take care of the conversion period that necessarily must follow the war?

Mr. LaGuardia. I think you will find that the percentage is discouragingly low, because of the costs of preparing the plans.

Now, some cities cannot appropriate money for engineering or architectural plans unless they have the authority to build the structure, and in many instances a referendum is required before a bond issue for that purpose.

In other instances they are unable to meet the cost of plans; and that is why we have been urging that the Federal Government provide grants to States, counties, and municipalities for this purpose, after having approved the need, the usefulness, and the desirability of any such public improvement.

And we all recognize that the locality must put in a substantial percentage of the cost. Otherwise the temptation to get improvements that cannot be maintained afterward is very great.

Senator Wallgren. The big problem here, I think, is that some sections of the country are going to be hit much harder than others; some sections which at the present time are producing munitions of war, some States, we will say.

Take California, for instance, with that great number of aviation plants and the shipbuilding and so on where people have migrated to work in those plants. There is a State that is going to feel the spot it is in, while other States will not feel it to anywhere near the same degree.

Mr. LaGuardia. I am very glad you brought that up, Senator. That was one of the suggestions I was going to ask the committee to consider, and that is, putting proper safeguards, having in mind the entire country as a whole, in the provision for transportation or repatriation of these workers.

Now, this is what is going to happen to New York:

We will get a large percentage of the workers, if no provision is made for their care, from neighboring States, from the South, and from the Midwest.

They know we cannot leave them on the streets. We have to provide rent, we have to provide relief.

In addition to W. P. A., gentlemen, during the time of unemployment the city's share of relief, the city's share alone, was $60,000,000 to $72,000,000 a year. And I financed that currently.

I cannot do it again. Cannot do it again.

You can do that in one period but it cannot be repeated.

Now, I think you will find that they will gravitate to the coast, the Pacific coast, and to the Atlantic coast.

Many people in our country for the first time in their lives have had enough to eat. And they are going to feel the pinch. And naturally they will go where they believe there will be hope to get some relief.

I think southern California will get it, will get it hard—we will get it up in New York—New York City will get it, and get it hard.

And that provision where you provide for a very sound approach is very wholesome if it is not abused, and that has to be guarded so carefully; otherwise we will get into very serious trouble on that.

Senator KILGORE. I think you will find in the bill provision for transportation and return is based upon the ability of the Government agency to ascertain employment in that area before they are moved back into it.

Mr. LAGUARDIA. That's right.

Senator KILGORE. Which will, of course, protect to a certain extent against the thing you fear.

Mr. LAGUARDIA. And it ought to be certified that such employment is available.

Senator KILGORE. Yes; before they are moved back.

Mr. LAGUARDIA. Before they are moved back. Because it is going to be costly, and it can create a great deal of unhappiness.

Senator KILGORE. In other words, it seems to me that for the man, shall we say in southern California, who is being shipped back to New York, shall we say, the job should be there waiting for him when he gets there.

Mr. LAGUARDIA. Right.

Senator KILGORE. Not just told that a thousand of you fellows are going to get a thousand jobs in New York. They should make sure that there are those jobs, and those men should be certified in New York as coming in to take them.

Mr. LAGUARDIA. Right.

Senator KILGORE. So the jobs will be there when they get there.

Mr. LAGUARDIA. Yes.

And the reverse of that ought to be true also, that if they come of their own volition, the Federal Government should then send them to their own homes.

Senator WALLGREN. Well, there will be some States where the need will be great.

Mr. LAGUARDIA. Right.

Senator WALLGREN. There will be some States where they could get along without more help.

Mr. LAGUARDIA. I suppose so. And there will be some States where because of the change in the industrial situation, where it is mostly agricultural, where a great many people would remain in agricultural pursuits who want to remain in industrial centers.

You will have to guard against that for a time.

Senator KILGORE. Mr. Mayor, a lot of States are going to need migration back. Many States have been drained of their workers.

Mr. LAGUARDIA. Well, that ought to be encouraged, that ought to be encouraged, because you will find that the tendency will be to the urban centers.

And that is why I think that some thought of removing all settlement requirement would be very unwholesome at this time and for some years following the end of the war.

The CHAIRMAN. Mr. Mayor, pardon me.

This is Senator Murray.

You have met the Senator before.

Mr. LAGUARDIA. Yes, indeed.

The CHAIRMAN. The Senator was unavoidably delayed on account of some official matters that he had to look after and he phoned me this morning to extend his apologies that he could not be here on your arrival.

And this is Senator Pepper. You know the Senator. He is not a member of this committee, but we are delighted to have him here with us.

Senator PEPPER. Thank you, Senator.

The CHAIRMAN. And you are privileged, Senator, to direct any inquiries to the mayor that you care to from time to time because he has told us that he prefers to have the questions as he proceeds with his observations.

Senator PEPPER. The chairman proceeds with his usual thoughtfulness.

The CHAIRMAN. Thank you, Senator.

Mr. LAGUARDIA. Now, the other large group that we are going to have is that of the discharged veterans, and we must exercise great care to prevent any ill feeling or friction between these two groups.

To prevent it will be much more effective, desirable, than to seek to adjust it afterward.

The CHAIRMAN. What suggestion have you to make there?

Mr. LAGUARDIA. I think that Congress is giving very intelligent thought to the adjustment of the discharged veteran in normal peacetime life.

I think the educational features of the bill——

Senator KILGORE. The G. I. bill?

Mr. LAGUARDIA. Yes. I think that is going to be very wholesome, and there again we must not repeat some of the mistakes we made after the last war.

I had some correspondence on that; how no school, no private school, ought to be approved that hasn't been in existence at least 5 years prior to the commencement of the war.

After the last war, in my town all sorts of mushroom schools sprang up, sign painters, automobile repair.

They would take a loft and the boys would just sign in for it, and sometimes once a week, and nothing would happen, and they just strung along during the whole period of the duration provision, and then we were exactly where we started.

There is an entirely different attitude now, and, in addition, we have taken boys much younger than we did in the last war. You will find a large percentage of boys who are taken, 17, 18, and 19, and they were still in the high schools.

These boys will not want to return to school as such. We are trying to prepare for them in New York City by providing academies or in-

stitutions where these boys can go and finish their normal high-school courses and then be ready to enter higher education if they desire.

We owe that to these boys.

The country, the Government, can never give these boys those precious months of their youth that has been taken from them.

So full and complete provision must be made for all these veterans who desire to complete their education.

Now, that is going to help.

I hope the Army will watch the employment and economic situation very carefully, and the coordination provided for in the Kilgore bill, I think, is very wholesome, so that after they get here they could be furloughed to visit their homes for a time and very gradually demobilized as the situation permits.

There should also be an exchange or relief of troops.

In all likelihood there will be a great deal of occupation and policing, military policing, in the enemy country, and fresh troops ought to be sent to replace those who have had combat service, in order that we won't feel the full impact of a release of 10,000,000 men at one time.

That may not happen because the situation in the Pacific may be entirely different than what may result in Europe at this time.

The provisions made—I don't know whether they call it unemployment or what they call it—are wholesome, and the provision in this bill for compensation during unemployment I think will solve that problem.

Nothing should be left then that can be done, because it will be difficult to place these men all at once, and the danger of friction is very great.

Senator PEPPER. Excuse me, Mr. Chairman.

The CHAIRMAN. Senator Pepper.

Senator PEPPER. Mr. Mayor, you have noticed the provision of the G. I. bill, which I believe is not less than $20 a week for up to 2 years for the returning veteran.

Mr. LAGUARDIA. That will do it. And with the educational feature of the bill I think that is the most useful provision there.

Senator PEPPER. Would you have any comment to make—you have been a man of distinguished service yourself in World War No. 1—as to whether in getting an education by the returning veteran the length of the education should be dependent, as the G. I. bill now has it, upon the length of service that the veteran had in the war?

Mr. LAGUARDIA. Not at all. Upon his age.

Think of a boy of 17 or 18 or 19 and he was in high school. He should be provided with the opportunity of getting the equivalent of that high school, and if he can qualify for higher education he should be given it. We owe it to him.

Now, you take a boy who is 25, out of school entirely and who has had no trade, then I think we ought to limit the time that he could take up a trade.

Obviously we couldn't make a scientist out of him overnight or in any time.

In the group that may qualify for higher education you ought to give them the opportunity; but the vast majority of those, especially those who had no trade, ought to be given an opportunity to learn a trade if they can.

I do not approve of any system based upon length of service for education. And I also don't approve of giving full status to one who has been inducted into service, went to an induction center, went to camp, and from there to a hospital for observation for 3 months and then was sent home.

I cannot get excited about him. Unless it is service-connected.

Senator PEPPER. But honorable discharge and the needs and qualifications of the man should be in your opinion the requirement?

Mr. LAGUARDIA. Absolutely. And you will find that will be very helpful; because it increases the efficiency of the whole, and it removes the man from the competitive labor market and channels him into a useful occupational calling.

Senator PEPPER. Now, just one other question:

Some think, I am afraid, that it would cost too much money if we throw open the doors of the educational institutions to the returning veterans, because too many of them would take advantage of that opportunity.

Now, is it your opinion that too many for the public interest are likely to take advantage of it, or that probably what can be done should be done to encourage and induce all who will to take advantage of the kind of training for which they are fitted, whether it be higher education or trade or profession?

Mr. LAGUARDIA. It will cost less than if we fail to do it. There is no question about that.

It costs just about as much to keep a student in college as to keep an inmate in a penitentiary.

I would sooner have them in college.

Senator KILGORE. One point I wanted to make, Mr. Mayor:

Don't you feel that a lot of the boys have been living under high tension and that, unless there is a cooling off period in which they are learning something useful, we are liable to have on our hands individuals who will cause us a lot of trouble?

Mr. LAGUARDIA. Exactly.

This youngster has had the benefit of discipline, and that is one great advantage. He has had a great deal of time to think. You get awfully lonesome when you are with a large body of men. You run out of conversation. They get away from home. They have been thinking.

You are going to find very good material there, and they should be given the opportunity to get an education, whether it is vocational or academic, professional or cultural.

That is very important gentlemen.

Because as we go into a new era where we will have to create the spread of employment so that everybody will have work, you will find that men and women will have more leisure time.

And you know leisure time is quite different from idle time.

Idle time is quite depressive and demoralizing, and leisure time can be exalting, exhilarating, and you can enjoy leisure time better if you have some cultural background.

So that I think, with the public-supported institutions and with the recognized private institutions, we will be able, as no other country in the world is able, to absorb these men and complete their educations, and the country will be that much richer after it is through.

Some of them will idle and fool around during this time, but that happens now.

But a great many of them will get a great deal of benefit out of it.

Senator KILGORE. One other question, Mr. Mayor, right on that line:

In some States after the last war in the rehabilitation of veterans, I feel that we made a terrible mistake in that, to give them vocational training, we practically made an apprentice system in factories in which boys not only went in there competing but in a large number of cases were just used as common labor and learned nothing.

Don't you think a better method is vocational schools, where they are actually taught, rather than an apprentice system in a plant?

Mr. LAGUARDIA. I am afraid you have started me off on something.

I think at this time a new technique has developed for the exploitation of labor and for the depressing of wages.

In my city a technique has developed a part-time employment that is the most disgraceful situation that I have ever seen.

You take the American Railway Express, they just have hundreds of city employees who are being taught the technique of how to sleep on their city jobs.

That and child labor we are watching out for.

We have regular surveys, and when the school closes we are going to intensify the activities of our child-labor law.

That is exactly what will happen here. And I have this marked on page 32, you have got a joker—I know it was unintentional—but every possible safeguard ought to be made.

Otherwise you are subsidizing employers who pay substandard wages, and putting the honest employer in an unfair situation competing with such an employer.

Now, that happened during relief time. You see advertisements in the New York papers: "Wanted, part-time workers, unskilled workers, women on artificial flowers, light industry."

I put my foot down on it, because they would employ these people at substandard wages. Two of them would deprive one of a full-time job; and our relief rolls were piling up, and we were subsidizing the employers paying substandard wages.

That is happening now with Government employees. It is a fertile field for it.

Well, we have discovered cases, gentlemen, where a city employee works 8 hours for the city and 8 hours for a private employer, 16 hours a day.

How they get from one place to another, I haven't determined yet.

We have discovered cases where they were on the time sheet at two places at the same time.

And the cost-plus fellow is the one that was chiseling, he didn't care.

No; this part-time thing can be very vicious.

Senator KILGORE. I am glad you brought it up.

I ran into one city recently where a taxi owner of a big fleet of cabs told me he was gradually employing all the firemen of the city.

I don't see how those firemen can do a good job as firemen and work and 8-hour shift on a taxi too.

Mr. LAGUARDIA. I have put my foot down in New York City and I am having the fight of my life on that.

The benefits ought to be sufficient to permit a minimum subsistence existence, and there of course you have to take into consideration the condition in various parts of the country.

Now, in large cities they must have shelter and they must have light and they must have gas for cooking; that forms a substantial part of the minimum requirement, and that ought to be considered; because if we just put that down to mere existence, then you have destroyed your whole purpose.

Legislation should be enacted without any further delay. The time may come when we would be very much embarrassed if we had not taken every necessary legislative protection.

No one would venture to guess when the war will end, not this kind of a war. I personally believe that some day we will wake up and we will find a blow-up in Germany, at the top. A blow-up in Germany will come at the top, not from the bottom. That general staff knows exactly where they stand. The most significant success I think recently has been in getting after their source of supply of oil. They are going to feel that. When the chessman is playing chess a good player can tell five or six moves in advance that he is going to be checked, and he is ready.

The one man who won't know is Hitler, and I think they will take care of him.

Whatever happens, whether it lasts 6 months or 6 weeks or 6 years, we must be prepared to just move right into a new situation, just as Eisenhower was prepared and knew exactly where he was going to land, exactly how many men he was going to put there, knew exactly what he had back of him.

It is not difficult if we approach it courageously, but if we try to satisfy one group against another, if we fail to take the whole economy, look at it as a whole, one complete picture, we will mess it up.

And, gentlemen, if it is messed up this time, we are going to have a very sorrowful period. People are thinking differently. The boys in the Army are thinking differently.

We all get mail from youngsters we know, they are thinking of one thing, a job when they come home, of living decently, of a family. We have been talking that to the entire world. We have to be able to show the world that we can do it. And it will cost so much less if we do it constructively, timely, than if we delay and have to slap something together as we did in the days of W. P. A. relief.

Senator WALLGREN. Of course this war is a long way from being over at that. You have to consider the Pacific.

Mr. LAGUARDIA. All the more reason we should be ready.

Senator KILGORE. Mr. Mayor, if both Japan and Germany should surrender tomorrow unconditionally, under our present set-up wouldn't we just about face chaos in the United States?

Senator WALLGREN. I don't think you need to worry about Japan.

Senator KILGORE. I am not worrying, but if we do not have the plans will we not have a chaotic condition?

Mr. LAGUARDIA. Let us say in a year from now; we would still be in a very difficult situation unless we were prepared.

The CHAIRMAN. Senator Murray, do you care to——

Senator MURRAY. Well, I have listened with a great deal of interest and respect to the statements made by the mayor. I am sorry that I

wasn't here at the opening of the hearing to hear his full statement. I am sure that he has covered a problem we have to consider in his usual inimitable way and I promise I am going to read it over carefully.

The CHAIRMAN. Senator Kilgore?

Senator KILGORE. No questions.

The CHAIRMAN. Senator Wallgren?

Senator WALLGREN. No questions.

The CHAIRMAN. Senator Pepper?

Senator PEPPER. Only this, Mr. Chairman:

There are some who constantly think that all ills will right themselves if the Government has nothing to do with it, if private forces are allowed to operate in their own way.

Is it your belief that any such miracle could occur as would bring all the economic forces into such equilibrium as would adequately meet this challenge, without some agency public in character acting as a coordinator and the leader in bringing it all about so that favorable conditions will arise?

Mr. LAGUARDIA. Senator, our country never got into a worse mess than during a period when there was the least Government interference with business, industry, and banking.

I served in the House during that period from '22 to '32. Business and banking and industry had their way in everything they wanted, and they got themselves and our country into the worst mess, one that was as costly as a war.

And what happened?

When the whole thing tumbled down, they were the ones who came to Washington; they were the ones who got the relief first. I was here. I was here.

Old friends of mine in New York who always said "no interference of Government," they were here saying "oh, Mr. Congressman, Mr. Congressman, something is going to happen."

Banks going like that, one right after the other; the whole thing piling up; no control, no supervision; all sorts of worthless securities peddled on the American people; factory after factory closing.

They had their way.

And they came in, and the first bill passed in the last year of the Hoover administration, where the R. F. C. was created, was to give relief to industry, to finance.

There wasn't a dollar in there for unemployment.

Senator WALLGREN. Where are they now?

Mr. LAGUARDIA. Now? The Government is taking care of them.

You cannot do it otherwise. It has to be done orderly—I say orderly; constructively. There is no other agency. You leave them to themselves and nothing will happen. I know them. I live with them.

You talk to some who say, "How about this?" "Oh, let us win the war first." That is because they haven't the capacity to think the thing through. You know, some people think they are bankers when they are only pawnbrokers, really.

I happened to be the mayor of my town when this thing broke. And not one single, original idea came from them during that period. Not one.

You cannot stop it. So we might as well do it; do a good job.

Senator WALLGREN. But those same people today are crying for no Government interference.

Mr. LAGUARDIA. Yes.

Senator WALLGREN. They want to go through the grill again.

Mr. LAGUARDIA. Yes.

The CHAIRMAN. Mr. Mayor, one moment please.

Mr. Mayor, I have listened to you with a great deal of interest, and your observations have certainly been of great benefit to the members of this committee.

It isn't difficult for any of us to realize that you have given a great deal of thought to this very important question, for which we as members of the committee are entirely grateful, and I think that the American people are appreciative to you for the time and thought you have given to it.

I want to ask you one question: Aside from the program that you have outlined for after-the-war employment, have you given any thought to the question of public works for the Nation, such as the construction of coast-to-coast highways, or highways of a dual nature from Canada to Mexico; the development of airports and the development of water ports or other public structures that would be of, you might say, primary and final benefit to the Nation as a whole from a transportation standpoint?

Mr. LAGUARDIA. Well, Congress has already provided, as in the highway bill passed, for a generous grant to the States and subdivisions for highways.

There is your Federal Public Works program, and that has been woefully neglected. There is so much to be done, and that kind of work is really good work. And your waterways and reclamations and irrigations, that is part of the Federal Public Works program, and it should be started right away.

The CHAIRMAN. I am very glad to have your views upon that. We are very much obliged to you, Mr. Mayor. It is nice to see you again.

Gentlemen of the committee, I have word here to the effect that the American Federation of Labor witnesses could not get here because of their plane having been grounded and that they are requesting permission to have their written statement inserted in the record as a part of the hearing.

I am confident there will be no objection to that and I will ask the reporter to make it a part of this morning's record.

(The statement referred to was not supplied in time for inclusion in this print.)

The CHAIRMAN. Mr. Rosenberg.

Mr. ROSENBERG. Yes.

The CHAIRMAN. Plant manager of the Electronics Corporation, New York City.

Mr. Rosenberg, we are glad to have you with us. We will be very glad to hear you.

Mr. ROSENBERG. Thank you.

STATEMENT OF HENRY M. ROSENBERG, PLANT MANAGER, ELECTRONICS CORPORATION OF AMERICA, NEW YORK CITY

Mr. ROSENBERG. Mr. Chairman, gentlemen, members of the committee, I am the production engineer and assistant plant manager of Electronics Corporation of America. My knowledge of the intricacies of lawmaking is very small, but I have some knowledge of production and what is going on in the small plants in New York, particularly in the electronics field; and I am prepared merely to tell you of our unemployment in Electronics Corporation of America, what the absence of planning in contract termination and reconversion has done to us, what might happen to industry now, and what, based on our experience, we should like to see.

First, let me tell you something about our company.

Electronics Corporation of America is comprised of some 250 men and women.

We are engaged in a 100-percent war work. We manufacture vital secret equipment for the United States Signal Corps and for the United States Navy.

Every member of our company is extremely proud that he happens to belong to it, because our production records have gone up in leaps and bounds with almost every month.

We are particularly proud because our production records have been attained not through management whip-snapping or blustering on the part of management, but through excellent labor-management relations.

The labor-management committee in our plant helps me with my planning.

I might say here at this point that my duties and responsibilities are to plan production to meet the war schedules; to determine what equipment and man-hours are necessary to make the units for the Army or Navy; and to lay out the production lines to do that work.

Our labor-management committee in weekly meetings analyzes and discusses with management the schedules, methods of production, technical processes, and any problems that might arise. And from these discussions and analyses we get to work and turn out the goods.

In the past 8 months we have increased our production some 50 percent.

This we have done without materially increasing our crew.

We have done this through the wholehearted cooperation of the labor-management committee that seeks to instill in these 250 men and women the importance of the war effort at our plant.

And so we in our little plant are cognizant of what planning means.

The Electronics Corporation of America leads in other fields. I think, proportionate for its size, the members of our company douated more blood to the Red Cross than any other company in the country. And we have oversubscribed to all the war loans. And our production records are leading ones in the electronics field.

The mayor mentioned something about returning soldiers not being able to acclimate themselves to production work after the war.

Our labor-management committee have been trying to make sure that we get our quotas, see to it that these men are given some sort of consideration, sent to some sort of schools.

We don't have the usual management problems actually, we don't have to worry about a man spending half an hour in the washroom. The labor men themselves see that the people turn out the goods.

I want to emphasize our record in order to emphasize a little later and show what happened when one of our contracts a little while ago was terminated without any notice, just stopped—cut off—by the Navy.

On April 10, 1943, our company received a contract for $196,000.

We went to making first a hundred units of a secret underwater device for the Navy, 1,200 more were in sight. We were to start in July. We needed some months to tool up and make our plans and then make deliveries from July on.

On December 6 of the same year the contract was suddenly, without any warning whatsoever, terminated. The value of the termination was $172,000.

The Navy suddenly demanded that we fill out a million forms, which we did. It threw our entire office, purchasing and procurement department, in turmoil. We only received $75,000 of the $172,000. The $100,000 is still outstanding.

The chaos that was created, as far as planning in the office, as far as paying our creditors, people who gave us material, is evident. The chaos it created so far as planning production is still evident.

This contract involved 60 percent of our engineering force, 60 percent of our production force. The contract involved four-fifths of our floor space. Then, just like that, without any warning whatsoever, the contract was terminated.

What was the effect on our personnel?

This, mind you, in a company that is outstanding for its wholesome labor-management relationships; for its production records. Don't forget that we got this 60-percent increase in production not through wage incentives. They didn't get any more money out of it. We worked together, planned together, sweated over it. The people in our plant know what they are working for. They are working to get their brothers, their loved ones, home to a secure world.

But we had chaos when our contract was terminated. Thirty percent of the people were laid off. It necessitated an entire replanning of the plant, tearing down special installations. These units were huge 6-foot affairs. For 6 months we produced practically nothing. We had no other contracts. We eventually did receive other contracts. We worked harder than before, got the people together, and once again we achieved that harmonious whole that makes for more production. We are breaking schedules faster than ever before.

But right now I can feel a certain tension in our labor staff. Our 250 men and women read the newspapers. They know what happened several months before when their contract was terminated, and they feel it might happen again to them.

Through discussions with other heads of other electronic plants of the same nature and size manufacturing kindred equipment I find that the feeling is the same.

Then the question isn't one of post-war conversion alone, but of present war production.

We feel that if congressional action isn't taken immediately, not only are we going to run into a lot of trouble after the war but we are running into trouble right now.

Let us assume that only part of our plant is laid off because of sudden contract termination. It affects everyone in the plant.

There isn't a slow-down. The workers themselves won't permit that. But the problem is one of current production.

Our executives and military leaders have told us that the war isn't over by a long shot; we still have to produce and still have to fight. But the people are getting a little fidgety. They feel if the Government cannot plan for them while they are sweating it out geting the weapons to the men in the fighting forces, then they will have nothing to show for it.

What do the people in our plant want, and in similar plants throughout the country?

What do our brothers on the fighting front want?

One way of bolstering morale is to read the letters to the people in our plant from our relatives who have gone over to fight.

Foremost in their minds is security, jobs when they come back.

And that question really is also in the minds of the people who have not gone to the front.

I have two brothers in England. And the brothers, we might say, of the people in our plant, and all brothers, want the same thing.

They don't want to come back to chaos. They want to come back to a job. They want families.

They know what happened to their fathers after the last war and they don't intend, I am quite sure, that it is going to happen again.

Therefore, what we have experienced in the Electronics Corporation, and what other electronic plants have experienced, shows that if reconversion is left to independent agencies, without centralized, coordinated control, we are going to have chaos.

We feel it is very urgent that Congress enact a bill setting up a centralized, coordinated agency that will take care of such problems as jobs in the troubled times ahead after the peace, contract termination, cut-backs, and the rest.

Through discussions wih the heads of other small plants in the New York area I get the feeling that they are also a little frightened that they are going to be left out in the cold; that because some of the mammoth organizations are still in war work, even should certain essential materials be freed for civilian use, the small plants will not be given access to them because of the power of these large companies who don't want any competition.

I notice that both bills make provision for that.

There is also the question of gradual logical cut-backs and termination of contracts.

This central agency at this moment I feel has sufficient data or would have if it were created, to know what material is needed for war, what we will need a month from now, and what we will need a year from now. If they hadn't any idea of what was needed, there wouldn't be these cut-backs at the moment. If this had been planned through a centrally located office, we wouldn't have had the trouble we had half a dozen months ago.

We make some items without which airplanes cannot take off. They just wait until we deliver the stuff. And so, for a month and a half our company was turning out nothing, and the war suffered thereby.

We feel then that now, immediately, Congress should take upon itself to enact a bill to create a centralized agency to take care of the problems of reconversion, cut-backs, and post-war planning.

I would like to say a word about soldiers coming back.

In line with our harmonious labor relationships at Electronics Corporation we have tried to give as many returned soldiers jobs as possible, and we find that they cannot acclimate themselves, cannot adjust themselves to work conditions.

They come back from the Pacific and from the African areas and all of a sudden they are put on assembly lines. They can't take it. Most of them quit after a week. And we feel that some provision should be made for these men so that there is this cooling-off period you speak of, so they are retrained.

There is another point:

There is going to be keen competition after the war. As much as employers will want to give jobs to returning soldiers, they are not going to give jobs to men who are inefficient. They want to make their profits, I imagine. And that is going to be the case. It is a very great problem for this country to spend its time, its money, and its heart, in giving the needed skills to work.

The mayor has spoken of further education. We have had in the past week three soldiers who cannot work, because they are very bitter. They planned to go to college. They joined the Army several years ago and now, instead of becoming engineers or lawyers, they have to become stock clerks or what have you. They feel let down.

The people in the plant know they feel let down.

There is then spreading throughout the country the feeling among the people that nothing is being done for them; that they are sweating it out for nothing; that the people are killing and being killed and nothing is done for them; that the people on the home front are sweating it out for nothing.

I just came down then to tell you what the feeling is or what we in the Electronics Corporation feel the feeling is in New York.

We feel again that production is going to suffer—because people feel insecure, production is going to suffer until something is done to give them the assurance that what they are fighting for in the post-war world will come true.

That is all.

The CHAIRMAN. We are very much obliged to you, Mr. Rosenberg, for the benefit of your advice. It is based on the experience you have had with returning soldiers.

I want to ask, Mr. Reporter, that a letter from Under Secretary of War Patterson addressed to Senator Murray under date of June 14 be inserted in the record at this point.

(The letter referred to follows:)

WAR DEPARTMENT,
Washington, June 14, 1944.

Hon. JAMES E. MURRAY,
War Contracts Subcommittee,
Committee on Military Affairs of the United States Senate,
Washington, D. C.

MY DEAR SENATOR MURRAY: As requested by your letter of June 9, I am glad to give your our comments on subcommittee print Nos. 3 of S. 1730, dated June 9, 1944, and subcommittee print No. 1 of S. 1893 dated June 9, 1944.

The War Department has no objection of substance to the provisions of this revised form of S. 1730. We believe that titles I and II of this draft are workable and generally desirable legislation. As for titles III and IV, the War Department strongly endorses section 301 and favors adequate provision for unemployment compensation and benefits for servicemen and unemployed war workers, but is not prepared to comment on the specific provisions with respect to them.

On the other hand, the War Department has serious objections to many of the principal features of the revised draft of S. 1893 and believes its enactment would be unwise and undesirable. Some of the major provisions to which we object are as follows:

1. Title 1 of this bill appears to contemplate a complex central agency with extensive functions and operations. Our experience convinces us that an over-all agency must be limited to establishing basic policy and planning, in order to perform its essential functions without becoming an administrative bottleneck. We fully agree with the testimony of Mr. Justice Byrnes before your committee on June 12, that to be effective such an office must be small and compact. In our opinion, the agency created by title I of S. 1893 would inevitably tend to become unduly large and to invade the operating fields of existing agencies and duplicate their operations. We think that this would interfere with efficient administration and would defeat the basic objectives of an over-all agency.

2. Section 105 is considered undesirable for several reasons. First, it seems inappropriate to require the President to appoint the Board from panels submitted by national organizations of industry, labor, and agriculture; appointments to an agency of this importance should not be limited in this manner or put under the control of private interests. Secondly, the War Department strenuously objects to the provision that the Board and each member shall have access to all data of the over-all office and of all other Government agencies bearing on war mobilization and post-war adjustment; this would obviously violate necessary military security and interfere with the orderly operation of the Department during the war. Furthermore, subsection 105 (e) would require the procuring agencies to consult with industrial or area councils representing industry, labor, and agriculture with respect to "policies, programs, and operations affecting industrial segments or geographical areas." This would seem to require such consultation by the War Department on every award, termination, or modification of any contract and would be wholly impracticable.

3. Section 201 would impose on the Chairman of the War Production Board the duty to review military production programs and to establish "policies and programs for the expansion, transfer, and curtailment of military production" covering specific products, firms, industry segments, and geographical areas, and to develop programs for curtailing military production based on assumed military developments. Such duties would directly interfere with the basic responsibility of the armed services for the procurement and production of military supplies and for determining their requirements for various military items.

4. Section 203 would require every procurement agency to report to the War Production Board "every projected change in its procurement program, including the award of new contracts and the modification, transfer, or termination of contracts previously awarded". In view of the thousands of such transactions, this blanket requirement would impose serious administrative burdens without corresponding benefits.

5. Title III deals with the disposition of surplus war property. Many of its provisions follow the bill recommended to your subcommittee by the Surplus Property Administrator and approved by the War Department. But certain of its other provisions, particularly sections 306, 308, and 310, differ from these recommendations. To the extent this bill differs in substance from the draft submitted by the Surplus Property Administrator, the War Department considers its provisions objectionable.

6. Title IV deals primarily with reemployment and unemployment benefits. While the War Department favors adequate provisions for these purposes, it is not prepared to comment on the particular provisions in the proposed draft, since these are not within its field of responsibility. Section 401 (c) dealing with the demobilization of servicemen is ambiguous; and might be interpreted to establish a policy different from that prescribed by section 301 of S. 1730. If that is its purpose, the War Department is strongly opposed to this provision.

In view of these and other objections, the War Department believes that S. 1893, as revised, should not be reported or enacted. We believe that the revised form of S. 1730 is basically sound, and in view of the need for prompt action recommend that S. 1730 be used as the vehicle for this legislation instead of attempting to revise S. 1893 completely to eliminate its many undesirable features.

Since you asked to have our comments immediately, we have limited them to matters of substance without dealing with defects of form or detail in either of the drafts. The Department has not been advised by the Bureau of the Budget as to the relation of this legislation to the program of the President.

Sincerely yours,

ROBERT P. PATTERSON.
Under Secretary of War.

The CHAIRMAN. The committee will recess now until 2 o'clock, at which time we will hear the remaining witnesses.

(Whereupon, at 12:30 p. m., the committee recessed until 2 p. m. of the same day.)

AFTERNOON SESSION

Present: Senators Kilgore (presiding) and Murray.

Senator KILGORE. Let us come to order. Is Mr. Rudloff here?

Mr. RUDLOFF. Yes, sir.

Senator KILGORE. All right, Mr. Rudloff.

STATEMENT OF ERNEST J. RUDLOFF, VICE PRESIDENT AND CHAIRMAN OF THE COMMITTEE ON ORGANIZATION OF THE GREATER NEW YORK CONGRESS OF INDUSTRIAL ORGANIZATIONS COUNCIL

Senator KILGORE. Mr. Rudloff, you are from the Industrial Union of Marine and Shipbuilding Workers, is that right?

Mr. RUDLOFF. Yes. I am vice president of the Greater New York City Industrial Union Organization and president of Local 39 of the Industrial Union of Marine and Shipbuilding Workers of America.

Senator KILGORE. Where do you live, in New York?

Mr. RUDLOFF. Yes.

Senator KILGORE. Do you have a prepared statement that you wish to make?

Mr. RUDLOFF. I have.

Senator KILGORE. And do you object to questions as you go along or would you rather have us ask questions when you get through?

Mr. RUDLOFF. I will take them as they come.

Senator KILGORE. All right. It is much easier for us because we can bring out the things in the record.

Mr. RUDLOFF. Yes.

We of the New York labor movement are elated at the success of our military operations on the European continent. As on the battle front, this is the time when on the home front all of our resources and energies must be thrown into the struggle for victory over the Nazis.

We cannot permit our military successes on the European continent to result in sharpened economic conflict here at home as a result of increased cut-backs and the termination of contracts. The greater and faster our military success, and the smaller our losses in matériel, the more staggering becomes the question of contract concelations and their effects.

This demands action now, for the questions of cut-backs, reconversion, and post-war planning become one and the same problem. Unless the legislature provides an immediate solution to this prob-

lem by setting up the basic framework of sound policy and strong organization, we face a period of esonomic dislocation and chaos, not when the war is over, but now in the midst of the war, at the moment of our most important and critical military operations.

The problem of demobilization is to us, therefore, identical with that of insuring the greatest possible mobilization and output for the war today, tomorrow, and in the next few vital months. Failure to provide adequate policy and machinery for demobilization must inevitably hold back our fullest mobilization for war needs as they change from day to day.

We are troubled over the fact that on the very eve of D-day we in New York suffered two sudden contract cancelations, closing down two of our largest war plants, Brewster Aircraft and Alcoa, and causing over 8,000 trained war workers to be idle. The demoralizing effect of these contract cancelations and the accompanying lay-offs was felt not only by the workers of New York, but in all other sections of the Nation.

Thus the New York labor movement share with the national C. I. O. its concern not only with the economics of an enduring peace based on full production, but even more immediately with those developments that may adversely affect full mobilization for victory in the war.

Let me try to outline briefly the situation we are in in New York City.

In the peacetime, New York is a city whose economic life is based on trade and finance and small shops manufacturing primarily consumers' goods. It is the greatest men's and women's clothing center in the world, and yet in the main uniform and textile contracts were sent to plants in other parts of the country. New York has a tremendous number of small shops with well-equipped machines of all sorts to manufacture radio tubes, electrical goods, motors, work metals.

Senator KILGORE. Let me interrupt you at this point.

My view of the industrial organization of New York City is that it does not have any vast industrial enterprises but is a great collection of small enterprises; that is, by small enterprises, I mean enterprises employing a relatively small number of people in peacetimes.

Is that right?

Mr. RUDLOFF. With one or two exceptions, that is right.

Senator KILGORE. What are the exceptions to that? One is the clothing.

Mr. RUDLOFF. And there are one or two fairly decent sized shipyards.

Senator KILGORE. Shipyards. But outside of that the rest is what we might call small plants, not large plants covering acres of ground, because you do not have any acres of ground to put them on.

Isn't that right?

Mr. RUDLOFF. That's right.

It has very few of the so-called basic industries, steel mills, rolling mills, large foundries. But in small shops and in small shipyards and spread throughout the city is a vast reserve of skilled craftsmen and complex machines for many types of metal work. And New York, as the A. F. L. points out, has the greatest reserve of skilled construction craftsmen available for every kind of work.

Apart from a very few plants, we are not a city of prime contractors. Not that we could not have been. For early in the defense period it was perfectly apparent that we were the greatest single reserve of skilled and semiskilled labor in the country.

But we got no big contracts and no new facilities.

If there had been intelligent planning and coordination in the war-production effort from the outset, many more war contracts would have been let in this area. We would not have had the wasteful spectacle of more than a million of our people migrating to other war centers that were already overcrowded, that had no housing, no stores, no sewers, no schools, no doctors, no churches to care for them.

Senator KILGORE. May I interrupt here?

I was thinking that apart from the assembly plants on Long Island, you had a vast reservoir of skilled labor in the New York area that made ordinary labor problems comparatively simple.

Isn't that so?

Mr. RUDLOFF. That is so.

Senator KILGORE. That those who could commute to those plants on Long Island could get plenty of work there and the rest had to leave the New York area.

Is that right?

Mr. RUDLOFF. That's right.

Senator KILGORE. In one plant near Newark, N. J., that I visited, the big bulk of their workers were coming from metropolitan New York.

Mr. RUDLOFF. Correct.

And for a short time, I should say until the last 9 or 10 months, New York City did have an unemployment problem.

The new plants should have been built in the places where manpower and womanpower already lived, and where there were community facilities to care for them, not where they had to be built from scratch.

New York in wartime is thus primarily a city of subcontracts, rather than prime contracts. The contracts are spread through thousands of small shops and small shipyards. And the contracts came late. Hundreds of thousands of workers have moved away, to the Jersey and Connecticut plants, to the Norfolk and Maine and Oregon shipyards, to construction work in all parts of the world.

Frankly, we think that the failure to use our facilities and our manpower on the spot has been unintelligent. It is the direct result of lack of coordinated planning of production. But with this existing picture and this experience behind us, we see how even more dangerous are the reconversion and cut-backs now going on in the same unplanned and uncoordinated manner. The last to get war contracts, we shall be the first to lose them. Our subcontracting shops suffer the minute a contract is cut off elsewhere in the country.

Senator KILGORE. In line with that, and what you just said about unemployment, I am just informed that you have always been listed as a labor-surplus area, and in January 1943 you had 400,000 unemployed people in New York.

Mr. RUDLOFF. I wouldn't be able to vouch for the figure. I know we had an unemployment problem. Just what the figures are I am not qualified to say.

We want you to look at our situation and put yourselves in the place of the workers or owners of any of our plants. At present we are

working on a contract in a small plant, making parts for a large contractor located in Detroit, let us say. The product is an important part of the invasion. We are only one of the Detroit plant's Navy subcontractors. We have been working overtime, around the clock, to turn out those parts. We have no other contracts. We produce no consumers goods, our ordinary peacetime product. Even if we wanted to or had the time and space, we couldn't because our materials come through the prime contractor for war goods only.

Tomorrow the Army notifies the prime contractor that his contract is cut, that it has enough of his product. Our prime contractor notifies us the same day to stop work on the part. We're through; 200 workers are out on the street. The prime contractor may have plenty of materials to shift into civilian production or pull enough to get another prime contract which may or may not be parcelled out to us.

Senator KILGORE. Now, let me ask you a question at that point.

We will say you had the material on hand there with which you could go ahead and make some item that you had made in peacetimes, without stoppage.

You couldn't go ahead and use that material, could you, under the present set-up?

Mr. RUDLOFF. No; not under the present set-up.

Senator KILGORE. Even if you had a market for the item, you could not make it and sell it?

Mr. RUDLOFF. That's right.

Senator KILGORE. Until it may be released.

Mr. RUDLOFF. Now, there is another example I would like to illustrate concerning two shipyards.

They are within five blocks of one another.

One shipyard in November 1943, employing approximately 20,000 employees had the facilities, had the work, and the tools and material to keep a force of 20,000 employees supplied, and kept working on a 7-day basis on a 10-hour shift and at 2 shifts a day, day and night; and 5 blocks away there is another shipyard that employed in November 1943 approximately 2.000 employees, with facilities, tools, materials, and supplies for 2,000 employees.

Now, in May and June of this year the larger shipyard that had 20,000 employees now only employs 14,000, with a 75-percent reduction on seventh-day work; whereas, the other shipyard is now employing approximately 5,000 men with only the equipment to put to work 2,000 men, and working 7 days a week on longer shifts than 10 hours, some 12 hours, and maybe twice a week on a 24-hour basis, around the clock.

Both plants had the same type of reconversion work. That is a repair yard.

Both are under contract with the same unions, have the same working conditions, with one or two exceptions; and there is an example of where proper planning was not used, and as a result there are 4,000 trained shipyard workers who have to go somewhere else, if there is work some place else.

Senator KILGORE. Whereas, if the work had been continued, both could have continued?

Mr. RUDLOFF. Yes.

Senator KILGORE. And you are over-working 18.000 or 19,000 with longer hours than is really good economy in a shipyard?

Mr. RUDLOFF. That's right.

The one shipyard that had 20,000 in November 1943, had on the surface apparently good labor relations and they had functioning very well a good labor-management committee, whereas, the other one for some reason or other does not recognize the fact that a labor-management committee can help, and just won't do business at all.

I mean, those are just actual facts.

We are here to urge the immediate adoption of over-all legislation to meet the requirements of a changing situation.

We know that cut-backs are necessary.

But when they are planned, and they should be planned in advance, not simply announced the day before they happen, they should conform with established manpower requirements and policy.

It is obvious that the best policy is to arrange cut-backs where possible in critical manpower areas, where the workers can be absorbed quickly by other plants that still need them.

That policy has not been followed in cutting back in New York City. New York is not a labor-shortage area, it is an area with an oversupply of labor.

And I might add, with an oversupply of available facilities.

The cut-backs could have taken place in labor-shortage areas, where the released workers could have been absorbed at once, if there had been the proper coordination and advance planning before the cut-backs hit us.

In fact, today, the War Manpower Commission wants those released workers thousands of miles away in other plants.

We cannot afford the luxury of another rebacle such as Brewster. That would bring demoralization not only to the war workers in the city, but to the plant owners and business interests who have been starved for war contracts and denied civilian work.

In raising this question the C. I. O. is concerned not only with its own members, but with all members of the community. We realize too well the consequences to small business, to storekeepers, to landlords, to every member of this vast community.

As a spokesman for 600,000 workers in the New York City area, let me make it perfectly clear that our first concern is pushing on with the war.

Until we are certain that the war is actually won by the force of our arms we dare not permit any plant capacity to go to waste or skilled men and women to be dumped out of war jobs.

That is tragic waste that is easily avoidable if Government, industry, and labor cooperate in trying to make the most use of what we have. Lay-offs such as those that have occurred in New York, occurring while Donald Nelson calls for more war production and the War Manpower Commission calls for more workers, only emphasizes the widespread fear that other war workers will suffer the same fate.

If workers do not feel secure in their jobs or are not assured of adequate notice in advance of lay-offs they will start shifting to other jobs they consider more secure.

This will sharply increase labor turn-over and play havoc with our already serious manpower problem. The same will happen to industry. It will relax the incentive of both labor and industry to produce to the utmost.

Let me assure you that labor is not trying artificially to keep any specific plants on war production.

We question, first, whether the mechanism now exists to explore fully the possibilities of keeping plants in war work in areas such as New York. But if a capable agency such as that set up by the Kilgore bill determines there is no need for these plants on war work then it is time to change over in New York to manufacturing much-needed civilian goods.

This requires allocating raw materials on a priority or quota basis.

But even more important, it requires some planning and some integration of the work of various agencies.

Government must enlist the initiative of industry and labor, both in devising these plans and putting them into practice. It is a prime war objective.

Otherwise we shall demoralize the war effort. And it is easier to do it now than a year from now.

For now we are still working under the urgencies of war; there are compelling reasons for our planning and working together. These reasons will seem less compelling and less forceful in the months to come.

But only this kind of preparation now assures us of victory and the building of a durable peace.

The Kilgore bill, S. 1893, provides this kind of preparation, and the effective mechanism to make it work.

As Philip Murray, president of the C. I. O., has pointed out before the Post-war Committee of the Senate, the Kilgore bill recognizes that the problem we face is right here and now and it sets out to provide the necessary measures to deal with the problem.

We join with Mr. Murray in saying that the only way to avoid large-scale unemployment is to start now to operate a full-employment economy.

This means entering upon a program of cooperative endeavor by all the leading groups in the Nation, first to set voluntary goals by industry and by the community, and then to agree as to how we are to attain those goals.

In such over-all legislation to cope with the continued mobilization for war production and the problems of reconversion for peace, the C. I. O. is deeply concerned not only with the urgency of the need, but as much with the continuance of active labor participation, in cooperation with other groups, as President Murray has pointed out.

The effective cooperation of industry, labor, agriculture, and the public is paramount in the continuing task of mobilization for war production and for the full use of machinery, manpower, and materials now and in the days ahead.

We in the United States have achieved a record of industrial production unparalleled in history. We shall be thankful for our great output in the trying weeks to come.

This record output was built in a large measure on an even greater record of labor-management-Government cooperation. This teamwork of industry and labor with Government has made possible the gigantic offensive now being waged by ourselves and our allies on many fronts.

We earnestly believe that there can be no relaxation of this teamwork as victory draws near and we begin to face the even more complex

problems of peace. The period of reconversion, the period of peace, will be even more trying than the period of conversion to war. In converting to war, all of us had the pressure and discipline that comes from the knowledge that somehow or other things must be done or the war just wouldn't go on.

That pressure will relax.

And what must take its place is the concerted effort to avoid confusion, doubt, and chaos through a planned, joint course of action, through machinery that will effectuate these plans and programs, through joint consultation in putting them into practice.

The C. I. O., therefore, believes it of decisive importance that the machinery for reconversion provide for the fullest participation of labor and of other groups in every step.

Labor representation in the long period of economic and human readjustment which we face is an indispensable assurance that the transition will use our resources to the maximum and with a minimum of conflict and chaos.

To help insure labor-industry cooperation, we urge that you give considerable thought to the kind of representation and cooperation that is most fruitful in this period.

We have had much experience with advisory committees and boards and even semijudicial, semiadministrative joint boards in the war period. There are some valuable lessons to be learned from this experience.

We might add up some of these lessons as follows:

First, the joint boards should actually be consulted on policy and not be used as window dressing.

Second, they should enlist the services and thought of the best representatives of the various groups.

Third, they should provide means of exchanging and reconciling divergent points of view.

Fourth, the representatives of these groups, meeting jointly, should provide the channels for the most clear-sighted and progressive thought of the groups they represent, and they must be given the sense of responsibility for action that will enable them, in turn, to activize their own groups for great programs.

Fifth, to aid in these efforts, the joint consultative bodies should be provided with technical information and staff so that their participation in policy will be informed and specific, rather than vague and general.

Senate bill S. 1730 negates these lessons almost entirely.

Its third revision, dated June 9, 1944, permits the Director of the Office of War Mobilization to consult with representatives of labor, industry, and agriculture. This will give them no sense of participation whatsoever.

The experience of the War Production Board with labor advisory committees particularly demonstrates that such permissive consultation results in few committees, in unsatisfactory representation, and in general futility.

Even worse in the provision for separate committees of labor, industry, and agriculture. This defeats the entire purpose of such committees.

If you want cooperation, as we in labor know only too well, the best way to get it is by sitting down across the table.

As a matter of fact, the separate committee idea of S. 1730 would actively prevent cooperation of the groups, and set at nought the lessons we have learned during the war.

It reminds us in labor of the barbaric days before collective bargaining, when labor met in one room, industry in another, and the Government representatives kept shuttling back and forth between them for days at a time, attempting to interpret one to the other, to the disadvantage of all. We have put those days behind us, except for some fossil remnants still lying around.

Senate bill 1893, on the other hand, provides the kind of representation and the mechanism that is designed to get the best results out of the various groups.

It creates a Joint National Production Employment Board with equal representation from industry, labor, agriculture and the public, appointed by the President.

The members have a sense of responsibility as group representatives in participating in the decisions of the Office of War Mobilization. They are in a position through staff and access to data to advise intelligently on policy. And with this sense of responsible participation in policy, they can secure the maximum cooperation and participation of their own groups locally in war mobilization and postwar adjustment.

As President Philip Murray has said—

this is in no sense an executive board, but neither will it be a mere figurehead to be consulted or ignored as the Director of War Mobilization or other officials might please.

Such a joint board will have the right to initiate necessary studies of policies and programs, and will advise Congress of the results of its studies.

The proposals in S. 1893, we submit, provide a method of labor-industry-agriculture representation that is real and responsible, and therefore effective, and one that will ensure the success of the program in the difficult days ahead. It is an indispensable part of the legislation proposed.

Senator KILGORE. Now, isn't it your idea—I gather from the prepared statement—that in the necessary cut-backs that will take place as the war progresses, this should be guided and directed by a central agency, so that they will take place in areas in which the workers can be mostly used for other war work, or, if there is no war work, they can be channeled right back into consumer goods for civilian industries.

Mr. RUDLOFF. That is correct.

Senator KILGORE. That must of course be controlled by a central director.

Is that right?

Mr. RUDLOFF. I personally believe that is the only way that it could function properly.

Senator KILGORE. In other words, it couldn't be operated by 15 or 20 agencies with only separate conferences.

Mr. RUDLOFF. The only thing you could get out of that would be confusion and delay.

Senator KILGORE. Now, your idea of the board is that the production and employment boards should be one board in which there are

representatives from the various phases of the program to meet in conference.

They can have their little caucauses among their own little individual groups if they want to, but their action would have to be joint action.

Mr. RUDLOFF. Correct.

Senator KILGORE. And not have separate action on separate boards, each representing its own phase. Is that right?

Mr. RUDLOFF. That's right.

Senator KILGORE. And the question of unemployment compensation should be closely integrated and completely controlled by the same board that directs the plant cut-backs or shut-downs, and that same agency should handle the necessary migration of workers to go back to jobs that can be found for them.

Is that right?

Mr. RUDLOFF. Absolutely.

Senator KILGORE. All right. Those are all the questions I have to ask. If there is anything else that you have I will be glad to hear it.

Mr. RUDLOFF. No.

Senator KILGORE. If not, thank you very much.

Now, the next witness I believe is Mr. Howard Simon.

Mr. SIMON. Yes, sir.

STATEMENT OF HOWARD SIMON, PRESIDENT OF LOCAL 1227, UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA

Senator KILGORE. Mr. Simon, I believe you are with the United Electrical Radio and Machine Workers of America in the New York area.

Is that right?

Mr. SIMON. That's right. I am the president of Local 1227 of the United Electrical, Radio and Machine Workers of America representing New York and northern New Jersey, comprising approximately 87,000 members.

Senator KILGORE. All right.

If you have a prepared statement furnish one to the reporter so that he can make his notes, and if you don't object, I would like to ask questions as you go along.

Mr. SIMON. Perfectly agreeable.

Senator KILGORE. All right.

You may just go ahead and if I see something I want to enlarge upon I will ask you questions.

Mr. SIMON. Thank you, Mr. Senator.

The United Electrical, Radio, and Machine Workers of America have played an important role in the program of conversion to war production. We have been instrumental in aiding in the conversion of the washing-machine industry, the refrigerator industry, the typewriter industry, and many others into the war production program. I might even say that our union has been the most potent force in pushing both Government and industry into converting parts of our industry to war work. It has been a painful job. Our union therefore

is vitally interested in legislation dealing with the problems flowing from contract termination and cut-backs. We feel that these problems constitute part of the need for continued mobilization for the war effort even more than for the post-war period.

Senator KILGORE. Now, I want to interject one question there.

In the New York area you had a number of conversions of smaller plants from a peacetime basis, such as refrigeration manufacture, or washing-machine manufacture, as you say, to war matériel.

Mr. SIMON. That is correct.

Senator KILGORE. And in that conversion, of course, there was practically no question of unlimited capital to be used; the question of expense meant nothing; the question of time was of the highest import.

From your observation, how long did it take to convert one of those plants?

Mr. SIMON. Well, the conversion of the plant depended in many of the cases first upon the size of the plant, and the character of the job that was demanded of it for the war period. That would vary from a small plant that might be making parts for typewriters to move into parts for small shells or trigger mechanisms or something like that, of a very short period of a matter of a few weeks, the time involved in retooling machines; but if it was necessary to replace one machine for another, or change lines, then the period extended to as high as 3 months—4 months, in some of the cases.

Senator KILGORE. Now, the reconversion back to peacetime of such plants, in which time to the owner is not as essential as it was to the Government to get that conversion made in the first place, is naturally going to occasion a greater length of time, isn't it?

Mr. SIMON. I will say this, there isn't the compelling force that there was for war production.

Senator KILGORE. No.

And naturally, there will not be the volume of labor used.

Now, in the conversion of those plants, compared to the number of men who work in the plants, approximately how many men would be required to reconvert the plants?

Mr. SIMON. Well, always in a period of conversion you run with a much smaller force than in a period of production; that force which may be involved in your tool work, maintenance work, and so on, for rearranging the different facilities.

Senator KILGORE. So if a conversion takes place on a direct cut-off, you will of necessity have a larger lay-off than if your conversion is started immediately?

Mr. SIMON. Well, in most plants conversion can begin to take place while war production is still in production.

Senator KILGORE. And when you do have a cut-off, you have a large lay-off in the number of personnel?

Mr. SIMON. Yes.

Senator KILGORE. Now, if the cut-back could be made gradually, the conversion in manufacture can go along simultaneously with practically the same personnel?

Mr. SIMON. That is absolutely correct.

Senator KILGORE. So that when you come off one item that you are making, you are practically in shape to start the other one down the line, is that right?

Mr. SIMON. That is correct. In a shop, as you narrow down a given department, workers can be freed from that department to begin the production of——

Senator KILGORE (interposing). And, incidentally, wouldn't that also save an awful lot of partially fabricated items?

Mr. SIMON. Yes, very definitely.

Senator KILGORE. You wouldn't find yourself with a whole lot of parts lying over here because you will be able to absorb those parts in the finished product that is coming, in a diminished number, off the assembly line?

Mr. SIMON. That is correct.

Senator KILGORE. All right.

Mr. SIMON. We do not feel that this is a special problem for us in New York—that is, the question of our contract terminations and cut-backs, and so forth—but we are prepared to show you how we are being affected in this city, and why there must be national legislation at once.

New York is most hard-hit by reconversions because the bulk of our plants are small manufacturers, with the exception of a few large companies, such as Sperry. This means the majority of the plants are subcontractors, making parts, fittings, and subassemblies for larger plants and prime contractors throughout the country. That is why the cut-back or termination of contract anywhere in the country may affect one or more of our plants in the New York area.

We should point out that presumably because New York is located on the seacoast and because of other factors, it was one of the last cities in the country to get into war production, although it was and is one of the largest consumer-goods producing centers. The working people of this area suffered as a result of that through unemployment when production needs and labor shortages in the Nation were mounting. Now that many war orders are being cut off New York, the last to be put in war production, is one of the first areas in the country to be hit, and hit hard.

We do not come here to plead for the continuance of unnecessary war production. That is wasteful, and American labor rejects it. But we do know that now that cut-backs are taking place, many former critical materials are available. We therefore come here to ask for a plan that will guarantee that our facilities and our manpower will be fully utilized as long as there is war work available. Further, to the extent that such war work is not available, the limitation and restricting orders of W. P. B. should be lifted to permit necessary and vital consumer production to fill the gap.

We have a whole series of plants in this area that have already been either completely cut out of war work or have had their hours cut to such a degree that the workers are not permitted to contribute fully of their skills, nor the plants of their capacity. There is, for example, the General Arc Lighting Co. completely cut out of war production by the termination of their contract. One Saturday morning the management of the plant called the workers together and told them to go home at noon, that he had just received word that their contract had been canceled. This is a small plant—only about 100 workers. It happened about a month before the Brewster shut-down. Yet this plant is typical of a problem that is probably

going to be repeated a hundred times for every major plant that is cut out of the war production program. For example, the shut-down in Brewster resulted in the termination of contracts to more than 127 subcontractors.

Senator KILGORE. By the way, getting back to that question—which may be of interest for the record—of the wastefulness of that complete cut-off, after the Brewster shut-down an endeavor was made to see if they couldn't use the partially fabricated parts from Brewster at Chance Vought and Goodyear, and we discovered that, due to different shop practices existing in the three plants, none of the partially fabricated parts on hand at Brewster—except, of course, instruments and things of that kind—could be utilized without complete rebuilding by either Chance Vought or Goodyear.

Mr. SIMON. That is very interesting.

We have had similar contract cancelations—that is complete cut-offs—in the cases of the Quartz Products Co., the Diamond Tool Co., and many others.

Most of the plants involved in this area are small plants having a number of subcontracts. Many of those plants have already suffered a reduction of hours, due to the fact that one or more of their contracts have been terminated.

A plant such as Bijur, making pressure lubricating systems, is running with a small crew 40 hours per week. Liquidometer, making gages for submarines and aircraft; Hammerlund, in the radio field; Sonotone, making electronic tubes; Fairchild, making aerial cameras; American Radiator, making magnesium bombs; Waldes, making parts for torpedoes; and Sperry, on its searchlight program—all have suffered a sharp reduction in working hours. Finally, the last two examples, most recent and most dramatic, have been the closing of the Brewster and Alcoa plants in Queens.

The point has been made that the closing at Brewster was the first of its kind and that it represented a warning of others to come. Gentlemen, cut-backs are all about us. We in the United Electrical, Radio and Machine Workers have already experienced the closing of the small-arms plants in the St. Louis area. These shut-downs preceded the Brewster case by many months. In St. Louis, 14,000 workers in the United States Cartridge plant were laid off due to a cut-back in small-arms production. This lay-off took place in a group 4 labor area, just as the termination in the Brewster and Alcoa cases. Group 4 is the loosest labor area, where labor is plentiful. Frankly, this kind of shut-down in an area where both labor and facilities are plentiful, if it is not followed immediately by a substitute program, is wasteful and criminal.

We feel that terminations should take place first in critical areas. In the small-arms cut-backs, the critical manpower areas in Connecticut were hardly even touched, while the loose area of St. Louis was made even more loose by the cut-back. Further, just as in the terminations in Brewster, no one, neither the management nor the union, was given prior notice of the terminations.

Senator KILGORE. Just as an illustration, no later than the first of this week five different companies had labor recruiting parties in my State of West Virginia, seeking to cull out some more labor out of West Virginia to move to highly critical areas.

Mr. SIMON. We know also the experiences in the lay-offs at Alcoa, for example, where, according to the reports of the United States Employment Service, workers from that area were requested to go as far as British Columbia and the Midwest and the South and other places, to fill needed jobs, and very few of them were hired in that particular area.

The fact of the matter is that these families were families that lived in the area around the plant, in Maspeth, Queens, and it was a very difficult problem to expect these workers to uproot themselves and to go to other places in search of jobs.

Senator KILGORE. I was told at Brewster that the least of their problems was manpower and transportation; that all of their employees lived within reasonable tube or streetcar range of the plant, and could use normal municipal or commercial transportation to get to and from work.

Mr. SIMON. That is right, and many of them walked to work.

Senator KILGORE. Yes; tremendous numbers of them were able to walk to work, they were so close.

Mr. SIMON. That is right.

Senator KILGORE. Incidentally, I was told that months ago, before there was any question of a shut-down there.

Mr. SIMON. I am not attempting to tread on the ground of the United Automobile Workers, who, I understand, are going to testify later, but of the 5,000 laid off in the Long Island City area, up until the middle of last week only seven-hundred-odd had been reemployed. One of the reasons is that they can't get jobs which would give them an opportunity to continue the skills that they have been using in the Brewster plant. However, the Goodyear and Chance Vought plants are in more critical labor areas, and these workers could have been reabsorbed if they had been laid off there.

We have other examples of the need for coordination and planning, as in the case of Sperry. The Sperry plant at the present time is laying off workers. At the same time a subsidiary of the Sperry Co.—the Ford Instrument Co.—is hiring workers. There is no real coordination between the lay-offs in Sperry and the hirings in Ford. Many skilled workers are being lost to the industry and new workers are being hired, unfamiliar with the trade, who have to be broken in.

We need the kind of coordinating agency provided in the Kilgore bill, with power to coordinate manpower and production needs and not just the power to umpire. We need an Office of War Mobilization and Adjustment that would be directed to work out the policies and program for guaranteeing that the problems of conversion would be part of the whole program of war mobilization.

We feel that full war production should me maintained, and that as workers and facilities become freed they should either be given other war work or they should be put into important consumer goods production.

We need the requisite powers in the W. P. B. and in the Production Program and Reconversion Committee set up by the Kilgore bill to provide the machinery for effectuating this integration. It would be necessary for this committee to work out definite formulas to fill the gaps that will take place as a result of necessary contract terminations. The experience in New York proves that what we need is

an agency which shall be directed to formulate such a plan and an agency to put the plan into action.

Gentlemen, this is not a post-war problem. If you here do not solve the problem now, you will be hurting the war effort. For it is a matter of maintaining the highest productive effort now to guarantee victory. Such coordination as provided for in the Kilgore bill would go a long way toward easing the minds of the workers in the shops in the New York area. The termination of contracts that is taking place, the cut in hours, are leading to a feeling of complacency on the one hand and insecurity on the other.

There are two main solutions. One is further war work. I cite this example from our own experience. At the present time, there is a sharp need for heavy artillery and for rockets. The Ammunition Branch of the Ordnance Division of the Army is looking for facilities to produce parts for this program. Yet when we came down here on Monday with a proposal to bring some of this artillery program into one of our shops that had the tools and facilities, the representatives of management and of labor had to act as a sort of one-man Office of War Mobilization, running from one agency of the Government to another trying to line up the work.

This is a typical example of what happens from a lack of coordination. We have plants that have open facilities for the rocket program. We have skilled workers available. Yet because of the lack of a coordinating agency which is directed to plan this program, it is up to the individuals to get the jobs for themselves. It results in wasted manpower and idle facilities, and it puts back the war program.

The second alternative to continued war production is the resumption of civilian production. We in New York are the greatest consumer-goods producing area in the country. We have the facilities, we have the labor. Moreover, due to the same kind of lack of foresight and planing and coordination at the beginning of the war effort that we now complain of in reconversion, we have many facilities that have never been converted to the war effort. I want to stress that this is no fault of ours. We sought war work; we cooperated with industry in hammering at the doors of the procurement agencies to get subcontracts and prime contracts. But that is the present situation.

This means that many of our shops could begin now to go back immediately to consumers' production without in any way affecting the war effort. For example, we have shops in New York that produce silver hollow ware and kitchen utensils. All over the country, war workers need these articles, restaurants feeding war workers need them. These plants could right now resume civilian production, in an essential category, I might add. But they cannot do so until the W. B. P. restrictions on materials are lifted.

Senator KILGORE. Let me ask you this question. Your kitchen utensil and hollow-ware plants could use aluminum in making these utensils, couldn't they?

Mr. SIMON. That was my next statement, Senator.

Senator KILGORE. All right.

Mr. SIMON. And yet, at the same time, the Alcoa plant in our own city has been closed down because of a surplus of aluminum, the chief material needed for these kitchen utensils.

Isn't it perfectly obvious that we desperately need the kind of coordination that would see to it that these aluminum facilities were continued to produce materials to be worked on in the shops turning out needed kitchen utensils? Why should each one of the shops concerned have to hurry down to Washington, pull strings, call for hearings, and pound on doors of procurement agencies, in order to arrange—each for itself—what could be so easily arranged in an orderly manner by the right kind of coordinating agency with sufficient power?

This is our problem. This is the problem of the overwhelming number of shops in the country. We need a coordinating agency, such as provided in the Kilgore bill to be established now to guarantee full production in war and to continue it in the desperate days of reconversion and in the peace.

We feel that Congress should not recess until over-all legislation assuring this coordination and providing for the human factors in reconversion is taken care of.

Senator KILGORE. Thank you very much, Mr. Simon.

Senator Murray, do you have any questions that you want to ask?

Senator MURRAY. No. I am very sorry that I made engagements for all day today, and I will have to leave again pretty soon. Mr. Richter, I understand, is going to testify, and I would like to hear his statement, if I could, before I have to leave.

Senator KILGORE. All right, is Mr. Richter here?

Mr. RICHTER. Yes.

Senator KILGORE. We also have Mr. Kerrigan scheduled; is he here also?

Mr. RICHTER. No, sir.

Senator KILGORE. Will you make the statement for Mr. Kerrigan?

Mr. RICHTER. Yes, Senator.

Thank you very much for coming down, Senator Murray; I know you are a very busy man.

Senator KILGORE. Proceed, Mr. Richter.

STATEMENT OF IRVING RICHTER, NATIONAL LEGISLATIVE REPRESENTATIVE, UNITED AUTOMOBILE WORKERS, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. RICHTER. My name is Irving Richter; I am the national legislative representative of the United Automobile Workers, C. I. O.

Mr. Kerrigan, our regional director for the New York area, was going to come down but a new situation has developed involving some cut-backs, and he is giving them his personal attention.

I would like to first start by saying that I have just received a telephone call from our people in Philadelphia. The first they heard of this Budd contract cancelation was a report they read in the newspapers this morning. Eight thousand people are to be laid off with no notice whatever.

Senator KILGORE. What does that cancelation involve?

Mr. RICHTER. It is a cancelation of a stainless-steel experimental plane that they have been working on.

Senator MURRAY. What agency is that?

Mr. RICHTER. The War Department, Senator Murray.

Mr. SIMON. No; it is the Navy Department.

Mr. RICHTER. I had understood it was the Army, but I am advised by Mr. Simon that it is the Navy.

Senator MURRAY. When was the notice of this cancelation issued?

Mr. RICHTER. They had no notice, Senator; they read about it in the paper this morning, and while the paper announced that the War Manpower Commission had been informed about it, the local representatives of the War Manpower Commission told them that that was the first they had heard about it.

Senator MURRAY. Did Mr. Wilson's committee of the War Manpower Commission know anything about it?

Mr. RICHTER. I didn't have a chance to look into it. If they did know about it, they didn't notify the labor people. Here is a newspaper story on it, Senator [hands clipping to Senator Murray].

Yesterday, the Washington News carried a story by a Scripps-Howard feature writer, about Detroit. It spoke of the peace jitters seizing Detroit. This writer had made a rather intensive study in Detroit and his conclusions were that there was absolutely no evidence and his conclusions were that there was absolutely no evidence that he could find of any planning being done for this conversion period and the post-war period; and that not only labor, but management in the industry, was jittery.

Senator MURRAY. This was a statement appearing in the press?

Mr. RICHTER. Yes, sir; this was a feature story, and the reason I bring it out——

Senator MURRAY (interposing). You haven't got that feature story here?

Mr. RICHTER. I don't have it with me, but I will get it for the record. It was written by a Scripps-Howard feature writer and I assume was a syndicated article. The reason I mention it is that it confirms so completely the reports we have had from Detroit at this time.

(The article referred to is as follows:)

DETROIT HAS PEACE JITTERS

(By Edward A. Evans, Scripps-Howard Staff Writer)

DETROIT, June 12.—Though sharing fully the Nation's pride that the first week of the invasion has gone so well, Detroit is developing an acute case of peace jitters.

It grows out of a belief that Washington is almost completely unprepared for the vast task of industrial demobilization, which may face the country within a few months or even weeks.

Official warnings against overoptimism concerning an early defeat of Germany are taken seriously here. But leaders of the automobile industry look for a sharp decline in war production soon if the invasion's progress continues to exceed expectations.

They fear that a flood of war contract cancelations and cut-backs may come before the Government is ready with any coordinated plan for smoothing and speeding the transition back to production of civilian goods and for saving millions of war workers from many months of unnecessary unemployment.

Nearly 4 months after the Baruch-Hancock report was issued, they point out, Congress has enacted none of the legislation it recommended. The House is still delaying action on the contract-termination bill, which passed the Senate unanimously weeks ago.

In a speech here last week, War Production Boss Donald Nelson asserted that "we are going to make the resumption of peacetime operation dovetail into the declining war economy." But if, as Mr. Nelson added, "the change-over machinery is ready" Detroit can see no evidence of it.

A few days before the invasion, Mr. Nelson did appoint a committee which is supposed to direct the War Production Board's part of reconversion. The Brewster Aircraft Corporation case, however, seems to many men in the automobile industry to have provided clear evidence that the change-over machinery is not ready, and not even in existence except perhaps on paper.

Word that War Mobilization Director Byrnes will go before Congress today to urge action on the Baruch-Hancock program was welcomed here, but there is little expectation that Congress will do more than pass the contract-termination bill—if that much—in the less than 2 weeks before its contemplated recess for the Republican National Convention.

And there is a great deal more that needs to be done.

The automobile industry, occupying a key position in the national economy, has been given no assurance that its plants will be cleared quickly of the Government-owned machines and materials which now fill them. It has not been permitted to buy the new tools it will need for making civilian cars or to use the small amounts of material its engineers and designers want for experimental work. Its next meeting with War Production Board officials for discussion of reconversion plans is set for mid-July, by which time cut-backs and cancelations may be reaching large volume.

It fears that, unless Washington gets a mighty move on very soon, plants will be closed down with no chance to begin a prompt change back to production of automobiles, and workers in Detroit and many other manufacturing centers will be out of jobs for months longer than they might have been if the warnings of industry and the recommendations of the Baruch-Hancock report had been heeded in time.

Mr. RICHTER. I understand, Senator Murray, that one of your staff people has just returned from there, and I imagine that he has told you a similar story. He has talked to a few of our officials in Detroit. I believe his name is Timber.

Senator MURRAY. I don't know of anybody by that name.

Mr. RICHTER. I may not have the name right.

Senator MURRAY. There is a Mr. Terman, and it may be he. I don't know; I am not sure.

Mr. RICHTER. But, anyway, his findings are what we are concerned with, and they, from the report I get, confirm what this Scripps-Howard writer found, and what we have had from our own people in the city.

I mentioned the other day, when you gentlemen and Senator Mead heard a few of us, that we had a report that 140,000 additional aviation workers were to be laid off between now and December—these on primary contracts alone.

In other words, this has become a very acute problem, it is a problem that—as Mr. Simon just mentioned—is not a post-war problem, it is a problem facing us today.

Senator MURRAY. The reason for your discussing it here now is to impress the Congress with the need for quick action on this legislation?

Mr. RICHTER. Yes, sir.

Senator MURRAY. Well, I think that everybody recognizes that now and everybody is making the statement that we must hurry up and put this legislation through, and that we mustn't adjourn without it; so I don't think there is any need to prolong that discussion.

Mr. RICHTER. Only this morning Senator George told us—not here, but I saw Senator George before coming here—that he was afraid there was to be a long recess without action on this. He personally is convinced that there should not be such a recess until this problem is settled. I am just repeating that, Senator, because there is no evidence that the Senate will act on it.

Senator MURRAY. I think other members of Senator George's committee have expressed themselves the same way—and so have I—on several occasions, both publicly and privately.

Mr. RICHTER. I know how strongly you feel about it, Senator Murray, and I imagine that if you hadn't had any legislation your trip to the Brewster plant and your first-hand knowledge of this case, would have changed your mind.

Senator MURRAY. Yes.

Mr. RICHTER. I am not addressing myself to you particularly on this delay.

Senator MURRAY. Everybody seems to be agreeing with that. Justice Byrnes, in his testimony the other day, insisted on immediate action, and I think that everybody who has given any thought to it is expressing himself along that line, that we should not adjourn without having this legislation enacted.

Mr. RICHTER. Well, we would like to see it, Senator, and we would also like to hear Senator Barkley announce that the Senate would not adjourn until action is taken on this. So far such a statement has not been forthcoming.

Senator KILGORE. What you are trying to do, Mr. Richter, is impress on those Members of the Senate who have not been engaged in studying this question, the need for continuing the session until the legislation is passed?

Mr. RICHTER. Yes; I am not addressing these remarks to this committee particularly.

Senator MURRAY. I think the matter ought to be brought up in the Senate at the next convening of this session, and I am on record and willing to take the stand that there should be no adjournment until this legislation has been enacted.

Senator KILGORE. So am I.

Mr. RICHTER. Now I would like to touch on one phase of this that hasn't been developed yet, before going into the specific bills.

We, in our union, are confronted with a serious problem of preventing strikes in order that we may adhere to the no-strike pledge. It is very difficult for us to go into plants and tell the workers that we have got to have this production, that the war is not won yet, when they see all around them as an example, a situation like Brewster, where they see lay-offs pending and no provision being made for transferring these workers to other essential war work, or to essential civilian work. That is a real threat to the prosecution of the war.

Now, Mr. Patterson, when he appeared on the question of national service legislation, said that there would be panic and exodus from war work to peace work before we licked Japan, and therefore that we needed a National Service Act.

Well, we agree that there is danger of an exodus and danger of a panic before we can deliver this knock-out blow, and the only constructive step that can be taken is legislation such as you have proposed, Senator Kilgore, in order to avoid the use of compulsion which, in any case, won't keep the boys on the job.

Now, I have a prepared statement which I don't want to read because I know Senator Murray wants to get away. I just want to touch on two major points in the two bills.

Our regional director for the South, where we have a number of aircraft plants, and I met with Senator George today primarily to discuss the Murray-George bill, together with the Kilgore bill.

We know, as I have told you privately, Senator Murray, that unless you three fellows can get together we are not going to get a bill through this year.

Senator MURRAY. Well, I have been begging and praying that we could get together and begin to work on the language of a bill. All we have done so far is to have hearings and talk. Now we can keep talking and telling the public the need for prompt legislation and all of that, but that isn't going to get it. The only way we can get it is to get these Senators to sit around at a table and prepare a bill. I don't know any other way. If you can tell me any other way I can get a bill out here I am willing to go along with you, I am for a bill. But the only way I know of getting a bill is to have somebody write it.

(Discussion off the record.)

Mr. RICHTER. It is perhaps because our union is involved to a greater extent than any other single union, that we have been spending a great deal of time trying to get something out, and I asked Mr. Starling to come up from Atlanta for this meeting because I know Senator George is one of the key people in this.

So we discussed with him what we consider the two main propositions of the two bills to be, and the different versions of those provisions.

The first was the section of S. 1730 which establishes representatives of labor, industry, and agriculture in separate bodies. The point we made to Senator George was that what we need in this country is more unity, and not less; and that getting these people to meet separately will not solve the problems that are going to be confronting the entire country; that if the industry people want to meet separately at any time they can do so in their hotel rooms or any other place; but that this board should really be a tripartite board where they could sit across the table and exchange their ideas and convey them to the executive authorities of the agency.

Senator George concurred with us on that.

Senator MURRAY. I have always been willing to concur on that. The only reason I was willing to go along the other way was that the argument was made that if you have them all in one group it is going to be more difficult for them to agree on things; that if you have labor sit around a table with their own group, they can determine what they want; and that agriculture can do the same thing and industry can do the same thing; and that they can then come together and see if they can't agree on the over-all.

Now it is immaterial to me. I will accept the proposition that you are making there, it is all right with me.

Mr. RICHTER. Thank you, sir.

Now to speak about the question of coordinating the various procurement agencies. In the Murray-George bill, section 201 does give the Director the authority to coordinate the activities of other executive agencies; but further on in the bill it states that any contracting agency shall terminate prime contracts for war production whenever,

in the opinion of the agency, the performance under such contracts will not be needed for the prosecution of the war.

Senator MURRAY. The subsequent language of the section, though, points out that that can only be done under the policies and regulations that are set up there, and that covers that.

Senator KILGORE. Senator Murray, if you will remember, we yesterday agreed that we would modify section 201, as written in S. 1730, by stating specifically in the section that they shall only terminate with the previous advice and approval of the Director.

Senator MURRAY. That is right. Of course that would be the result anyway because my understanding of the rules construing a legislative act is that all the terms and provisions of the act must be considered in construing what the act means.

Now the subsequent provisions in there go on to show that those contracts could not be terminated without following a certain procedure. But I am perfectly willing to have it made extremely clear by having that amendment put in that you have mentioned that I agreed with you on the other night when we talked about it. I recognized then right away that that would not change the bill at all, it wouldn't change the provisions.

Senator KILGORE. It doesn't change your intent in the bill.

Senator MURRAY. No; I would say that there wouldn't be a court in the United States that would construe that bill, the way it was written, as giving any agency at will the power to terminate a contract without paying any attention to the other provisions.

Mr. RICHTER. Well, if there is agreement on that I will go on to the next point.

We discussed with Senator George the unemployment compensation provision. The latest draft of S. 1730 does not contain the amounts, and we raised, with Senator George, this question of the 80 percent maximum in the Kilgore bill, citing the fact that if you provide a flat absolute minimum of, let us say, $20, or whatever it is, in some cases that might be above the actual earnings. So he was in favor of the 80 percent.

Senator MURRAY. I would be in favor of 80 percent too, but you should consult the Social Security Administration there and they will tell you that that is an administrative impossibility. That is a problem for your organization to work out. I will agree on the 80 percent; I will agree to 90 percent, to show you what a good sport I am; but the people who are going to administer it say it can't be done. Now you work that out with them.

Mr. RICHTER. Have they provided your committee with a bill embodying an unemployment compensation provision?

Senator MURRAY. No; but they advised us in the formulation of this bill. However, we put that 80-percent provision in there without their consent and they now say that it is not feasible, not practical, that it is administratively impossible. Maybe if you cantact them you can show them that they are off their base. If you can do that I will go along with you and let them go.

Mr. RICHTER. Well, we feel that if it is practicable, and if it can be done, of course we want; if it is not practicable, we are not going to ask for it.

Senator MURRAY. I wish you would call them up right away and talk to them, as soon as you have time. They just left my office a few moments ago.

Mr. RICHTER. Are they to testify here?

Senator MURRAY. I asked them to write me a letter telling me what I have stated, that they said it was an administrative impossibility.

Senaor KILGORE. I think the best thing to do would be to ask them to come up here and state that on the record.

Senator MURRAY. That would be fine. Maybe you could have them called right now—because we haven't any time to waste and we ought to settle these things as we go along—and see if we can't have them up here tomorrow morning, unless you can get them to come up this afternoon.

Mr. RICHTER. Those are the major points we discussed with Senator George this morning.

Senator MURRAY. Another thing they told me was that the entire unemployment compensation provisions of the bill, as we have them set up there, have to be revamped in such fashion as to make it possible for us to pass it in the Senate, because if it is a tax measure, then, under the Constitution, we are not entitled to put it through the Senate, and if we do, the House will refuse to consider it because we are encroaching upon their jurisdiction.

Now we have to change it around in some fashion and they say that that can be done, and they are working on it now to put it in appropriate legislative language to enable us to get by that constitutional inhibition there.

Mr. RICHTER. I will submit for the record my prepared statement.

While Senator Murray is still here I would like to call on one of our representatives who have been working on the Brewster case since its termination, or rather since the termination of employment there. My purpose in asking him to come up here is to give you some evidence of what actually happens to the individuals who were terminated.

Senator KILGORE. You say that you have a prepared statement which you wish to submit for the record?

Mr. RICHTER. Yes, Senator.

Senator KILGORE. That may be incorporated in the record at the conclusion of your testimony.

(The prepared statement of Mr. Richter is as follows:)

STATEMENT SUBMITTED BY IRVING RICHTER, NATIONAL LEGISLATIVE REPRESENTATIVE, UNITED AUTOMOBILE WORKERS-CONGRESS OF INDUSTRIAL ORGANIZATIONS, ON CUT-BACKS IN NEW YORK

The cut-back at the Brewster Aeronautical Corporation plants last month focused attention on the administrative and legislative steps necessary for dealing with the decline in war employment which is already upon us.

At the insistence of the President, Justice Byrnes at the time of the Brewster cut-back called together the Joint Contract Termination Board to investigate the possibilities of providing Brewster with additional war contracts. While desirable and even necessary as an emergency measure, this sort of thing is obviously not a long-run solution for the period when total war production is on the decline.

Employment in durable-goods industries, now principally engaged in war work, has fallen off by almost half a million since the peak last fall. Mr. Byrnes is quoted as saying that in the year following the defeat of Germany employment in munitions industries may decline by as much as 50 percent. In the airplane industry alone employment is already substantially down and is expected to fall

by some 140,000 before the end of this year even if no further changes are made in the airplane program. That figure is for prime contracts only. There are no major offsets for these declines so far as war production is concerned. To take up the slack it is essential that we begin now to plan for an expansion of essential civilian production and for an export program far in excess of pre-war levels.

It is, therefore, important that Justice Byrnes in connection with the situation at Brewster call upon Mr. Charles E. Wilson of the War Production Board to look into the possibilities for other types of production at the Brewster plants. The production executive committee over which Mr. Wilson presides is the agency currently charged with responsibility for reconversion. The committee is now assisted by a new agency, the production executive committee staff set up explicitly to advise with regard to reconversion. This staff, I am glad to note, has on it representatives of the vice chairmen for Labor at the War Production Board, of the Office of Civilian Requirements and of the Smaller Warplants Corporation. All these agencies must work together with other parts of the War Production Board, with the armed services, and with the Foreign Economic Administration if further Brewsters are to be avoided.

But even this machinery is quite inadequate. Recognizing this fact, Mr. Byrnes announced 2 days ago that he had issued a directive giving the military cut-back subcommittee of the production executive committee of the War Production Board "a virtual veto power over contract terminations recommended by the procurement departments and agencies" (New York Times, June 13, 1944). This is a step in the right direction since it will force some prior consideration of cut-backs such as was notably absent in the Brewster case.

There is, however, an opposite danger inherent in this method of handling the situation. I have heard that the War Department has recently vetoed a severe cut-back in the production of one of the fighter planes because it was afraid of a public reaction similar to that developed by the *Brewster case* which might endanger public morale at the very time of the great invasion. What does this mean? It means that we may go ahead to produce war equipment which the armed services don't need simply in order to prevent a revolt of public sentiment. But consider the cost. When the cuts come, they will come all at once and have even more serious effects than if they take place gradually.

This is essentially a short-sighted policy necessary if at all only because of a basic lack of planning. We agree with Justice Byrnes that positive action is necessary. His assistants, Mr. Baruch and Mr. Hancock, according to newspaper accounts have even threatened to resign because of inaction on the reconversion front.

We go further, however, and insist that we need legislation of the sort embodied in the Kilgore bill and now sponsored by 10 Senators, many of them on this committee. The principal points about this bill which seem to us essential to an orderly handling of the situation which is now beginning to confront us include the following:

In the first place we applaud the stated objectives of the bill:

1. *Its insistence on the continuing priority of war production.*—It would be dangerous at this time to think in post-war terms only or even in terms of reconversion only. No plans now being made and no steps now being contemplated can be allowed to interfere in any way, shape, or fashion with carrying out to the full the war production program required by the armed services.

2. *Full production and full employment.*—We endorse wholeheartedly the second basic approach to the Kilgore bill best stated in the language of the bill itself, "To insure that the great momentum of the war mobilization which is bringing victory to our arms will not be lost, but will be reconverted into a peacetime transition program providing for full production, full employment at adequate wages, and full consumption in a steadily expanding civilian economy with rising standards of living for all."

We agree secondly with the over-all administrative provisions of the bill:

1. *Labor representation.*—The bill provides for a National Production Employment Board to consist of three representatives of labor, three representatives of industry, and three representatives of agriculture. The function of this Board is "to endeavor to secure maximum cooperation and participation of the American people in war mobilization and post-war adjustment. * * *" There is also provision for joint labor and industry councils to be set up on an industry and regional basis. We cannot conceive of an orderly approach to reconversion which does not contain these essentials.

The alternative bill also before your Subcommittee on War Contracts, the George-Murray bill, S. 1730, is far less satisfactory in this respect. In the version dated May 27, there was a provision requiring that the Director of the Office of War Mobilization and Post-war Adjustment shall consult with representatives of labor, industry, and agriculture "as he may deem necessary," but setting up no specific machinery for such consultation. In the latest revision of the bill dated June 9, three separate advisory boards are provided for—one for agriculture, one for industry, and one for labor. Surely Senator Murray didn't intend it, but this set-up is reminiscent of the Italian corporate state and will be bitterly opposed by organized labor.

I might add in connection with S. 1730 that it is difficult to know what its principal provisions are in view of the drastic character of its periodic revisions. With the exception of the point just noted, the changes fortunately appear to be in the right direction. .

2. *An over-all Office of War Mobilization and Adjustment.*—There now appears to be some agreement on the need for legislative sanction for an Office of War Mobilization to be clothed with the additional responsibility of coordinating and directing the process of reconversion to peacetime production.

But there is no agreement on the extent of the authority of the Director of such an Office. The Kilgore bill gives him authority to "unify the programs and activities of Federal agencies engaged in * * * production * * * economic stabilization; war production cut-backs; settlement of claims under terminated war contracts; disposition of surplus war property; resumption and expansion of civilian goods production; the training and placement of returning servicemen and civilian workers. * * *" And to "issue such directives on program, policy, and operations to the Federal agencies as may be necessary. * * *" The George-Murray bill in section 201 permits the Director "to coordinate the activities of other executive agencies," but provides further on that "any contracting agency shall terminate prime contracts for war production whenever in the opinion of the agency the performance under such contracts will not be needed for the prosecution of the war. * * *" Thus the authority of the various procurement agencies is continued in essentially unlimited fashion.

3. *A central planning agency.*—Within the Office of War Mobilization and Adjustment the Kilgore bill provides for a Bureau of Programs, an agency authorized to study and report on plans and programs affecting both war mobilization and peacetime full production and employment. We are gratified that the latest version of S. 1730, in response, we believe, to labor's insistence, now provides for a similar agency, a "Division of Post-war Plans and Projects." It fails to recognize the need for planning the war and post-war together.

Thirdly, we feel that the interim safeguards provided by the bill are the best which have been brought forward. If enacted into law, the bill would insure that returned servicemen and workers on the home front shall be treated alike with respect to placement in jobs, training and retraining, and in eligibility for unemployment compensation. The specific provisions of the bill which we endorse include:

1. *Unemployment compensation.*—"Interim placement benefits" are called for amounting for ex-servicemen to $20 per week for those without dependents and going up to $35 a week for those with three or more dependents. For others than ex-servicemen the bill calls for a maximum benefit rate of 80 percent of regular weekly earnings not exceeding $20 to $35 depending upon the number of dependents. Such benefits would be payable for a maximum of 2 years.

It is impossible to comment upon the corresponding provisions of S. 1730 because the essential figures have been omitted in the latest draft—those relating to amount and duration of benefits.

2. *Training.*—New jobs must be found for 25 to 30 million, counting both ex-servicemen and displaced war workers. The bill authorizes the Work Administrator, who operating under the general authority of the Director of the Office of War Mobilization and Adjustment, to provide for vocational educational training for a period not to exceed 6 months. It provides further that persons receiving vocational training shall be entitled to a maintenance allowance varying in amount according to the number of dependents.

3. *Extension of the Federal Employment Service.*—The Kilgore and the George-Murray bill both provide that the United States Employment Service shall be continued as a national operated system for a period of 2 years after the end of the war. Such a provision is essential to an orderly handling of the problem of transferring workers from war employment and from war areas to civilian employment.

4. *Transportation.*—A corollary to the above provisions is that workers who must move to another location in order to find suitable employment shall be assisted by the provision of funds to meet in part the cost of moving. The $200 limitation in S. 1730 will prevent needed redistribution of workers in relation to jobs.

In concluding my testimony I should like to say that the United Automobile Workers' Union is very glad indeed that so many Senators have joined sponsoring the Kilgore bill. They represent a considerable diversity of backgrounds and opinions. That they are willing to collaborate in pushing this essential legislation is a good omen for the cooperation among all portions of the population which will be necessary if we are to have an orderly reconversion period and if we are to achieve the continuation of full production and full employment in the post-war period.

Senator KILGORE. Now, what is the name of the witness you wish to have heard?

Mr. RICHTER. Leonard Schiller.

Senator KILGORE. All right; go right ahead, Mr. Schiller. First state your full name and connection?

Mr. SCHILLER. My name is Leonard Schiller. I have two connections with Brewster. First, I am a former employee of the Brewster Corporation, having worked there some 3 years; and I am now employed by the United Automobile Workers, C. I. O. as an international representative, working under the direction of Charles Kerrigan.

Senator KILGORE. All right, proceed, Mr. Schiller.

STATEMENT OF LEONARD SCHILLER, INTERNATIONAL REPRESENTATIVE, U. A. W.-C. I. O.

Mr. SCHILLER. I would like very much, gentlemen, to point out to you some of the consequences and effects since the Brewster lay-off, that have happened to our people formerly employed in that plant.

The number of people laid off was about 600 in Long Island and 1,500 in Johnsville. This does not include what has happened to some of the people in the 127 subcontracting shops doing work for Brewster. Out of every 100 people laid off in the Brewster Corporation, as of today it is the union's estimate that only 15 people have been placed at work. These people who have been placed at work, in the majority of cases have been placed at a reduced rate, which obviously means a cut in their present standard of living. They have been channeled into work which is not compatible with the work they have been taught to do at the Brewster Corporation, and consequently the full capacity that these people might employ in the war effort is not being utilized to aid in expediting war production for the successful conclusion of the war.

Secondly, the entire Brewster situation has created, in the New York area, a mental condition among the war workers of that area, a feeling that work in war plants has become insecure, that there is no future for them in that type of production. Those who remain on the job have a tendency to become slightly demoralized; others, who have farms or who have lived in other areas, are beginning to go back to those areas; and those who live in the vicinity are going into nonessential industries such as barbering, restaurant work, and so on.

That has created a problem in the lowering of the morale in that particular area.

Senator Kilgore pointed out the difficulty of getting work into the Brewster plant because of the inability to transfer work, say from Chance-Vought or Goodyear, into Brewster. Now that is a problem specific to the aircraft industry. It is in the main, yet, today a handicraft industry, where each part is fitted and worked over, and the jigs of one plant are not transferable to the jigs of the other plant, and so on.

Senator KILGORE. In other words, in the program the over-all plane design was followed, but each plant was permitted to put in its own shop practices and its own detailed drawings, and therefore even the cutting of the sheet aluminum for the skin on the plane, and frequently the location of the extrusions and things of that kind were left to the plant engineers themselves—so that the parts are not interchangeable plant from plant?

Mr. SCHILLER. That is right. If you and I each had a tailor-made suit, I couldn't wear yours and you couldn't wear mine, but they would still be suitable suits.

That is the problem of the aircraft industry and that is a serious problem in considering the conversion of the aircraft industry and the termination of contracts in the aircraft industry, that must be given a great deal of thought in the type of work that is to be used to replace the production of the aircraft plants.

I want to go, for a moment, from the Brewster situation to another situation in New York City, which is the Bendix Corporation which has a marine division in New York City, and I am the organizer servicing that plant.

On Monday, without any previous notice, the company told us that this coming Friday there was to be a lay-off of some 125 people. The reason the union was notified, gentlemen, is that it has been union procedure to incorporate in the contracts a notification of lay-offs. We had a 5-day notification period in our contract. We were notified on Monday that on Friday there would be cut-backs in that plant, and that 125 people would be laid off. This is the second lay-off in that particular plant in a 2-month period, which will mean a total of about 300 people that will be laid off at that plant.

The problem that I want to raise in connection with that plant is this: New York is a loose labor area. The Bendix Corporation—and I am not singling out that corporation as a flagrant example, I am using it as a general example—has plants in Norwood, Mass., Teterboro, South Bend, and so on.

They hold somewhere above $80,000,000 of war contracts. As between the various Bendix plants their older plants are undoubtedly much more efficient in the production of war work than the newly created or "war baby" plants. In the scheduling of production by this corporation, undoubtedly they would schedule it where they feel the production could be most efficiently produced and where it probably would be most profitable for them to produce it.

For example, they might schedule work that could very well be done in the Brooklyn plant, in Norwood, Mass., which is a tight labor area, rather than put it into the Bendix marine division in New York.

It seems to me that some provision—where corporations hold tremendous amounts of war contracts, and where there are loose labor

98534—44—pt. 8——6

areas, and cut-backs taking place in particular plants—that some control should be exercised in channeling the war work of these corporations to the plants where the cut-backs are taking place. At least that attempt should be made to relieve the situation of immediate lay-offs, and thus facilitate the over-all total production of war work.

That is the problem in relationship to that particular plant.

Secondly, I think there is another over-all problem that has been somewhat discussed here, and I would like to touch on it again. I think that the cooperation of the armed services—and Mayor La-Guardia was absolutely correct in praising the armed services for taking the blackest side of the picture and preparing for any eventuality so that they would not be caught short—but I think that greater cooperation between the armed services and the civilian sections of our Government engaged in war production should be developed so that you would have the scheduling of civilian production on an installment basis, where war work has run out.

Now I understand that a number of the huge corporations which are fully engaged in war work, and which had other items during peacetime, object to the smaller units, the smaller businesses which have run out of war work, and which are faced with cut-backs, engaging in civilian commodities, in the production of civilian commodities, because they would get the "jump" on them in the post-war competitive market.

It is my thinking on this matter that regardless of the jeopardy that these business concerns momentarily might be put into because they would be placed momentarily in an unfavorable competitive position, that the human element of lay-offs, the morale uplifting by keeping people at work, and the gradual slow transition from war economy to peace economy, must take place along those lines.

With that, gentlemen, I want to conclude my notes on this matter and to thank you for giving me the opportunity of presenting this statement.

Senator MURRAY. I appreciate your statement; it seems to me that it is very convincing and that no one could disagree with you in what you are saying there. Certainly the bill should contain provisions that would safeguard the situations which you have discussed there. It seems to me that that would be very important that that should be controlled by the over-all bill that we are trying to get up here.

Mr. SCHILLER. Thank you, Senator.

Mr. RICHTER. I have read the letter that Under Secretary Patterson submitted for the record, this morning. I don't believe you were here, Senator Murray, when it was submitted. That letter objects to S. 1893 particularly because it provides that information on military cut-backs and contracts shall be provided through this joint labor-industry-agriculture board.

Now we feel that if the board is to mean anything at all, the labor people and the industry people and the agriculture people must have the information with respect to contracts or else it is just window dressing and will not serve the purpose you have in mind.

Senator MURRAY. What reasons does he give?

Mr. RICHTER. Well, the statement that Mr. Patterson made in his letter—I can't quote it exactly—was that it would disclose information of a military character. Of course we don't want any military secrets disclosed.

Senator MURRAY. But it could be given to them in executive session, I should think.

Senator KILGORE. Certainly.

Senator MURRAY. I can't believe that it wouldn't be possible to submit that information to them with perfect assurance that it would not be turned over to the enemy. I think we should be able to work that out. I didn't see the letter but I will be glad to read it later.

Senator KILGORE. We will now take a recess until 10 o'clock tomorrow morning.

(Whereupon, at 3:30 o'clock, p. m., the hearing was recessed until Thursday morning, June 15, 1944, at 10 o'clock.)

THURSDAY, JUNE 15, 1944

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in the Military Affairs Committee Room, the Capitol, Senator Harley M. Kilgore presiding.

Present: Senators Kilgore and Murray.

Also present: Mr. Herbert Schimmel, of the Kilgore subcommittee staff, and Mr. B. M. Gross, of the Murray subcommittee staff.

Senator KILGORE. We have with us this morning Mr. Wilbur J. Cohen, Assistant Director, Research and Statistics, Social Security Board, from whom we will be very glad to hear.

Senator MURRAY. Before Mr. Cohen testifies, I would like to call your attention to a letter from Mr. Watson B. Miller, Acting Administrator, Federal Security Agency, written to me, dated May 15, 1944, in which he discusses the provisions of this bill, S. 1893. The letter goes into detail and discussion——

Senator KILGORE. Let's put the letter in the record, Senator Murray.

Senator MURRAY. I will put it in the record. I think it contains many things that you may want to question Mr. Cohen about, and it might be a good idea if I read the letter into the record, so that you may see what it contains.

Senator KILGORE. All right.

Senator MURRAY. This letter is addressed to me [reading]:

MAY 15, 1944.

DEAR MR. CHAIRMAN: This is in reply to your letters of May 6 to Mr. Altmeyer and myself concerning title V of S. 1823 and the proposed amendment of S. 1718, which has now been incorporated in title IV of S. 1893. The present letter is based upon S. 1893. The concern of this agency is primarily with the provisions for vocational education in section 407, and the provisions for interim placement benefits in sections 409 and 410.

Insofar as section 407 relates to the education of veterans it provides less extensive benefits than either S. 1767 or H. R. 3846, both of which are now pending in the House of Representatives. (Since that time both of these bills have passed.) In view of the numbers of young men and women in our armed forces whose education has been interrupted by the war, it would seem to me a mistake to eliminate all provision for free education for this group beyond the 6 months contemplated by section 407 of S. 1893.

Section 401 (d) declares the objective of providing for the "necessary training of ex-servicemen and war workers," and section 407 is prefaced with the statement of a purpose "to give effect to the objectives of this title." I am not altogether clear how far these provisions are intended to restrict the authorization to provide education or training "to any person." Unless they were to operate as drastic restrictions I should be afraid that section 407 would be open to serious abuse, and might furnish opportunity to undercut the ordinary safeguards in unemployment compensation laws.

If it is intended that the Work Administrator should confine the provision of education and training of civilians to those war workers who have need for retaining to fit them for peacetime occupations, I would question the provision less from the standpoint of its objective, which has much to commend it, than from that of administrative feasibility. The difficulty of definition of war workers is evident. A selection from this group on the basis of the necessity in the individual case would seem to pose an impossible task, and it is not easy to see any other basis of selection which would be more satisfactory. Without further opportunity to study the problem I do not wish to suggest that these difficulties are insoluble, but I do feel that they are sufficiently grave to cast doubt on the soundness of the present proposal. In this connection, members of my staff would be very happy to join you or your representatives in any further study of the matter.

If such a provision is to be enacted, I would urge that it be amended to require the utilization of the existing educational agencies of the States. It is certainly desirable that such a program be integrated with our normal educational processes and be carried out in the main through existing institutions and schools.

In considering the unemployment compensation portion of the bill we have, in accordance with your request, examined the provisions of title IV of S. 1893 and title V of S. 1823, and have compared the provisions for the payment of interim placement benefits in these two bills with the provisions for the payment of readjustment allowances to ex-servicemen in S. 1767. The following comments, like those above with respect to education and training, are based on S. 1893.

I am in complete sympathy with the general objectives of sections 409 and 410 of S. 1893. It is clear that there will be need for adequate protection against unemployment both for the civilian population and for veterans during the reconversion of our economy from war to civilian production. Although the State unemployment compensation acts will meet part of the problem of tiding workers and veterans over this period, the protection they afford is inadequate both in coverage and benefits to meet any volume of unemployment which may be reasonably contemplated in the post-war period. The coverage of State laws is too limited, benefit duration is too brief, and the benefits available in the different States vary so widely that there are great inequalities in the treatment afforded to the unemployed in the various States.

However, I have considerable question regarding the general plan outlined in the bill for accomplishing this objective. At the present time there is accumulated in the unemployment trust funds of the 51 jurisdictions over $5,000,000,000. I might add that will be greatly increased in the near future. It would not seem sound fiscal policy for the Federal Government to finance 50 percent of the States' benefits out of general revenue while funds already accumulated for this purpose lie idle. In the absence of more permanent legislation, what is needed is to assure that the States will provide adequate benefits and wider coverage with a Federal guaranty against State insolvency.

Aside from my general reaction to S. 1893, I have some comments on the substantive provisions of the bill which you may find useful.

1. *Coverage.*—I am glad to see that some of the limiting provisions in the original bill, such as the requirement that Federal workers and workers in employment covered by title II of the Social Security Act must have earned at least $600 in such employment in the 12 months preceding their entitlement to benefits, have been abandoned in favor of more liberal eligibility requirements. However, section 410 as now drafted seems to me unduly complicated and lacking in clarity in some respects. Such a provision opens up the possibility of too many conflicting administrative organizations and relationships. It does not seem to me sound to provide that the Federal Government will operate the interim placement benefit program for certain categories of workers, only in the event that the State agency does not agree to pay these benefits to its own covered workers.

While it is sound that plans to handle reconversion unemployment include not only veterans but civilian workers, the bill should take into consideration legislation now pending before other committees of the Congress to some special groups, such as veterans and maritime workers. If S. 1767 is finally enacted, the relationship of S. 1893 to S. 1767, insofar as the provisions for the payment to ex-servicemen of allowances during unemployment are concerned, will need clarification. A provision for the repeal of title V of S. 1767 should be included in S. 1893, or veterans should be excluded from its coverage and benefit provisions.

I understand that the House Maritime and Fisheries Committee is about to report out a bill establishing a Federal unemployment-insurance system for maritime workers. The peculiar employment characteristics of this industry make me believe that the problem of providing benefits for this group might better be handled through separate legislation which deals specifically with the special problems which surround the employment and unemployment of maritime workers. The coverage provisions of the maritime unemployment-insurance bill are written in such a way as to eliminate most of the knotty problems of the relative jurisdictions of the Federal and State Governments in the maritime field. For example, the coverage of the fishing industry, regardless of size of vessel, would be an extremely difficult undertaking under a Federal system.

The words "Federal agency" in section 410 (a) (2) (i) are not defined. Should not this be changed to "Federal Government agency" since "Government agency" is defined in section 501 (a)?

2. *Eligibility for benefits.*—The provisions of alternative methods for securing coverage for the great majority of civilian workers is unduly complicated. The eligibility requirement in section 410 (a) (5) of earnings of not less than $150 in employment covered by title II of the Social Security Act would result in uniform treatment of workers on a national scale. Under section 410 (a) (4), however, the application of the eligibility requirements of the State laws would result in great variations. The minimum-earnings requirements in the States range from $60 in 2 States to $300 in 1 State, with 16 States requiring $200 or more, and 19 requiring less than $150. If the present draft of S. 1893 were enacted and all the States agreed to administer the program, a worker's eligibility might depend solely on the State in which he applied for benefits, even though the Federal Government might be paying most of the costs and the benefits available would be uniform throughout the country. However, should the States not elect to provide the protection specified in this bill, coverage could not be extended to individuals employed by State and local government agencies, nonprofit organizations, or in domestic service who are not covered under the provisions of title II of of the Social Security Act.

The exception to the requirement in section 409 (b) (2) that claimants must be available for suitable work to be entitled to benefits establishes what is in effect a complete sickness-insurance program. It makes no provision for the certification of sickness or disability, however, or for the establishment of any of the procedures necessary to a sound sickness-insurance system. In any event, a well thought out program could not be put into effect by the date contemplated by this bill for the beginning of benefit payments.

3. *Benefits.*—S. 1893 provides for the payment of weekly benefits for total unemployment amounting to 80 percent of regular weekly earnings for all claimants except ex-servicemen, with a maximum of $20 for the claimant without dependents to $35 for the claimant with three or more dependents. Ex-servicemen receive a uniform benefit of $20 to $35, depending on the number of dependents they have. These benefits are high in relation to those provided in S. 1767. The Senate version of this latter bill allows weekly benefits ranging from $15 to $25, and the House version gives a flat benefit of $20 to all eligible claimants. If either of the two versions is enacted consideration will need to be given to the relationship of benefits under the two programs.

While weekly benefits for civilian workers are equivalent to 80 percent of regular weekly earnings, no minimum benefit is provided. With one exception, all the State unemployment compensation acts now include a flat minimum benefit amount which ranges from $2 a week in one State to $10 a week in four States.

A provision paying 80 percent of regular weekly wages to a single individual may not provide sufficient difference between the benefits he receives when unemployed and the wages he receives when fully employed to provide an incentive to prefer work to benefits.

The bill includes no definition of regular weekly earnings. Although the Congress may wish to leave the exact method of determining such earnings to the Administrator, I believe that it would be sound policy to give some legislative guidance as to the intent of this phrase, for example, as to whether full-time earnings or average earnings should be used. Moreover, if such earnings are recomputed every time a worker becomes unemployed and claims benefits, the administrative task will be greatly complicated.

The phrase "partial unemployment" as used in section 409 (a) is not defined. The most common definition in the State laws, included in 37 laws, provides

that an individual is partially unemployed in any week of less than full-time work in which his earnings fall below his weekly benefit amount for total unemployment. In some of the States, the first two or three dollars of earnings are disregarded for this purpose. Under S. 1767, a claimant is partially unemployed in any week of less than full-time employment if his earnings are less than his weekly benefit amount plus $3.

The maximum limitation on the benefit payable for a period of partial unemployment which, together with earnings, may equal eight-fifths of the benefit for total unemployment, seems to me to be rather high, especially when the benefit rate is equal to 80 percent of wages. For the claimant with three or more dependents and a weekly benefit of $35, the total earnings plus benefits would be $56 a week. Although the partial benefit provision should offer an incentive even to the relatively high-paid skilled worker to accept less than full-time employment, it would be far more generous than the benefit provided under the most liberal State laws and under S. 1767.

4. *Duration of benefits.*—Benefits are payable to the individual claimant without limit during the period beginning 1 week after he registers with a public employment office until 24 months after the cessation of hostilities. For the serviceman discharged after the war, the period is extended for 2 years after his discharge. Thus, the benefit period ranges from 2 years for the serviceman who remains in the service after the war to an indefinite number of years, depending on the length of the war and the time of the registration, for all other claimants. In my opinion, the duration of benefits provided in the bill is too long. I would suggest that with respect to any individual, benefits under the act only be payable to him for 52 weeks within a 24-month period following his first registration at an employment office after the effective date of the act. This is the provision in the Senate version of S. 1767.

5. *Disqualifications.*—I note that no disqualification is provided for discharge for misconduct or for unemployment due to stoppage of work due to a labor dispute. Since every State unemployment compensation law normally makes provision for disqualifying a worker under such circumstances, disqualifications for such acts might well be included in the bill. Payment of benefits under such circumstances may do much to bring the bill into disrepute since the benefits are intended to be paid only for involuntary unemployment. In other respects, the disqualification provisions are excellent. The strengthening of the specifications by which the suitability of offered work is tested may be doubly important in the post-war period. However, the following changes in these provisions are suggested:

Section 409 (c), page 27, line 10. Insert the words "without good cause" before the phrase "to apply for suitable work" and "to accept suitable work."

Senator KILGORE. Just a minute, Senator. Wait until I get that section, because I think he is talking about the original draft of 1893, because we redrafted it to incorporate a large part of his letter.

Senator MURRAY. I might add that those are written out in full.

Senator KILGORE. I just wanted to check to see if we had not taken care of it. What is that section?

Senator MURRAY. Section 409 (c), page 27, line 10.

Mr. SCHIMMEL. It must be a different draft.

Senator KILGORE. He was writing about a different draft.

Senator MURRAY. Then I will skip those suggestions.

In conclusion it says:

6. *Effective date.*—The 30-day period allowed after the date of enactment of the bill before the benefits will become payable is too brief to permit the various agencies which will be concerned in the administration of the bill to make adequate preparation for the task assigned to them. At the minimum, a period of 3 months should be allowed and preferably the period should be extended to 6 months.

If there is any further information that you desire please do not hesitate to get in touch with me.

Because of the limited time available for the preparation of this report, no advice has been obtained from the Bureau of the Budget as to the relationship of these comments to the program of the President.

Sincerely yours,

WATSON B. MILLER, *Acting Administrator.*

Senator MURRAY. I thought you might have that before you began questioning Mr. Cohen.

Senator KILGORE. Yes; I want to ask Mr. Cohen what he used. Did you use the committee reprint?

STATEMENT OF WILBUR J. COHEN, ASSISTANT DIRECTOR, RESEARCH AND STATISTICS, SOCIAL SECURITY BOARD

Mr. COHEN. Yes.

Senator KILGORE. Of June 8?

Mr. COHEN. The May 4 draft.

Senator KILGORE. This is revised as of June 8, at the top of it.

Mr. COHEN. No; I do not have a copy of that version.

Senator KILGORE. Here is a copy——

Senator MURRAY. You are familiar with the last draft?

Mr. COHEN. I just saw a copy of it this morning.

Senator KILGORE. This is the one we have under consideration, which incorporates a large number of the suggestions made in that letter.

All right, Mr. Cohen, you just go ahead.

Mr. COHEN. My name is Wilbur J. Cohen, Assistant Director of Research and Statistics, Social Security Board.

I am here at your request, Senator, to answer any questions with regard to the bill, if you have any. I think the letter on the whole is self-explanatory. I will be glad to answer any other questions that you may have.

Senator KILGORE. What we are after today is to find out whether or not you have studied this last revision, and to find how closely we came to the suggestions made in that letter, and what further objections or suggestions the Bureau might have to make.

One thing I would like you to discuss is this question of the 80 percent clause and the Bureau stand on that, taking into consideration the fact that Congress has very generously given industry 100 percent for 2 years and also guaranteed the price to farmers for 2 years. I want you to discuss the 80-percent clause with reference to labor, taking into consideration also that 80 percent only goes for the lower-wage brackets, because nobody can draw more than the ceiling, no matter how much his wage was.

Mr. COHEN. Well, I think there are two problems, Senator, in connection with that provision in the bill. One is that the term "regular weekly earnings," which is in this new committee print on page 32, line 6 of the bill, is not a defined term. That term is the heart of the determination of any unemployment-insurance benefit. "Regular weekly earnings" is not a term that is used under any of the State unemployment-insurance laws. At the present time State unemployment-insurance laws quite usually determine an individual's benefits on the basis of the total amount of earnings received by the individual during the highest quarter during a particular period of time, usually 1 year.

That makes it possible for the benefits to be computed on a mathematical basis without the discretion or interpretation on the Administrator's part. "Regular weekly earnings" raises the question of what week, what period of time that you would have to take in administering this provision, and depending upon how it was interpreted would result in very wide differences in the amount of benefits to be paid to

an individual, depending upon what week and what period of earnings were used.

This is an especially important problem at the present time since most industries are working overtime and you would have a question of whether you would compute it on the basis of the 40-hour week or the 35-hour week or in a period of serious unemployment, averaging an individual's earnings over the period in which he actually worked.

I think it would be absolutely essential, not only from the standpoint of sound administration, but from the standpoint of fairness and equity to the unemployed individuals, so that there would be no discrimination among different industries, different persons, and different classes, that the term should be exactly and precisely defined, so that it would not be subject to the discretion of the Administrator.

Senator KILGORE. Would you suggest, for instance, using in the place of the words "regular weekly earnings" the "average weekly earnings during the highest earning quarter in the 12 months next preceding date of application"?

Mr. COHEN. I don't know that those exact words would be acceptable, but something along that general line of using the high quarter earnings would fit in most closely with the State unemployment-insurance laws and would possibly make it possible for the State laws—the State agencies to administer it most simply.

Senator KILGORE. What are the usual—what is the usual phraseology in the State law?

Mr. COHEN. The usual phraseology in the State laws is the highest quarterly earnings in the base period of an individual, but that is not the only language that is used in the State laws. That is the most typical.

Senator KILGORE. All right. Do you have any suggestion to make, then, that would conform to the most State laws, or could you furnish a suggestion?

Mr. COHEN. I think it would have to be worked out quite carefully. Language of that sort could be worked out. I think it would take substantially more words than you indicate.

Senator KILGORE. It would be that in effect. That would define the earnings to fit most State laws, and would be the average weekly earnings during the highest quarter of the defined period.

Mr. COHEN. Yes; although I think you would probably want some alternative provision for the States which do not use that formula. I don't remember offhand what some of the other State laws say, but if you are intending to try to build upon the existing State unemployment-insurance administrative structure, so that these benefits can be paid quickly and promptly, I think it would be essential, in order to assure that objective, to tie in as closely as you can to the existing framework, so that the unemployed individuals would be able to claim benefits promptly.

Senator KILGORE. I am very anxious to see that type of thing carried out, because I have found in the State from which I come, for instance, the question of unemployment insurance as administered in that State has done much to cause steady employment. In other words, employers have more carefully planned their working schedules so as to give steady employment to their employees throughout the entire 12-month period to obviate the penalties that might be invoked if there

was too much unemployment within the State. Whereas, before, we used to have high peaks of employment and low valleys, we now have it much more leveled out. Employers find it no more trouble to work out their production schedules so as to keep their employees employed for a greater portion of the time. I think that is highly desirable in this post-war period that we get employers in that frame of mind to spread their work so that there will be steady employment rather than sporadic peaks of employment in which there is a lot of overtime and then valleys of employment in which they only work 2 or 3 days in a pay period.

Mr. COHEN. That will be an especially important and difficult problem in the reconversion and post-war period, because the length of employment and unemployment, the amount of the earnings is what determines the individual's weekly earnings, and what period you take will obviously therefore determine the individual's benefits.

Senator KILGORE. And you realize the fact that an employer can have his deductions reduced by showing a spread-out employment record for his men has added a great incentive to the employers to work out a more steady production schedule and more steady employment schedule for their employees. Haven't you found that? I have talked to employers, and I know what they think. They feel they are much better off if they can plan their production to keep a steady group of employees working steadily than if they have at periodic intervals to certify a whole lot of employees, and therefore keep their contributions to the unemployment fund at a high rate rather than the other way around.

Senator MURRAY. I suppose you would consider it very desirable legislation of a permanent character that we should have some changes in the existing law to bring about that kind of a situation that the Senator is discussing.

Mr. COHEN. Well, I would say, generally speaking, that anything that could be done to assure more permanent employment is a very desirable objective, and we should certainly see to it that nothing that is provided in the legislation will detract from that objective.

Senator KILGORE. That was one of my reasons for wanting to administer, because I had found employers in certain States, where they had well-administered unemployment compensation departments, were working with the department to keep unemployment at a minimum in their plants, mines, and factories.

Mr. SCHIMMEL. The main point, Senator, is that this does not modify the merit-rating system.

Senator KILGORE. No; the thing I was getting at was this wording here, "regular weekly earnings." I can see Mr. Cohen's point there that it might be advisable, and probably is, in the legislation to be more definitive in it and have a greater uniformity.

All right, go ahead.

Senator MURRAY. What comment have you to make on the following provision on page 32 where it says:

And provided further, That no benefit for partial unemployment shall be paid in excess of an amount which, when added to the person's earnings during the period of partial unemployment for which paid benefits on account of partial unemployment shall exceed eight-fifths of the benefits he would receive for total unemployment for such period—

beginning at line 12 on page 32?

Mr. COHEN. Well, the provision there, as I read it, provides that the Administrator shall prescribe some system of partial unemployment benefits, and the further proviso establishes the maximum total amount of income which the individual can receive, made up of his benefits plus his earnings from partial employment.

Now, that is a very important problem, especially if, in the reconversion or post-war period or during any period of time, there should be a substantial amount of partial unemployment. As the present provision of the bill reads, the individual who is getting $35 a week could, as the letter of Mr. Miller indicated, have total earnings, plus benefits, which would be $56 a week.

However, a much more difficult problem is involved in the "eight-fifths" provision on page 32, line 17, where an individual, by working part time, could receive 28 percent more income than if he worked full time. In other words, it goes contrary to the objective which you just stated a second ago, Senator, of encouraging full-time employment.

Senator KILGORE. If you remember, however, Mr. Cohen, at the outset of unemployment compensation, one of the problems you had was that a man would not accept partial employment because that cut him off entirely, so that there was not much incentive for partial employment. Therefore the committee allowed additional percentages. He could still get unemployment compensation and have partial earnings that would be in excess of his total unemployment compensation if he was totally unemployed, and encourage him to take partial employment to eke out his earnings.

Mr. COHEN. I think there would be a question there which you would have to decide as to whether the 28-percent differential might not be substantially more than would be desirable in the post-war period.

Senator KILGORE. That would only be in the low-wage brackets though.

Mr. COHEN. No; that would go into all classes of beneficiaries which are eligible here.

Senator KILGORE. No; because you could not get above $35. But say a man, a highly skilled workman, was making a dollar and a half an hour, he would get considerably above $56 if he were on full-time work.

Mr. COHEN. The most he could get would be $56.

Senator KILGORE. So it still holds to the low-income-bracket group there.

Mr. COHEN. Up to $56, that is contract.

Senator KILGORE. That would be the only one that could be a loss to beneficiaries under that.

Mr. COHEN. I think, however, due notice should be taken of that provision and consideration given to it, especially if there is some feeling that there be a shorter or longer period of substantial partial unemployment.

In the same section I think there is another provision which certainly ought to be clarified in the interests both of the unemployed individuals and the administrator, and that is the use of the term "dependent."

Senator KILGORE. What page?

Mr. COHEN. You will find it used in several occasions on the top of page 32 in lines 1, 2, and 3.

Senator KILGORE. Yes; you mean there should be a definition of "dependent"?

Mr. COHEN. Yes. The problem there is that the term "dependent" is subject to very wide variation in meaning, and the question would arise whether you meant totally dependent persons or partially dependent persons. I think it would be especially important to have that word defined so that individuals would not feel aggrieved should the administrator, for administrative or financial purposes define "dependent" in a more strict interpretation than the average person feels is reasonable. So, in the interest of prompt payment of benefits and simplicity of administration, I think that "dependent" should be defined.

Senator KILGORE. Could you furnish a suggestion on the making of that more definitive?

Mr. COHEN. Yes; I could, Senator.

Senator MURRAY. Don't you think it would be much better, if you are going into the subject on such a wide scale, that we should just adopt the Murray-Wagner-Dingell bill and incorporate that as a part of this legislation? Would that be practical?

Mr. COHEN. Well, I was going to say, in answer to the Senator's question, I believe that there is, if my memory serves me correctly, a definition of "dependent" in Senator Murray's bill, and on a number of these points, there are such definitions in the bill. I don't seem to be able to locate it right now—yes, you will find in S. 1161, on page 73, a definition of "dependent" given on lines 21——

Senator KILGORE. How do they define "dependent" there?

I was thinking of this "dependent," of course, as the standard definition which is referred to in the sense of the ex-serviceman standard definition of "dependent," which was laid down by Congress for the Veterans' Bureau.

Mr. COHEN. I would say, if you are going to continue to include servicemen in this legislation, despite the passage of the G. I. bill, it might be wiser to utilize the definition of "dependent" which is in the Senate version of the G. I. bill for unemployment insurance. That would synchronize——

Senator KILGORE. Of course, frankly, I do not agree with Congress on the terms of the G. I. bill with reference to the question of unemployment compensation for veterans. I feel we were unduly harsh with the returning solder on that question in the G. I. bill.

Mr. COHEN. I was speaking only on the point of the definition of "dependent." You could either use that definition or this definition of "dependent" in Senator Murray's bill.

Senator KILGORE. That was the reason I put that in there, because I did feel all the way through the G. I. bill that it was not——

Mr. COHEN. I would say, Senator, whatever definition you see fit to adopt, it would be in the interest of economical administration to have the Congress define specifically what definition it wishes to apply, because I am sure you will appreciate that the subject of dependency is one which all of us have somewhat different ideas about, from time to time, depending upon our financial status, and so forth, and it would be the only way in which the law could be administered efficiently.

Senator KILGORE. You see, I went through the last unemployment period for the soldier in seeking jobs for my men, and trying to get them out of sleeping in parks and things of that kind, and I know the deplorable situation that some of those returning soldiers were in, many of whom held very high-salaried jobs, were sleeping in parks and taking jobs for a dollar an hour, 3 hours a week, keeping books in order to buy sandwiches. That period continued for over 2 years. They found themselves dependent when they came back. I don't want to see that happen again, and I am not going to see it happen again if I can stop it. This bill does not guarantee him a job; we guaranteed him a job at least verbally, when he went to war. We said to him, we will guarantee you a job; then we drafted a bill which did not guarantee him a job at all. It had so many loopholes in it that you could drive a 10-horse team through it from every angle.

Mr. COHEN. My statement was only directed to the problem—I am sure we are in complete agreement on the statement you made, that it is in the interest both of the Nation and the administration of this law, and the individual, to have the payments to those individuals made promptly. That is one of the great advantages of unemployment insurance, it gives a sense of security and immediate income to families at the time when they need it most, and the administration of the law should be such that the benefits can be paid very promptly without undue delay, confusion, or misunderstanding on the part of the claimants.

Mr. SCHIMMEL. Mr. Cohen, as a matter of mathematics, I think the record should show that the soldier who comes back and who has two dependents at home, will he not get less unemployment compensation under the present G. I. bill than his wife had been getting in her monthly allotment check? In other words, he comes home and joins the family, he is quite an expense; and still, because there is no provision for dependents in the G. I. bill—a single man gets the same amount as a man with three dependents—he is going to be getting less than his wife was getting in her monthly allotment check while he was abroad.

I may be wrong about that, but mathematically, I think that works out that way. I think the record ought to show it, if it is so.

Senator KILGORE. Yes.

Mr. COHEN. I believe it is so, but it can easily computed. That certainly would be so for larger families, there is no doubt about that.

Mr. SCHIMMEL. In other words, the wife was getting, with her dependents, more than $20 a week. The Government was recognizing during the war, while he was away, that it requires more than $20 a week to take care of his family. When he gets home he is adding to the family, and probably is the major expense in the household, but his allotment is reduced.

Senator KILGORE. Colonel Sanders calls my attention to the fact that under the G. I. bill, if he had a wife and one child, it would be approximately the same.

Colonel SANDERS. Yes.

Mr. COHEN. It would be approximately the same.

Senator KILGORE. It would be approximately the same with a wife and one child, but if there were more than one child, he would get considerably less.

Mr. COHEN. That anomaly arises in part because the allotment——

Senator KILGORE. Of course, that does not consider the fact that he also was drawing some salary in the service and his rations, clothing, lodging and everything else, and he is adding to the family budget his living expenses and yet the family budget has not increased.

Mr. SCHIMMEL. Isn't it true, Mr. Cohen, that the effect of this provision in 1893 would be to keep the compensation that is paid a single man in the service, and the ex-serviceman on exactly the same level as in the G. I. bill, but would make additional allowance for dependents, plus increase in duration, so that as long as he is unemployed during the defined period he would be able to get these benefits?

Mr. COHEN. Yes.

Mr. SCHIMMEL. That is the major difference, so far as the ex-serviceman is concerned.

Mr. COHEN. That is correct.

Mr. SCHIMMEL. And a civilian comes up to these maximum benefits to the extent that he qualifies by reason of salary, approximately.

Mr. COHEN. Yes; there is only one technical deficiency in that provision, which was mentioned in the letter of Mr. Miller, that, of course, there is no minimum provided in that section of the bill as there is in most States' unemployment insurance laws. It is not limited.

Mr. SCHIMMEL. Fifty percent of it.

Mr. COHEN. No; not necessarily.

Mr. SCHIMMEL. If he is eligible under the States as the bill requires him to be——

Senator KILGORE. We are speaking now of the civilian worker, not of the soldier.

Mr. COHEN. Well, there is a question. First, I think there is an ambiguity in the present draft of the bill on page 36, lines 9 and 10, as to whether every individual who is now eligible under State laws would have to continue to be eligible unde this provision of the bill. I have not figured out in every case whether an individual would, at least, get the minimum benefit now provided in every State law, but I certainly say, in order to avoid any ambiguity that provision of the bill as to eligibility should be clarified, because it was not clear in my mind when I read this draft of the bill.

Mr. SCHIMMEL. I think you have just put your finger on it. I say it is quite clear in the language, because he does have to qualify, either by Federal provision or State provision. The State has a minimum, he would get approximately eight-fifths of said minimum by virtue of the 80-percent clause, as against the usual 50-percent State clause.

Mr. COHEN. I don't think that is true, for the reason that there is language in here that at least I don't understand—let me see if I can find it in this print. Page 36, paragraph 4, beginning on line 8 it says, speaking of individuals who are eligible [reading]:

> Any person who at the time of first application for benefits under this title would, if all other qualifications were waived, be eligible by virtue of his or her earnings——

Senator KILGORE. Be eligible, leaving other qualifications out, eligible by virtue of his or her earnings under the unemployment-compensation law of a State, and so forth.

Mr. COHEN. I would certainly suggest, Senator, if that is what you had in mind, the eligible conditions under State law were to apply, that that be made much more specific, because I don't think it is clear in this present draft. If that is so, I would say that the bill is subject to a very peculiar result. That means that if the States administer these provisions, the different eligible conditions in the different States would apply and if any State refuses to administer these provisions the Federal provision would apply then in that State, and $150 would be the eligibility condition, whereas, in another State it would be a different amount, which would result, I think, in a very complicated situation and perhaps confusing to claimants in the different States, in which States the eligible condition would therefore be $300 and in another State $150.

Mr. SCHIMMEL. Aren't they now, Mr. Cohen?

Mr. COHEN. They are now; yes.

Mr. SCHIMMEL. It would not modify that except that you would have the same eligible condition as in the States, as the States now have. You would only modify it if the State did not elect to administer the thing; you would bring in this $150, which is very close to what most of the States have at the present time.

Mr. COHEN. The States vary so widely in regard to that provision it is almost impossible to summarize it, but in view of the fact that you are making a uniform amount of benefits available, it is somewhat anomalous to have uniform benefits available on a basis of different eligible conditions, I think.

Mr. SCHIMMEL. You pay them for the State——

Senator KILGORE. Except that with the provision on page 37—

that such person's benefits shall be subject to the reduction, in accordance with the regulations of the Work Administrator, on account of any unemployment compensation paid him or payable to him by a State agency for the same period of unemployment.

In other words, if you were entitled to it, it would be reduced to that extent. If the State failed to pay him, they would just pay him the difference.

Mr. COHEN. I am not in a position to offer you any solution, I think as Mr. Schimmel says perhaps, that is one price you have to pay, if you are trying to build upon the very divergent and variable provisions of existing State laws. I do think that if you elect to, and if you require the States to pay a uniform amount of benefits, there is a strong argument that can be made too, for a uniform eligibility condition, in order to be consistent.

Senator KILGORE. On the other hand, their surpluses, Mr. Cohen, are built up, their reserves are built up on the basis of their State laws.

Mr. COHEN. That is right.

Senator KILGORE. And the reserves and surpluses are just as widely divergent as the laws are.

Mr. COHEN. Yes.

Senator KILGORE. Your big States sometimes have surpluses, considerably less surpluses and reserves built up than do the smaller States, where the laws have been more liberally drafted. That is one of the biggest problems you have on any idea of merger, the fact that the States which have large surpluses and reserves in comparison to the

number of workers resent naturally the fact that their funds would go to help some State which had been very niggardly in its handling of such matters and has built up small surpluses and small reserves. That is your biggest problem in any idea of consolidation of unemployment compensation at the present time, just like trying to merge a bunch of insurance companies some of which, by reason of careful management, have built up maximum reserves, and others of which have not been operated in so careful a manner and have much less reserves to fall back on.

Of course, in that case, you could always handle it by financial adjustment, but you cannot do that between States, because States are not stockholders.

Mr. COHEN. Well, that is one of the most difficult problems that is inherent in this version of the bill.

Senator KILGORE. It is the biggest problem inherent in any idea of Federal operation of unemployment compensation at the present time.

Mr. COHEN. There is no doubt, as you say, that the State funds are in very different types of financial conditions. Some are in a better situation than others. In fact, some of them are so well off that they could in effect be able to pay any reasonable amount of benefits for any reasonable amount of time with money they have already built up. Other States are not so fortunate.

I think it is fair to say that I think you should take into consideration in your study of this bill, that all States now have sufficient funds built up to pay much more adequate benefits than they are paying now, without the necessity of having any immediate Federal financial help whatsoever.

Senator MURRAY. Under this act, would the States utilize the huge funds that they have to the fullest extent? Would this allow them to escape and saddle the burden on the Federal Government?

Senator KILGORE. Oh, no.

Senator MURRAY. I am asking Mr. Cohen.

Senator KILGORE. This makes a direct charge against State funds. But the amount the State funds are required to pay direct to the payee, the Federal Government would pay the cost. The amount the State fund would be required to pay is deducted from any payment.

Mr. SCHIMMEL. That is 50 percent, but it probably should be 100 percent. The deduction is only 50 percent, and it probably should be 100 percent.

Mr. COHEN. I think, Mr. Schimmel, you have put your hand on a provision in the bill which certainly should be given further consideration. As I read the bill at the present time it states that the benefits in the bill shall be paid and the Federal Government shall pay the total cost less one-half of what the State law provided at the time that this act was enacted, which in effect means that the Federal Government would be bearing roughly at least 50 percent of the cost of these benefits and perhaps in a period of long unemployment as much as two-thirds of the total cost.

The result of that would be, as I see it, to transfer a large part of the payment of these benefits to the Federal Government out of the general revenue and not utilize to the fullest extent possible the existing State funds.

98534—44—pt. 8——7

I think that some such idea as Mr. Schimmel has proposed, some modification of it, is essential if the money that has already been built up over the last 8 years is to be utilized. There is already $5,000,000,000 in State funds, and it probably will be $6,000.000,000 before the end of the year. It is possible during the future there might be, according to some students of the problem, as much as eight or nine billion dollars in these State unemployment insurance funds, dependent upon your estimate of when the war will end.

Senator KILGORE. Let us get down to your hypothesis. Had we had a uniform system of State payments and State charges against pay rolls in existence and had we continued under the original plan of social security, instead of modifying that plan recently, we could have largely taken care of this unemployment problem through the surpluses built up, isn't that a fact?

Mr. COHEN. Yes.

Senator KILGORE. And how far—for instance, if you had mass unemployment, say 20,000,000 people—how far do you suppose that $5-000 000,000 would go in that mass unemployment problem?

Mr. COHEN. Well, of course, as you know, one of the difficulties is when you say there may be 20,000,000, not every person who is covered under existing unemployment insurance laws would be eligible. Those funds cannot be used to pay a large part of the people who would be unemployed because there are 3,000,000 persons in small firms who are not now covered under the existing State unemployment insurance laws; there are somewhere from two to three million people in Federal employment, particularly arsenals and navy yards, which are not covered; there are 150 to 160 thousand persons now in maritime employment who are not generally covered under State laws, as well as some other groups.

Senator KILGORE. And unfortuntely the maritime group may suffer a heavy unemployment soon, is not that a fact?

Mr. COHEN. That would depend, Senator, upon the policy.

Senator KILGORE. What the international situation develops into upon termination of hostilities?

Mr. COHEN. Yes; it depends on the action that this Government and other governments would take regarding the maintenance of a merchant marine after the end of the war. It is entirely possible, if you are to speculate, to say that we are going to continue to have a large merchant marine, and no one will be unemployed. Then, it is possible to speculate the other way and say there would be substantial unemployment.

One of the advantages of covering such a group under unemployment insurance would be that if anything of that kind did happen, they would have the protection of unemployment insurance.

Mr. SCHIMMEL. In connection with the 20,000,000 hypothesis, isn't your fundamental problem, for instance, under S. 1893, the possibility that these 20,000,000 would be able to continue to draw benefits for the full length of their unemployment, and under existing State laws these individuals would exhaust their benefits, and then there would be many of the 20,000,000 without any benefit whatsoever, so that there is that very substantial difference.

The effect of S. 1893, taking into account the modifications we have talked about, would be to have the Federal Government pay

both to the extent of the duration, which is not presently provided under State laws.

Mr. COHEN. There is absolutely no doubt that the State unemployment insurance laws are very inadequate at the present time in regard to duration benefits. Even in as good a year as 1940–41, I believe, as you know, approximately one-half of the unemployed individuals exhausted their unemployment insurance benefits before they became reemployed.

Now, that was a fairly good period of time during the conversion period and certainly under existing provisions of State laws, large numbers of individuals would be disqualified from the receipt of benefits, and there is absolutely no doubt but that that protection should be extended.

Mr. SCHIMMEL. And then they would have no relief essential of trying to qualify for relief if the other funds were exhausted, whereas, under the provisions of the legislation we are discussing, there would be no need for relief setting up the unemployed under a minimum subsistence level all the way through.

Mr. COHEN. I think there is this basic question on that point, that you should give consideration to. In the past unemployment insurance has been traditionally thought of as dealing with individuals who are for a short time unemployed. If there is going to be long-time unemployment, then it seems to me that the Congress should give consideration to alternative measures, rather than unemployment insurance. I think unemployment insurance is a very satisfactory and helpful device when individuals are unemployed a short time. But if you keep giving him over the years cash benefits, I think there is no doubt that it is not helpful either to his morale——

Senator KILGORE. That is right.

Mr. COHEN. Or his family circumstances, or maintenance of his skill. And therefore, I think, rather than merely provide unemployment compensation for a long period of time—it is not the most desirable solution, either from the national viewpoint or the individual viewpoint.

Mr. SCHIMMEL. Except this provides for an emergency period. It makes no permanent provision under Federal law.

Mr. COHEN. I would say I would certainly hope that Congress would give some consideration to providing some alternative method of employment or reemployment prior to the time that any individual had completed 26 or 52 weeks of unemployment.

Senator KILGORE. I am going to go over into Senator Murray's pasture lot on another bill and ask you a question—we have a terrific weakness in our unemployment old-age pension system in that the coverage has never been general enough. In fact, there are large groups of employees who have not been covered.

Now, the railroad retirement was one place that did step in on a national basis to cover a situation that could not be covered by the States and took a whole group, and there are other large groups which are not adequately met.

On the other hand, you have this problem of interchange also. For instance, a worker from, shall we say West Virginia, goes to work in a war plant in the State of Mississippi and after the war is over there is nothing for him to do down there. His family is in

West Virginia, and he comes back up there. He has been under the Mississippi unemployment compensation and has been collecting benefits, and he comes back to West Virginia to live, and he has higher costs and the length of benefits laid down in the West Virginia statute are longer than those laid down in Mississippi. It puts him in rather a tough spot. He must either draw from Mississippi or go on relief in West Virginia. That is one of the problems.

Mr. COHEN. That is one of the problems.

Senator KILGORE. There I am stepping over a little bit into the Murray-Wagner-Dingell bill and asking a question to illustrate the Government weakness that I think we face in the question of security.

Mr. COHEN. I would say this, Senator, that questions of interchanges between States can only be solved if you do go to something of a uniform national system. Neither 1893 nor any of the other bills that I have seen which are short of a uniform national system would adequately solve that problem. Even under 1893 there is the possibility of individuals who move from State to State who either lose out and get lost somewhere in the shuffle or are adversely affected. It seems to me the only mechanism to meet that problem is to have a single, uniform national system.

Mr. SCHIMMEL. Wouldn't you estimate you would probably pick up about 80 percent of the cases lost in the shuffle, and you would still have some fall between the chairs?

Mr. COHEN. The difficulty about those people who are lost in the shuffle, we never know about them, so that we cannot make really an estimate. There are probably quite a lot, but they do not show up at the present time because——

Mr. SCHIMMEL. I think there a Federal system would take care completely of the people that are lost in the shuffle. It provides for a uniform benefit, and provides for unlimited duration. You do take care of the two greatest problems of this crossing from one State to another without the loss of social benefit which Senator Kilgore just described.

The other is a man who has been a few weeks in a particular State, then he has moved around to another State and has not earned anything there, and he keeps on moving.

Mr. COHEN. In that connection, I would like to point out as an illustration of the point the Senator pointed out, it is not merely or only true that an individual can move from a northern State to a southern State and be adversely affected thereby, but it is rather anomalous, under the present state of employment situation some northern States pay less benefits than southern States do.

Senator KILGORE. That is right.

Mr. COHEN. The State-by-State system has been frequently described as a system where the benefits are chained to the different wage levels. But that is not correct.

Senator KILGORE. Or to the different costs of living.

Mr. COHEN. Yes.

Senator KILGORE. I realize that.

Mr. COHEN. You will find in some cases the southern States pay higher maximum benefits than the northern States. You will find that some of the southern States pay somewhat higher rates of benefits than certain northern States, and there is no real relation to different wage levels or cost of living.

Senator KILGORE. It usually depends upon the liberal attitude of the legislators when the bill was passed.

Mr. COHEN. That is correct.

Senator KILGORE. And even on the group who are handling the bill within the State.

Mr. COHEN. That is correct.

Mr. SCHIMMEL. That type of problem would be taken care of in S. 1893—some of those certainly would be taken care of, isn't that so, Mr. Cohen—I mean the question of the change of benefits as you move from one State to another.

Mr. COHEN. As you have it in this bill it would be uniform, if the definition of "regular weekly earnings" were uniform throughout the United States.

Mr. SCHIMMEL. Yes.

Mr. COHEN. That being so, the answer to your question would certainly be "yes." I think that illustrates again—you come back again and again to the reason why it is essential that the "regular weekly earnings" definition be uniform throughout the United States in order to assure uniformity of treatment.

Senator MURRAY. Have you also examined S. 1730, Mr. Cohen?

Mr. COHEN. I have seen two committee prints of S. 1730. I thought I had them here. Those bills, of course, go on a quite different approach. As I understand it, they take the approach that the existing State unemployment-insurance laws have sufficient funds to care for the existing situation.

Senator MURRAY. And undertake to bring about the highest utilization of those funds in the program.

Mr. COHEN. Yes; you see, you have a Federal law at the present time establishing a 3-percent Federal unemployment tax which is in a sense the method by which Congress said to the States, "We will see that you have a way of building up a State fund for unemployment insurance."

So the Federal Government really in large part assured the States of the ability to build up these funds, and as I understand the idea of the S. 1730, it is to require the States to pay more liberal benefits and to insure maximum utilization of their State funds.

Senator MURRAY. And S. 1893 does not do that.

Mr. COHEN. S. 1893 would not do that, insofar as it would transfer a substantial part of the cost to the Federal Government.

Senator MURRAY. That is it, the Federal Government would be paying them, notwithstanding the State had the funds available for that purpose.

Mr. COHEN. Under S. 1893 the Federal Government and the States would both be paying part of the cost; under S. 1730 the States would by and large, take care of the entire cost.

Senator MURRAY. Yes; and don't you think that is the most desirable approach?

Mr. COHEN. Well, I think in view of the situation as it exists today, it certainly is desirable to see the maximum use made of the State unemployment-insurance fund, this fund having been built up for 8 years for this specific purpose, and I think it would be unwise not to make every possible use of them under present circumstances.

Senator KILGORE. Well, the question is, leaving all other methods out, which would be the most desirable. That, I think, was Senator Murray's question. I agree with you that we must make the maximum utilization of that. The question is the best method of doing that. As you pointed out before, there are certain segments of our worker population who are not covered by any State.

Mr. COHEN. Those, I think, Senator, can and should be covered by a change in the existing Federal law. There is no reason why, for instance, with respect to coverage of small firms, employers who employ less than 1 to 7 should not be covered.

Senator MURRAY. S. 1730 undertakes to take care of that situtation, does it not?

Mr. COHEN. S. 1730 amends the Federal law and in effect therefore would bring them under State laws that deal with 3,000,000, approximately 3,000,000 employees. It seems to me that is one specific amendment, that suggestion, that certainly could be incorporated under the present structure. There is no reason why as a permament proposition the State law should not cover that. I believe there are 26 States which already do cover small firms of less than 8. So that there is no reason why that could not be made a provision of the existing State law, for either as a permanent proposition or certainly a provision to be included under the State law.

Senator MURRAY. And that was contemplated in S. 1161, the Murray-Wagner-Dingell bill.

Mr. COHEN. Yes, sir; that group is included, as well as some of the other groups.

Senator MURRAY. Yes.

Mr. COHEN. With respect, of course, to maritime unemployment, there has been for some time a bill before the House Chairman of the Marine and Fisheries Committee to include those individuals under a Federal system of unemployment insurance similar to the program that exists now for the railroad workers. They could be brought under such a uniform system, and there is no reason why that could not be done also as a permanent proposition.

Senator MURRAY. Wouldn't it be more desirable to have that separate legislation carried through as is now contemplated?

Mr. COHEN. I think so, Senator; for this reason, that the maritime problem is such a special and complicated problem which is, in many respects, different from the normal civilian employment. When a man goes on board a ship he is not working within any State at the time; he may have left a particular State where he signed his contract of employment and as you know, he may dock at several different States, and may go from one State to another and may return and get his benefits in another State; his family may still be living in another State. That, I think, is very important with respect to the thousands of maritime workers—to have some simple uniform method of dealing with them under Federal legislation just like the railroad workers.

Senator MURRAY. We know the maritime workers themselves regard that as most desirable.

Mr. COHEN. According to my understanding that has been their view.

Senator MURRAY. They would more quickly be able to very adequately take care of their problem by separate legislation, than to have this incorporated into a general measure of this kind.

Mr. COHEN. Well, there are quite a number of problems with respect to maritime workers which need special legislation because there are quite a number of problems that are different for those groups than for normal groups. For instance, you do not have the problem of voluntarily quitting work in the maritime industry as you do have in the normal situation.

Senator KILGORE. The contract terminates when you dock.

Mr. COHEN. The contract terminates when you dock, and you have the opportunity to sign on again. If you do not sign on no one has ever interpreted that as voluntarily refusing to work. That is a tradition in the industry to afford a man the opportunity to re-sign. If he does not, that is perfectly all right. I think a careful study of the maritime problem will show that there are a number of special characteristics of the industry and employment circumstances which would argue for somewhat special consideration.

Mr. SCHIMMEL. Mr. Cohen, as I understand it, there are two House committees—at least one House committee, and I understand another House committee, the Merchant Marine and Fisheries Committee, under Chairman Bland, has been studying this unemployment compensation in the House. Then, I think, the House Ways and Means Committee, as I understand it, has made this thing its jurisdiction. Now, there is nothing in this bill to prevent the enactment as early as possible by these two standing committees of permanent legislation. This bill only provides for the immediate covering-in of groups which are not already provided for. Presumably, if permanent legislation were set up, it would take care of this problem.

Senator MURRAY. If this law were enacted, would not that have the tendency to make the Congress feel that the problem had been taken care of and it would not be necessary for the other legislation which is contemplated by the maritime workers?

Mr. SCHIMMEL. Senator Murray, they have been studying that for 6 years in that committee. They are getting ready now to put it through, but they have been studying it for 6 years.

Senator MURRAY. Yes; I know; but if we had a law here now incorporating that into the act here, wouldn't that slow down their effort to get the independent legislation through? What do you think of that, Mr. Cohen?

Mr. COHEN. Well, it would be hard to say.

Senator MURRAY. Well, the maritime workers have not come here and requested us to take their problem in on this bill. I have never heard from them. They have never consulted me, or ever made that request of me to take care of their situation. I assume they are very ably and competently represented, and if they felt that we should take care of them, why, they would come and say so, it seems to me.

Mr. COHEN. I certainly think if you are going to include the maritime employees under this provision of the bill, I think that you would have to put in a number of other provisions to take care of these special characteristics that I have mentioned. I do not think that, with the general language that there now is in the bill, an administrator could administer this without very great difficulties.

Senator MURRAY. That would require some time to work out a bill that would cover all those features that are not recognized in this.

Mr. COHEN. Well, it would depend on how far you wanted to go. I think you could take the provisions of the existing bill if you wanted to.

Senator MURRAY. What do you mean by the existing bill?

Mr. COHEN. This first bill which Mr. Schimmel indicated was pending over in the House.

Mr. SCHIMMEL. It is prety well drafted, Senator.

Senator MURRAY. Well, yes, if they wanted to take the whole bill and put it in here, that, of course, would be one way of meeting this problem.

Well, have you any other criticisms of the approach that we have taken in 1730? Is that feasible and a practical way of meeting this problem?

Mr. COHEN. Well, I think that the provisions in S. 1730 are feasible and practical. It depends on how far you want to go. I certainly think——

Senator MURRAY. If you want to go as far as you can go.

Of course, we all recognize there will be serious opposition to any legislation that the States' administrators will be interested in; won't there?

Mr. COHEN. As I read the testimony before the Senate Committee on Post-war Planning they took the general position that they could take care of the situation and that their State legislatures ought to make whatever changes they thought proper. So, I think their attitude, as I understand it, is in complete opposition to both 1893 and 1730.

Senator KILGORE. In fact, their opposition is based upon an idea that this may be an opening wedge for the Federal Government to take over the State unemployment-compensation operation and administration.

Mr. SCHIMMEL. Either bill.

Senator KILGORE. Either bill.

Mr. COHEN. I think in that respect they do not distinguish between these emergency proposals to utilize the State systems and make it more adequate, and other proposals for a uniform Federal system. I think there is a very great difference between those two types of proposals.

Senator KILGORE. Off the record.

(Discussion was had outside the record.)

Senator MURRAY. In S. 1730, we undertake to require the State to pay these benefits, and under S. 1893 it does not.

Mr. COHEN. That is correct.

Senator MURRAY. So that in S. 1730 we would not be saddling this great obligation upon the Federal Government and Federal Administration, but it would require the States to carry the load out of the funds that they have been accumulating and which are there available for this purpose.

Mr. COHEN. That is correct, Senator.

Senator KILGORE. Do you mean by that the enhanced load?

Now, here is the question, Mr. Cohen, Are their funds, as built up now, capable of carrying the increased load?

I don't mean increased in number but also increased in size, based upon the present average cost of living. In other words, are their reserves and surpluses sufficient that they can take over the burden?

I have talked to some of them just recently who said that, or claimed, there was a lack of understanding upon a lot of their problems. They felt that their fund should be cut down because they were not paying out so many claims. As a matter of fact they were working the same personnel now checking pay rolls and collecting in for future payments of claims. It took just as much administrative work as it took to pay out claims, and I am just asking from your statistics available, can they shoulder the burden without Federal—pretty heavy Federal aid?

Now, I think we must look forward to this, that we cannot be shortsighted in planning, we must, as we did in the war, as was so well testified yesterday by Mayor LaGuardia, we must take the blackest side of the picture and protect against that in the hope that nothing like that will occur. In other words, we must do long-range planning and not short-range planning on the thing, not with the defeatist attitude that we are going to have a lot of unemployment, but in the fond hope and anticipation that we won't have a lot of unemployment, but that we will be ready to take care of the situation when it does arrive. That is the viewpoint, I take of it, without having a bunch of hurried legislation rushed through which will be nothing but a dole, pushing out doles and things of that kind to take care of some emergency that may arise.

Mr. COHEN. If that were your objective and starting point, don't you think it would be somewhat better to provide that the States will pay whatever benefits you require, and, say, if any State could not meet out of its own funds the cost of those benefits, the Federal Government will guarantee the solvency of the State fund?

Senator MURRAY. That is practically what S. 1730 is doing.

Mr. COHEN. That is practically what S. 1730 is doing. That will cost the Federal Government less money and make the maximum utilization of State funds and still give the guaranty to the States to meet, as the Senator expressed it, the blackest possible situation that might arise.

Senator MURRAY. And then, of course, as we have a real crisis, we cannot do it entirely under this program we are talking about here, you have got to have something supplemental to that if we have a situation where there are 20,000,000 people unemployed, you are not going to be able to handle that situation without other methods of meeting the situation.

Mr. COHEN. That is correct.

Senator MURRAY. But for all practical purposes, it seems to me that S. 1730 provisions put the load where it belongs, on the State fund and not on the Federal Government. It is the most practical and feasible way of handling the situation.

Senator KILGORE. Just a second, I want to get this point—assume this stopped there——

Senator MURRAY. Everybody is coming to the Federal Government to get everything. I think there is a strong opposition to that in this country. I don't think any plan will go through Congress if the United States is going to saddle this burden on the Treasury of the United States. It has got to be put where it belongs. The money has been accumulated for that purpose, to handle this situation, and the bill

should require them to carry the burden and supplement it to the extent necessary, if we put additional burdens on them. For instance, if we pass this law and require firms employing less than eight people that may necessitate some assistance to them if they fail to carry the load.

I have talked with some State administrators, and they tell me they were capable of talking care of this situation themselves under the funds that they had, but if we required higher payments or brought additional workers in that then we will have to supplement them. I think that is only fair and only reasonable.

Senator KILGORE. Mr. Cohen, I want to ask you one question on that point, of the danger of guaranteeing the solvency—it just appears to me to be a danger—I want to ask your opinion if we require the States to pay out to the ultimate amount that they have without any absolute guaranty to them when they have spent every cent they have, we are going to make good and pay from then on, no matten what it costs. are we not then putting a premium on the States failing to cooperate with the Federal Government and municipalities and industries of the State, in the elimination of unemployment because there is no incentive, whereas a State which has paid out its normal unemployment benefits from a fund that is carefully built up, and those payments being augmented as they go along by contributions to make up the first amount, has an incentive, don't you think, to get rid of unemployment and save its own surplus, whereas if it feels that it might just as well go ahead and keep on paying until they pay it out entirely there is no incentive to help build up the unemployment side of the fund.

Mr. COHEN. I think you have a good point there, Senator. I would say you should not wait until the State fund has been absolutely exhausted before the Federal guarantee account or the reinsurance account comes into play.

Senator KILGORE. Why should we sweat ourselves to find jobs for these people and help them get employment and get things back to where we want to get; we are going to have to pay this out and the Federal Government is going to guarantee the deficiencies. We start back to the deadline again just the same as the States who do not.

Mr. COHEN. S. 1730, as I remember it now, has a provision that the Federal Government will come in and make payment before the States becomes insolvent; it would begin to pay the States whenever their fund was less than their collections in the preceding calendar year, thereby making it possible for a State to swing through practically on its own motion with a minimum of Federal assistance.

Senator MURRAY. And that approach would not meet with serious objection from the States, I should not think. That is to say, it would seem to me that they would be willing to accept that kind of a proposal.

Mr. COHEN. I could not say, Senator. As I recollect their testimony before the George committee——

Senator MURRAY. I know, there were only a very few witnesses who testified there. I talked to the State Administrator of the State of Indiana who gave me to understand that he was entirely in accord with the approach that we have followed in S. 1730, and that under that, with the supplemental aid that the Federal Government would give them, that they would be glad to undertake to carry out the program, talking about the way this thing would work on State funds now totaling nearly $6,000,000,000, don't they?

Mr. COHEN. Yes; they are between five and six billion dollars at the present time.

Senator MURRAY. That would allow benefits averaging $30 a week for an average of 20 weeks for 10,000,000 people. That will be a pretty good load to carry, it would seem to me, and then the Federal Government coming along under S. 1730 to supplement that with Federal aid, we would be able to carry a pretty good heavy burden of unemployment, and then when it was a real crisis, that we run up against, we would have to have, of course, other ways and means of meeting the problem.

Senator KILGORE. That would apply if that were equitably distributed among the States, but it is not equitably spread over now.

Mr. COHEN. No.

Senator KILGORE. It is rather spotty.

Mr. COHEN. It is very spotty. The relative amount in different State funds is very spotty, as you say. However, if you had such a guaranteed amount coming in, it in effect guarantees whatever benefits you do require the State to meet.

Senator KILGORE. For instance, I ran into two States recently in checking the latest balances I could get, two States, one of which was six times as large as the other, that had less than twice as much reserve built up as the smaller States had. I don't know wether the smaller State had an adequate reserve or not, but to show the spottiness, it was at least six times leaner in the larger State when it had less than twice as much reserve.

Mr. COHEN. That is due, in part, to the fact that the States, even at the present time, do not collect the full contribution of 2.7 percent. The State of Michigan, which many people have been concerned about, is only collecting a contribution on an average of 1.7 percent of the pay roll, whereas the Federal law provides 2.7 percent. Therefore, they are collecting on the average of 1 percent less, and that I think, is something like $58,000,000 a year less than they would collect at the full 2.7 percent rate.

Many people are concerned that the fund in Michigan will not be sufficient. So that our Federal concern about the situation is due in part to the failure on the part of the States to collect sufficient contributions during the present period to pay adequate benefits.

Senator MURRAY. Another illustration of the need of a Federal program.

Mr. COHEN. Under the Federal program you would presumably collect a sum sufficient to pay out whatever you need in all of the States of the Union, and under present circumstances the total amount of the reserve should be less, with greater assurance you could pay more adequate benefits for a longer period of time.

Mr. SCHIMMEL. Mr. Cohen, I think this fact might be very relevant in the attitude of the State administrators. Don't you think their attitude is more dependent on the scale of benefits you are going to introduce. That is, both size and duration. If you set up there that the maximum shall be one—shall be at least $20 and the duration has to be, let us say, at least 20 weeks—in other words, modifying the present criteria as you have used it, don't you think there is going

to be comparatively small resistance to the amendment under the standards which are similar to those in S. 1893, and using the technique of S. 1730 the resistance will be overwhelming, because the effect of imposing higher standards and then keeping their present merit rating system will be to gradually bring them all down to the minimum reserve.

Mr. COHEN. Well, it is my understanding——

Senator MURRAY. Mr. Chairman, I am sorry, I have another engagement, I will have to leave now, and I will be glad to see you after luncheon.

Mr. SCHIMMEL. The attitude of the States, in rejection of the so-called State rights viewpoint, would, it seems to me, if you incorporate simultaneously the higher scale of benefits compared to the present scale which is in S. 1893 and the technique of S. 1730, which gradually reduces their present fund then their opposition would be at the greatest level. In other words, if you want to apply the scale of benefits in S. 1893 during this emergency period you are pretty much driven away from the technique that has been worked out in S. 1893, otherwise you have imposed a complete Federal system.

Mr. COHEN. It is my understanding that one of the reasons why they are opposed to any high levels of benefits, no matter what they are, even though they are an emergency, is the thought that creates a policy on the part of the Federal Government to recognize that these scales should be continued even after the emergency period is over, and then they will have to draw out the State fund and will not be able to meet the costs and there won't be any guaranty account to meet those costs after the emergency.

Mr. SCHIMMEL. Yes; they told me in person, but the point I want to raise is this: if you provide the benefit of S. 1893 through the technique of S. 1730, you are going to lower the—very rapidly lower the reserve of the various States so that they will all be brought down to a uniform level. Right now your Federal law requires a lower benefit based on definitely limited duration. If you increase the benefits and increase the duration through the entire emergency period the reserve might well be wiped out of the States and all the States would start out with a reserve equal to the previous year's collection.

Mr. COHEN. Well, personally, I don't see any disadvantage in that. It is my understanding that the approach to unemployment insurance has always been you would build up funds in good times to expend them in bad times. At the end of the period of unemployment you should come out with little or practically no reserve, because you then start rebuilding it again in the next cyclical period.

Mr. SCHIMMEL. So that actually the difference between S. 1730 and S. 1893 are differences between scales of benefits and differences of administration, as to whether those details will be left to the States or whether the Federal Government will move in to supplement and keep the funds up.

If you have those two major differences, they ought to be clarified.

Mr. COHEN. That is correct.

Mr. SCHIMMEL. I think that the record ought to show those two principal differences.

Senator KILGORE. One thing more I want to ask you, Mr. Cohen, because you are undoubtedly familiar with it, is that all of our State

unemployment compensation benefit payments are based on the prewar cost of commodities, if based on commodities at all—some of them are not based really on anything, but there has been no modernization of those laws during the war to take care of enhanced living costs which in the estimation of the Bureau of Labor Statistics of the Department of Labor varies but they undoubtedly have gone up and in fact, in accordance with my pocketbook at the end of each month I find they have undoubtedly gone up, isn't that a fact?

Mr. COHEN. There are some States which during the past few years have liberalized their laws in some respects. It would not be fair to say that they have not changed their laws at all, but I don't think they have by any means changed them as substantially as is required by the situation.

Senator KILGORE. By the situation. Now, on yesterday it was testified, as we all know, that the drain on foodstuffs out of this country as the invasion progresses will progress tremendously, which, of course, always raises the cost of living. That, coupled with the fact that the Congress has guaranteed to the farmer a 2-year post-war price level on farm commodities would tend to keep the bare essentials of life—I am not talking about buying automobiles and radios and things of that kind, I am talking about the bare essentials of life, which are food, shelter, and clothing, they tend to keep them at substantially the present level, if not higher—that is, at present levels, if the O. P. A. can hold the line, and much higher levels if they do not hold the line, isn't that right? Which means that the State payments, unaugmented, would not be adequate for the unemployment in the post-war period.

Mr. COHEN. I think, outside of the duration of benefits which we have discussed previously, which is most inadequate in State laws, the second cause of inadequacy is the low maximum amount of benefits that the States provide. Most of the State laws, if I recollect, pay maximum benefits of $15, $16, or $17, somewhere in that range; not matter what the man's wages were, he can never get more than that amount of benefits.

Senator KILGORE. And no matter what his dependents are.

Mr. COHEN. No matter what his dependents are, he is limited. The State laws usually allow no more than $15 a week. In view of the existing wage level and the cost of living and these other factors, I certainly think that the State laws could well provide a maximum substantially above $15.

Senator KILGORE. But the trouble has been that the legislators of our several States in fixing the contribution to the fund just adopted the limits fixed by Congress. They adhered to the plan of setting the amount of benefits based on actuarial figures, is that the fact?

Mr. COHEN. Well, I don't think so, Senator. I think that what they have done is to determine what sort of benefits they wanted then lower the contribution rates, roughly speaking, to finance the level of benefits.

Senator KILGORE. That is what I meant when I said actuarial. I meant it has been computed on the amount of benefits they decided they could pay.

Mr. COHEN. Yes.

Senator KILGORE. That is so, and their reserve was built on that, and built on the maximum period laid down.

Mr. COHEN. There is no doubt if ever they wanted to pay more adequate benefits than those at the present time, they would be able to do so if they would approach it from that point of view.

Senator KILGORE. But to carry the full burden is going to be a terrific pull.

Mr. COHEN. That is what we don't know. Of course, I think some guarantee fund should be worked out to guarantee that they can carry that load with some Federal help, if that is necessary.

Mr. SCHIMMEL. Mr. Cohen, on that 80-percent figure, don't you have a load at which the entire post-war scales are inadequate, because when you take the lower income groups, take a man who is making $30 a week, if you continue that 50-percent figure, even under the present living conditions, he is already close to subsistence level, and if you continue that 50-percent ratio between what he earns and what he is paid in benefits, he is only going to get $15. That makes it utterly impossible for him to get along. Now, if you are going to increase the benefits so that people can manage to get along it seems to me you have got to both increase the maximum and also a categorical increase in the percentage they are going to get.

I think Senator George pointed out yesterday it was reported that he agreed to that type of provision since it does not fundamentally alter the wage scale and does provide that the lower paid wage earners will not starve.

Mr. COHEN. There is no doubt that some of the States, as you say, pay a percentage of the man's previous wages which are not very substantial.

Mr. SCHIMMEL. Principally low wage scales.

Mr. COHEN. Principally low wage scales. There are even some States which have low percentages all the way along the line. There are several States, which, by gearing the amount of benefits to an individual's annual earnings rather than to his normal full-time earnings or total weekly earnings at the present time, result in quite low benefits relative to his average weekly earnings.

Mr. SCHIMMEL. I mean, commensurate with the low wage scale.

Mr. COHEN. That is right.

Mr. SCHIMMEL. There is one other point I think the record ought to show, that there is no universal agreement that unemployment benefits should be financed out of wage taxes. In other words, if I interpret Mr. Willkie's article No. 3 of his current series, I don't think he is the sole spokesman of such viewpoint; I believe the social-security circulation viewpoint has been advanced many times, that it is entirely equitable to have that portion of the unemployment benefits financed from the General Treasury, with the understanding that the funds in the General Treasury are obtained by imposing an equitable system of taxation. Is that a fair statement, Mr. Cohen?

Mr. COHEN. Yes; there is some view to that effect.

Mr. SCHIMMEL. Isn't it true that the present proposal does mean some sort of a revision of the social-security system, whether it is to have the States pay their benefits or whether it is to have the Murray-Wagner-Dingell bill put through, there will have to be some revision as indicated by having higher benefits paid for this emergency period and it does not solve the permanent system, though it must be considered as emergency legislation only.

Mr. COHEN. Well, there are some things which I think certainly should be considered as permanent legislation, such as broadening the coverage to one or more, taking care of the seamen and perhaps even some other provisions could be permanently included in the existing law. They are sound for the present and I think sound for the future, so I don't think it should be solely a matter of emergency legislation.

Senator KILGORE. Mr. Cohen, don't you think one of the problems that faces us is the fact of the real need to enlighten the people of the United States on the fundamental underlying principles of unemployment compensation that it is not a payment out of the taxpayers' money to the recipients, but if it is properly and consistently carried out, that it is merely a method of setting up money for bad seasons in times of good employment and the creation of a compulsory insurance fund against unemployment which really is actually charged by the employer into cost of operation.

Mr. COHEN. That is right.

Senator KILGORE. As part of the wages, and although it happens to be tax free, it is not taxed as wages, isn't that the fact, that there is no understanding of that? Maybe it does not matter so much the amount of unemployment compensation is paid to a man provided it is enough to live on, if he, from his earnings and his working period has been able to build that up, it has not hurt the taxpayers 1 cent, is that not right?

Mr. COHEN. If he is not helped by providing these payments, it hurts society.

Senator KILGORE. I cannot understand the need for any question about the scale of benefits. I think the scale of benefits should be based completely on constant studies of living costs, and savings should be built up as the old time Egyptians were under wise guidance, in the plentiful years to take care of the lean periods without affecting the taxpayers at all. There is one reason I cannot understand the opposition to the question of the actual amount, so long as the amounts do not become such where they discourage gainful occupation and as long as they are limited in time so that there is no idea that the whole work structure of our country will try to get on some kind of a nonwork relief system.

Mr. COHEN. That is right.

Senator KILGORE. That is what I cannot understand and that is a question that I want to ask you on, the technique of handling this. It has been my impression during my trying to work it out that the best way to handle this situation is to have the States pay, based upon their funds, the full amount that they can pay and augment that up to taking care of the living cost differentials from Federal sources for an emergency period. I think that will take the maximum advantage of the savings that they have built, and at the same time encourage the State governments and the employers within the States to reconvert and to get back into gainful occupation as quickly as possible and the workers to get back to work and will furnish an incentive—I don't know whether—I have thought of one system that might be worked out, as we used to work the old circulating fund, let the State pay the full benefit and submit the bill for the differential which might be paid by the Federal Government, let them be reimbursed on a gradual

basis for the payments made and let them determine under the laws of the State how much money the man is entitled to and let them be augmented and let them handle the reimbursement. It seems to me that that would be better than to just turn the money over to them in advance, give them an advance, because I think their surpluses are adequate to take care of several months' payments under existing State laws, and the Federal Government could start the reimbursement program.

Mr. COHEN. I think they are adequate, certainly under anything that I can see right now, for quite a period.

Senator KILGORE. It would encourage the well administered estate to continue good administration and at the same time would administer a slight spanking in States where there has not been such good administration, is that right?

Mr. COHEN. Yes.

Senator KILGORE. That is the general idea; probably it is not as well expressed in the bill as it should be, that is kept in this bill 1893, with the idea of handling it that way.

Mr. COHEN. I think if you are going to have a system that is going to continue to operate in the emergency, you must build upon a State system.

Senator KILGORE. You must build upon the State system.

Mr. COHEN. You cannot go into operation quickly enough during an emergency period. We don't know when the emergency period may arise. If we had the date—if we said, beginning January 1 1947, the emergency is going to start, we might be able to prepare for it, but we don't know whether the emergency is going to begin tomorrow or whether it is already here.

Senator KILGORE. Yes.

Mr. COHEN. Therefore we ought to build upon existing State administrative machinery and the financial funds at this time.

Senator KILGORE. I have talked with a number of State administrators on this bill that I have suggested to you, and they seem to think, so far as they were concerned, it would entail no difficulties in administration, it would not disturb the administration of those States at all except just a little additional clerical work in certifying the pay rolls to the national headquarters and would entail work, of course, in the national headquarters in checking the pay rolls, and writing the bulk check, which is one check for the month's differential or week's differential, whatever it was. They seem to think it would be simple. So far as they were concerned they didn't see that it would complicate matters from the national viewpoint.

Mr. COHEN. No; I think as long as the provisions in the Federal law are clear, simple, and equitable, so that every State administrator will be administering the same thing.

Senator KILGORE. That would be a matter of administration. Don't you think that would simplify the handling?

Mr. COHEN. Yes.

Senator KILGORE. Well, do you have anything more?

Mr. SCHIMMEL. I think it would be very valuable to work it into the problem.

Senator KILGORE. I wish we could have a little conference with you on some of those questions to clarify the language.

Mr. COHEN. I would be very glad to help.

Senator KILGORE. Because I think—as I have explained to you in the past, I think that is the simplest way in the world to do it.

Mr. COHEN. I would be very glad to be helpful in any way that I can.

Senator KILGORE. I think our job is to take care of the differential which the States have not provided for and let them take care of everything they have provided for.

Mr. COHEN. Yes, sir.

Senator KILGORE. Because it is like an insurance policy—you establish your rates on the longevity of a man's life and everything, but if you had a mass suicide wave, the insurance companies would go broke pretty soon.

Mr. COHEN. Yes; that is an entirely different situation.

Senator KILGORE. Yes. Well, if there is nothing further I would like the opportunity of talking to you a little bit later.

Mr. COHEN. All right; I will be glad to at any time.

Senator KILGORE. That is all.

(Whereupon, at 12:10 p. m. the hearing adjourned.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

FRIDAY, JUNE 16, 1944

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in the Military Affairs Committee room, the Capitol, Senator Edwin C. Johnson presiding.

Present: Senators Johnson, Hill, Truman, Kilgore, Murray, Austin, and Thomas (Idaho).

Senator JOHNSON. All right; the committee will come to order.

The special work of the committee today is to hear a report, to be presented by Senator Austin, from the George committee, the Special Committee on Post-war Economic Policy and Planning, on the subject of unemployment compensation in connection with S. 1730 and S. 1893.

Senator Austin.

STATEMENT OF SENATOR WARREN R. AUSTIN, SPECIAL COMMITTEE ON POST-WAR ECONOMIC POLICY AND PLANNING—UNEMPLOYMENT COMPENSATION

Senator AUSTIN. The George committee, after hearings and a day of discussion, took a formal vote on various questions relating to unemployment compensation in the post-war period. I don't think it is limited to post war, strictly, but involves the period of reconversion from the war effort, industry and the armed services.

It may take a longer period than we contemplate now, but it is supposed to be effective if written into the law, even before the cessation of hostilities, as I understand. And they asked me, from the George committee, to make a report to the Military Affairs Committee this morning, because there has been so much pressure relating to time brought on our committee, and we want to discharge our duty to the Military Affairs Committee as promptly as possible.

We had already filed Monday the report No. 539, part 4, in the Senate. This is a Special Committee on Post-war Economic Policy and Planning pursuant to Senate Resolution 102. And this reports on the problem of post-war unemployment and the role of Congress in solving it.

This report I am asked to make by the committee today is specially addressed to unemployment and the compensation for the unemployed. I will read it. It is very brief.

(Senator Austin reads his report as follows:)

JUNE 15, 1944.

I am listing below the conclusions of the committee with reference to unemployment compensation (and "I" means Mr. Russell, who is the general counsel or special counsel for that committee.)

1. The committee decided against the setting of any Federal standards.

2. It decided that Government workers, including War Shipping Administration, should be covered under the laws of the States where their wage credits would have accumulated had they preivously been under the law; that their benefits be calculated under the State law, based on the amount they earned while employed by the Federal Government; that the payments to them be made by the States and that the Federal Government reimburse the States for any such payments.

3. The committee was convinced of the solvency of the State funds. But to make this solvency absolutely certain, it recommended the setting up of a Federal loan fund from which loans could be made to any State that felt the solvency of its fund was threatened. It committed itself to consider supplementary measures to guarantee the solvency of the State funds, if the loan provision proved to be inadequate.

4. The committee felt that the Unemployment Compensation Tax Act should be amended to cover employers of less than eight, and cover maritime workers employed by private shipping companies, but recognized that legislation to this effect would have to originate in the House.

5. The committee decided to recommend to the States that they carefully survey their own situation with a view to increasing maximum benefit payments and extending the duration of payments to the greatest extent they deemed compatible with the situation in their States.

Senator AUSTIN. That is the end of the report. That is all the copy I have of it.

Senator JOHNSON. Are there any questions with respect to this report?

Senator Murray?

Senator MURRAY. No.

Senator JOHNSON. Senator Thomas?

Senator THOMAS. No; I don't think so.

Senator JOHNSON. You haven't had very much opportunity to study it.

Senator MURRAY. No.

Senator JOHNSON. It is brief and concentrated and high powered.

Senator Austin, just what do you mean when you say the committee decided against the setting of any Federal standards?

Senator AUSTIN. I mean this: We have before us, and the witnesses had before them, S. 1730, by Mr. George, for himself and Mr. Murray, and the Kilgore bill, S. 1893. And it is apparent that in both of them there are Federal standards. The witnesses in our record almost unanimously are opposed to Federal standards. A great many representatives of States appeared and built up a very strong case against Federal standards or Federal subsidy because they fear the effect upon governments of the several States by the reaching in, by the Federal Government, through these subsidies and through these standards.

Senator MURPHY. They fear this is a move to federalize the Unemployment Compensation Act. It will be necessary to have Federal standards in order to bring it up and to make it possible for us to meet this situation as it is going to develop in the reconversion period. It seems to me that we have simply got to have some Federal standard, and the Federal Government has got to give some assistance in this program of unemployment compensation.

Senator JOHNSON. Later on in the record they provide for certain assistance?

Senator MURRAY. Certain assistance; yes.

Senator AUSTIN. Their theory is different from yours, Senator Murray, on that point. The George committee came to the conclusion after study of this matter, that they had better take another course, that that would be encouragement of the States to raise their standards.

Senator MURRAY. Yes.

Senator AUSTIN. And for the purpose of encouraging them to do that, to provide for guarantee of their funds. So on the issue, when it was presented to the George committee, they agreed that the commitee does no wish to set up Federal standards for the States to follow. I am making the report.

Senator MURRAY. Yes; I understand.

Senator AUSTIN. I realize there are differences of opinion about that matter. But the chairman of this committee asked me a question. I was trying to tell why we took that vote.

Senator JOHNSON. He brought in a report here.

Senator MURRAY. I don't see how the States should have any objection to the standard that we are seeking to set up here, because we are going to assist them in carrying the load that these standards will impose upon them.

My bill, of course, is designed to place the burden on the States that have accumulated this vast fund for the purpose of taking care of the unemployment situation. They already have something like five or six billion dollars. That will increase very rapidly. It will be seven or eight billion dollars very soon. My bill undertook to require them to use that money, but that we supplement it, wherever it is necessary, as result of the burden that we undertake to place upon them through the standard that we set up.

Senator THOMAS. Just what do you mean by Federal standards? What do you mean?

Senator JOHNSON. That is my question.

Senator MURRAY. At the present time, employers that employ from one to eight people are not included. Isn't that right, Senator Kilgore?

Senator KILGORE. Right. Very few States that have smaller.

Senator JOHNSON. The Federal law sets the minimum of eight.

Senator MURRAY. That is right. We are supplementing that by increasing that. And of course, the new Federal security, the new act expanding the Federal security program, the Murray-Wagner-Dingell bill, undertakes to do that.

Senator KILGORE. There is also one thing: The maritime workers are not covered by anything. They are clear out on a limb by themselves.

Senator MURRAY. The Federal workers are not included.

Senator JOHNSON. On that point, Senator Murray, if I can find it in this report——

Senator AUSTIN. I think it is the next to the last one.

Senator JOHNSON. I am not looking for that. I am looking for the statement in here some place that says such legislation must originate in the House.

Senator AUSTIN. That is down there.

Senator MURRAY. That is unemployment compensation.

Senator JOHNSON. Is it because of the tax?

Senator MURRAY. It is a tax measure. It might be construed as a tax measure, but the social-security experts are working on that now and are intending to present to me amendments, modifications of the unemployment-compensation provisions which we are proposing here, so as to get away from that objection.

Senator JOHNSON. This is the way paragraph 4 of the report reads:

4. The committee felt that the Unemployment Compensation Tax Act should be amended to cover employees of less than eight, and cover maritime workers employed by private shipping companies, but recognized that legislation to this effect would have to originate in the House.

Senator KILGORE. If we amend that to carry employers of less than eight people, we will put the States in this position: That they will be paying out of a nonexistent fund because no collections have been made by employers of less than eight in any of the States. It will mean that employers and employees who have contributed to funds now existing in the State, if we put that burden on the States, will be paying the employers of less than eight.

Senator MURRAY. Who have not contributed.

Senator KILGORE. Who have not contributed at all. The same applies to the Maritime Commission, who have not contributed, because no agency could contribute.

Senator JOHNSON. How can you get around that?

Senator MURRAY. This bill would be a violation of the constitutional provision which requires tax measures to originate in the House. But I understand it can be framed in such language as to avoid that objection. I don't know. The social-security experts are working on that now. What do you think of that, Senator Kilgore?

Senator KILGORE. I think it can be framed in such language as to get around it all right, inasmuch as it was a piece of emergency legislation, not a continuing proposition.

Senator AUSTIN. I ought to tell you that point was raised in the George committee, and that is their opinion.

Senator JOHNSON. I can see where the Federal Government might have an interest, and more than an interest in the Maritime workers, but I can't see why you should use this Federal fund for employers and employees under the minimum number of eight.

Senator KILGORE. Senator, we have a whole lot of little gadget plants that employ four and five and six people, who are really subcontractors.

Senator MURRAY. That is right. I have seen some small plants.

Senator KILGORE. I happen to know in South Carolina there is a garage man down there making parts for shipyards. He has a total of six employees in a little garage. He makes a little gadget that goes to the Charleston Shipyard on a contract with the Navy.

Senator JOHNSON. I think it was a mistake originally to set the standard of eight.

Senator MURRAY. To leave them out.

Senator JOHNSON. Why that should be the burden of the Federal Government to change it now is more than I can see. I can't see why the Federal Government should stand the burden of that change. It is not a large matter.

Senator MURRAY. As Senator Kilgore said, there are many little concerns that employ less than eight. I know a concern in California that only has four employees, yet it makes a product for the Navy which supplies the Navy for the whole country. Just one little tinhorn plant out in Fresno, Calif., which makes a nozzle for a spring, some plastic paint on the hulls of ships, which has to be specially constructed with a heat element in it. That little concern makes all of those for the Navy all over the United States, and it just employs four people.

Senator KILGORE. There are a lot of those little plants with highly skilled men in them.

Senator MURRAY. That doesn't answer the question.

Senator JOHNSON. That doesn't answer the Federal burden. Where you find one of those plants, you find 10,000 plants that have nothing to do whatever with the war effort.

Senator MURRAY. If we increase it, if we bring that in here, the Federal Government through these bills proposes to reimburse the States for that additional amount that they pay out. And we feel that that should be done in this emergency which we are facing, the danger of widespread unemployment, which would have a very damaging effect on the country.

Senator JOHNSON. The George report deals with the policy of assistance to the States through loans.

Paragraph 2. It, meaning the George committee, decided that Government workers, including employees of the War Shipping Administration, should be covered under the laws of the States where their wage credits would have accumulated had they previously been under the law. That their benefits be calculated under the State law, based on the amount they earned while employed by the Federal Government. That the payment to them be made by the States and that the Federal Government reimburse the States for any such payments.

Are you in disagreement with that reimbursement provision?

Senator MURRAY. No; I think that is exactly what we are trying to do. We propose to reimburse the States.

Senator KILGORE. Senator Murray and I have been working on that same idea of a reimbursement, rather than a loan.

Senator MURRAY. Some of the State collectors who appeared before the George committee are opposed to a subsidy or any grant or anything, but said that they would prefer, one or two of them did, that they would prefer to get nothing from the Federal Government except a loan to aid them in carrying it out.

In other words, they didn't want to let the Federal Government have anything to do with it. They didn't want the Federal Government to get its toes under the tent there, which might finally result in federalizing the system.

Senator KILGFRE. Off the record.

(Discussion off the record followed.)

Senator MURRAY. Along the lines Senator Kilgore has been talking, there is a widespread sentiment in the country that it should be federalized. Take the Washington Post, a very conservative newspaper. It comments on Mr. Willkie's statement and points out that it should be federalized.

Senator AUSTIN. I tell you, I don't think the George committee has apprized the public opinion beyond the witnesses that have appeared before it.

Senator MURRAY. That is right.

Senator AUSTIN. It may be as you say, that this change has occurred in the country and that there is an opinion which Mr. Willkie represents in his statement. But regardless of that, this is the view of the George committee.

Senator JOHNSON. Yes. Yesterday, on the floor of the Senate, that question was indirectly tested. Senator La Follette, who presented the view of the States, won out, as you recall.

Senator AUSTIN. I think that vote yesterday was rather surprising. It did surprise me and is in line with this report from the George committee. It supported the opinion that came by telegram from these representatives of the State administrative organizations, and it fits what we think as a committee, the George committee thinks is an important decision, that is in between federalization and nonfederalization.

Senator KILGORE. I want to disagree with you as far as one Senator who voted, was concerned. Here was a going machine. I voted because in my State the organization for paying unemployment compensation had already been stripped to the bone, the constant minor cuts, and I voted in order that it might keep alive. Not as a decision between federalization and State operation, but mine was to make dead sure that the machinery didn't break down; that was what I was voting for.

Senator AUSTIN. That is a rational decision, I think.

Senator JOHNSON. Yes; but that is the very point, Senator La Follette made, that they want to see the State machinery break down so the Federal Government can take them over.

Senator MURRAY. Did I understand Senator La Follette then supported the State view?

Senator JOHNSON. That is right. Senator La Follette supported the State view. That controversy has been up repeatedly in the Senate Finance Committee through the years, and the State side of the argument has always won overwhelmingly, almost unanimously in the Senate Finance Committee.

Senator MURRAY. How did this vote come up yesterday? What was it on? I don't recall.

Senator JOHNSON. It was on the increase of appropriation from $25,000,000 to $31,000,000, I think it was. It was reduced to $25,000,000.

Senator MURRAY. Who introduced it?

Senator KILGORE. The bill was introduced to increase it to 31,000,000, so the State machinery would not break down. Senator La Follette supported the movement. I voted for it, as I previously said.

Senator AUSTIN. I want to express the wish of the George committee that you can all come to the meeting over there this morning. It started at 10:30. They asked me to invite you all. They are going to have testimony on this subject, among others.

Senator KILGORE. Senator Austin, could I ask you a question. In the testimony over there, has there been any testimony as to the scale of unemployment compensation paid by the States as compared with the present cost of living and with what, under present, existing acts, which guarantee farm prices for a period of 2 years, post-war, what effect that will have if we limit payments to the amount set forth by the States? In other words, most of the laws, I believe, were formulated in the period prior to 1940 before the present rise in prices took place. That point was made by Mayor LaGuardia here—the increased cost of living now, which will probably continue for a couple or 3 years.

Senator AUSTIN. I can't say that particular comparison was made. Of course, there have been many comparisons made. Our records are full of figures from the several States, but whether that particular one relating to cost of living was made, I can't remember. I know that we had specific examples set up that tended to show that under your plan in S. 1893, a man with three children, getting benefits that are set up according to that standard, who had formerly been employed 48 hours a week, and who now would be on the basis of 40 hours, and then out of employment, unemployed, would get more under the law for benefits than he could earn. Therefore, his inducements were all against earning and against serving. That comparison was made. And other comparisons were made; as to the one you mentioned in particular, I don't know whether it was made or not.

Senator KILGORE. If he were getting 40 hours work, on a basis of a 40-hour week, on what scale would you figure you would get more? Because he is limited to 80 percent with the ceiling? I think the definite ceiling is probably $35.

Senator AUSTIN. You would pay him $35, and he would get less than $35 a week if he worked.

Senator KILGORE. At 40 hours?

Senator AUSTIN. Yes.

Senator KILGORE. If he worked less than 40 hours a week, he would only draw 80 percent of his pay.

Senator AUSTIN. I don't propose to engage in a debate with you about the application of particular cases.

Senator MURRAY. In the testimony we had up here yesterday afternoon, Mr. Cohen, from the Social Security Administration, testified on that and pointed out how that could be.

Senator KILGORE. In the case of part-time workers.

Senator MURRAY. He showed how they would be able to get more pay for not working than for working?

Senator KILGORE. No; how a part-time worker, for instance, a man—that possibly should be susceptible of amendment—how a man working part-time employment could run his pay up to as much as $56 a week, including the curtailment.

Senator MURRAY. Any way, his testimony, I suppose, will be transcribed and we can see that.

Senator JOHNSON. What does the commitee want to do?

(Discussion off the record followed.)

Senator JOHNSON. Getting back to the record, we have a communication here from the War Department, signed by Under Secretary of War Robert P. Patterson. I think all of you have copies before you, but I presume we ought to read that and consider it. I will read it, unless someone has an objection. This is addressed to Senator Murray.

(The letter referred to is as follows:)

WAR DEPARTMENT,
Washington, D. C., June 14, 1944.

Hon. JAMES E. MURRAY,
War Contracts Subcommittee,
Committee on Military Affairs of the United States Senate,
Washington, D. C.

MY DEAR SENATOR MURRAY: As requested by your letter of June 9, I am glad to give you our comments on Subcommittee Print No. 3 of S. 1730, dated June 9, 1944, and Subcommittee Print No. 1 of S. 1893, dated June 9, 1944.

The War Department has no objection of substance to the provisions of this revised form of S. 1730. We believe that titles I and II of this draft are workable and generally desirable legislation. As for titles III and IV, the War Department strongly endorses section 301 and favors adequate provision for unemployment compensation and benefits for servicemen and unemployed war workers, but is not prepared to comment on the specific provisions with respect to them.

On the other hand, the War Department has serious objections to many of the principal features of the revised draft of S. 1893, and believes its enactment would be unwise and undesirable. Some of the major provisions to which we object are as follows:

1. Title I of this bill appears to contemplate a complex central agency with extensive functions and operations. Our experience convinces us that an over-all agency must be limited to establishing basic policy and planning, in order to perform its essential functions without becoming an administrative bottleneck. We fully agree with the testimony of Mr. Justice Byrnes before your committee on June 12, that to be effective such an office must be small and compact. In our opinion, the agency created by title I of S. 1893 would inevitably tend to become unduly large and to invade the operating fields of existing agencies and duplicate their operations. We think that this would interfere with efficient administration and would defeat the basic objectives of an over-all agency.

2. Section 105 is considered undesirable for several reasons. First, it seems inappropriate to require the President to appoint the Board from panels submitted by national organizations of industry, labor, and agriculture; appointments to an agency of this importance should not be limited in this manner or put under the control of private interests. Secondly, the War Department strenuously objects to the provision that the Board and each member shall have access to all data of the over-all office and of all other Government agencies bearing on war mobilization and post-war adjustment; this would obviously violate necessary military security and interfere with the orderly operation of the Department during the war. Furthermore, subsection 105 (e) would require the procuring agencies to consult with industrial or area councils representing industry, labor, and agriculture with respect to "policies, programs, and operations affecting industrial segments or geographical areas." This would seem to require such consultation by the War Department on every award, termination, or modification of any contract and would be wholly impracticable.

3. Section 201 would impose on the Chairman of the War Production Board the duty to review military production programs and to establish "policies and programs for the expansion, transfer, and curtailment of military production" covering specific products, firms, industry segments, and geographical areas, and to develop programs for curtailing military production based on assumed military developments. Such duties would directly interfere with the basic responsibility of the armed services for the procurement and production of military supplies and for determining their requirements for various military items.

4. Section 203 would require every procurement agency to report to the War Production Board "every projected change in its procurement program, including the award of new contracts and the modification, transfer, or termination of contracts previously awarded." In view of the thousands of such transactions, this blanket requirement would impose serious administrative burdens without corresponding benefits.

5. Title III deals with the disposition of surplus war property. Many of its provisions follow the bill recommended to your subcommittee by the Surplus Property Administrator and approved by the War Department. But certain of its other provisions, particularly sections 306, 308, and 310 differ from these recommendations. To the extent this bill differs in substance from the draft submitted by the Surplus Property Administrator, the War Department considers its provisions objectionable.

6. Title IV deals primarily with reemployment and unemployment benefits. While the War Department favors adequate provisions for these purposes, it is not prepared to comment on the particular provisions in the proposed draft, since these are not within its field of responsibility. Section 401 (c) dealing with the demobilization of servicemen is ambiguous; and might be interpreted to establish a policy different from that prescribed by section 301 of S. 1730. If that is its purpose, the War Department is strongly opposed to this provision.

In view of these and other objections, the War Department believes that S. 1893, as revised, should not be reported or enacted. We believe that the revised form S. 1730 is basically sound, and in view of the need for prompt action, recommend that S. 1730 be used as the vehicle for this legislation instead of attempting to revise S. 1893 completely to eliminate its many undesirable features.

Since you asked to have our comments immediately, we have limited them to matters of substance without dealing with defects of form or detail in either of the drafts. The Department has not been advised by the Bureau of the Budget as to the relation of this legislation to the program of the President.

Sincerely yours,

ROBERT P. PATTERSON,
Under Secretary of War.

Senator JOHNSON. Well, he is quite specific in what he had to say.

Getting back to what we are going to do this morning, I know Senator Austin is anxious to have that point decided. What are we going to do? Recess and go over?

Senator AUSTIN. I think the wise course for this committee to pursue is the one that aims principally at the soundness of legislation rather than at the speed of getting it out. Therefore, I wish you would vote to go over to the committee that is hearing testimony on this subject at this time.

Senator HILL. I understand Mr. Clayton, who is the Surplus War Property Administrator, is testifying over there.

Senator TRUMAN. I move that we accept the invitation of Senator Austin.

Senator JOHNSON. All in favor say "aye." Opposed, "no."

(The motion was carried.)

Senator KILGORE. I am going to vote "no," until I find out something. When can we have a meeting to decide on something in the Military Affairs Committee?

Senator AUSTIN. We can have it this afternoon after that meting is over.

Senator JOHNSON. Can't we have it this afternoon?

Senator AUSTIN. This afternoon. It is highly important, I realize, Senator Kilgore, just as you have said. It is highly important to get something out on the Senate floor.

Senator KILGORE. The Post-war Committee not being a legislative committee, can't get a bill out. Something must be done from some legislative committee.

Senator JOHNSON. If there is no objection, we will have a meeting here at 2 o'clock this afternoon.

Senator HILL. I want to bring up one more question. I don't know whether we are going to recess or not——

Senator JOHNSON. Is this on the record?

Senator HILL. It is all right with me. There is no need to put it on the record.

Senator JOHNSON. This will be off the record, then, Senator Hill.

(Discussion off the record followed.)

Senator JOHNSON. We will adjourn at this time, gentlemen.

(Whereupon, at 10:55 a. m., the meeting adjourned.)

APPENDIX

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 15, 1944.

Senator ROBERT REYNOLDS,
Chairman, Senate Military Affairs Committee,
Washington, D. C.

DEAR SENATOR REYNOLDS: I am enclosing herewith letter received from Hon. Walter E. Edge, Governor of New Jersey, expressing his views in regard to S. 1730, now pending before your committee. In the further study of this legislation, I shall appreciate your consideration of the statements made by the Governor.

Sincerely yours,

ELMER H. WENE.

STATE OF NEW JERSEY,
June 13, 1944.

Hon. ELMER H. WENE,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN WENE: The proposed revision of S. 1730 recently brought to my attention contains provisions that are in direct contradiction to the very forceful resolutions adopted at the Governors' conference at Hershey, Pa.

The Governors of 39 States went on record for the immediate return to the States of the employment services as soon as hostilities end. Yet, the revised S. 1730 would continue Federal control of these employment services for 2 years after the end of the war. To my mind there is no excuse for such continuance, since the States would be far better able to work out reemployment programs at a local level rather than for them to be directed from Washington.

As a matter of fact, the 2 years immediately following the end of the war is the time when these employment services would be of the greatest value to the State governments, and, accordingly, I should be very pleased if you would lend your efforts to change this provision.

Another provision in the bill would provide some Federal assistance for State unemployment compensation funds that get into financial difficulties. However, the price of such proffered Federal assistance would be to substantially increase the duration and amount of benefit payments to the point where stability of the funds might well be jeopardized. On this basis I hope you will see your way clear to leave the unemployment-compensation-benefits provisions flexible enough to insure solventy.

Sincerely yours,

WALTER E. EDGE, *Governor.*

AMERICAN FEDERATION OF LABOR,
Washington D. C., June 15, 1944.

Hon. ROBERT R. REYNOLDS,
Chairman, Senate Military Affairs Committee,
United States Capitol, Washington, D. C.

DEAR MR. CHAIRMAN: As you are aware, the representatives of the Railroad Brotherhoods, the Congress of Industrial Organizations, the Farmers Union, and the American Federation of Labor have met jointly with Senators Kilgore and Murray on numerous occasions in an endeavor to reconcile differences between S. 1730 and S. 1893.

The representatives of the four organizations thereafter met jointly and are in agreement on the terms of S. 1893, as set forth in the committee print of June 9. This print is a combination of both bills.

Beginning on page 30, parts of sections 407, 408, and 409 are carried in the G. I. bill (S. 1767) just enacted, and while it would do no harm to carry these matters

in regard to ex-servicemen in the bill, S. 1893, they could just as well be eliminated.

On page 32 of the bill, line 5, the figure "80" should be striken and "60" inserted, ts the former figure is too high.

In addition to the foregoing, S. 1730 sets up several committees which are not as satisfactory as is the set-up in S. 1893 as revised.

As I have previously advised, it is not of great importance to us as to the number of the bill or who gets the credit for authorship, as our interest in this matter is to get satisfactory legislation.

May I impress upon you the necessity of prompt action on this legislation as it is going to be needed before the war ends.

If our invasion proceeds satisfactorily there can be no question but that additional cut-backs to those now being made will be put into effect, with resulting unemployment.

With kindest personal regards and best wishes,

Sincerely yours,

W. C. HUSHING,
National Legislative Committee, American Federation of Labor.

WASHINGTON, *D. C., June 15, 1944.*

Hon. ROBERT R. REYNOLDS,
Chairman, Military Affairs Committee of the Senate,
Washington, D. C.

Every member of the Railway Labor Executives Association was furnished with copies of Senate bills, S. 1730, George-Murray bill, and S. 1823, Kilgore bill; and at a meeting of the association may 15 endorsed the Kilgore bill. Subsequently each member was furnished with a revised copy of S. 1730 and also a copy of S. 1893 [a revision of S. 1823], and while in session both bills were reviewed and considered; our association is unanimously opposed to S. 1730 because of its numerous weaknesses and unanimously endorse the Kilgore bill, S. 1893. Since the provisions of the latter bill, broad in scope, can and will accomplish the principal purposes which are to guard against chaos and unemployment, a united cooperative effort will bring about full production and full employment and prevent a repetition of the experience following the last war when big interests followed the narrow path clamoring against Government participation and when it failed was the first to beg the Government to save it. The Kilgore bill if properly applied will prevent the repetition of such a vicious circle. We respectfully request that this be made a part of the record for the benefit of the members of the Military Affairs Committee and urge that they support the Kilgore bill, S. 1893.

T. C. CASHEN,
Chairman,
T. J. G. LUHRSEN,
Executive Secretary,
Railway Labor Executives Association.

MOBILIZATION AND DEMOBILIZATION PROBLEMS

MONDAY, JULY 10, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE OF THE
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to notice, at 10:30 a. m., in room 457, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray.

Also present: Charles A. Murray, Bertram M. Gross, and Kurt Borchardt.

Senator MURRAY. Gentlemen, the hearing will come to order. The first witness is Mr. Eugene E. Wilson, vice chairman of the United Aircraft Corporation. Mr. Wilson, I understand, has Mr. J. Carlton Ward, Jr., president of the Fairchild Engine & Airplane Corporation; Harry Woodhead, president of Consolidated Vultee Aircraft Corporation; and Mr. Joseph T. Geuting, vice president, General Aircraft Corporation, with him presenting this matter this morning.

Will these gentlemen come forward, please?

Gentlemen, this hearing has been prompted by reason of the conditions that developed as a result of the sudden termination of the Navy Department's contract with the Brewster Aeronautical Corporation.

As a result of the widespread publicity surrounding the Brewster situation, considerable interest has developed throughout the country, and comprehensive post-war planning on the part of the Government.

Moreover, I am informed that the War Production Board has already set forth detailed procedures to be followed in carrying out cut-backs in war production.

Other agencies of the Government are at work on the same problem.

Inasmuch as legislation dealing with this subject is now before Congress, we are particularly interested in the specific details of the plans that are now being made and the proposals that are being developed by industry, labor, and the Government. Accordingly, these hearings have been arranged to bring forth the best thinking to date on the subject of war production cut-backs and reconversion.

The aircraft industry has been selected for special attention not only because of the Brewster case, but also because of the fact that the curtailment in this industry will perhaps create the most serious problem of unemployment with which our Nation will be faced at the end of the war.

The witnesses will include representative groups from the aircraft industry, officers of the unions in the aircraft field, and officials of the War Production Board, the Army, and the Navy.

Mr. Wilson, the vice chairman of United Aircraft Corporation, is the first witness. Are you ready to start?

Mr. WILSON. Yes, sir.

STATEMENT OF EUGENE E. WILSON, CHAIRMAN, BOARD OF GOVERNORS, AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, AND VICE CHAIRMAN OF THE UNITED AIRCRAFT CORPORATION

Mr. WILSON. Mr. Chairman, I do not have to tell you how happy we are to have the opportunity to address this committee. We have taken this very seriously, and in the last month have had meetings of the east coast group and the west coast group, and have coordinated their points of view in this somewhat formidable statement which will be presented for the record.

To save the committee's time, Mr. Woodhead, Mr. Ward and Mr. Geuting will review more or less extemporaneously the principles and high lights of this statement.

We would like to emphasize that, while taking part in the attempt to arrive at a solution for post-war problems, we are, of course, not letting up in our production efforts. However, we are strongly conscious of the fact that at the close of the last war, we were quite as unprepared for the armistice as we were unprepared for the war in the beginning, and we feel a public responsibility, as well as a responsibility to our employees, to aid this committee in its studies in any way we can.

With this in mind, on April 26 of this year we held a meeting in Los Angeles of the new board of governors of the Aeronautical Chamber of Commerce. We took advantage of the meeting there of the War Production councils whose task is predominantly that of advancing production. We took time out to reorganize the chamber and to make certain recommendations.

For your information, I am chairman of the board of governors of the chamber; Donald Douglas, president of the Douglas Aircraft Co., is vice chairman; James P. Murray of Boeing Aircraft Co. is president of the chamber; and L. D. Bell, of Bell Aircraft, and La-Motte Cohu, of Northrup Aircraft, are vice presidents. The board of governors consists of E. R. Breech, president, Bendix Aviation Corporation; Clayton J. Brukner, president, the Waco Aircraft Co.; Victor Emanuel, president, the Aviation Corporation; R. E. Gillmore, president, Sperry Gyroscope Co., Inc.; Robert E. Gross, president, Lockheed Aircraft Corporation; P. G. Johnson, president, Boeing Aircraft Co.; J. H. Kindelberger, president, North American Aviation, Inc.; Alfred Marchev, president, Republic Aviation Corporation; Glenn L. Martin, president, the Glenn L. Martin Co.; T. Claude Ryan, president, Ryan Aeronautical Co.; Guy W. Vaughan, president, Curtiss-Wright Corporation; J. Carlton Ward, Jr., president, Fairchild Engine & Airplane Corporation; and Harry Woodhead, president, Consolidated Vultee Aircraft Corporation.

This is a truly representative group. This board of governors unanimously passed a resolution, which reads as follows:

The board of governors of the Aeronautical Chamber of Commerce of America, in order to "provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," and in order to ensure that the airplane which America created shall be used to maintain peace and secure the blessings of peace to mankind, does unanimously recommend the early formulation of an American air power policy under the following guiding principles:

The United States should maintain an air power sufficient (in conjunction with other forces) not only to win this war but also to keep the peace:

I. By maintaining adequate air forces at such strength and in such state of readiness as to preclude a successful assault upon our country or its possessions.

II. By acquiring and maintaining air bases essential to our security and that of overseas trade.

III. By facilitating the orderly and economic expansion of domestic and international air transport and of private flying.

IV. By preserving a strong aircraft manufacturing industry.

We must, of course, train the youth of the country to understand the air as a vast new world for transportation, and to fly the airplanes which use that world.

In looking toward the future, we must assume that huge bombers will be able to attack an objective half way around the globe and return nonstop. We are not likely to be allowed the few hours of grace which follow a declaration of war. Air power will strike like lightning. Announcement of hostilities will come later. We must have air power to discourage and forestall such attacks.

Copies of this little pamphlet[1] have been circulated to the committee, I believe, and perhaps the committee would like to include it in the record.

Now, of course, these recommendations have some reference to foreign policy on a fairly large scale, and they apply particularly in the field of domestic policy, where our feeling is that the Government, labor and industry are mutually interdependent and must cooperate in a statesmanlike way.

From our own point of view, the immediate requirement is the early delineation of an air power policy. Unless we expect to ride off in all directions at once, we need to know where we are going.

We are strongly reminded of our experience at the close of the last war, and we all recall that the termination of contracts was quite ruthless. Surplus war products were dumped on the market. There was even operation of Government-owned plants and the aircraft industry was threatened with destruction prior to the time President Coolidge appointed the board under Dwight Morrow.

That board listened to some 99 witnesses and heard conflicting testimony and conflicting statements of fact, but came up with a clear statement of principles, namely, that a strong air force was vital to our defense, that the backbone of a strong air force was a strong private industry, and that technological development was the outstanding asset of that industry.

Of course, as we know, this was implemented by Congress in the Air Corps Act of 1926, and subsequent legislation that has brought us to our present state.

[1] Pamphlet Air Power listed in appendix III.

Of course, public opinion did not support the maintenance of large forces in that period, and we were in quite a serious situation but we were able to tide it over through foreign orders. Thanks to this policy, we arrived at this emergency with two assets: One, we had technological superiority, and two, we had the ability to expand rapidly to meet the emergency. Those are the fundamental requirements for national defense.

Now, as I have said, technology is the key. That is the industry's responsibility, and we believe that private competition is the key to technological advance.

I might say, as an engineer, that we are just now on the threshold of developments of great importance in this field. We now see that air power is decisive, and when I say air power I am thinking of it, as defined in this little booklet, as including the Air Forces, air transport, personal flying, the aircraft industry, air bases, and, finally air-mindedness.

In that connection we are reminded of the analogy with sea power, and in this little booklet we developed that analogy.

We all recall, of course, that in the period when the British sea power maintained the freedom of the seas, peace and prosperity reigned, and we had the Pax Brittanica. The corresponding effects of air power are only now being brought to light. If air power continues to be used properly in our behalf there can be no doubt of the ultimate results.

Senator MURRAY. What was the status of the airplane industry just prior to the outbreak of the war? What was your position in this country? Were you then equipped with laboratories and technological experts that were able to quickly develop planes for war purposes?

Mr. WILSON. Well, thanks to the policy outlined by the Morrow Board and implemented by the Air Corps Act, and thanks again to competition, the industry had maintained through this period, under great stress and difficulty, design staffs and technical equipment. As a result, we entered the war—striving for production—with technological superiority.

Senator MURRAY. Right from the start?

Mr. WILSON. Yes. We had that and the ability to expand rapidly and those two things, we believe, have been responsible for our present situation.

Senator MURRAY. And it was because of that situation that we were able so quickly to become powerful in the air?

Mr. WILSON. Right.

Senator MURRAY. I recall that, when we had the hearings here on the lease-lend bill, Mr. Lindbergh took the position that it would be impossible for this country, notwithstanding the great productive power, to build up the air forces of the Allies to enable them to compete with the Germans, that it was a futile proposition, and that the best thing to do would be to discontinue any further assistance to the British and the other countries and permit them to negotiate the best peace they could.

That seemed rather strange to me, in view of what you say now, that we were equipped to quickly get into production of the very best kind of planes for war purposes.

Mr. WILSON. Well, I think our whole history is the record of the accomplishment of the impossible, and we ourselves often consider a thing impossible that we turn around and do the next day. It is, of course, a matter of opinion.

Senator MURRAY. It was our production in this country that really put the United Nations in a position to eventually win the war.

Mr. WILSON. It is just my opinion that save for the production orders of the French and British Governments in this country, that we would not have been in that advantageous position at the time the emergency occurred.

Senator MURRAY. They commenced immediately as the threat of war began to develop?

Mr. WILSON. That is right. That emphasized the correlation of continuing production, continuing procurement and development. They go hand in hand. We need continuing production orders in order to continue development.

It is then our belief that we, as the dominant air power, must maintain this situation of ours. The question is often raised as to how we can afford to do that. We believe that we have been somewhat oversold in this country on the idea that the maintenance of the Army or Navy Air Force for security purposes is a burden on the public. We do not believe that. We believe that continuation of the principles that have prevailed in the aircraft industry, namely, that the needs of the armed services are met through procurement and competitive private industry, will bring about technological development. That technological development is translated into air commerce, as it has been through air transport, and we then have a dynamic process of an expanding economy that will promote new opportunities and new employment. I think perhaps the Vice President's speech in Seattle yesterday is somewhat along that line.

The men on the west coast look to the Pacific as the new field, and of course those vast distances are wide open to air transport. As concrete examples of experience along that line, we have the marvelous development of the American air mail. It is hard to get concrete figures, but we are told that this year the sale of air-mail stamps will return to the United States several times the cost of the services rendered by the transport lines. In other words, the air mail is not a subsidy; it is a profitable investment, and if the profit of the Government is measured by the standard that we are accustomed to, the Government is a profiteer with respect to air mail.

We are reminded, too, of the experience in the Civil War, and when we go back to read about that, we realize how Grant and Sherman and the Union leaders realized the vital need of employment for returning soldiers.

I come from out in the far West, and I am conscious of the pioneering element, and recall that the development of the transcontinental railways was really forced by the United States Government. It is interesting to see the degree to which they went into that. Of course, the returns were enormous, judged on the general basis of the opening and development of the West.

I was told by the president of the New Haven Railway the other day that the land-grant rebates this year would amount to some $350,000,000, and that has been going on for years. Look at that as an investment on the part of the United States. The transcontinental investment has turned out to be profitable to the Government.

We feel that if these things are handled through competitive, private

industry, they are investments rather than a burden on the people, and we need to reorient our principles. Meanwhile, we in the aircraft industry are struggling to survive. That has been our objective since the beginning.

Of course, three hurdles confront us, namely, the termination of war contracts disposal of surplus goods, and surplus plants. We are deeply gratified at the work that has been done by Congress in the Termination Act. We feel that there is need for some similar work in connection with the delineation of principles as to the disposal of surplus goods and surplus plants.

The Government is our present customer and no supplier can compete with his customer. That is obvious. The objective we have is to contract to whatever size the requirements justify, but still to retain the technological superiority and still be able to expand again as we did once before. That is a very complex problem. We have not got all the answers for it.

Fundamentally, we seek no subsidy but only the opportunity to compete on constructive ground. Again, we are impressed with the similarity of the situation here and that which existed at the time of the Morrow Board. There was great confusion and uncertainty. Committees met and discussed this whole problem, but nothing happened until this statesmanlike group resolved the principles and made some recommendations which Congress implemented into a policy. Meanwhile, our task is to assist Congress in the discharge of its responsibility, and the final recommendation for my part of the testimony in this report is the crux of my statement, which reads:

The maintenance of air power is the master need as we move the aircraft industry from war to peace. Technological development through competitive industry is the key to air power. In the light of proven and decisive character of air power, we recommend new legislation restating as national policy the advance of technological development of aviation through competitive private industry. There are many angles to the task of bringing that legislation up to date, and I would like to close by offering to the committee the services of the Aeronautical Chamber of Commerce, or its executive committee, or its specialists, in any effort you might like to make along that line.

Senator MURRAY. Your view is that it is important that the industry shall remain as a competitive industry, and that any attempt to have a monopoly should be very carefully examined into by Congress and prevented?

Mr. WILSON. We feel specifically that there can be no controversy with respect to the technological development. That is a matter of internal policy and a matter of our own security. The Air Corps Act of 1926 and other legislation provided certain facilities for that purpose, but predicated it on a viewpoint with respect to the air that existed back there in 1925. We have gone a long way since then and we believe that this should be brought up to date, that the national policy should be outlined clearly in the legislation, and a process developed by which we can advance our technology competitively.

We do not know of any other way to advance technology except through the struggle to survive, which is the very essence of competitive private industry.

Senator MURRAY. You look forward to a broad expansion of the civilian airplane industry?

Mr. WILSON. Yes, sir. We think the key to this cut-back is a transition from a predominant air force to a predominant air commerce.

Senator MURRAY. Have you presented your full statement?

Mr. WILSON. Yes, sir.

Senator MURRAY. Thank you, very much. Do any of your associates desire to make a statement?

Mr. WILSON. Mr. Woodhead is ready to go ahead with his portion of it.

STATEMENT OF HARRY WOODHEAD, MEMBER OF THE BOARD OF GOVERNORS, AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, AND PRESIDENT OF CONSOLIDATED VULTEE AIRCRAFT CORPORATION

Mr. WOODHEAD. The George-Murray bill, S. 1730, provides a national program for demobilization and post-war adjustment. Of the four titles of the bill, the ones on (1) industrial demobilization and reconversion, and (2) manpower demobilization and reemployment bear on the aircraft industry.

The committee requested the aircraft industry to present before the War Contracts Subcommittee its viewpoints on eight questions concerned with the industrial and human aspects of demobilization.

In our answers to the committee's questions, we are being as specific as possible. Some of the problems reflected in the committee's questions still are in relatively early stages of study, both by Government and industry. In many cases, industry cannot make plans with any degree of finality until it knows what are to be the national policies and how the agencies of Government shall administer those policies. As the work of your committee proceeds, and as some of the uncertainties are resolved, you may wish to ask the aircraft manufacturers to appear again with their facts, conclusions, and recommendations.

A close interrelationship exists in many of the committee's questions, and we have, for clarity, arranged our answers in four groups: Group 1, manpower demobilization; group 2, termination methods and problems; group 3, surplus disposal and reconversion; group 4, post-war national defense program and the aircraft industry.

The problem of employment will be foremost in the minds of all Americans when this war ends. We can store excess machinery, but we cannot store surplus human beings. Recognizing the importance of a successful readjustment of millions of men and women to the post-war economy, we first will give our answers to the committee's questions concerning demobilization of manpower and treat the other groups later.

MANPOWER DEMOBILIZATION

The committee's question is: What provision should be made for employees who are released from wartime aircraft production (1) through unemployment compensation, (2) through retraining, and (3) through transportation to other localities?

In addition, this question cuts across all other topics.

UNEMPLOYMENT INSURANCE

The aircraft industry wants full employment for everybody, but it realizes there will be a difficult transition period before this aim can be achieved. Demobilization will be a national problem.

The industry is in thorough agreement with the principle of adequate unemployment insurance as an essential to orderly manpower demobilization and reemployment.

The industry realizes that expansion of unemployment benefits will ultimately mean an additional burden to all industry. As part of the national economy, the aircraft industry will be glad to share this burden with all other industries.

Payments should be far enough below the average wage scale to provide a safeguard against voluntary unemployment at Government expense.

The sum of industry recommendations made below in answer to Senator Murray's other questions will permit a more orderly return to peacetime production and, therefore, a considerable lessening of the dangers of sudden mass unemployment.

RETRAINING

Many of the workers presently employed by the aircraft industry have had no previous industrial experience. They have been trained for their specific jobs by the aircraft industry.

Retraining will be necessary for many of those who go into other industries. We believe that the new employer or suitable educational agencies should assume the responsibility of training these workers for the new jobs.

This would prevent the disappointments and waste of money resulting from training people for jobs which do not exist.

TRANSPORTATION

In many aircraft plants it has been necessary to bring workers from great distances. We endorse that part of the George-Murray bill providing transportation of these workers to other jobs or back to their bona fide residences at Government expense.

OTHER METHODS

(*a*) War contractors should supply prompt and detailed information on reductions in employment to Government employment offices and other interested agencies.

(*b*) Such agencies should provide full information concerning new employment opportunities and conditions to released employees.

(*c*) War contractors and Government employment offices should collaborate to assist employees in finding new employment opportunities quickly.

INDUSTRY'S ABILITY TO ASSUME FINANCIAL RESPONSIBILITY IN MANPOWER DEMOBILIZATION

The aircraft industry expanded its production of war weapons at the Government's request. For a large amount of this production there will be no use and no demand after the war is over. The industry thus represents a large share of the general problem of the reallocation of labor that will be necessary before maximum employment can be achieved for the country as a whole.

This demobilization problem is not that of the aircraft industry alone but of the national economy, as a whole. The industry can contribute to the solution of the problem by wholehearted cooperation in the activities previously described.

The financial position of the aircraft industry aggravates its problems in converting from wartime to peacetime operations. Only a few years ago, the industry ranked a lowly forty-fourth in importance to our national economy. It was a youthful industry, striving to advance. It was mushroomed out of all proportion to its former status. Aircraft building was small business; our outlook is for a return to the status of relatively small business.

This tremendous expansion has taken place under the demands of war. During normal peacetime growth, aircraft makers gradually would have acquired the financial resources necessary to sustain increased volume. Working capital has increased but, under wartime controls, has not by any means kept pace with responsibilities and obligations imposed by a greatly expanded production.

The rate of net profits on sales volumes in aircraft is the lowest of any industry engaged in war production. In 1943 the percentage of net income to sales for 24 major aircraft and parts manufacturers was 1.8, according to the National City Bank of New York.

Following is a comparison of war industry profits. These are net profits on sales for 1943.

	Percent
Non-ferrous metals	9.0
Petroleum products	6.8
Automobile (including aircraft sales)	3.2
Railway equipment	3.1
Iron and steel industry	2.8
Aircraft and parts	1.8

The profits reported by the aircraft manufacturers during the war period are to a large extent bookkeeping figures. The ultimate profits, if any, of the industry during the war can only be determined when all final settlements have been made. A very substantial part of the bookkeeping profits are still in the business, largely in the form of inventories and other properties which will be subject to drastic shrinkage in values. Only a small part has been paid out in dividends. But in spite of this conservative practice, working capital is meager in relation to the obligations of the business. It is safe to say that the entire net current assets of the industry would not equal 1 month's operating costs at present production rates.

The industry, while eager to do its full share during the conversion period, may have difficulty in meeting its present obligations, to say nothing of assuming additional burdens.

TERMINATION METHODS AND PROBLEMS

The committee's questions were as follows:

1. To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department and that of the War Department? How can this best be achieved?

2. Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

3. What should be the policy governing advance notice of cut-backs for, first, the company? Second, the subcontractors? Third, the employees? And, fourth, other Government agencies?

5. How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of war production?

CONTRACT TERMINATION

The principles set forth in the Murray Contract Termination Act are sound and workable, if properly administered.

The industry believes that, once the need for given types of aircraft and equipment ends, contracts should be terminated promptly. This is sound policy from the taxpayer's standpoint and it is sound policy from the industry's point of view. We don't want to produce planes to fill warehouses.

Termination must be orderly and planned to assure the uninterrupted continuation of remaining Government orders.

An orderly and planned termination program will accomplish:

(*a*) Continuation of planes of new design, either in production or projected, if in the opinion of the Army or Navy they are needed for the maintenance of air power.

(*b*) Continuation of development of experimental types which will contribute to advances in the sciences.

(*c*) Complete termination of types of which there are excess quantities and of types which are no longer of tactical value.

A planned and orderly termination plan must—

(*a*) Prevent precipitous and continued wholesale unemployment.

(*b*) Provide employment in nonwar industries in proportion to decreased employment in war industries.

These are the industry's replies to question 1 of the Murray committee:

It is necessary to continue and extend coordination between Army and Navy cut-back programs to the fullest extent. If a program is to be decreased by one branch of the service, it might prove that the other would have business to fill up the manufacturing facilities so released without serious interruption of production.

The Army and Navy not only should be in accord on their programs but should continue close contact with other Government agencies and the aircraft manufacturers. Thus, when cut-backs appear probable, these agencies and the manufacturers will have the maximum possible time to adjust their schedules.

Extension of the policy of collaboration between the services and the industry would have many advantages. It would cut the cost to the Government of excess inventories of parts, work in process and raw materials, by permitting the manufacturer to schedule his work and his purchases more closely with the revised program. Both the employer and the employee would benefit by more realistic planning, closer scheduling of labor supply and material requirements, and advantages in subcontracting.

What the industry needs now is the same unity of planning and administration applied to demobilization as the Aircraft Production Board brought to production scheduling.

FACTORS TO BE CONSIDERED IN CUT-BACKS

Many interrelated, and in some csaes, conflicting facts need to be considered before a just decision can be made on cut-backs. The weight of the different criteria influencing such a decision will vary greatly with individual cases. It is, therefore, impossible to make a conclusive statement. The overriding consideration should be the safeguarding of the creative design staffs of the pioneer aircraft companies. We can further state several major factors which should be taken into consideration.

1. The aircraft industry has a relatively small post-war market awaiting it. Aircraft cut-backs should, therefore, be effective first for those temporary aircraft manufacturers such as the automobile industry, which have substantial post-war markets waiting for them.

2. Problems of the creator of the original design should be given consideration in the decision as to which manufacturer is going to be cut back first—the licensee or the basic manufacturer.

3. Present production status of manufacturers concerned.

4. Local manpower situation.

5. Over-all costs of the products to the Government.

6. Manpower utilization.

7. Meeting of production schedules.

8. Contributions to progress of aviation.

9. Needs of the aircraft industry to prepare for post-war development and production.

10. Orders for aircraft that are becoming obsolete should be cut back before orders for airaraft of more advanced design and of greater tactical usefulness.

ADVANCE NOTICE OF CUT-BACKS DURING THE WAR

The primary consideration for all cut-backs during the war has been and should be the earliest possible determination as to how many airplanes of each model will be required by the Army and Navy.

(*a*) Advance notice to the company: The aircraft manufacturing cycle is from 60 to 120 days. Unless the Government gives cut-back notice to the manufacturers at least that far in advance, it will receive only semifinished parts of indeterminate value and with attendant contract settlement problems. Such 60 to 120 day advance notice will give the Government complete aircraft instead of partially processed materials and miscellaneous parts which may or may not be usable. In the long run this should prove sounder economy for the Government.

Senator MURRAY. I would like to ask you if that would be a very difficult thing for the Army or the Navy to do? Shouldn't they be in a position to determine some considerable time in advance the

situation and be able to determine that a cut-back is going to be necessary?

Mr. WOODHEAD. Yes, sir; we believe they should, although tactical changes come up rather quickly.

In other words, they may experience a certain condition over in Europe and immediately require a different type of plane or a complete rebuilding of an existing plane.

Senator MURRAY. That is right. That has occurred many times as a result of experience in actual combat.

Mr. WOODHEAD. Sometimes it may be that somebody hesitates or procrastinates a little bit, and does not make up his mind quite quick enough.

Senator MURRAY. But in the present state of the war, it would seem to me that the planes that are now in use are the result of considerable study and technological advance, so that they should be able to determine when they have a sufficient supply of those planes, and when it may be necessary to cut them back.

Mr. WOODHEAD. Yes, sir.

Senator MURRAY. All right; proceed.

Mr. WOODHEAD. Adequate notice will help both Government and industry in the solution of two other difficult problems. The first is the loss of workers hard to replace. The second is the evaluation of work in process. These are serious handicaps to speedy termination of contracts.

(*b*) Advance notice to subcontractors and suppliers: When prime contractors are given formal notice of cut-backs, prime contractors are now required to advise subcontractors promptly, with the instruction to them that this notice be passed on through the various tiers of subcontracting. As a matter of principle as well as good business, all suppliers affected by a cut-back program should be advised as far ahead of time as possible.

(*c*) Advance notice to employees: It is the policy of the aircraft industry to give advance notice to employees of any cut-back which may cause a reduction in manpower. Employees should be advised by the manufacturer as soon as revised personnel requirements can be computed. The speed with which the Government notifies the employer of cut-backs is of vital importance. If advance notice is inadequate, many workers return immediately to their civilian pursuits and are permanently lost to essential industry. This loss goes up to 80 percent of all women workers. If adequate notice is given, half of these workers can be saved for essential industry.

It is important that no statement whatever be released before it is definite and can be stated clearly. Uncertainties are sure to destroy morale and cause disruption of the production process.

(*d*) Advance notice to other Government agencies: All interested agencies, such as the War Production Board and War Manpower Commission, should be informed promptly of projected cut-back programs. It is important, however, that no agencies take any action or release any information affecting the company or the community in which it operates until the agency is fully informed as to the long-range plans of the company concerned.

INTEGRATION AND SYNCHRONIZATION OF CUT-BACKS WITH OTHER WAR PRODUCTION

Cut-backs should not interfere with future production of types of aircraft still in demand by the military. An example will illustrate the complexity of the problem. There are at present three manufacturers producing a certain type of bomber. One of tnese three manufacturers has a new model coming in to replace the one presently produced. If this manufacturer's production were to be cut, labor would leave the area of production and would not be available for the new model except at great expense of money, time and efficiency. In this specific case, the local manpower situation should have a decisive weight. The involved nature of the problem makes it essential to have the industry's viewpoint fully represented at the earliest time at which cut-backs are being considered.

The average aircraft plant is not readily convertible for nonaircraft types of war production. It is also highly unlikely that any emergency will arise during which the facilities and skills of the basic aircraft industry would be more useful in producing anything but airplanes. Should this need arise, however, the aircraft industry stands ready to make its resources available for war production of any type.

SURPLUS DISPOSAL AND RECONVERSION

The committee's questions:

5. How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of civilian aircraft production?

6. What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production?

7. What principles should be followed in handling Government-owned aircraft factories, aircraft and airfields?

Civilian aircraft manufacture should be started at the earliest possible moment which will not interfere with military needs.

Before discussing the committee's questions referring to surplus disposal and reconversion, we wish to point to the major handicap under which the industry is laboring in all its planning activities; namely, the lack of any information on the size of the post-war air force of the United States, and the Nation's technological program for aviation development. While determination of the former may necessitate awaiting world developments, the latter certainly can be determined now. Without such information, all planning—both for military and for civil aviation—lacks a sound basis. Preparation and release of such information is an essential prerequisite to industry planning.

1. Handling Government-owned aircraft factories, aircraft, and airfields: I will take aircraft factories first.

Each company operating a Government factory should be given an opportunity to buy or lease the factory at reasonable terms for use. If, after a reasonable period of time, the manufacturer has not made arrangements for using the Government factory, the Government should then be free to dispose of it to others. If aircraft factories cannot be used by either the original occupant or others, the factories,

if suitable, should be kept under private management as stand-by plants for defense purposes. Aircraft factories should be available for use by their present occupants as warehouses for surplus materials acquired by the Government as a result of contract terminations. Under no circumstances should the plants be operated by the Government.

AIRCRAFT

After the war, the Government will own many different types of aircraft for which it will have no use. These aircraft will be in all parts of the world. They will be in different conditions varying from new to badly worn. The policies of disposal for these aircraft are of major importance to the future of the industry.

The industry commends the Harvard Business School on its excellent report entitled "Disposal of Surplus Aircraft and Major Components Thereof." It heartily endorses many of the principles which the report sets forth.

It is the theme of the report that surplus aircraft constitutes a major asset that can be used to promote production and employment in the post-war aircraft industry by broadening the demand and enlarging the replacement market and creating overhaul and sales work.

The industry appreciates the opportunity for employment created by the need for conversion of military aircraft as well as overhauling and repair of these aircraft to make them of commercial value. However, the employment furnished by this conversion process will maintain only a comparatively small number of people in the factories of the design originators. This business will certainly not maintain sufficient numbers of engineers, supervisory and management personnel and workers to assure the survival of the industry, or the continuation of adequate development and research.

Policies regarding disposal should be determined by one central Government disposal agency to be created by legislative action. This would avoid duplication of effort, confusion, and possible interagency competition. Several agencies and subagencies may prove necessary and desirable, under this one policy-making central authority, to carry out the mechanical functions involved in the disposition of surplus property.

PLANES USEFUL ONLY FOR MILITARY PURPOSES

Such aircraft fall under two categories:

A. Combat aircraft which, because of military action or the vagaries of use and maintenance by foreign nations, are unsuitable for further use and should be scrapped.

B. Combat aircraft suitable for further use which can be sold, leased, or bartered to friendly foreign nations.

In the disposal of planes useful only for military purposes, the Air Forces and the State Department should have a veto power over any action deemed adverse to military security. Disposal of this type of plane should be subject to the approval of a board including representatives of the War, Navy, and State Departments.

Overhaul and maintenance prior to delivery should be under direct supervision of a qualified aircraft manufacturer.

This is most important in order to insure buyers of the high standard of operation and efficiency of aircraft of American manufacture—and to maintain the outstanding reputation of American airplanes.

PLANES PRIMARILY USEFUL FOR SCHEDULED TRANSPORT OPERATIONS

No price favors should be shown in the disposal of surplus transport planes. The sale of planes should not be made the instrument of a subsidy.

Wherever practicable, sales should be made through the manufacturers who originated the design.

Overhaul and reconversion should be made only by qualified manufacturers.

Disposal practice should be governed by the basic principle that the national interest requires that the United States maintain the strongest possible manufacturing and transport industries.

This policy requires the judicious release of surplus aircraft and parts.

Great care must be exercised to assure continuance of design, development, and market. Manufacturers are clearly dependent on a sound transport industry.

Although it may not be practical to establish, at this time, and without consideration of many factors, whether disposal should be by sale or lease, care must be taken to assure that control is provided to eliminate the possibility of pressure developing in later years to continue operation of wartime planes. With this consideration, leasing seems to provide the best control in most cases if limited to 2 or 3 years. Consideration should be given to the effect that the planes, leased or sold, will have on the sound progressive development of two vital industries—air transport and manufacturing.

SMALLER PLANES WITH NONMILITARY USES

The industry approves of the disposal of surplus military aircraft which are closely akin to standard civil types. These include the L2, 3, 4, and 5, which are small liaison planes. Care should be taken that there is no wholesale disposal to brokers or speculators who may hold these planes over the market for several years.

With reference to the disposal of primary, basic, and advanced trainers in civil markets, we urge consideration of these problems:

1. Such aircraft have been built to military specifications for military training purposes.
2. They are designed for military use only and they are not suited for use by civilian purchasers for civilian flight training.

The industry does not agree with the Harvard Business School report that such trainers should be sold at a nominal price.

Surplus military aircraft should be given to schools and colleges for military training only. A survey of leading universities and colleges reveals that a great number wish to continue courses in ground-school instruction and flight training.

We cannot expect to have adequate Air Forces, with trained pilots, navigators, and mechanics, unless we offer opportunity to every able-bodied college student to get such training. The civilian pilot training program, later the War Training Service, made a remarkable

contribution to the Air Forces in the emergency. We strongly recommend the continuation of such a program in colleges and universities. Reasonable Federal subsidies will be needed. We must emphasize, however, that such a program should be in the nature of an R. O. T. C. program, the course of study and training meeting military requirements. We differentiate in the requirements for this type of training from that of the millions of potential applicants for a personal flying license. Such licensing should not be influenced by the restrictions and high requirements of the suggested R. O. T. C. programs.

To encourage such R. O. T. C. programs, as well as training aeronautical engineers, mechanics, and other technicians, the surplus military aircraft, aircraft engines, and components, should be given to them.

MAJOR COMPONENTS

The Harvard report makes the following statements:

> Engines, propellers, and instruments which are not handled carefully are liable to be dangerous on aircraft * * *. The larger, more complex, and expensive instruments, such as gyro flux-gate compasses, should be inspected, overhauled, and sold through the original-design manufacturer at prices specified by the Government. The manufacturer is best suited to insure that proper safety standards are maintained.

In making recommendations with respect to surplus combat aircraft located abroad, the following statement is made:

> United States combat types which have been subjected to the vagaries of use and maintenance by foreign nations should be unhesitantly scrapped for their salvage value in components.

To maintain the reputation of our aircraft, engines and components, we recommend that when surplus military aircraft located abroad are scrapped, the engines and components should likewise be scrapped. It would be an economic waste to try to salvage most of these complicated aeronautical components by returning them to this country for overhaul.

Such components as gyro flux-gate compasses and automatic pilots represent many different units which are installed as systems throughout the plane. To disassemble them after rough military usage they have had under untrained hands in foreign fields, would be no more practicable than returning the completed airplane for overhaul.

AIRFIELDS

All Government-owned airfields not required for military purposes should be made available promptly for commercial or personal flying use at nominal cost to the States, counties, or cities, the upkeep and operating costs of which are to be assumed by the State, county, or city, with assistance from the Government where necessary.

DEVELOPMENT OF CIVILIAN AIRCRAFT PRODUCTION

The aircraft industry, to meet the demands of an air-minded public, should be planning on the type of products which it hopes to manufacture at the end of the war, and should be taking all steps possible for the development, tooling, production, and marketing of these products. Experience gained in aerodynamically clean airplanes for

commercial use has made and can continue to make great contributions to the design of efficient military aircraft. In order that the Nation may have a strong and virile post-war aircraft industry, the Government should now permit and encourage companies to use a part of their engineering, tooling, and manufacturing facilities for the development of civilian aircraft. The Government should make available to each cost-plus-fixed-fee, as well as fixed-price manufacturer at a nominal cost the design and engineering data, tooling and other facilities developed for his own military aircraft which might be adaptable, at least in part, in his civilian aircraft.

As long as there is no interference with the war effort, it is undoubtedly to the benefit of the country as a whole to have all opportunities for post-war employment prepared for in advance, so that production and employment may start promptly when the war ends. Domestic and foreign sales markets should then be opened to free, private competition, subject, of course, to national security requirements.

TRANSPORT AIR LINES

Other steps which the Government should take in the very immediate future are the establishment of policies covering the following items and the informing of the aircraft industry of its policies in regard to transport airlines on the following subjects:

1. Development of a planned and integrated feeder-line system.
2. Every effort should be made to increase the use of air mail as soon as equipment is available and whenever such transportation shall speed delivery.
3. Immediate release of more airplanes to the air lines.
4. Further development of main lines—both foreign and domestic.

That is the end of my part of the statement, sir. I will be glad to answer any questions.

Senator MURRAY. I have a few questions. The supposed revision of S. 1730 contains the following statement of policy on the resumption of civilian production:

> The Government agencies exercising control over manpower, production, or materials shall permit the expansion, resumption, or initiation of production for nonwar use whenever such production does not require materials, components, facilities, or labor needed for war purposes, or will not otherwise adversely affect or interfere with the production for war purposes. Such production for nonwar use shall be permitted regardless of whether one or more competitors normally engaged in the same type of production or still engaged in the performance under any contract which is needed for the prosecution of the war, and shall not be made dependent upon the existence of a concern or the functioning of a concern in a given field of activity at a given time.

Do you agree with such a policy, or do you think that civilian production should be postponed until the competitors can have an even start?

Mr. WOODHEAD. My answer to that is that we definitely are not in agreement with holding up production where a concern is in a position to go ahead without interfering with the war effort.

But we do feel that this would be the only fair and proper thing to do: Let me make it more of a personal situation. Suppose my company were in production 100 percent on an airplane absolutely vital to the war effort, and that therefore we were not able to do any

post-war work whatever. Supposing a competitor had been manufacturing a plane which was no longer required for tactical use, and was in a position to start on his post-war activity. We would be perfectly willing to subscribe to that if we were permitted to increase our facilities or add to our engineering and development personnel to permit us also to start our post-war work at the same time we were continuing 100 percent of our productive efforts on the war requirements. That would give us at least an even start as far as our engineering and development was concerned.

Senator MURRAY. Would such a policy require a considerable number of your employees to be engaged in that work?

Mr. WOODHEAD. No, it would not. It might be that we would have to get permission to hire some additional engineers. We would not take any of them away from the war effort. What we would want to do would be to hire additional engineers whom we could put on post-war activity with the definite proviso that under no consideration would anything that we do interfere with the current war effort.

We would be in favor of going ahead with post-war efforts on the part of our competitors.

Senator MURRAY. What you ask, then, would be that, while you are still engaged in war production, you would want to have the right to prepare plans for reconversion to civilian production so that you might not be delayed in promptly going into civilian production?

Mr. WOODHEAD. In other words, we would not want to be penalized due to the fact that we had been fortunate in producing a plane so vital to the war effort.

Senator MURRAY. And you say that such a policy as that would not in any manner interfere with the war production?

Mr. WOODHEAD. That is right.

Senator MURRAY. And that would be carried on at your own expense?

Mr. WOODHEAD. That is right; that would be our regular post-war development.

Senator MURRAY. Well, isn't that the situation already in many of the big industries of the country? Aren't they engaged at the present time in laying plans and studying?

Mr. WOODHEAD. I am afraid that, sir, is largely mental. For instance, if we happen to be building a plane which is required for the war effort for tactical purposes, immediate tactical purposes, we have to account for what all of our engineers and all of our people are doing. The local Air Corps representative keeps a very close tab on what our engineers are doing, and we are not permitted to take the engineers from the war effort and put them over on post-war.

Senator MURRAY. The technological experience that you have gained in the war production will make it possible for you to have considerable advantage in the production of civilian requirements as soon as you are able to?

Mr. WOODHEAD. To an appreciable extent, sir. Of course, you also realize that the production of military aircraft will sometimes be a disadvantage. They are fighting machines, and aerodynamically they might be not as perfect as airplanes designed for transport rather than military purposes. In other words, we would sacrifice certain aerodynamics for military purposes.

Senator MURRAY. Your plants are located at San Diego, are they not?

Mr. WOODHEAD. They are located at 13 different points throughout the United States.

Senator MURRAY. The large plant?

Mr. WOODHEAD. The two largest plants are in San Diego and Fort Worth.

Senator MURRAY. If your war contracts should be suddenly terminated, what effect would that have on San Diego?

Mr. WOODHEAD. If they were all terminated immediately that would have a disastrous effect on San Diego, because I believe, either through our own plant or through our subcontractors, we employ probably 50 percent of the employees in San Diego.

Senator MURRAY. Have the people of San Diego given any thought to that situation?

Mr. WOODHEAD. They have given a great deal of thought to it. As a matter of fact, our local chamber of commerce, with the cooperation of the local aircraft companies, has sent out a questionnaire to all aircraft workers asking a number of very pertinent questions. First of all, they ask what has been their experience, what are their qualifications, and where did they come from, what are they going to do at the termination of hostilities, do they intend to remain in San Diego, or is it their idea to return to their own home.

We will have the results of that survey shortly, and I will be glad to send them to you, sir.

Senator MURRAY. Your corporation is planning also the continued operation of those plants at a very greatly curtailed degree?

Mr. WOODHEAD. That is right.

Senator MURRAY. The great majority of the workers there will be required to leave San Diego?

Mr. WOODHEAD. Of course, it is rather difficult to arrive at a definite figure. We have certain opinions as to what that may be—20 percent or 30 percent. Of course, probably 80 percent of our employees are from outside of San Diego.

Senator MURRAY. So at any rate, your organization has cooperated with the local community in studying that situation?

Mr. WOODHEAD. Very definitely. I think that is true of pretty nearly the whole industry.

Senator MURRAY. In your statement you say that you are in favor of unemployment compensation. What is your position as to whether or not the Government should allow manufacturers to charge dismissal wage as a cost of production?

Mr. WOODHEAD. Well, we are heartily in favor of all workers being adequately taken care of when their jobs have ended and during the period when they are seeking new employment.

A great many of the aircraft workers have taken war jobs for patriotic motives alone, and will make no attempt to find work at the end of the war. In other words, there are a great number of employees who are normally unemployable, but who, on account of the shortage of manpower, have come into the industry during this period and would immediately leave thereafter.

We recommend a national policy which would permit the orderly termination and encouragement of civilian production, thus creating

new job opportunities as the war jobs decline. That, we believe, is very pertinent. We believe that all workers should be given unemployment compensation as soon as their jobs end, and that the procedure should be set up so there will be no difficulty for any worker in getting his unemployment payments promptly and conveniently.

In addition, the George-Murray bill provides for transportation to be paid to the worker to his former place of residence or to his new employment. It is our opinion that the provisions of the George-Murray bill covering unemployment benefits and transportation make severance pay unnecessary.

Senator MURRAY. In your statement, I understood you to make the statement that in the curtailment or cancelation of contracts for aircraft production, that the curtailment should first be made with reference to automobile manufacturing concerns that have not been previously in aircraft manufacturing.

Mr. WOODHEAD. That is true, sir.

Senator MURRAY. What is the basis of that statement? You feel, I suppose, that they do not intend to continue in aircraft manufacture, and therefore when it becomes necessary to curtail or cut-back contracts, that the cut-back should be made on the concerns that are not strictly aircraft manufacturers.

Mr. WOODHEAD. That is right, sir.

In the first place, we feel that that will not be a very hard proposition on them. They came into this industry temporarily and have done a splendid job. There is no question about that. They have got a tremendous pent-up demand for their product, which has been completely out of the market.

We believe, not only from the standpoint of the automobile manufacturers, but from the country at large, that they should be permitted, as soon as they can without interfering with the war effort to go back to the manufacture of automobiles.

By doing that, by taking them out of the picture first, it will also soften the blow to quite an appreciable extent for the aircraft manufacturers who only have aircraft to build after this period is over.

Senator MURRAY. Do you think it would be helpful if the Government started at once to make a full examination of the possibility of subdividing some of the large aircraft plants for lease or sale so that they may be occupied by other smaller industries?

Mr. WOODHEAD. Yes; subject, of course, to the condition that we advocate in our set-up, that the aircraft manufacturers themselves should be given the first choice.

Senator MURRAY. You should be given an opportunity to lease the plant, and if you could operate them successfully you should be given a prior right to use the plant?

Mr. WOODHEAD. Yes; we also feel, however, that at least a goodly number of these plants should definitely be kept as stand-by plants and maintained, so that should the demand arise, they can be immediately thrown over into aircraft production again.

Senator MURRAY. To the ordinary observer, looking at those plants, it would seem impossible for them to be used by any other industry. Certainly the aircraft industry would not be able to use them completely.

Mr. WOODHEAD. You are right.

Senator MURRAY. So that if, even under your plan, you were to take lease of them, you would be in a position to sublease, I suppose, to smaller concerns that wanted to utilize parts of the plant?

Mr. WOODHEAD. Yes, sir, should the demand arise. Of course, the plants have been built specifically for aircraft production. Now, while in the case of smaller aircraft it may not be so bad, in the case of the extremely large aircraft, the type of plant would be very uneconomical to operate for most industries. That is on account of the spans and the size of the plant.

Senator MURRAY. And there are no small industries, at least not very many small industries, in that immediate area that would need that space?

Mr. WOODHEAD. That is right. They would go broke trying to manufacture in there.

Senator MURRAY. Of course, in some sections of the country, I assume that if there were certain industries that would be able to take space in some of those, that might be done.

Mr. WOODHEAD. That is right. It is one of those things, sir, on which a pat answer cannot be given. The localities would have to decide the feasibility of doing just exactly that.

Senator MURRAY. And the surrounding conditions?

Mr. WOODHEAD. That is right.

Senator MURRAY. The Harvard University study of surplus aircraft, to which you have referred, makes a statement of policy, which reads:

> The sooner surplus planes and components are made available to domestic and foreign markets during the latter days and after the war, the more completely will the desired effect be achieved. The immediate use commercially of surplus equipment, before new and improved models have become generally available, will tend to act as an incentive to technical development, and not a drag in broadening the demand for improved equipment that will better enable the United States to meet foreign competition for export markets, and the sooner sales are made, the greater the dollar return to the Government is likely to be.

Do you agree with that approach?

Mr. WOODHEAD. Yes, sir. We endorse that in our statement. We believe that the pursuance of that policy will facilitate and encourage flying.

Senator MURRAY. Well, I thank you very much for your very exhaustive statement. I think you have covered the situation completely.

Does Mr. Geuting wish to make a statement?

Mr. GEUTING. Yes.

STATEMENT OF JOSEPH T. GEUTING, CHAIRMAN OF THE PERSONAL AIRCRAFT COUNCIL, AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, AND VICE PRESIDENT OF GENERAL AIRCRAFT CORPORATION

Mr. GEUTING. Senator Murray and members of the War Contracts Subcommittee of the Military Affairs Committee of the Senate of the United States, the purpose of my testimony today is to present the role of the personal aircraft in post-war readjustment.

In the interest of time, I am going to briefly highlight the portions of my testimony which are already a part of the record.

Question 6 of the group of questions presented to the Aeronautical Chamber of Commerce of America, inquires as to "What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production."

It has already been stated by Mr. Woodhead that the Government should now permit and encourage aircraft companies to develop their thoughts and plans for civilian aircraft so that all opportunities for post-war employment may be prepared for in advance and so that production and employment may start promptly when the war ends.

The Government, too, should take steps now to encourage civilian aircraft production by creating an atmosphere healthy to the growth of a large personal aircraft industry.

If the public is to reap the benefits which personal flying makes possible, a new viewpoint must be taken by the law and the administrative agencies of the Government.

In the past, personal or private flying has suffered from the handicap that the purpose for which private flights were made was not important—not by comparison with flights for the national defense—flights carrying mail, flights carrying passengers for hire, and flights tending to promote the art of aeronautics. Yet, it may well prove to be the case, gentlemen, that the airplane will develop a most important role as a private conveyance of the ordinary citizen, similar in social and economic importance to the automobile, serving to raise the people's standard of living, and make their lives fuller and their pursuit of happiness more effective. The automobile did just that. It created millions of jobs. It made possible thousands of business opportunities which serve to increase the wealth and prosperity of communities all over the Nation. It drew people closer together and made all parts of the country easier of access to every citizen. The personal aircraft can do even more than this.

The one big factor, which will largely determine whether manufacture and sale of the personal aircraft reaches mass marketing proportions, with all the attendant benefits to the economic and social life of the Nation, is the question of utility. People simply will not buy anything in great quantity which does not serve some really useful purpose in their lives.

It is just and reasonable to expect that the aviation industry will provide the best quality personal aircraft at the most reasonable price. Competition among ourselves in our efforts to give the customer only the very best personal aircraft will bring this to pass. There remain, then, two main problems for solution in order that personal aircraft have that utility which will make volume production possible.

The first of these is the great need for landing facilities. For unless countless places upon which to land and take off in personal aircraft exist, it can have no real utility as a means of private transportation.

The second, I have already stated as a responsibility of the Government, is that of creating both by law and the administration of law, an atmosphere healthy to the development of personal flight.

Senator MURRAY. How long has this personal aircraft idea been developed; for how many years has that idea been developed?

Mr. GEUTING. Well, personal flying started, I should say, with the beginning of the aircraft industry. Flying started to develop

when the Wright brothers first flew, and long before that as men experimented.

Senator MURRAY. And there was considerable personal flying, then, long before the war?

Mr. GEUTING. No; I would not say that there was considerable.

Senator MURRAY. There was some, I suppose.

Mr. GEUTING. Some; yes, sir.

Senator MURRAY. It depends, as you say, upon the development of landing places to increase the personal flying.

Mr. GEUTING. That is entirely correct.

Senator MURRAY. I know some business concerns out West that were using planes to carry on their business enterprise within my State, in Montana, maybe 20 years ago.

Mr. GEUTING. In the West in particular, where distances between communities are great, personal flying has been a popular means of transportation.

Senator MURRAY. Is that also for the transportation of heavy machinery?

Mr. GEUTING. No; we define personal aircraft as aircraft engaged in nonscheduled, nonmilitary use, and I should say for personal transportation, whether for business or for pleasure.

Senator MURRAY. Not for commercial?

Mr. GEUTING. Not commercial or transportation for hire in any way.

Senator MURRAY. Don't you anticipate that transportation of heavy materials will be very considerably carried on after the war?

Mr. GEUTING. Well, the airplane has limitations which would make it not altogether satisfactory as an economical means of carrying heavy or bulky materials, except for speed or for some peculiar circumstance making it desirable.

Senator MURRAY. I understand that in the northwest of Canada they were used to a considerable degree in transporting heavy machinery to isolated mining camps.

Mr. GEUTING. That is correct; yes.

Senator MURRAY. Proceed.

Mr. GEUTING. The first of these problems, that of obtaining a suitable number of landing facilities, the industry is trying to solve through its own action. It is not asking for any Federal funds for its personal aircraft program. I should like to tell you briefly of this program as it is important to an over-all understanding of the role which personal aircraft can play in post-war adjustment.

Landing facilities are like the telephone, in that one telephone has no value, two very little, but as we have come to have thousands of telephones, the telephone has become a great utility to our everyday lives. It is estimated that there are now about 2,500 landing fields. The progressive State of New York, for example, has only about 122. We need many thousands. Every community, no matter how small, should have one or more.

At the request of the Personal Aircraft Council of the Aeronautical Chamber of Commerce of America, the Civil Aeronautics Administration has granted semiofficial approval to some new terminology which is calculated to more properly describe and connote the sort of landing facilities which are needed to encourage personal flying. These

are airparks, flightstops, and air harbors, and should not be confused with the word "airport." An airport has come to mean a landing facility costing many thousands and even many millions of dollars, and which is principally used for military and transport aircraft.

In other words, the word "airport" has come to mean something large, expensive and complex—a Grand Central Station, so to speak.

An air park may be defined as a landing facility suitable for non-scheduled or personal flying. It need not be large—runways 2,000 by 300 feet will prove to be adequate in most cases.

Air parks, in order to provide the maximum utility and practicability, should be built within the confines of the community, adjacent to the business district, the town square, the market places, and the residential areas. In building air parks, there need be no plan for future expansion, as is the case in most airport building; when an air park becomes crowded, additional air parks should be placed in operation.

Air parks are felt to be a community responsibility and should be built with local funds. Air parks are community responsibilities in the same sense as are roads and streets. Air parks are needed, many thousands of them.

Flight stops may be described as intermediate landing facilities lying between communities and adjacent to the highways. We have had discussions with State and county planning groups which indicate that the building and maintenance of flight stops might well be projects for State and county highway departments.

An air harbor is just what the name describes, a landing facility for float aircraft. Air harbors should be provided wherever there are quiet bodies of water adjacent to a community.

Manufacturers cannot hope to find a market for anything they create unless there is a definite use for it. As an example, the automotive industry is cited. The country today is in much the same position "air-wise" as it was from an automotive standpoint in 1913 to 1914, when the automobile was a new thing. Hundreds of thousands of potential customers held off until the country built good roads.

It is the belief of the aircraft industry that personal flying is entering a new era, but that unless landing facilities are planned promptly, an important part of the foundation for great aviation advancement will not be ready at the end of the war and there will be fewer jobs for the thousands who might have been employed in building the facilities, fewer jobs for those thousands who might be employed in building the personal aircraft, and the thousands who might be employed to service and maintain these aircraft.

This first aspect of the problem of developing a utility, the industry is undertaking in a great program of community education. We commend it to your attention for encouragement and support.

The second aspect of this utility problem, that of creating an atmosphere healthy to the growth of the personal aircraft industry, is a responsibility of the Government.

Civil air regulations are a deterrent to volume production of aircraft. Since 1926, when the Bureau of Air Commerce began functioning, there has been a constant increase in restrictive regulation as to pilot qualifications and the flying and maintenance of aircraft. Many pre-war personal pilots laid their discouragement to such restrictions in abandoning flying.

The industry feels that the regulation of personal aircraft and the personal pilot has grown through the years to the point of where present regulations impose onerous burdens which hamper the public right to fly, and impose additional and unnecessary costs upon the flying public.

With such conditions existing, it is clear that potential aviation purchasers are discouraged rather than encouraged, thus narrowing the post-war market and helping to preclude the possibility of volume production and busy factories.

It is suggested, therefore, that insofar as the personal aircraft and the piloting thereof is concerned, it be sorted out from other kinds of aircraft and flight, and that the mature of these operations be considered in an Air Commerce Act written to cover them alone.

More detailed suggestions are included in written testimony filed with the committee. Whatever the written detailed suggestions, however, it is apparent that a sane and sensible relaxation of regulation must be accomplished if we are to welcome anything which approximates the air age insofar as personal flying is concerned.

The personal flyer has been lost in the shuffle and he must be given the right to fly, which in many ways has been denied him, and be encouraged to fly.

These are things, gentlemen, which must be done if personal aviation is to assume the important place it can hold in air power and our post-war national economy.

Senator MURRAY. The development of personal aviation theory would mean that you would have to develop some very low priced machines, would it not?

Mr. GEUTING. The industry is prepared to do that.

Senator MURRAY. And it would also depend upon the economic conditions of the country as a whole. It would require, would it not, full employment in the country, a standardized economy in order to develop that to any great degree?

Mr. GEUTING. Well, the prosperity of the country would naturally tend to encourage further growth of the industry, but conversely, if the industry grows, it can add to the prosperity of the country.

Senator MURRAY. Just the same as pleasure cars have that place.

Mr. GEUTING. That is the reason we have pointed out the social-economic benefits which the automobile has brought, and which, we think, the personal aircraft can bring.

Senator MURRAY. Thank you very much for your statement. It covers the field very thoroughly.

Mr. Ward.

STATEMENT OF J. CARLTON WARD, Jr., MEMBER OF THE BOARD OF GOVERNORS, AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, AND PRESIDENT, FAIRCHILD ENGINE & AIRPLANE CORPORATION

Mr. WARD. Mr. Chairman, my role has to do with the technological phases of development, and a general summary of our policy.

The committee's question is: What plans should be made for a post-war national defense program for the aircraft industry?

a. Through research and development?

b. Through stand-by capacity?

c. Through other methods?

Technical development is the key to American air power, present and future. In our national interest, what are the broad facts in this particular, and what should be our country's policy?

History shows us that many great inventions in the past have been developed and perfected by various nations, to the detriment at times of the nation that originally produced the fundamental development or conception. Thus, America produced the first flying airplane in 1905, but in World War I it was compelled to fight in airplanes produced by its Allies, and for years the original American invention of the first flying airplane has rested in a British museum. Similarly, the principles of radar were first announced to the world in the United States as early as 1922 by two Naval scientists in the laboratory at Anacostia, D. C. Yet radar was developed primarily by Sir Watson Watts in Britain and handed back to us after we became her fighting ally, and after we had been given time to prepare ourselves for the present struggle with the time purchased by her effort.

It is interesting to know that Sir Watson Watts was knighted for the work which he did in that preparatory effort. The two naval scientists are known only to a few.

Similarly, the Navy, in the spring of 1918, launched a successful flying bomb at Bellport, L. I., in cooperation with the Sperry Corporation, carrying 1,000 pounds of TNT with a 400-mile range. It had many features of the present German robot bomb. I would like to submit this photograph to you of America's first robot bomb.

Senator MURRAY. That was published in a magazine recently, wasn't it?

Mr. WARD. Yes, sir; it was in the New York Times.

At the same time, Charles Kettering and his associates began the development of radio-controlled flying missiles which they believed could assist in preventing future wars. It was left to the Germans, a quarter of a century later, to put it into their own concept of total war. Such instances can be multiplied.

At the expiration of World War I, France emerged as the leading air power in the world, with more airplanes, more facilities and more technicians than could then be found in any other country. From that date on she declined steadily, not only in relation to other powers, but also in an absolute degree. From the outside it has appeared that France rested on her laurels. Being a thrifty nation, she seemed to feel that the possession of a quantity of airplanes met the needs of the situation. Subsequently her industry became a political football and attempts were made to nationalize it under a socialist government. That was as late as 1939. And so, as World War II approached, France found herself with politically dominated facilities which her government, in the throes of war, admitted were inefficient and wasteful.

I might interject here that at that time I was head of a mission to the French Government to promote production, and the first job to which we were assigned had to do with their worst headache, the nationalized Lorraine-Detrich engine factory. Production standards were lower in the nationalized industry.

Senator MURRAY. The French seemed to be wholly oblivious of what was going on in Germany at the time.

Mr. WARD. As a matter of fact, the informed people were not, but the then government was entirely a labor minded government, interested primarily in domestic, social and economic reform. There was an excellent article written in 1942 by an American who lived through that period in France, which I would be glad to submit for the record if the point is sufficiently interesting. It carefully sets forth those factors that undermined France's effort in preparation for the war.

Senator MURRAY. I would be glad to see the article. I cannot understand how any section of the French people would want to prevent France from developing its air power in view of what was going on in Germany. That is to say, knowingly to let that happen. I would like to see your article.

Mr. WARD. It is always well to bring those points home in this way, I think: We, in this country, knew what Germany was doing. As a matter of fact, when I was on duty in France in May of 1940, I was shown a plan of Hitler's for invading the United States, and so reported it on my return. But even very few of my closest friends felt that that was any serious threat.

Politically, the situation in France and America at that time was not too far apart, and I think it was Prime Minister Baldwin who, when he resigned his leadership of the Conservative Party in Britain and was accused of not having rearmed England, made a significant statement to the effect that, if he had attempted to rearm England, he would have been removed from power. Some of his own Conservative Party members said, "For shame that you should set yourself above the good of your nation." To which he replied: "Had I been removed from power, the Labor Party would have taken control and those steps for which we were able to assume political support would have been eliminated."

Now, that is a fairly accurate summary of the British-French-American rearmament situation politically prior to war.

Senator MURRAY. I would like to pursue my study of that situation. It seems startling to me to hear a statement of that kind. Of course, in this country I thoroughly understand that we felt that we were so isolated over here that we did not have to pay much attention to what was going on in Europe, and that at any rate it was no concern of ours. But it would seem to me that the nations so close at hand, every citizen in those nations, would be greatly concerned about what was going on in Germany. I cannot understand how anyone could attempt to blame it on any one section of the people.

Mr. WARD. The answer that was given to us when we raised that same question was that the French people had built the Maginot line, the most expensive single military work, they thought, in history.

Senator MURRAY. They had provided for their complete defense, and they sat down and took it easy.

Mr. WARD. France said, "We feel that our Maginot line is as complete a defense as your Atlantic Ocean." Neither were right, as history has shown.

The lessons to be learned from French experience are clear. They are:

(1) Possession of the most airplanes at a given moment does not permit the relaxation of continuing development nor the successive production of improved models.

(2) Private industry, with its competitive aspect, surpasses to a marked degree the performance of Government-owned facilities.

(3) Merely to be confronted with a national emergency does not solve the problem and, in the instance of World War II, France was not given time enough to work herself out of her inferior position.

Before turning to America's position, it might be well to examine that of Germany. Germany is popularly regarded as a nation of vast technical resources and possessed of ample skilled labor and engineering talent. Even under Hitler, her factories operated under private management, but with governmental direction as to basic policy and, in many instances, government participation in the ownership. I believe the government owned 50 percent of the great Junkers Works, but, in spite of that ownership, permitted the operations to be carried on by private management. Being a totalitarian state, the basic policies were laid down for the various manufacturers by the government. Germany had started her preparations, in an active sense, in 1933 for World War II. Ample facilities and money had been provided by the government for production and for research and development. While a smaller country than our own, her appropriations for aircraft production were tremendous as compared with ours; under her rearmament program, her funds for research and development were many times those available here in our own country.

The Americans who inspected the D. V. L. laboratories—and they were many, because the Germans at that time were free in showing them to us—all brought back to us a report on the tremendous facilities that the totalitarian government had provided for this one job of getting the most and best airplanes.

As a result, there was produced the greatest quantity of then modern aircraft that the world had ever seen when World War II began. However, there were near fatal mistakes made in the German preparations for war in the air that stemmed from over-all powerful governmental direction. These mistakes were:

(1) Her assumption that airplane models should be frozen in order to produce in quantities, as soon as a satisfactory design had been evolved (this produced static designs of airplanes, modern at the start which, in the early stages of the war, were numerically superior to those of her enemies but which, as time went on, were inferior technically to the rapidly modified British designs).

(2) Her airplanes were designed essentially for ground cooperation, and were considered by the Germans themselves as primarily offensive weapons. Hence, they were weak on the defense against enemy aircraft.

Senator MURRAY. Of course, they anticipated that it was going to be a very short war and that it would be over before any new designs would be developed.

Mr. WARD. During the blitzkreig, yes.

Thus, totalitarian direction produced basic errors in policy which resulted in products which proved inferior in over-all competition to the planes made under the relatively free enterprise system between competitive makers in Britain and, later, in America. Superiority is not a static thing—it is a dynamic thing.

In Britain, active steps toward rearmament in the air began in 1938 and the Government laid down a very sound approach to over-all British production, with dispersal of manufacturing units and with

competitive engineering designs. In this atmosphere, the now indispensable Mosquito was developed by a private aircraft firm, independent of the direction of the Ministry of Aircraft Production. Even more important, when Britain had to meet the threat of German bombing, she was ready with radar locators developed in secret, which permitted 700 British fighters to stave off attacks by as many as 2,400 enemy aircraft in the air, instead of being wiped out on the ground as had already been the fate of France, Poland, and Germany's other enemies. The radar locators, plus the efficient British fighter designs and their superior armament, took such a heavy toll of the Luftwaffe that it became an uneconomical form of war and was abandoned. This happened in spite of the high prediction Germany had made of subduing England from the air, thus hoping to avoid the risks of a sea-borne invasion for which she had not equipped her Navy. By having in use at that critical time the fruits of engineering development, Britain saved herself and perhaps the world from Nazi domination.

And what of America? With all of these lessons before us, we had allowed ourselves to live on a starvation diet for development, even relative to the appropriations for development of such a second rate power as Italy.

I believe at that time it was known that Italy's appropriations for the city of Guidonia, an entire city founded for the development of aircraft, was something on the order of two and a half times our equivalent appropriations in the United States for our own program.

At that time we had an undernourished Government facility at N. A. C. A., insufficient Army and Navy evaluation laboratories, and a lack of money for industry's development contracts.

Mr. Wilson has just spoken at some length on that question, and I think he and I were here before the Senate in the pre-war period testifying to the inadequacy of the Army and Navy development contract awards. That policy held in the United States, as I recall it, until about 1939.

There has been ample testimony before the Congress on the unrealistic procurement policies of the Government with respect to aircraft development, extending through the late 1930's.

Faced with a certain European war, it still took first French and then, nearly a year later, British money to underwrite sufficient production for American aircraft factories so that the industry was able to accumulate personnel and facilities for the start on its subsequent expansion program.

About that time, early in 1939, the Pratt & Whitney aircraft engine facilities were faced with a lay-off of approximately one-fifth of their total skilled employees, with war definitely just over the horizon. It was the French purchases which put those employees back to work, added to them, and formed the start for the program Mr. Wilson referred to.

On February 20, 1939, General Arnold addressed the National Aviation Forum, stating that the Air Corps' goal was to obtain 5,500 planes before July 1941. In April 1939 he appeared before Congress to explain his proposed program. The House cut this program for 5,500 units to 59 units and the Senate provided funds for 375 planes. It was not until April 1940, after the fall of Norway, with the world aflame, that funds were made available for this original program

formulated a year previously. This program then represented a mere fraction of Germany's air strength.

Senator MURRAY. That was not the result of any mere neglect; it was a result of a feeling that that was to be the policy of this country; that we should not develop planes or armaments because it would take us into war; and eventually it would involve us in the war.

Mr. WARD. In that connection, it is interesting to think back to the time of Woodrow Wilson and the unpreparedness parade in New York City only 2 or 3 months before we were plunged into World War I.

We, in our presentation here, think of Congress merely as the reflection of political sentiment of the United States, and not as an independent agency.

What we are trying to point out is that through lack of education in the importance of understanding technological developments, this country, in the face of world unrest, failed to recognize that one cannot summon technology overnight and secure immediate results.

Again, to go back to Mr. Wilson's opening remarks, if it had not been for the successful battle that England staged, and if Hitler had put into effect the plan we were shown in France in 1940, we would have been attacked through Mexico with an armored German force when we had no tanks, and no effective air force. Many people say that would not have been possible. Nevertheless, those were the plans. To have been in Europe and to have seen the things that were supposed not to be possible being done from week to week, as some of us so saw Germany doing it in 1940, definitely meant to us that our American home public was too remote to have appreciated the factors involved in real preparation, and that Congress was truly representing that sentiment.

Senator MURRAY. I understand that in the law there is a maxim sometimes referred to, that the impossible sometimes happens.

Mr. WARD. I think one of the excellent examples of that is the fact that France had a military axiom which started at the time of Napoleon, to the effect that France would never be attacked through the Forest of Ardennes. It was precisely by that route that the armed forces of Hitler broke through while exercising a feint on the low countries.

The remark was made in France practically as you have made it here.

The truth of the matter is that America had become a second-rate power in the air, except for the unsurpassed job being done by American transports in civil aviation and in the field of private flying. It was in this condition that we faced a certain world holocaust of war.

Perhaps that needs a little explanation. We probably had more private aircraft at that time than any nation in the world. We had the best transports, but our fighting planes, as was shown, were not comparable to the best product of our potential enemies. We had drifted into a second-rate place because there had been provided insufficient funds for our military services to match the degree of development carried on by the totalitarian countries.

There is no need for recounting the industrial and technical miracles in the ensuing period that have been wrought with the intelligent cooperation of the armed services. These have brought us where we are today. However, the lesson of France should show us clearly

that we cannot stay where we now are without a realistic consideration of the factors that have brought us here. These must be evaluated and made effective if we are to remain a first-rate air power.

For instance, it is not known generally that the Flying Fortress, one of the world's greatest fighting machines, first began its development in 1934. It had required an expenditure of over 4,000,000 engineering man-hours between 1934 and 1942—a period of 8 years—to bring it to the high state of efficiency as a fighting machine that was necessary to start the unprecedented operation of daylight precision bombing against heavily defended Europe.

I have received a telegram from the vice president and chief engineer of the Boeing Aircraft Co., that I would like to read:

> The Boeing model 299 was conceived in 1934 and first flown in the summer of 1935. It was the first of the four-engined, long range, heavy bombardment airplanes. In a nonstop flight from Seattle to Dayton in 1935, the Fortress prototype broke all existing records for heavy aircraft. In other words, the basic design was good. Nevertheless, between the prototype and the current model, the B–17G, there has been an enormous expenditure of engineering man-hours in redesign, development, and research. The history is revealing. Altogether, in the YB–17 series, 120,860 engineering man-hours were expended. The preponderance of this time was spent in perfecting the turbo-supercharger installations, giving the bomber the ability to perform at high altitudes. This was pioneering of a high order. It required time to perfect. An additional 268,478 engineering man-hours were invested in the B–17B (first production series) smoothing out the "bugs," improving over-all performance. In the B–17C and D series, 263,368 engineering man-hours were required to improve the armament, install more powerful engines, and build in self-sealing fuel tanks and increased armor.

I would like to pause there a moment, to point out that none of our airplanes that started this war were either armored properly or had self-sealing fuel tanks. To go back and quote:

> These were the models which first saw combat action both with the British over Europe, and with the United States Army Air Forces in the South Pacific. Boeing engineers, in cooperation with Army Air Forces experts, were quick to anticipate additional requirements in the Fortress to provide for adequate protection from the rear, and a more stable bombing platform. At the time war was declared on Japan in 1941, B–17E's had already been made ready, at a cost of 344,778 engineering man-hours, with the new dorsal fin and enlarged stabilizers for better stability, and the lethal tail turret, packing twin .50 caliber guns. The upper and lower power gun turrets were also added at this time, as was the automatic flight control equipment which handed over to the bombardier the control of the aircraft during the actual bombing run. In the F and G series, many detail improvements were incorporated, costing a staggering total of 3,038,039 engineering man-hours. In fact, changes dictated by technological advance and combat experience were engineerd at a rate of three or more a day. Total changes for the B–17E, F, and G series to date—2,036. The total number of engineering hours on the entire series is as of June 1, 4,172,875.
>
> The above information does not include any manufacturing or flight-testing information.

I think that provides a very excellent summary of what continued technological development means in our industry.

The Liberator, an equally successful heavy bomber, started in January 1939 and, having available the service experience of the Fortress, became a potent fighting machine shortly thereafter. The medium bombers grew out of an Army sponsored competition about 1938 and were largely developed by French and British purchases before our entry into the war. Even under most ideal conditions, an airplane does not become a good, service-tested machine in under 2 to 3 years. As everyone familiar with the war effort knows, airplanes are constantly being modified on the production lines. The P–40,

an early type of American World War II fighter, has run through its model series of major modifications clear up to the letter "Q", indicating the necessity for its continued development.

There have been no new aviation engines brought out in service in this war that were not started before the European war.

For example, the present power plant for the new Superfortress and the Navy's great flying boat, the *Mars*—the Wright 3350 engine—was begun in 1936 and is only now becoming an accepted, service-tested engine, all at a cost of something more than $13,000,000. In the liquid-cooled aviation engine field, the Allison was started in 1930 and is still undergoing development into higher powers.

In the important field of accessories, the Sperry automatic pilot was first recognized internationally in 1913. From then up to 1932 the development had cost an estimated $1,000,000. Not until 1932 was the first commercial order for 42 received by Sperry. In 1935, it was not yet considered of value as a military development. That is a period of 22 years from the first accepted demonstrated model.

Thus it can be shown that literally all of the American air fighting equipment now in action had its origin in the pre-war period. Therefore, it is obvious that a nation cannot have time to arm in the air when confronted with a major international crisis.

It so happens that Army and Navy appropriations for the most part merge development and production funds. Promptly at the expiration of the active fighting period in this war, there will undoubtedly be brought to bear tremendous political pressure for economy—and it is only right that production requirements will be sharply curtailed. Unless provisions are specifically worked out at this time, whereby development funds will not fall a victim to the sudden post-war demand for economy, they will inevitably suffer the same fate as the funds for wartime production.

A 5-year engine or airplane development, cut off after 2 or 3 years of development work, will probably never bear fruit. For one reason, because the technicians who are the creators of such complex mechanisms will look for more secure positions in the post-war economy. Should there later be an effort to complete the development, it will be found impossible to do so. This will be true even assuming that there are no new technical developments in the interim to modify the original conception in such a way that it would be better economy to start the development anew. Thus for armament, radar, instruments, and all the technical equipment of a modern airplane.

Unless the principles of air power as outlined here today are accepted and then implemented by a wise policy for continued development, our country cannot be expected to hold its position in world affairs.

Commercial designs will, under the American system, be best developed as in the past, by wise regulations of the Civil Aeronautics Authority, wise policies of the Civil Aeronautics Board, and the enterprise of the commercial air lines and the private owner demand. This system produced the best airplanes for world commerce and for personal flying in the pre-war period and, in a free economy, will continue to do so in the post-war period.

Summarily, it should be brought out that there is a legitimate field for Government activity and for private industry, in which each is by nature best adapted for its task.

(1) Fundamental research not applicable to specific projects can best be fostered and accomplished in Government laboratories such as those at the N. A. C. A.

(2) Special application of research to particular designs or projects is the legitimate functon of private industry with all of its competitive stimulus. This will avoid the mistake made by Germany, by providing a diversification of solutions not readily possible under a totalitarian or Government-dominated system.

(3) Evaluation of the results of private industry developments can best be accomplished impartially by the Army and the Navy in their respective facilities, such as Wright Field, Eglin Field, the Naval Aircraft Factory, and other Navy evaluation centers.

These three vital functions in over-all development should never be in conflict, one with the other, if wisely molded into an over-all policy. This will provide America's answer to the competition of other great powers, if it includes the necessary procurement of service-tested quantities of the new models, produced in sufficient volume for operational and tactical use.

I would like to point out here that it is through that type of practical use that these modifications of the Boeing Fortress came into being. It could not have become an efficient fighting craft merely as an experimental development.

Here are the answers to the committee's questions with respect to planning for a post-war national defense program for the aircraft industry:

A. Through research and development: (1) Present development contracts should not be terminated.

(2) Military research, design, and development should be continued on a constructive basis through competitive private industry.

(3) A production program for the aircraft industry should be maintained to retain its ability to establish production processes and to permit the air forces to become familiar with the handling of such planes. We assume that 20 percent of the number of airplanes in the air forces will be replaced annually. That would give the industry, if it knew the size of the post-war air force, a basis for planning.

(4) New and advanced models of all types of military aircraft required for a balanced air force should be designed and developed. Quality of the product should be the primary factor in placing orders.

The United States would have been a third-rate air power if the present war had been deferred a few years. Totalitarian governments subsidized their aircraft industries heavily. The aircraft manufacturers want no such subsidy, but do suggest a national air power policy which will allow the aircraft industry to maintain leadership in design and preparedness to resume large-scale military production at any time if it should be necessary. In addition, such a policy contemplates an air force maintained at such a level as to assure the Nation of adequate air defense. The above suggestions outline a program for minimum preparedness compatible with full security and one which would permit rapid expansion in time of emergency.

B. Through stand-by capacity: Air power presupposes several elements, among them airplanes, trained personnel, technical staffs, management, and productive capacity. All of these are essential. A strong industry must be maintained with operating productive capacity at least equal to the current needs of the armed services.

Additional capacity, preferably through stand-by plants, should be available and ready as the necessity arises.

Senator MURRAY. That would be a very expensive program to maintain, would it not?

Mr. WARD. That is a very good question, because the problem comes down to this: Our Government is, I believe, spending a total of about $90,000,000,000 a year while carrying on the war. We spent, in the pre-war period, perhaps $1,300,000,000 for the combined Army and Navy. Had we had an adequate Army and Navy before the war, it is a question of doubt whether we would have ever been compelled to fight this war, So it is a question of how much a military insurance policy would be worth.

Senator MURRAY. I was thinking of it in regard to the possible terms of peace. If a real peace is achieved as a result of this war, and these nations that have been the source of wars are held under control, it would not be necessary to maintain such an elaborate program as you have been suggesting here.

Mr. WARD. I think two facts come into this question: One is that it is freely admitted by the international authorities, who have tried to police such conditions as you have outlined, that there is no way of policing it—that a nation can secretly rearm.

Senator MURRAY. I do not see how they could. If Hitler won this war, there would be no possibility of the Allied Nations rearming and undertaking to start another war on him.

Mr. WARD. Because he would have kept effective this big, powerful military force.

Senator MURRAY. He would have controlled all the sources of war making, and it seems to me that at the end of this war there ought to be some way of preventing nations from having access to the materials that make it possible for them to build up these tremendous armaments.

Mr. WARD. Well, I have heard that question answered this way: If Hitler won this war, he would dominate every country. He would run every country.

If we win the war, we hope to let each country run itself.

Now, under the democratic peace, if we win—and we are going to win—we would not take the steps that Hitler would have taken. The only way we can enforce our policy is to have potentially, and in actuality a means of enforcing our peaceful program. That means a powerful military unit, which again comes back to compulsory military training in order to have an army, a navy, and an air force ready. It means the training of flight personnel by reaching down into the school system. It means, in fact and not on paper, having a force strong enough to prevent Germany from doing what it is the plan of the German people to do again.

Senator MURRAY. All of the other nations would be doing likewise.

Mr. WARD. Perhaps.

Senator MURRAY. So then you would have the basis of a race in armaments, and the whole thing all over again, would you not?

Mr. WARD. Perhaps, because the fundamentals of human nature do not change, and nations are nothing but an integration of human nature.

As long as there are going to be predatory nations and nations which aspire to the lands or resources of other nations, there is going to be the grounds for incipient war.

We knew what Hitler was doing. France knew. We were democratic nations. We did not intervene. Neither did England. All were democratic nations.

There is nothing in human nature to change that in post-war peace if we all disarm and one chooses to rearm. This peace has got to take a lesson out of the failure of the last peace. The only lesson that has been proved is: Be strong enough so that the other nation's chances of licking you are so small that it would not want to risk the gamble of going to war.

Senator MURRAY. It seems that until the nations of the world organize, and are prepared to know what is going on in other countries in the way of preparation for war, and undertake to stop it, we are going to see the development of armaments in all the nations of the world again, the same as before.

It seems to me that we would be in a very serious situation. It seems to me that the only way to handle this thing is to have a world collaboration of nations, to prevent any nation from undertaking to arm to such a degree that it will become a menace to other nations, and that could be done.

Mr. WARD. I have heard that question answered this way: In each of our towns and villages in this country, we maintain a police force, and the police force carries revolvers with cartridges in them. Some people say it is wrong to carry a revolver, because you might get mad and shoot somebody. But the whole essence of our own internal government is that there lies a power that will be stronger than the predatory few, whoever they may be.

Nations and people are very similar, it is argued. There are predatory nations. They recognize nothing but the pistol and the holster. If you relax and give the world an unarmed police force, they will do as Hitler and his cohorts did.

Assume that the democratic nations are weak. Assume that their politics are such that they prefer their so-called "fat" life and high standard of living. Assume that Hitler's slogan is, "Butter or guns" and that he chooses guns. So long as such a philosophy is allowed to exist—and there have been nations like that down through recorded history—then a peaceful approach by the democratic nations, all anxious to go about their peaceful ways and not be bothered with policing somebody else far from their shore, will not work.

But if we have a navy and army and air force potentially strong enough, its chances of winning would be removed.

It is suggested that some proportion of existing aircraft plants which are needed for aircraft or other production, be kept available for war production in the event of national emergency. This stand-by capacity could be administered by the aircraft manufacturers on a contract basis. The possibility of using this stand-by capacity for temporary storage of surplus should be investigated.

Now, that point has been introduced to avoid what we did with Muscle Shoals in the last war. We built a very expensive war facility, and then subsequently accomplished nothing with it. It was not even useful as a potential arsenal.

It is our hope that these large shadow plants erected in predominantly agricultural communities where there is a normal use for the citizenry in peaceful pursuits, will be kept as arsenals. They should not be scrapped and they should not be reconverted by the expenditure of public money. Their great spans and high ceilings are not suitable

for making peacetime knick-knacks. If such were attempted, we would either be granting an indirect subsidy to make their use economically possible, or else be throwing good money after bad. In their present condition, these great facilities are highly useful as stand-by arsenals.

All possible methods should be used to train the youth of the country in aircraft and in technical matters. The technical and mechanical skill of the Nation is one of its greatest assets, and this should be maintained at any cost.

All design and engineering data, tooling and production facilities developed as a result of Government orders, shuuld be made available to manufacturers for civilian production in the interest of post-war employment.

The established aircraft manufacturers should be utilized by the armed forces in handling the modification and repair of military aircraft in various locations throughout the world.

Senator MURRAY. I do not think it will be necessary to read the summary. It will be carried as part of the complete statement.

I want to congratulate you on your very dramatic statement here. It is certainly very enlightening to us. It will be very helpful to us in our study. Thank you.

(The summary referred to is as follows:)

In order to keep the peace after winning the war and to promote the general welfare, the United States must have air power. This can be accomplished by—

1. Having an adequate, ready air force composed of superior aircraft and competent personnel.
2. Training our youth to fly and service airplanes.
3. Maintaining air bases essential to security and commerce.
4. Expanding our domestic and foreign air transportation, and personal flying.
5. Maintaining a strong aircraft manufacturing industry, with continuing world leadership in research and development.

With respect to the workers involved in the demobilization of the aircraft industry when victory is won, the industry—

1. Agrees with the principle of adequate unemployment insurance, as an essential to orderly manpower demobilization and reemployment.
2. Believes that the new employer or educational organizations should retrain workers, thereby avoiding retraining for nonexistent jobs.
3. Agrees that transportation of workers to bona fide residences or to new jobs at Government expense is desirable.

The rate of net profits on sales volume in aircraft is the lowest of any industry engaged in war production, amounting to but 1.8 percent in 1943. The entire working capital of the aircraft industry would not equal 1 month's operating costs at present production rates. It, therefore, is obvious that the industry, while eager to do its full share during the conversion period, can be of very little help in assuming financial responsibilities of the manpower demobilization and reemployment process.

Sudden changes in war requirements are necessitating termination of some war contracts. The industry believes that when such occasions arise contracts should be terminated promptly.

There must be full coordination between Army and Navy cut-back programs and between Government agencies and aircraft manufacturers. Thus capacity released by one agency could be used by another and labor resources conserved.

Many factors must be considered in making cut-backs.

(*a*) First cut-backs should be in industries producing aircraft only during the war emergency.

(*b*) Problems of the creator of the original design should have first consideration when cut-backs are contemplated.

(*c*) Other factors which should be weighed are present production status of manufacturers concerned; local manpower situation; over-all costs of the products; manpower utilization; meeting of production schedules; contributions to aviation progress; needs of the aircraft industry to prepare for post-war development and production; obsolete aircraft should be cut back sooner than those of more advanced design.

Notice of cut-backs should be given to manufacturers sufficiently in advance to permit them to complete the production cycle (60 to 120 days).

Subcontractors and vendors should be notified promptly by the prime contractor.

Employees must be notified as soon as revised personnel requirements can be computed.

Cut-backs in the aircraft manufacturing industry should be synchronized with increases in other war production and with the reexpansion of other civilian industries whenever possible.

When the war ends there will be surpluses of aircraft plants, military aircraft, and military air fields. Surplus aircraft factories should, if possible, be sold or leased to the present users. If not feasible, the Government should dispose of them to others. If not needed for aircraft or other production, these factories should be kept, under private management, as stand-by plants.

Disposal of surplus aircraft should be controlled by one central Government agency.

Combat aircraft rendered unsuitable for further use should be scrapped.

Combat aircraft suitable for further use can be sold, leased, or bartered to friendly foreign nations under the control of proper Government agencies.

Overhaul and maintenance of such aircraft should be under the direct supervision of a competent aircraft manufacturer.

Planes useful for scheduled transport operations should be disposed of through limited leases or sale without price discrimination. This must be done judiciously to eliminate the possibility of pressure developing in later years to continue operation of wartime planes.

Small planes with possible nonmilitary uses are divided into two groups. The small observation and liaison planes can be released to any market. Civilian sale of military training planes must be considered in the light of performance characteristics of these aircraft. Such equipment can be released on a wide scale for military training in schools and colleges.

Major components—engines, propellers, and instruments—should be scrapped when surplus military aircraft located abroad are scrapped.

Government-owned airfields not required for military purposes should be made available promptly for commercial and personal flying.

To further the development of civilian aircraft production, the aviation industry should now be allowed to plan types of post-war products and use part of their facilities for this purpose if military needs are met.

Transport air lines should be aided in the development of main and feeder lines through the release of airplanes and increased use of air mail.

Personal aircraft manufacture needs more landing facilities and liberalization of civil air regulations to achieve volume production.

With respect to planning for a post-war national defense program for the aircraft industry the industry believes—

1. Present development contracts should not be terminated.
2. Military research, design, and development should be continued on a constructive basis through competitive private industry.
3. A production program for the aircraft industry should be maintained to retain its ability to establish production processes and to permit the air forces to become familiar with the handling of such planes. We assume that 20 percent of the number of airplanes in the air forces will be replaced annually.
4. New and advanced models of all types of military aircraft required for a balanced air force should be designed and developed. Quality of the product should be the prime factor in placing orders.

The aircraft manufacturers want no subsidy, but do suggest a national air policy which will allow the industry to maintain leadership and design and preparedness to resume large-scale military production at any time if it should be necessary.

It is suggested that some proportion of existing aircraft plants which are not needed for aircraft or other production be kept available for war production in the event of national emergency.

All possible methods should be used to train the youth of the country in aircraft and in technical matters.

The established aircraft manufacturers should be utilized by the armed forces in handling the modification and repair of military aircraft in various locations throughout the world.

Senator MURRAY. Colonel Berliner.

STATEMENT OF COL. HENRY A. BERLINER, CHAIRMAN OF THE BOARD, ENGINEERING AND RESEARCH CORPORATION, RIVERDALE, MD.

Senator MURRAY. Colonel Berliner, will you state your name and present position to the reporter?

Colonel BERLINER. Henry Berliner. I am chairman of the board of the Engineering and Research Corporation.

Senator MURRAY. What has been your training, your experience in this subject of technological research?

Colonel BERLINER. I have been in aviation ever since I got out of school. I was trained and educated to be a mechanical and aeronautical engineer. I have been in aeronautics all my life.

Senator MURRAY. How many years?

Colonel BERLINER. About 25 to 28 years.

Senator MURRAY. Would you describe, in a general way, your company's plans for post-war aircraft production?

Colonel BERLINER. Before the war, we were manufacturing a small commercial airplane for private flying, a private flying airplane, and also we were manufacturing machine tools.

During the war, we have, of course, continued to manufacture machine tools, but our aircraft department has gone over to items for the war.

At the conclusion of the war, we hope to go back to aircraft as rapidly as possible.

Senator MURRAY. Were you manufacturing aircraft before the war?

Colonel BERLINER. Yes, sir.

Senator MURRAY. Were you also operating this Engineering and Research Corporation? Is that a separate corporation?

Colonel BERLINER. No; it is one company doing the two things.

Senator MURRAY. Now, what are the basic problems in the manufacture of personal aircraft?

Colonel BERLINER. Our principal problem will be to go from the manufacture of war items, back to the manufacture of airplanes, and to prevent a time lag as much as possible.

In other words, if the war were to stop right this minute without any notice, we would be 4 to 6 months in getting back into the production of private aircraft.

Senator MURRAY. What plans has your company afoot now for post-war production?

Colonel BERLINER. We would like to tool up for post-war aircraft, and we would like to go beyond that. We would like to manufacture components and parts for aircraft, as long as this would not interfere with our deliveries to the Army and Navy.

Under present conditions, we do not have that permission, and we cannot get the material. Hence, there will be a time lag that I spoke about, which will require a lay-off of probably four-fifths of our employees while that is taking place.

Senator MURRAY. I understand you to mean that you would like to engage in the manufacture of components and parts for civilian airplanes?

Colonel BERLINER. Yes, sir; we would like to make up components so that instead of taking 4 to 6 months, we could commence deliveries within 1 or 2 months.

Senator MURRAY. There would be considerable demand right at this time for components and parts for civilian aircraft?

Colonel BERLINER. No, sir. There is no demand now, but we would be willing to go ahead and do it anyway.

Senator MURRAY. There has not been any production of civilian airplanes recently?

Colonel BERLINGER. No, sir.

Senator MURRAY. Would that not create a demand for parts for existing planes?

Colonel BERLINER. No, sir. These parts that we would like permission to manufacture are parts which will go into completed airplanes. It is simply what we call a pipe line. We want to cover the pipe line so that we can commence assembling the complete airplanes as soon as possible after the termination of hostilities.

Senator MURRAY. And you are interested there because of the fact that it would enable you to make an easy transition to a post-war production?

Colonel BERLINER. Yes.

Senator MURRAY. Do you have any fear of unfair competition from these surplus planes that the Government will dispose of after the war?

Colonel BERLINER. No, sir. We have no fear of that at all, but I would like to say that other companies may have that fear. We had only commenced production on a new model when the war started, and then we ceased production of that model.

Now, other companies have been producing a model during the war and are not ready to produce anything more modern at the end of the war, so whereas, while we have nothing to fear from them, in our opinion there are other companies who might object to it and whose objections might be valid.

Senator MURRAY. Do you think there will be any considerable conversion of war planes to civilian planes after the war?

Colonel BERLINER. Do you mean the companies now building military aircraft might go to civilian?

Senator MURRAY. They might convert a great many of the surplus planes that will be on hand after the war into planes for civilian use. Would that be possible?

Colonel BERLINER. Of course, the only planes that are really suitable in the private plane class would be what we call the grasshopper type, the liaison type of plane, of which there are about three different models made. Most of them, I believe, will be pretty well worn out, and a great many of them will not even be in this country.

I think that the people who build those particular planes could answer that qusetion better than I could.

Personally, we have no fear of them at all.

Senator MURRAY. You do not anticipate that that would create any serious problem for the aircraft manufacturers in the post-war period?

Colonel BERLINER. We feel that those planes are obsolescent, and that new types will be demanded by the public.

Senator MURRAY. Where is your plant located?

Colonel BERLINER. It is in Riverdale, Md., about 8 miles out from Washington on the Baltimore road.

Senator MURRAY. Has your plant been considerably expanded during the war?

Colonel BERLINER. Yes, sir. It is about four or five times the size it was at the beginning of the war.

Senator MURRAY. To what extent do you anticipate that you will be able to continue your plant after the war?

Colonel BERLINER. That is rather a difficult question, because we do not know just what the demand for these planes is going to be. We can give you an estimate. We would estimate that we would have to lay off approximately half of our employees. In other words, we will have a good many more than we had before the war, but only half as many as we have now.

However, I would like to point out that we made a survey of our employees, and found that about one-fifth of the men would leave our employ as soon as the war is over in order to go back to other jobs that are not essential, and that another fifth of our employees, who are women, would leave us because they have no desire to work after the war.

Senator MURRAY. Have you any other observations to make that might be helpful to our committee?

Colonel BERLINER. The question has come up as to what the Government could do to help civilian aviation, personal planes, and it has been answered almost completely, I believe. I do not believe anything has been said about possible Government aid to navigation. It has been said that we require fields, a lot more fields than we now have, but, I believe, in addition to that, we will require either an elaborate marker system, or more radio aids, or both.

I think that would be of a great deal of help in expanding the private plane market.

Senator MURRAY. The airplane industry is pretty well equipped with facilities for developing new ideas and new technological methods?

Colonel BERLINER. Yes, sir.

Senator MURRAY. And do you think the planes that will be turned out after the war can be brought down in price to such an extent that it will be made attractive for personal use?

Colonel BERLINER. I do not anticipate the figure that is given in the committee's report which they say themselves is a "blue sky" figure. Our own estimate is that there will be about 25,000 personal planes built a year, and then possibly that will increase to 50,000 within 2 or 3 years after the war.

We do not foresee any parallel to the automotive industry at this time.

Senator MURRAY. No; I should not think so. It seems inconceivable to me that the air is going to be filled with small personal planes flitting to and fro over the country after the war.

Of course, I can see where they would be very useful in industry, in certain commercial enterprises, for use in business activities, but it does not seem to me they would become numerous for pleasure purposes.

Colonel BERLINER. I would like to stress again that the greatest difficulty that pilots have is finding their way. We feel that it is very easy to teach a person to fly a modern airplane, but that is only a small portion of the work.

Senator MURRAY. Most of the accidents occur as a result of the pilot being unable to find the landing place; is that right?

Colonel BERLINER. Faulty navigation or interpretation of the weather, and things of that sort.

Senator MURRAY. Thank you very much, Colonel Berliner.

This concludes the hearing for today.

On tomorrow, July 11, we will have other witnesses. Mr. Frankensteen, the director of aircraft of the United Automobile Workers, C. I. O.; Harvey Brown, president of the International Association of Machinists, of the A. F. of L., and Thomas Burtch, of the Army Air Force Branch of the Smaller War Plants Corporation. Those three witnesses will testify tomorrow morning at 10:30.

(Whereupon, at 12:55 p. m., the hearing was adjourned until 10:30 a. m., Tuesday, July 11, 1944.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

TUESDAY, JULY 11, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE OF THE
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10:30 a. m. in room 457, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray and Representative Randolph.

Also present: Charles A. Murray, Bertram M. Gross, and Kurt Borchardt.

Senator MURRAY. The hearing will come to order, please. Is Mr. Robert C. Storment here?

STATEMENT OF ROBERT C. STORMENT, ASSISTANT TO THE INDUSTRIAL RELATIONS DIRECTOR, LOCKHEED AIRCRAFT CORPORATION

Senator MURRAY. Mr. Storment, will you give your full name and the firm you represent to the reporter, please?

Mr. STORMENT. Robert C. Storment, Lockheed Aircraft Corporation.

I appreciate the opportunity to appear before your committee. I want to make it clear that I am appearing in my capacity as a member of the Lockheed organization and not as a representative of the aircraft industry as a whole. My statement constitutes a progress report to your committee on a field of research and planning which is of obviously great importance to industry, labor, and government. That field is demobilization and reemployment of war industry workers and veterans.

Virtually all of the aircraft companies, as well as many other companies in other war production industries, are devoting intensive study to this problem. We at Lockheed do not contend that we see all or even any substantial part of the answers, but we do feel the preliminary results of our research and our planning may be of some interest and assistance to your committee.

In order to achieve efficient, orderly demobilization of our armed forces so that the problem of reemployment of returning veterans will be minimized, it is imperative that a definite policy be established to guide the formulation of demoblization plans. We must not make the same error that was made at the end of World War I, when we followed the practice of demobilizing at the place of debarkation. Likewise, we must avoid the error made after the last war of completing demobilization as quickly as possible.

BASIC PROBLEMS OF DEMOBILIZATION

It is estimated that we will have 11,300,000 in our armed forces at the peak of our war effort in 1944. In the post-war period, we may maintain a force of perhaps two and a half million. On the basis of these estimates we may conclude that, when peace comes, more than eight and a half million persons could be returned to the labor market within a few months time. But this is only one part of the problem. The Bureau of Labor Statistics estimates that over 6,000,000 industrial workers will be demobilized from the war industries immediately after the cessation of hostilities. Thus a total of over fourteen and a half million people could be seeking reemployment during the first few months after the war ends. This total number includes only those in the services and in war industries, not those in indirect war jobs, Government work, and the thousands of other trades that will be affected. Therefore, the problem could be even greater than these large figures indicate.

The magnitude of the demobilization problem may be further illustrated from a recent study by the Post-War Division of the Bureau of Labor Statistics. This study shows that, for the United States as a whole, the number that will be demobilized from the armed forces and from war industries will amount to 32.3 percent of the number gainfully employed in 1940, the highest level of peacetime production and employment that we have ever reached. The solution of the problem, however, cannot be based upon an analysis of the over-all figures for the Nation as a whole.

The individual States vary considerably in the degree to which demobilization will affect them. Since 1940, many States have had great industrial expansion in wartime industrial growth. On the basis of percentage of the total number employed in 1940, the numbers of persons to be demobilized, both military and industrial, range from 19.2 percent in South Dakota to 58.5 percent in Michigan. Washington and California are among the five States whose demobilization problem is most severe. In these two States, the numbers of demobilized persons will represent, respectively, 45.2 percent and 42 percent of the 1940 employment level.

In general, the relative severity of the post-war demobilization problem for each State may be measured by the relationship between the number of demobilized persons and the total number employed in that State in 1940.

However, other factors must also be considered. For example, in some States not only the numbers but the kinds of workers have undergone great change. In many instances, men now in the armed forces moved their wives and families to the neighborhood of shipbuilding or aircraft plants before being drafted. In many other cases, wives and families moved to war production centers after their husbands had been inducted into the armed forces, in order that they might augment their income and assist the war effort by working in a war plant.

The problem of reconversion of the war industries of shipbuilding and aircraft production to peacetime endeavors will be most difficult. Thus, it is not unreasonable to assume that demobilization will present the most severe problems to the Pacific Coast States. Those States that were heavily industrialized before the war can resume production of their peacetime products.

The recently industrialized States will have a greater adjustment to make, for they have no peacetime products to which to return; nor do they have any organization built up for marketing peacetime products. Thus the reemployment of demobilized soldiers and industrial workers during the reconversion period will be more involved and will require more time in those States which have only recently been industrialized. It, therefore, seems advisable to explore all possible ways and means of relieving the prospective unemployment burden that the recently industrialized States will face in the immediate post-war period. The feasibility of developing incentives to encourage people in war production centers to move back to the communities from which they came should be explored by community and Government agencies. Such incentives might be in the form of cash to cover cost of moving back to the State of origin. The United States Employment Service, in cooperation with community agencies, could work out the details for operating and financing a program of this type.

VULNERABLE POSITION OF CALIFORNIA

1. The Los Angeles and San Francisco regions have had greater increases in population than any other metropolitan areas in the country. The increase in population in the Los Angeles area between April 1, 1940, and November 1, 1943, was 378,000. The San Francisco-Oakland area ranked second (in terms of absolute population growth) among metropolitan areas in the country with a population increase of 376,000. The State of California led all other States in the number of net in-migrants in the above period.

2. The expansion of the war industries of shipbuilding and aircraft production in California has been responsible for a large percentage of the migration from other States since 1940. These industries will have the greatest difficulty in reconverting to peacetime products.

3. Men and women in the services who have been quartered in California may wish to return here.

4. In the absence of a decentralized demobilization plan, Los Angeles, San Francisco, and San Diego (as debarkation points) will probably be important demobilization centers.

While California does not wish to discourage new residents, it is believed that employment opportunities during the reconversion period will not be sufficient to meet the needs of the present population. Although this problem may exist in other States, it will cause particular concern in California which has had the greatest expansion in shipbuilding and aircraft production.

SUGGESTED DEMOBILIZATION POLICY

General Hershey has indicated that demobilization will be slow and that men will be released from the armed forces only as rapidly as they can be absorbed elsewhere. The principle voiced by General Hershey appears sound, and a definite blueprint of such a procedure would be extremely helpful in both industry and Government planning.

In the last war, official consideration of plans for the discharge and return of servicemen to civilian life was started only a month before the armistice. There was far too little time for adequate solution of

the problems involved. The military authorities adopted the traditional plan of demobilization by military organizations, because it was the only plan for which regulations and administrative procedures could be quickly developed at so late a date. A plan put into operation now could be perfected by the end of the war on the basis of the experience already gained in returning released servicemen to civilian life. The State in which the demobilized soldier has his "roots" will in most cases be the State in which he registered under the Selective Service Act. As of July 1, 1943, Selective Service reported 22,184,000 registrants who were between 18 and 38 years of age, inclusive. Of these, 8,023,000 were in the armed forces and 1,566,000 in class 1. Approximately 18 of the 22 million in this age group registered before Pearl Harbor. Thus, it can be assumed that less than a fifth of the men now in the armed forces could have registered in a State to which they had moved after December 7, 1941. Therefore, if we send demobilized veterans back to the locality in which they were registered, we will be returning most of them to the regions in which they had pre-war employment. A veteran whose family has moved to another State since Pearl Harbor should be given the privilege of being demobilized in the State in which his family is now domiciled.

In anticipation of the enormous load which will be thrown on the United States Employment Service in the near future, we should take steps to strengthen this organization prior to the actual period of demobilization.

BACKGROUND OF THE PROBLEM

Two major problems in the field of industrial relations post-war planning are: (1) The development of the best qualified personnel for competitive peacetime operation. (2) The reassimilation of employees returning from the armed services.

Practical solutions to both of these problems will be greatly affected by the job plans of our present employees and of our ex-employees on military leave.

To find out what these employees want or plan to do after the war, the Industrial Relations Research Department completed a survey designed to sample these attitudes.

In order to accomplish a wide study of the problem, and to avoid the difficulties of discussing personal motives with employees, Lockheed suggested that other companies be included and that the survey be sent out by the Los Angeles Chamber of Commerce. This was done by the Subcommittee on Survey of Post-War Economic Plans, in conjunction with the Southern California Chapter of the Committee for Economic Development, and the California Governor's Committee on Post-War Planning. Other companies are now completing companion surveys. This report covers information submitted only by Lockheed factory employees. Our data will be pooled with those of other companies to develop a community survey.

As a first step, over 100 selected factory employees were interviewed as a basis for developing a questionnaire and studying employee reactions. Then over 900 of these questionnaires were mailed out to employees in our factories and to ex-employees on military leave in the United States and overseas.

The factory workers were selected on the basis of age, shift, sex, and length of residence in southern California so that we could insure a representative sampling of our total factory work force.

Replies have been received from more than 70 percent of those to whom questionnaires were sent—a large response for a survey of this kind. Both the number and the completeness of the returned replies indicate that the employees were seriously interested in problems of post-war employment and that they were willing to offer their full cooperation.

SUMMARY AND ANALYSIS OF WORKERS' POST-WAR OCCUPATIONAL AIMS

Attitude of present factory employees: (1) Of the male employees, 71 percent expressed their intention to remain with Lockheed, if possible.

(2) Of the female employees, 48 percent expressed their intention to remain with Lockheed.

(3) Although only 18 percent of the male employees have done factory work before the war, 67 percent of the male employees want to do factory work after the war. Most of these people have been laborers, shopkeepers, neighborhood merchants, tradesmen, or farmers.

(4) Although only 3 percent of our women factory employees had done factory work before the war, 42 percent of them want to do factory work after the war. It is of interest to note that domestics and waitresses do not intend to return to that line of work, but workers such as those who were formerly beauty-parlor operators generally plan to return to their former activities.

(5) Of those women who had been housewives, 64 percent intend to return to the home after the war, and many expressed the hope that a serviceman would get their job.

Attitude of ex-employees on military leave (in the United States and overseas).

(1) Of the ex-employees on military leave, 71 percent intend to return to Lockheed, if possible; 26 percent definitely do not plan to return; 3 percent are doubtful.

(2) Of ex-employees on military leave, 82 percent expressed their intention to take advantage of a governmental training or educational program if such a program were geared to their advantage.

(3) Of the ex-employees on military leave, 28 percent are learning a new skill in the services.

SIGNIFICANCE OF THESE ATTITUDES

An application of the foregoing survey percentages to our total personnel shows that if employees were able to follow their own choice, our post-war factory force would include:

(1) 35,000 of our present factory employees.

(2) 11,500 of our former employees now in the armed forces.

(3) A total of 46,500 factory employees in all.

(4) There is no basis on which the Lockheed Co. can anticipate maintaining employment at such a level after the war.

In building our organization, at one time comprised of nearly 100,000 employees, workers were drawn from every State of the Union, and naturally from hundreds of other employers. Why could not a plan of negotiated transfer be inaugurated at this time for the return of these borrowed workers to their original communities and previous employment? Especially if the original employer is one

whose post-war business will satisfy a hungry consumer's market—whose employment rolls will be increased rather than depleted, comes the post-war period. Many employers know what their needs will be, and certainly may have a place for the worker who has so ably supplied our armed forces with the material of war. Our employees know what our problem is—they know their post-war employment with our company is problematical. They are worried. Some are looking now for that post-war job, and the war job is not yet completed. To know that their company and their Government is not only interested in their plight, but is studying the problem of their post-war employment, and doing it now, would strike a most definite response in the form of continued high war production.

We are of the opinion that Government, through such agencies as the War Manpower Commission, the United States Employment Service, and the Veterans' Administration, can do much toward this end.

Just last week the regional director for the War Manpower Commission in the New York area agreed to give our negotiated transfer plan a thorough trial. We are forwarding 50 individual employment records of men whom we originally hired in the New York area for work in our California plants. These employment records are to be submitted to employers in upper New York by area directors of the War Manpower Commission. This trial is strictly an experiment. A pilot plan that, if it works, may well become a part of a procedure designed to minimize the war workers' replacement problem.

Thank you, sir.

Senator MURRAY. I had a number of questions here that I intended to ask you, Mr. Storment, but I believe you have covered the subject so fully in your statement that I do not see any necessity to present any questions to you whatsoever. I know that the relationships between the workers and the management in your plant have been very satisfactory.

Mr. STORMENT. That is true, sir.

Senator MURRAY. How do you account for that? Has the management been friendly and sympathetic to the workers and has met them half way in all their problems?

Mr. STORMENT. I believe that is true, Senator; the management has been fair in all of their dealings. I think we can trace back their ability to be fair to the fact that during our entire hiring program, they were hired on a very carefully selected basis. We tried to get the type of employee who would live up to what we felt was the Lockheed spirit, and we maintained it through our industrial and personal relations with the employees.

Senator MURRAY. It is very gratifying to hear that, especially in a large plant where there are so many thousands of employees, there have been such friendly relations established which worked out so satisfactorily. I am sure your statement is going to be very helpful to us in considering the problems we have on hand, and we are very glad to have had you here this morning.

Mr. STORMENT. Thank you, sir.

Senator MURRAY. Congressman Randolph, of West Virginia, is here this morning and wishes to make a statement at this time. Congressman Randolph.

STATEMENT OF HON. JENNINGS RANDOLPH, A REPRESENTATIVE IN CONGRESS FROM WEST VIRGINIA

Mr. RANDOLPH. Senator Murray and members of the committee. Recalling the testimony of the witness who just left the stand, I should like to have the privilege of saying for the record that during August of 1943, on my own individual responsibility, but thinking especially of my membership upon the House Labor Committee, I visited many aircraft plants throughout this country and especially those located on the west coast. I recall spending a considerable amount of time in the Lockheed Vega plants near Los Angeles, Calif. I studied there the utilization of the manpower and woman power of this country which had been brought into that concentrated area of wartime aircraft production from many sections of this nation. Many were individuals who had been previously without experience in the field of mechanics but had come, a large number of them at least, from the farms of America, from the rural sections and from jobs which they held in commescial and business establishments.

I continued the interest by attempting to get a close-up of what was happening during the impact of war upon our economy in the production of aircraft. More particularly I was thinking in terms of what could and would happen in the United States when we began to level off from our production of the heavier aircraft which are spearheading the attack of America and the Allied nations toward a certain victory. For that reason I am genuinely appreciative of the opportunity which you have given me to present brief comment during these hearings which I am sure will lay down a foundation or pattern upon which the Senate and House can attempt more properly to meet this problem which comes very near to us.

Mr. Chairman, as I understand it, the winning of this war is going to involve more than just the mere defeat of those relentless and ruthless and still well equipped foes we fight. What we are doing now in the actual prosecution of the war will be largely lost if this Republic fails in the post-war period. Any nation in the world must be kept from attempting to do in the future what Germany and the Axis powers have done in this conflict.

Now, we have had the impact of war, and I have spoken of that in connection with these aircraft workers. I think, however, we are going to have a greater problem from the standpoint of American productivity under the impact of peace. I feel that if the nation is unprepared we might have a disaster which might affect the ultimate welfare of the economy of this country, and of course it would drastically affect America from the standpoint of keeping on a stabilized economy during the immediate years after the war.

Our war will not be won on the day when some gallant American doughboy throws a leg over Hirohito's throne. Nor will we win it on the inevitable day of unconditional surrender of the Axis, not even when the last cringing criminal has been tried and punished. Victory will be ours only when we have achieved the objectives for which we are battling; when the giant factories now producing munitions of war, including aircraft, are humming with peaceful production; when our returning soldiers have been demobilized and given good employment on our farms and in our factories; when there is a job for each man who

desires to work; and the dignity and liberty of every person are secure.

The most critical period confronting us today is the period of transition from total war to the paths of peace. It is imperative, therefore, as a vitally important part of our war effort, that we consider today the post-war world which is waiting for us in the tremendous future, and that we be ready for the final battle of civilization, the battle which will begin in earnest on the day bombs cease to drop.

So I believe we must plan in time of war, just as your committee is doing, for the peace which is to follow. In planning for our post-war period of domestic life in the United States, certainly we have at least two important problems which are vitally connected. We must plan, before it is too late, for a conversion of our industrial structure that has been almost wholly war production, into a sound and wholesome, thriving and expanding commercial production. At the same time, as far as possible, we must retain the essentials of this industrial structure, thinking essentially of aircraft production. We can do it efficiently and, if necessary, quickly, as we did in the past when we shifted from peacetime to war production. I think if there is any single factor which has made itself known to America and the world in this conflict, and the factor that checked the Axis powers, it was that America had the ability to turn from a peacetime production and to propel it rapidly and on a large scale into the purposes of war.

Mr. Chairman, I would like, if I may, to place in the record a quote from a speech I made November 12, 1943, on this subject when I had the opportunity of speaking at the National Clinic of Domestic Aviation Planning in Oklahoma City. It is as follows:

> The Government of the United States certainly has the over-all responsibility to bring about a readjustment of wartime contracts. Cooperation is needed between the Army and Navy and private industry, and I believe a proper check should be exercised by Congress.
>
> We have in effect all over this country an emergency from the standpoint of the construction of the buildings that house these great industries. I don't believe you can expect the aircraft manufacturers or private business to take at cost these expensive structures which had to be built, sometimes at a waste, because, of necessity, they had to be built at once. Industry today should be given a reasonable cost basis for the continuance of these factories after war has ended.

There are at least 2,000,000 employees now in the aircraft manufacturing industries of America, and 1,500,000 might lose their jobs immediately at the conclusion of the war, especially the end of the war in Europe. Loss of these jobs could be rapid and a fearsome result might come to America at the war's end. I think, however, we can go through a period of leveling off and readjustment and at least 500,000 to 750,000 workers can be kept in the aircraft industry after the war. They might work part time in many activities other than actually be employed in an aircraft plant. They could be used in agriculture. Now, I realize that there are many individuals who believe that it is not practical to have employees work part time in a factory and part time in the production of the products from the soil. Mr. Chairman, I believe part time work is sound. I believe, on a small scale, it has been found feasible and I believe in the post-war period of America many aircraft factories, particularly those on the west coast, could utilize tens of thousands of individuals who would work part time on small farms, and even on larger agricultural projects, and at the same time be employed for a certain number of hours or a certain number of days a week in the production of aircraft.

Senator MURRAY. Has Mr. Ford suggested such a program as that at some time?

Mr. RANDOLPH. I believe he has, sir. I am not just sure who has suggested it or what has actually been done, but I know that there are reasons, from my own observation, to believe that after the war we will have in this country men and women who could work on the soil, and till the land and who would also find time to supplement their income by working in factories. There is no reason why the aircraft industry can not do this on a large scale.

I believe also that a second possibility for the aircraft worker today, who will probably be displaced in a large measure, is for that individual to continue, as I have said, in part time employment of other types.

I believe also we can balance heavier plane production with lighter aircraft output. There are individuals who believe that that can not be done possibly in some plants, but I believe there are men who are making a study and a thorough research who believe that the plant can combine the heavier aircraft which will be used in wartime or in air transport activity and the smaller plane for private business and pleasure in this country—the family-use aircraft.

After World War I, we became a nation on wheels and our economy was built around the automobile. I believe in view of the fact of what happens in this war, instead of an era on wheels, America will become a nation on wings. I believe that the approximately 24,000 privately-owned and operated aircraft that we had in this country as of Pearl Harbor day in 1941 will be increased, certainly within a reasonable period of readjustment after the war, to upward of 400,000 to 500,000 privately owned and operated aircraft. Oliver Parks, far-visioned head of Parks Air College, St. Louis, Mo., believes approximately 140,000 permanent aircraft manufacturing jobs could be maintained through the construction and operation of 6,000 air parks. These facilities would be essentially for the private flier. We do know that more than 200,000 persons have indicated that they desire, at the close of the war, to purchase small planes for private use. Mr. Parks believes that there may be 5 million private planes built and sold by 1960. It is on this basis that he estimates the 140,000 permanent jobs in manufacturing the personal plane.

There is a responsibility of America to keep its aircraft industry after the war is concluded. I believe it will be absolutely tragic to America and disastrous, for that matter, to the world if this Nation does not continue in the post-war period to build a continuing air power, to be utilized certainly for the purpose of peace but possibly for the purpose of war.

I feel that the 28,000 high schools of the United States will fail in doing a complete educational job if they do not include in their curricula pre-flight courses, such as, navigation, theory of flight, servicing of aircraft, meteorology and many other subjects. If these 28,000 high schools of America can, not a part of them, have these pre-flight courses as a part of their regular studies, the educational system of America will be more valuable, not only to the boys and girls who will absorb that which they study, but to the nation in any emergency in which it might find itself in future years.

So we have a potential of millions of young men, the youth of America, who are going to begin to think, and they should think, in terms of the utility of aircraft in the future of this country.

I also believe that any administration, whether it is Republican or Democratic, should subsidize—and that word may be unpopular today—should subsidize in the future actual flight training of boys and possibly girls of the ages of 16 and 17 in the United States.

Now, someone may say, "Well, those boys and those girls can pay for their own flight training." It cannot be done, and the discriminating taxpayers of America, regardless of whether they are the Democrats or Republicans who are in power in the next few years, cannot better spend tax money than for a part of it to be used to subsidize actual pilot training of the youth of this land. Those youth are in the age brackets where they do not have the money to take flight training and pay for it themselves. In their twenties, of course, after they are employed they might have the money but those of 16 and 17 years of age, take most readily to pilot training. This has been shown by a study of the pilot training program which was adopted as a civilian measure in 1939 but which certainly gave a backlog of at least 100,000 pilots who have gone into the channels of Army and Navy aviation.

I believe in a program for approximately 120,000 youth in the age bracket of 16 and 17 to be trained through aid from the Federal Government each 12 months, at least for a period of 5 years after the war has been concluded. In other words, we could train approximately 600,000 boys and possibly girls in this age bracket in that 5-year period.

In conclusion, I believe also that the Congress of the United States, in preparing for the post-war period, when the aircraft and the air-transport industry will be increased, that the Congress should consider that this Federal Government can and must assist the political subdivisions of the community, the county or the State, in the construction of airports in this country. People say, "Well, now, when this war is over the Federal Government should not spend funds upon any activity of this type." I remind you that the Federal aid highway bill which, each 2 years, comes before the Senate and House for passage, gave to America a system of roads throughout this nation prior to the war which were the envy of the world. Under wartime stress, when repairs could not be made, with the heavy equipment which has been hauling the materials to the fighting fronts, by and large that highway system has stood the test. In other words, it was built soundly and it has been used effectively. We found that America in war had to depend upon this building program which was constructed in peacetime.

For a period of 5 years after the conclusion of this war, America, through Federal aid, matching 50–50 with the State or other political subdivision, should lay down a pattern of between 12,000 and 15,000 airports in this country. These airports do not have to have in all instances hard surface runways, but can be built at a few thousand dollars' cost, especially in the smaller communities where the turf will make it possible for the landing of light aircraft, and in some instances the heavier aircraft. I believe this Nation can profitably spend $100,000,000 every year of Federal funds, matched, of course, by State or local funds, and an expenditure of at least $2,000,000,000 of airport construction should come about in this country in 10 years after the war. Tremendous growth will come in private flying, I repeat, and air-transport lines will have a great upsurge.

Mr. Chairman, once again I congratulate this subcommittee and express my genuine appreciation for the opportunity of making these few remarks.

Senator MURRAY. I thank you very much for your very able statement, Mr. Congressman. I am glad that you came here and gave it to us.

Mr. RANDOLPH. Thank you, Senator.

Senator MURRAY. Mr. Frankensteen.

STATEMENT OF RICHARD T. FRANKENSTEEN, VICE PRESIDENT AND DIRECTOR OF AIRCRAFT, UNITED AUTOMOBILE WORKERS—CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. FRANKENSTEEN. I testified before this committee about 6 months ago on the cut-back in the production of Navy Corsairs at the Brewster plants on Long Island and in Johnsville, Pa. I am sure you will be interested to know what has happened at those plants in the meanwhile.

Labor's contentions have been borne out. We predicted that the way the termination was handled would bankrupt the company and would leave the workers without jobs. This is what happened. The workers at the Long Island plant of Brewster have scattered and many of them are still unemployed.

What developments have occurred during this period in the Government's plans with regard to the handling of reconversion? At the W. P. B., a program has been worked out by the production executive committee staff and approved by the production executive committee and by the armed services. This calls for advance notice to the production executive committee in the case of all cut-backs in war programs amounting to a million dollars or more per month. It involves also approval by the production executive committee of the detailed plans regarding which plants are to be cut back, prior to the cut-back itself. Through the machinery of the labor and industry representatives at the War Production Board, information regarding the impending cut-backs is transmitted both to the plant managements and to the unions involved.

These are steps in the right direction, but they are by no means adequate. In the first place, the new procedures apply only to prime contractors. Since no more than one-half of workers employed in munitions production are employed directly by prime contractors, this limitation is obviously a very important one. There is nothing in the present procedures to determine how the prime contractor will distribute the cuts which he must necessarily make in his subcontract work. In general, it may be supposed that as war production declines and until reconversion really gets under way, the prime contractors will pull in their subcontracts insofar as possible, and concentrate production in their own plants. Thus, from the standpoint of disemployment, the importance of the subcontractors is even greater than is indicated by the proportion of workers whom they employ.

Senator Murray, you will not miss the significance of this point for the small businessman. As war contracts are terminated and canceled, the small producer who operates at the beck and call of the big producer will be the one who takes the brunt of the cut-back. Later,

however, when reconversion is well under way, we may find the reverse: the prime contractors, scrambling to return to nonwar production, will again pass the burden on to their suppliers and subcontractors. All this, as I shall point out presently, indicates the urgent need for developing orderly reconversion plans.

A second defect in the present procedures is the absence of a policy regarding the selection of plants to be cut back. This is a difficult issue, but one which must be faced with a maximum of public discussion and public consent. Otherwise there will be charges of discrimination against plants or against localities, with the result that morale will be seriously impaired. Many factors must be taken into account, but it seems to me that two are crucial.

Those plants best prepared for immediate reconversion to nonmilitary production should be the first cut back. That is, other things being equal, if there is a choice between cutting back production in a highly specialized plant or in a less specialized plant, the latter should be selected. This would mean frequently that privately owned plants would be chosen for cut-back ahead of new Government-owned plants. Incidentally, the effect of such a policy would be to increase the pressure for planning and scheduling reconversion.

A corollary to this principle would be the selection of plants which subcontract a considerable portion of their work, in preference to plants which handle it all themselves. Thus, the subcontractors which are typically more flexible and more readily reconvertible would be the ones to start on nonmilitary production.

The second principle, essentially similar to the first, which should be used in choosing plants for cut-backs, is that preference should be given to plants in areas of diversified production. Thus, in the aircraft industry, for example, as between two plants, one in Detroit and one in Wichita, the choice would fall on the Detroit plant. This would be desirable both because the Detroit plant could be more readily reconverted, and also because delay in stopping production in Wichita would provide the time necessary for developing plans for handling the extremely difficult situations which are bound to develop in the greatly expanded, single-purpose war areas.

The aircraft industry, with the exception of shipbuilding, is the most difficult industry to which to apply these principles. Obviously, a very large proportion of its facilities are of the single-purpose type, located in single-purpose areas. It is imperative, therefore, that work be begun at once on what is commonly called "post-war planning" for the aircraft industry. The cut-backs which are visible in the next 6 months will involve not only reconversion problems, but post-war problems. I shall return to these issues later. They are urgent.

A third limitation concerning cut-back procedures arises out of the continuing failure to schedule the resumption of nonmilitary production. With munitions employment already sharply on the down grade, essentially nothing has been done to insure that the workers, no longer needed in producing war materials, shall be expeditiously reemployed in the production of nonmilitary goods, either for export or for meeting essential civilian needs at home. Here and there minor changes are being made in W. P. B. orders concerning the use of critical materials and some relaxation has occurred in the limitation orders applying to consumer durable goods. The policy, if it can be called

that, is a negative one of relaxing controls, not a positive one of adapting controls to the needs of a new situation, namely, the shift back from producing war goods to producing peacetime goods.

On this matter there appears to be an extraordinary amount of pulling and hauling in Government circles, reflecting policy conflicts within industry. Certain elements in W. P. B. are lined up with the services to delay the return to nonmilitary production, while other elements in W. P. B. are lined up with small business to expedite reconversion. From the standpoint of the general interest of the country as a whole, which sees orderly reconversion as a wartime necessity for the maintenance of full employment, there can be no choice between these two positions. Recognition of this fact, Senator, is one reason why labor is wholeheartedly supporting the idea of overall legislation in the reconversion field.

I should like at this point to make some observations on the position taken by the Services in this connection. Their weight is being thrown heavily against any immediate reconversion. No one, of course, much less our union which takes second place to no one in its emphasis on war production, can object to this if it means simply that reconversion must not be allowed to interfere with production for victory. But it is our conviction that failure to plan for reconversion in time to prevent large-scale unemployment is itself a war necessity. If X day comes before we are ready with programs for nonmilitary production, it is no exaggeration to predict unemployment of up to 4,000,000. This might develop by this Christmas if Germany is knocked out this fall, as we all hope it will be.

In the face of this probability, the services continue to talk only of war production. In effect they are saying, "Our concern is only with immediate war production. We are not interested in the possibility of production chaos after Germany is defeated. And we have no interest whatever in the shape of the civilian economy after the war." Let me illustrate what I mean.

The War Department in recent statements has emphasized that "its monthly goals of war-material deliveries are not being met" and is quoted as having urged the W. P. B. "not to permit relaxation in production controls and to exert even more vigorous efforts to increased manufacture of weapons" (New York Times, July 2, 1944, p. 15). General Somervell, in another press release, "declared today war production was continuing to lag and asked that fishing trips be put off until victory is won" (Washington Post, July 4, 1944, p. 9).

These statements are for public consumption and appear to be designed to throw discredit on war workers; they are not a complete representation of the facts. It is true that war production is now on the decline, but it is not true that war production is lagging. The facts are, as I understand them, that all essential schedules are being met. The schedules which are not being met are an unrealistic hangover of earlier plans and are not being taken seriously either by industry or by the Government.

The aircraft industry is a case in point. The first news release regarding June airplane production emphasized a drop from the preceding month of nearly 10 percent in the number of aircraft produced. A subsequent release, however, pointed out that output in weight per day had been substantially the same over the past 3 months. Moreover, four-motor bomber production, the type most urgently

needed, was ahead of schedule in June. Mr. Wilson explained that the decline in the number of planes produced was "fortunately" principally in types of planes "not needed." I conclude from this that plane production is in good shape. The same, I am sure, is true of other production programs where the pressure is really being applied.

In general, it appears that the barriers of planning for the resumption of nonmilitary production rise out of the very lack of planning about which we are talking. The War Department is reluctant to have the word get around that the peak of war production has passed because they fear an exodus of workers and growing pressure on the part of individual enterprises to get back into civilian production. But the worker's fear of the ending of his war job and the industry's fear of contract termination could readily be allayed if they knew in advance that opportunities were available to them for other types of employment or production, particularly if they knew that jobs were to be available in the same plants or same localities.

Another defect in the current situation regarding the handling of reconversion rises out of the continuing absence of adequate labor participation. Nine automobile companies are scheduled to meet with the W. P. B. next Friday, July 14, according to the New York Times story, "to discuss and learn how they are to return gradually to peacetime production." A proposal is afoot for an early return to civilian auto production at a level of 50 percent of pre-war output—all companies to participate equally. This is a proposal of critical importance to labor as well as to the country as a whole. Yet to date the U. A. W. has received no invitation from the W. P. B. to participate in this meeting. Organized labor is convinced that the interests of the country as a whole and of labor in particular cannot be adequately safeguarded without full labor participation during the reconversion process.

On the legislative front, progress during the past 6 weeks has been even less notable. Congress has passed, and the President has signed, a contract termination bill which in itself will do nothing to meet most of the pressing problems with which this hearing is concerned. So far as I can make out, the next topic nearest to Congress' heart is the disposal of surplus Government property. This is a matter in which the labor movement has a vital concern but is one which, we feel, can best be handled as a part of the whole program for obtaining the fullest possible utilization of our human and material resources, rather than as a single unrelated item. We are united, as you know, in support of legislation which would establish an over-all Government agency to handle the return to peacetime production, and we feel that the disposal of surplus property should be one of the functions of this over-all office. Contract termination should, of course, be handled by the same agency.

Here in the Senate, discussions of such over-all legislation have concerned themselves more with acrimonious intercommittee dispute than with constructive pressure for the passage of adequate over-all legislation. In the House, an over-all bill has only just been introduced. Some persons in the administration appear to be lukewarm over the proposal, preferring to take the long discredited position that it is sufficient to knock heads together when disputes arise, but that no steps need to be taken to prevent the disputes from arising.

Senator MURRAY. Mr. Frankensteen, I would like to inquire, what committees do you have reference to that are engaged in acrimonious disputes?

Mr. FRANKENSTEEN. Well, on the question of the Kilgore bill.

Senator MURRAY. Don't you know that the Kilgore committee is a special committee of the Senate and has no jurisdiction over this problem that we are considering? Don't you know that?

Mr. FRANKENSTEEN. Well, it ties in very closely with it.

Senator MURRAY. Yes, but this committee that I am chairman of is a subcommittee of the Military Affairs Committee and is the only committee that has jurisdiction here, and there is no acrimonious dispute between this committee, of which I am chairman, and the Kilgore committee. I do not know of a single dispute that this committee has ever had with the Kilgore committee in the past, and I am a member of the Kilgore committee myself. I think you are very careless in making that statement.

Mr. FRANKENSTEEN. All right.

Senator MURRAY. There is no basis for it whatever. I have always tried to be very courteous to you, I have always treated you with the most extreme courtesy in all committees in which I have membership, and I do not like to have you make a remark of that kind when there is no basis for it whatoever.

Mr. FRANKENSTEEN. I am sorry, Mr. Chairman. Perhaps my remark should not have been made. I agree as to the courtesy and I appreciate your excellent attitude. I did not mean any affront to your committee or to you personally. Perhaps I should say we regret that there has been no action which will meet the problems which we are facing where action is so sharply needed.

Senator MURRAY. I assume that your labor organization and other labor organizations are very much interested in aiding us and formulating legislation which would be a guide in this connection. Isn't that true?

Mr. FRANKENSTEEN. That is absolutely true.

Senator MURRAY. Don't you know that you have not presented any proposed legislation to this committee, and if you had it would have been considered in connection with the contract termination bill? I sat up late at night and worked on Sundays with representatives of labor in an effort to have them work out a bill on unemployment compensation, and we were unable to do it. Only yesterday I received a proposed bill which representatives of labor think will meet the situation. I haven't read it yet. So, as far as this committee is concerned, I want you to understand that we are extremely anxious to cooperate in every way with every group in the United States in working out these reconversion problems.

Mr. FRANKENSTEEN. I do not intend to challenge that, Senator. I know that to be true as to your particular interest and as to your own participation. I am sorry if my remarks led to your thinking I was attacking your personal activity or the activity of your committee.

Senator MURRAY. Thank you.

Mr. FRANKENSTEEN. As an elected official of a labor union, I can understand the current preoccupation of Senators and Representatives with questions of party conventions and reelection. It must seem

very important to those who are planning the Democratic convention, to which I happen to be a delegate, that they have obtained Helen Gahagan Douglas to outshine Clare Boothe Luce. But I want to reiterate, what I stated in my testimony on the Brewster case, that the absence of over-all production planning, serious as it has been during the war, will be even more serious during reconversion. For both workers and business there was, during the conversion period, a combination of patriotic and financial incentives which made the transition to war work relatively easy. In the period ahead the incentives motivating both business and workers are not such as to make for an orderly transition. The absence of Government controls, developed and operated with business and labor consultation, is certain to produce a chaotic situation which will make extremely difficult the attainment of the full employment about which everyone is talking.

Industry without guidance is certain to seek to return to non-military production in such a way as to maximize immediate profits without much concern about the over-all effects. The recent announcement by the automobile industry, for example, that its first post-war cars will be substantially similar to the 1942 models is a case in point. In the aircraft industry, I have found similarly little in the way of constructive planning with a view to the general interests of aviation. Left to itself, industry tends to think in terms of contract terminations, clearing their plants of Government property, disposal of Government surpluses, reductions in "oppressive" taxes and reduction of the public debt.

This general attitude is well illustrated by the great majority of the winning plans submitted for the Pabst post-war employment awards which I have been looking over recently. Almost none of them gives more than lip service to the full employment concept or to the important human problems involved in reconversion. I am happy to point out an exception which proves the rule, namely, the very fine program outlined by Joseph M. Gillman which I commend to the attention of your committee.

To indicate the magnitude of the cut-back problem which is already upon us, I should like to submit a few figures on employment changes. In this connection, it should be emphasized that by no means all reductions in war employment are in the form of what are currently being called cut-backs. Contractors, as they see that contracts are running out, are permitting their forces to fall off by failure to replace all those who leave. In some instances, according to reports which I receive from the west coast, they are even stimulating the number of quits so as to achieve a reduction in employment. From the standpoint of the individual company, this method of reducing employment may be smarter than the sharp cut-back of the Brewster kind; it is less dramatic and produces less public outcry. From the standpoint of national production, however, there is very little to choose between the two methods. In either case, we are losing the production which these workers might be turning out, and we are bringing upon ourselves a new unemployment problem.

I have prepared a simple table which shows what is happening to total munitions employment, giving in three columns, respectively, peak employment, current employment, and estimated employment

as of the end of this year. You will note that total munitions employment has already dropped off substantially, and that, by the first of the year, there may have been a net reduction from the peak amounting to almost a million and a half. This is on the assumption that the war in Europe is still on. It it is over this fall, a 40 percent decline from present levels would bring employment in munitions industries down to 6,000,000.

Employment changes in war industries

[In millions]

	Peak	Current	End of 1944 estimates assuming war in Europe is—	
			Still on	Ended
All munitions	10.4 (November 1943)	9.8 (April)	9.0	6.0
Aircraft	2.3 (November 1943)	2.0 (June)	1.8	1.2

The second line presents, for the same periods, figures for the aircraft industry as a whole, including employment by subcontractors and employment in plants producing engines and propellers, as well as in airframe assembly plants. Here, too, a considerable drop has already occurred and an even greater one is in prospect. For the Los Angeles-San Diego area, the largest single concentration of airplane employment, the reduction has been even more striking. Some 50,000 or nearly one-fifth have already disappeared, and a further reduction of 50,000 by the end of this year is not unreasonable to expect, even if there are no further substantial changes in scheduled output. Thirty thousand have been dropped in the last 90 days.

It is common gossip that with the end of the European phase of the war, production schedules will be cut by 40 to 50 percent. It is common gossip, also, that the Army's supply program provides for a very wide margin of safety. As a civilian, I am in no position to criticize this policy even if I wished to do so. I must point out, however, that the abundance of supply which now characterizes the Army situation presents certain possible dangers. It is possible to come to a sudden decision, as was done apparently in the Brewster case, to cut back scheduled output suddenly.

That such action might be taken on the basis of political considerations, leading to drastic cut-backs within the next few months prior to the November elections, seems to me a possible eventuality not to be overlooked. It was with this type of possibility in mind that President Murray addressed a wire to Secretary of the Navy, James V. Forrestal, at the time of the Brewster cut-back, urging him to make sure that there were no political considerations involved in that particular action. I am reading from the paragraphs in question:

> In the meantime it is respectfully requested that the Secretary examine the political background of the Navy's action. Those in your Department initiating the action could not have been blind to the fact that termination of contracts are of the greatest political significance in this election year, particularly when it is demonstrated that the Department has not planned for or exhibited any consideration of the people thus thrust out of work.

The apparent motive of secrecy from other Departments, created by our great President to handle just such emergencies, it is respectfully urged, merits your attention.

It would be most reassuring to be informed that the Navy's action was not precipitated by Navy Department people unfriendly to the President of the United States and to Senator Robert Wagner of New York. Such a back-door entrance into national politics, we feel sure, you would deplore in any Department serving under our President.

I am glad to believe that in this instance the action was not taken on these grounds, but I should respectfully like to urge that the best way to avoid the appearance of an improper use of the power of the military would be the adoption of some type of over-all planning in which all interested groups participated.

In connection with the transition to peacetime production, there are several specific steps which must be taken in order to safeguard workers' earning power, to insure the maintenance of purchasing power, and to prevent unnecessary loss of productive capacity. I recently addressed a letter, June 13, 1944, to all aircraft locals in my organization, recommending that wherever possible, they enter into negotiations with the aircraft companies with a view to adding to existing contracts provisions for severance pay. I suggested, as a standard, 4 weeks' pay (at the 48-hour rate) for those employed 6 months or more but less than 1 year, and 8 weeks' pay for those employed for 1 year or more. Several of the locals have reported that they have negotiations under way. Local 887 in Los Angeles is one of these. We are prepared in most instances to find the companies unwilling to accept any such proposal, and are assuming that the cases will go to the National War Labor Board for settlement. We believe it should be a policy of the War Labor Board to approve severance pay provisions in collective bargaining contracts. There is nothing inflationary about this proposal; on the contrary, the payment of these wages, as employment falls off, will have the effect of helping to hold up national purchasing power when it is most needed.

There is a lot of nonsense widely current concerning the reserves which workers have been able to accumulate during the war because of allegedly high earnings. A recent study by the United Steelworkers dissipates this idea completely. Typical steelworkers' families were interviewed during the fall of 1943 to obtain specific information regarding their expenditures, earnings, and savings. It was found that despite the fact that they were buying War Savings Bonds, they were doing so only at the expense of other savings, and that on balance they were going into the red to the amount of $3.42 per month. While the coverage of this study is not great, there is no reason to suppose that its findings are not typical of war workers, while in the lower-paid categories they had even less opportunity to save than the steelworkers. Furthermore, as the C. I. O. and A. F. of L. studies on the cost of living have demonstrated, living costs have risen in the neighborhood of 45 percent since January 1941, thus erasing the large amount of increased dollar earnings. I think that can be illustrated also by the failure to meet the quotas on the sale of "E" bonds. I don't think there is any question that, when the cost of living was not high or as high as it is, and there was some surplus, the workers were purchasing more war bonds, but in this last drive they certainly did fall off because the money just was not there.

In passing, it may be interesting to compare the findings of this study of the steelworkers with a recent study by the Securities and Exchange Commission of working capital holdings of American industries. These, according to the S. E. C., have reached an all-time peak, amounting to a total of 41.6 billions of dollars in 1943. To quote from the S. E. C. statement: "At the end of 1943, American corporations were in as favorable a financial position as they had ever been in their history." As a whole, American industry is in an essentially favorable position to reconvert.

It is true that the aircraft industry, having expanded phenomenally during the war primarily with Government funds, is in a considerably different position from manufacturing industry generally. Its working capital position is distinctly less favorable. Over against this fact however, should be put another, namely, that the aircraft industry has been fabulously profitable during the war. By 1943 the rate of return on net worth for 24 leading aircraft, parts, and engine plants, had risen to an average of 41.48 percent, the equivalent of $41.48 for every $100 owned by the stockholders. In the single year of 1943, therefore, a stockholder got back in profits almost one-half of his total investment. I am submitting for the record, at this point, an analysis of aircraft-industry profits prepared by our Research Department.

Senator MURRAY. It may be inserted in the record.

(The analysis referred to is as follows:)

AIRCRAFT INDUSTRY PROFITS, 1939 AND 1943

[From the Research Report, Detroit, Mich., June 1944]

A preliminary study of 24 leading aircraft, parts, and engine compaines' profits before and during the war has just been completed by the United Automobile Workers-Congress of Industrial Organizations. The results of the study—covering more than half the industry—show that between 1939 and 1943 net sales increased 2,466.3 percent, profits before taxes increased 1,797.5 percent, profits after taxes increased 684.3 percent.

These figures do not fully reflect the actual increase in sales and profits for the entire industry, for the preliminary survey does not include such large corporations as Curtiss-Wright, Wright Aeronautical, and North American Aviation, companies which have not yet released their 1943 income accounts to the public.

For the 24 companies as a whole, net sales rose from $239,742,201 to $6,152,428,024 between 1939 and 1943. Profits before taxes shot up from $33,703,593 to $639,516,972; and profits after taxes, from $20,199,905 to $158,425,411.

RATE OF PROFIT

The 1939 profits after taxes for these companies represented a 14.16 percent rate of return on net worth. In other words, for every $100 which a stockholder held, a net profit of $14.16 was made that year. By 1943, the rate of return on net worth for these same companies had risen to an average of 41.48 percent, the equivalent of a net profit of $41.48 for every $100 owned by stockholders. In the single year of 1943, therefore, a stockholder got back in profits approximately one-half of his total investment. Figured in terms of their 1939 net worth, the 1943 profits of these 24 companies yielded an average rate of return of 111.06 percent. In other words, they made in 1943 a profit of $111.06 for every $100 owned by their stockholders in 1939.

The average return on net worth for the aircraft industry—41.48 percent—was approximately 4¼ times as large as the 9.9 percent rate of return which, according to the National City Bank Bulletin, was the average for all manufacturing industries in 1943. It was approximately 3 times as large as the 16.1 percent average rate of return for the automobile industry.

AUTO AND AIRCRAFT

The spectacular increase in profits of the aircraft industry does not mean, however, that it has reached the position where it threatens the dominance of the automobile industry. That increase is largely accounted for by the fact that the auto industry before the war was already the Nation's largest industry, while aircraft in 1939 played only a minor part on the American industrial scene. Auto plants, for example, employed about 700,000 workers in 1939; aircraft, only about 50,000. In 4 short years, however, the aircraft industry, fed by Government orders, has become a major American industry and the Nation's leading war industry.

The relative positions of the auto and aircraft industries 4 years ago has had a major effect on the wartime position of the aircraft industry today. Because the auto firms were well established several years ago, they were able at that time to exert pressure on Congress to enact tax legislation which would be most favorable to them.

TAXES

Proof that present corporate tax legislation works to the advantage of older, well-established industries may be seen from the fact that taxes eat up a smaller proportion of their earnings than they do of the earnings of new industries. Profits after taxes of the auto companies included in the recent United Automobile Workers, Congress of Industrial Oragnizations, survey amounted to 35.5 percent of profits before taxes. For the 24 aircraft corporations included in the present survey, profits after taxes amounted to only 24.8 percent of total income.

In terms of dollar of net profit per dollar of sales, it can also be shown that the tax laws favor the automobile industry. In 1943, net profit per dollar of sales in the auto industry was 3.2 cents. Aircraft companies made only 2.6 cents on every dollar of sales that year.

Spokesmen for the aircraft industry, in testifying before Congressional committees on renegotiation and taxation, repeatedly make the claim that the industry is in a precarious financial position. They conveniently gloss over the fact that, since 1939, earned surplus—the part of the profit which is left after the distribution of dividends—and contingency reserves have increased at least 793.85 percent. They do not mention the fact that while net income for the industry rose from $70,000,000 to $82,000,000 between 1941 and 1943, dividends paid out dropped from $28,000,000 to $24,000,000. And they never acknowledge that under the terms of the Federal tax law they are guaranteed rebates if, after the war, their profis should drop to the 1939 level.

Aircraft industry profits, 1939 and 1943

Name of company	Net sales		Increase of sales, 1939–43	Profits before taxes		Increase of profits before taxes 1939–43	Profits after taxes [1]		Increase of profits after taxes, 1939–43

GUARANTEED ANNUAL PROFITS

If these corporations should operate at no profit in 1945, they would under the carry-back and carry-over provisions of the tax law be entitled to checks from the United States Treasury worth the following amounts:

Fairchild Aviation	$358, 651	United Aircraft	6, 690, 266
Bendix Aviation	1, 925, 404	Douglas Aircraft	4, 009, 700
Boeing Aircraft	898, 900	Cessna Aircraft	200, 885
Aviation Corporation	1, 263, 500	Thompson Products	1, 061, 510
Beech Aircraft	169, 859	Glenn L. Martin	2, 222, 755
Air Associates	149, 207	Hayes Manufacturing	412, 114
Bell Aircraft	555, 500	Timm Aircraft	17, 574
Bellanca Corporation	101, 000	Ryan Aeronautical	89, 804
Consolidated-Vultee	1, 020, 100	Continental Motors	732, 250
Breeze Corporation	509, 343	Lockheed Aircraft	1, 789, 316

Mr. FRANKENSTEEN. The same study shows the amount which these 24 companies would receive back from the United States Treasury under the carry-back and carry-over provisions of the tax law if they should operate without profit in 1945.

Severance pay is one thing we are working on as an immediate aid during reconversion. A second safeguard consists of the seniority provisions in our contracts. These assure some degree of orderly reduction in force when lay-offs are necessary. They likewise offer in some measure an orderly procedure for reabsorbing the returned servicemen. Your committee may be interested to know that many of our aircraft contracts contain clauses of this sort. (I am quoting from a summary of the contract between the Wright Aeronautical Corporation, Paterson, N. J., and Local 689, U. A. W.-C. I. O.):

Men and women, drafted or enlisting, get leave of absence and accumulate seniority during period of service in armed forces. Upon termination of service, if honorably discharged, will be reemployed on basis of seniority if qualified to do available work at the then current rate for such work, if he reports within 60 days.

We are also, as I point out later, working to insure maintenance of purchasing power through increased wage rates. These are the steps—severance pay, seniority rules, and increased wage rates—which, as a union, we can work for most directly. Beyond that we have to depend largely upon Government action. It is necessary for the Government to provide adequate unemployment compensation, to pay transportation costs involved in shifting from one job to another, and to establish training and retraining facilities adequate to handle immense turn-over. All of these presuppose the development of an adequate Federal employment service.

Of these, the most pressing is the need for an adequate system of unemployment compensation. Three proposals are currently before the Senate: (1) that embodied in the Kilgore bill for interim emergency unemployment benefits of practically unlimited duration; (2) that in the George-Murray bill establishing Federal standards (though in the latest version these standards are not specified); and (3) that recently enunciated by the George post-war committee for an improvement of the standards of the State laws with a Federal guaranty of the solvency of State funds.

In this connection I regret exceedingly that the urgency of adopting legislation for an improved system of unemployment compensation received no more than lip service here in the Senate even on the part of some liberal Senators.

Senator MURRAY. Right there, Mr. Frankensteen, I think you are making a very serious mistake in your observations. I have remained here in Washington in an effort to work out this legislation, and I am doing everything in my power to get legislation that it may be possible to have passed in the Senate. There is no use going into the Senate or into the House with legislation that will not pass. It is a very highly technical job. The experts on labor legislation have not yet produced anything. Now, I do not see why you should try to single out some of these Senators who have been working hard to get this legislation ready. I do not see why you should criticize them when they are doing everything in their power to work out legislation here that will be helpful to labor. You say—

Several Senators, including yourself, Senator Murray, Senator George, and Senator Barkey, stated publicly that they favored the postponement of the recess until after the passage of such legislation.

Well, of course, I was anxious to have a postponement of the recess. The fact that I remained right here is an indication that I meant what I said in that regard. It is not an easy thing to work out this legislation.

Mr. FRANKENSTEEN. Senator, my remarks here are not questioning the fact that you, as others did, and as Senator Vandenberg, for example, wrote W. G. Grant, president of Local 600, U. A. W.-C. I. O., on May 18:

I made a statement on the floor of the Senate Monday that the bill for Federal unemployment insurance (to supplement State unemployment insurance funds) should be brought to passage within the next few weeks and that there should be no consideration of a congressional recess before this action is concluded.

Senator MURRAY. Yes.

Mr. FRANKENSTEEN. All I am saying in this is that it was not done, we did not get it, and the action was not taken. Now certainly the Senate is responsible for the adjournment.

Senator MURRAY. You say it is responsible for not getting the legislation before recess?

Mr. FRANKENSTEEN. For not carrying through.

Senator MURRAY. You are very gravely mistaken there. The Senate can only pass legislation which can be formulated and which can be presented to the Senate for action on the floor. If you haven't got it ready, how can the Senate act on it? You cannot grab a bill off the shelf as you can go into a cigar store and buy a cigar, and put it through the Congress. It requires a great deal of time, care, and study to work out these things. They are highly technical; you know that. You know that the States are opposed to this legislation, and we are trying to work it out in such fashion that we may be able to get by with it in the Senate. We think we may be able to get a bill ready in a few days or a few weeks so it will be ready when the Congress returns. I don't think there has been anything lost by reason of the recess which has been taken to allow the Republicans to hold their convention and the Democrats to hold their convention because, in the meantime, the work is going on in a study of this legislation, in a real effort to work it out so it can be presented.

Mr. FRANKENSTEEN. Senator, it is true that many Senators did make that statement, and you were one.

Senator MURRAY. Yes.

Mr. FRANKENSTEEN. That you felt the adjournment should not take place until this action is concluded.

Senator MURRAY. We were talking about a full adjournment. They were talking about adjourning from that time until a very much later period, but they changed their plans on that, because they merely took a recess until after the conventions, so that in the meantime the legislation can be processed to presentation.

Mr. FRANKENSTEEN. Maybe I am overanxious because of the problems we are facing, but they are so critical and so realistic that I could not help but make that statement.

Senator MURRAY. I appreciate that.

Mr. FRANKENSTEEN. Maybe I cannot understand the delays when so much is involved.

Senator MURRAY. I appreciate your earnestness in this matter and your sincerity, but I want you to feel that we can be sincere, too.

Mr. FRANKENSTEEN. I do not challenge that.

Senator MURRAY. We are not trifling with the people of this country in our effort here. Many of us are overworked. You ought to realize that it is not fair for you to make any insinuations against people here who are honestly and sincerely trying to do a job.

Mr. FRANKENSTEIN. I will say once more for the record, Senator, I have never questioned your sincerity. I know your standing, how you work, and I know how hard you tried to put through the legislation. That is true of a lot of other Senators, but I cannot help feeling that there has not been adequate time put in—not by you, I know you worked holidays and every day yourself, as has your committee, because I appeared on this problem—but there has not been sufficient realization of the need of action on this problem. Certainly it has been pending so long that we had a right to expect some action prior to this reality of the situation being upon us.

Senator MURRAY. I realize you feel that way, of course. As I said, it is such a technical matter, such a controversial subject, that it is not easy to work out. It takes time. We have prepared a dozen drafts of legislation, each time to find defects in it. We are still working on it. So I want you to feel that we are sincere and honest and energetic in what we are trying to do here. I thank you very much. Go ahead.

Mr. FRANKENSTEEN. Turning now to a somewhat longer look at the airplane industry, I should like to consider some of the problems involved in the future development of the industry. With respect to the three major portions of the industry—relating to the production of military planes, of transports for scheduled air line use and of private planes—I shall discuss principally the question of planes for private flying. The extent to which the production of military planes continues after the war is a problem for the Army and Navy to decide. Most of us would like to look forward to a peaceful world in which the Military Establishment need not be large. But the experience of the last few decades suggests that it may be a long time before this end can be achieved. We are, therefore, prepared to accept the position that the Army and Navy will insist on a much larger production of military aviation equipment than before the present war.

The volume of the production of transports for scheduled air lines depends upon factors which again are largely out of our control. The Civil Aeronautics Board has made an elaborate study of the possibilities for the development of feeder and pick-up lines which appears to be one important direction in which transport flying may develop. Most conducive to an expansion would be significant reductions in rates, particularly for air express. These now run five times or more as great as Railway Express, with the result that volume is unnecessarily restricted. Control of air express by the Railway Express Agency is a dominant factor in this situation. Reduction in air-mail rates to the regular 3-cent rate and with a change in post-office procedures so that all first-class mail would go by air, whenever it could do so more expeditiously, will greatly increase the volume of air mail carried. The introduction of air parcels post would be similarly helpful in stimulating air transport and would be one lever in forcing a reduction in express rates. Rates for passenger travel, now down close to the Pullman rates, can and should be further reduced.

The development of a large industry producing planes for private flying depends in the first instance upon developing and maintaining a high level of consumer purchasing power. The importance of the large volume of purchasing power has a much wider significance than this statement would indicate. It is the principal problem of postwar economic policy. It is with this end in view that the C. I. O. is pressing for high wage rates and for guaranteed annual earnings in one form or another. According to Government statistics, a total of almost 90 billions went in 1943 for wages and salaries (excluding agriculture). Taking manufacturing alone, with which we are now principally concerned, wages and salaries for 1943 amounted to $46,796,000,000. This is total earnings, the sum of the take-home pay to all workers engaged in manufacture.

When we return to peacetime production, we can expect a very substantial falling off in these figures even if there is no decline in wage rates. Assuming the same percentage of premium overtime pay as in 1939, the total of wages and salaries in manufacturing would be only $38,770,000,000, or a 5-percent reduction. Falling back to the same average weekly hours as was worked in 1939 would cause a further 15-percent reduction to $32,632,000,000. If, further, we return to the same percentage distribution of industry as before the war—if, that is, workers shift back from manufacturing to trades and services, and within manufacturing from the higher-paid industries like shipbuilding and automobile production to textiles or other lower-paid industries—there would be a further drop of 20 percent in total salaries and wages. Thus, taking these three factors into account, the total of wages and salaries in manufacturing may fall by as much as 40 percent, even if there is no change in wage rates and even if there is no net reduction in employment.

The importance of raising wage rates is, therefore, apparent. It is demanded not only by the necessities of the workers as a group, but by the necessities of the economy as a whole. Specifically in connection with the production of airplanes for private flying, how can we expect to build a large and strong industry unless a large proportion of consumers have the wherewithal to buy the output of the industry?

There is nothing fantastic about the idea of raising wage rates during this period. On the contrary, the increase in the productivity of labor in war production has now become so great that it is high time that labor obtained some of the benefits directly. In the case

of airplane production, productivity per man-month has risen by some 300 percent, and in the case of the west coast plants alone the rate has been about 500 percent. For the west coast plants, the average airframe production per worker in January 1941 was just under 19 pounds. By January 1944 this had increased to 118 pounds. During the war, labor has foregone its usual privilege of sharing, in the form of increased wages, in rising productivity. We have accepted the Government's policy of equal sacrifice. Now, however, with employment and purchasing power beginning to drop off and with every prospect of severe declines in the future, we feel that both justice and necessity require a return to the customary relationship according to which wages go up with rising productivity.

A second prerequisite to a sound development of private flying is an extensive Government research program, with a pooling by the industry of technical developments. There already are small planes that are extremely easy and safe to fly—so easy, in fact, that the Army has not wanted to use them for training purposes—and there has already been some investigation into the possibilities of developing a roadable plane. Such work has been done almost exclusively by individual plane manufacturers rather than by the Government. Government research, both before the war and even more so during the war, has been concentrated upon developments for military type ships. After the war, there is reason to believe that the War and Navy Departments will see to it that research along these lines is continued, but they have little interest in the development of the kind of plane which you and I would like to own and fly. There is need for some reorientation on the part of the work of the National Advisory Committee for Aeronautics, or for the development of a research program under the auspices of the Civil Aeronautics Administration. It seems clear that this work should be in the hands of a civilian agency.

With respect to the pooling of industrial technique, this would be simply an extension of what has been done during the war through the Aircraft War Production Council. Restrictive policies which would keep new techniques in the hands of a single company as long as possible are needed only in a restricted market. If we succeed in getting an economy of full employment, the gains from a restrictive policy will be outweighed by the advantages of universal adoption of improved equipment.

A third area in which activity is necessary in order to insure a healthy post-war private flying industry lies in the development of a much needed airport program and the provision of other flight aids, including flight strips along highways, control devices, and airway markers. Thus far the location of airports has been almost exclusively related to the needs of transport flying. Even from this standpoint a considerable expansion and improvement is in order so as to increase the utility of air transport. From the standpoint of private flying there is a whole new field to be developed. This calls for an integrated program involving at least the Bureau of Public Roads and the Civil Aeronautics Administration. Airfields now maintained by the Army should be considered for their feasibility in connection with this other use.

A greatly enlarged civilian pilot training program is a fourth need. Other countries have gone much further than we in stimulating civilian

interest in flying. In Germany and in the Soviet Union, for example, flight instruction has been very general in the schools. Here again coordination is needed among the agencies interested, in this case particularly the Civil Aeronautics Administration and the Office of Education. If, as the Army is inclined to believe necessary, we must have universal military training after the war, flight instruction should certainly be a part of it. Such a development, in my judgment, need not preclude a civilian training program of a less intensive sort. Indeed the Army program would benefit by a preliminary acquaintance with planes and engines on the part of those coming up for military training.

The widespread development of interest in aviation and training, not only in flying but in aviation mechanics, offers an important outlet for those types of aviation equipment which will become surplus as the war terminates. No Government agency is at present equipped to push for the fullest utilization of such equipment in the schools and colleges. The Civil Aeronautics Administration, in cooperation with other interested agencies, should be authorized to develop such a program and to present the needs of such a program to the Surplus Property Administrator.

Similarly, it is possible that some of the present airplane plants could be effectively used in this connection. It is inconceivable on the most optimistic premises that the post-war aircraft industry will utilize fully the plant and equipment now in use for the production of military airplanes. Much of it can be utilized for other productive purposes; just what can be produced in present airplane plants seems to me a problem which private enterprise is peculiarly fitted to solve. In this matter, I am prepared to trust the inventive and business genius of American enterprise. Wherever productive uses are not possible, however, I suggest that attention be directed to the possibility of turning the plants into educational institutions equipped for training in the field of aviation from start to finish. In some instances, these centers might be taken over by private institutions such as universities, but in most instances they would have to be operated as part of the educational system and with a considerable Federal subsidy. Such use would be an appropriate recognition of the stake which the Federal Government has in these plants.

In conclusion I should like to urge the formation of a national aircraft development council. This might be looked upon as a peacetime version of the Aircraft War Production Council, though in structure it should be essentially different. Instead of being limited to industry representatives, it should be a tripartite body, with labor and Government members in addition. The purpose of the council would be the fullest possible development of the post-war aviation industry with particular reference to civilian use.

I should also like to make a suggestion, Senator, so that you would not think I have any prejudices. I would like to ask you to undertake this type of movement. It seems to me we are going to have to move to the industry levels, to the community levels, on these termination and cut-back problems. I believe it would be most helpful if in every aircraft center in the United States you would move in and call conferences of the community, of the industry and labor, and have a frank discussion of just what work they might move into, what the termination possibilities are, and what the community can provide. We

are specifically requesting that you do this on the west coast, as Brother Michener will point out in his testimony, but I would like to point out that you move with us on a national basis in all communities.

Senator MURRAY. I believe that is a very good suggestion, and we contemplate taking that up.

Mr. FRANKENSTEEN. Fine. There might well be, for example, such a council in California, the State which faces this problem in its most critical form. I propose to do everything in my power, and to urge on my associates to do everything in their power, to organize and develop such joint councils.

At this stage of the airplane industry, it is next to impossible to predict with any accuracy the rate at which the industry will grow. We are now at about the point at which the automobile industry was in 1901 or 1902, in terms of number of private planes registered. If the number of planes increases at the rate of the fastest expansion of the automobile industry—namely, 45 percent per year, it would take 10 years to reach the level of 1,000,000 planes. At a rate of 25 percent per year, there would be less than a quarter of a million planes by the end of the tenth year. With variations as great as this and with all the uncertainties ahead, it is obviously impossible to estimate the size of the post-war industry. What we can do is to set about developing the governmental and other procedures which will guarantee as large an industry as possible. It is with this thought in mind that I have recommended a coordinated approach among interested agencies to problems of training and research and have suggested the formation of a National Aircraft Development Council.

The committee will be interested to know that I have already obtained agreements with Mr. Donald W. Douglas of the Douglas Aircraft Co., Inc., and with Mr. Henry J. Kaiser for a cooperative approach to the problems of the post-war industry. These agreements are obviously not enough in themselves, but point the way toward a larger cooperative relationship which, when expanded to include a number of companies, should also bring in representatives of the Government.

Mr. Michener, the west coast regional director, U. A. W.-C. I. O., will next address you. I might say I have met with Donald Douglas and Mr. Henry Kaiser, and both of them are very willing, in fact anxious, to sit down in a tripartite form of discussion and see if we cannot work out something that will meet the problems of the industry. They have both expressed a willingness to see me and work out the problems.

At this time, Mr. Chairman, with your permission, I would like to ask Mr. Michener, who is the director of the U. A. W., west coast region, to supplement this statement with some pertinent facts pertaining to the west coast.

Senator MURRAY. Thank you, Mr. Frankensteen.

SUPPLEMENTARY STATEMENT ON PROFITS OF AIRPLANE COMPANIES

(Submitted by Mr. Frankensteen, July 20, 1944)

The United Automobile Workers, Congress of Industrial Organizations, has never denied that profits per dollar of sales made by aircraft companies during the war have been comparatively modest. Such companies could scarcely have expected to mark up a return for themselves on Government investment in plant, equipment, and materials which was required to meet production demands. Having refused the risk of this investment they cannot with good logic demand the profit which is presumed to reward the taking of risks. That is why aircraft profits before taxes increased no more than 1.797 percent on a sales increase of 2.466 percent.

Current market prices of aircraft corporation stock cannot be accepted as reliable indices of the industry's increased profitability. In 1940 aircraft common stock prices were sharply inflated by the prospect of booming wartime business—in 1944 the anticipation of post-war contraction produces a contrary effect. In addition the withholding of dividends to pile up surpluses has tended to keep market prices of aircraft stocks below levels which could be justified by present phenomenal rates of return on net worth.

Our own analysis of 1943 profits made by 24 leading aircraft corporations shows an average rate of return on net worth amounting to 41.5 percent.

Analysis of 1943 income of 2,625 leading corporations made by the National City Bank of New York shows aircraft industry enjoying the highest rate of profits of any corporate group. Average return on net worth for 30 aircraft companies amounted to 36.8 percent. In second place stood shipbuilding industry with a rate of 25.6 percent. Average rate of return for all corporations analyzed by National City Bank amounted to only 8.6 percent.

Thus aircraft industry is now operating at rate of profit more than four times greater than the average of American corporations.

Senator MURRAY. You may proceed, Mr. Michener.

STATEMENT OF LEWIS MICHENER, DIRECTOR OF WEST COAST REGION 6 OF THE UNITED AUTOMOBILE WORKERS, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. MICHENER. Mr. Chairman, I would like to take a few moments of your time at this time to report on the west coast situation.

I am in complete accord with the report submitted to your committee by Mr. Frankensteen, national director of aviation for the U. A. W.-C. I. O., and want to add my voice in requesting that your committee consider the merits and seriousness of that report.

In appearing before your committee, I want to stress the seriousness of the west coast aircraft situation. I am in daily contact with that problem and I am serious when I report to you that the problem is becoming increasingly alarming.

I wish to quote an official of the North American Corporation. He said:

If North American or any other aircraft company maintains 5 percent of its present pay roll in peacetime they will have done a very good job.

That, in general, represents the majority of thinking of the west coast aircraft industry.

What does this mean to the war effort and to the post-war era? First, with an approximate estimated pay roll of 232,000 workers, this means that only 11,600 workers would remain on the job. Add to this picture the returning aircraft war veteran and you have a glimpse of the gloomy future of the west coast aircraft worker. His morale is fast becoming broken and this is having its effect on the war effort.

R. J. Thomas, president of the U. A. W.-C. I. O., recently stated:

Any reconversion legislation, if it is to obtain the support of labor, must contain the following principles:

1. The basic need to continue war production.
2. The determination to keep the goal of expanded production and employment as its major objective.
3. Recognition of the importance of labor-industry-Government cooperation.
4. Recognition of the need for protecting small business.

I subscribe to these principles wholeheartedly as a sane approach to the problem. I say that the time has arrived in the aircraft industry to start planning now for the post-war period as the basic means of maintaining war production, while at the same time holding out a ray of hope for the future destiny of all who wish to remain in the aircraft industry.

Reconversion is not a post-war problem. It is a wartime problem. in some industries, reconversion is performed during the war period itself. In others, like the aircraft industry, it must, at least, be planned for during the war period. Successful reconversion, successful planning for reconversion during the war, is home-front victory which measures up to battle-front victories.

Thus far, in the aircraft industry, nothing has been done. Thought given to the problem, thus far, is of a character with defeatism and pessimism. Low post-war employment figures are considered realistic by management representatives. This is proved by the planless wage and staff cutting which can only mean that aircraft management fails to realize they can continue to be big industry in the post-war world.

Reconversion, planning for reconversion is labor's problem and management's problem. But it is management's responsibility. We do not presume to tell management what kind of product they are to make in the post-war world. That is their job, to be determined by their engineers, by their directors, and by their understanding of what the foreign and domestic markets need.

Planned reconversion may be spelled three ways. For labor, it spells full employment and an end to the insecurity of the thirties. For management, it spells operating costs and profits and expansion. For the general public it spells universal peace and prosperity, and production of consumer goods it wants at prices it can pay.

Planning for reconversion requires the utmost in sympathetic, cooperative action from among representatives of labor, management, and the Government. On an international scale, which is related directly to foreign markets, it requires the continued existence of the understanding and cooperation among the United Nations that already promises us victory in the war.

I therefore propose the following for your consideration:

1. A survey by management and labor to determine how many present aircraft employees will want aircraft employment in southern California in the post-war period.

I may pause there to say that I was very pleased to learn here yesterday that some preliminary work has been done in this direction. However, I believe, where there are collective bargaining contracts with management of the southern California aircraft plants, that such a program would result in much better results with the cooperation of joint management and labor in that connection.

2. Reconversion, or full employment plans, must think not only in terms of full employment of all now working who want jobs in the post-war period; it must also think in terms of jobs for our 10,000,000 servicemen.

3. Joint labor-management support of proposed Federal financial support to reconvert plants to peacetime production with the least tension on the national economy in terms of the retooling period, terminated contracts, and unemployment.

4. A survey of domestic and foreign needs of military and commercial planes in the post-war period and a planned campaign to spread that work equally.

5. Immediate national surveys of the possible sales market of family planes to the more than 300,000 trained civilian pilots who will be at liberty after the war.

6. A plan for free, national pilot training for civilians under Federal Government auspices after the war to further increase the number of potential plane buyers.

7. Implementation of the program of the U. A. W., C. I. O., and the National Aeronautical Chamber of Commerce to establish landing fields and plane-servicing facilities in every town and hamlet after the war, so that family-type planes can be utilized to the utmost; to be carried on as part of the national public works program.

8. Payment of severance pay—that is, increased unemployment insurance, either by management or through congressional action, such as that proposed by the Kilgore bill—for those workers who must be laid off during the retooling period.

9. Equitable distribution of all work through a shorter workweek, but without recourse to wage cutting or slashes in present take-home pay.

10. Setting post-war employment sights on a goal of 1,000,000 workers in aircraft production and another two or three million more in servicing and other auxiliary lines.

11. Utilization of all available plant facilities, not required for domestic and foreign military and transport plane production and family-plane production, for the production of other needed consumer goods—outlets to be provided through effective central planning agencies.

12. Calling of a meeting of labor, management, and Government representatives in southern California at the earliest possible moment to jointly devise and present a program designed to provide full employment for labor and full operation for management.

I want to urge that you consider this program with special emphasis on the last point. I believe your committee should get a first-hand view of the situation as quickly as possible. I know labor will cooperate in such a meeting. I am sure management, civic, and other interested parties would also cooperate.

In conclusion, the reconversion problem, in my opinion, represents a chain of three links: One link represents Government; one link represents management; and one link represents labor. A chain, it is said, is only as strong as its weakest link. Therefore, Government, industry, and labor must all work together to make that chain secure; to guarantee a sane, workable reconversion plan for the future security of our Nation.

Senator MURRAY. Thank you, Mr. Michener. I think you have made some very good recommendations there. I might say our committee is contemplating holding those conferences that you recommend.

I also thank you, Mr. Frankensteen.

Does that conclude your statement?

Mr. FRANKENSTEEN. Yes. Thank you very much.

Senator MURRAY. I think, with a few exceptions, your statement was a very excellent one. I might say that the few exceptions may be regarded as incompetent, irrelevant, and immaterial.

Mr. FRANKENSTEEN. Very good. Thank you very much.

Senator MURRAY. The Supreme Court would call them obiter dicta. I am sure we can get along all right.

Mr. FRANKENSTEEN. I appreciate your cooperation, and I thank you.

Senator MURRAY. Mr. Brown.

STATEMENT OF HARVEY W. BROWN, INTERNATIONAL PRESIDENT, INTERNATIONAL ASSOCIATION OF MACHINISTS, AMERICAN FEDERATION OF LABOR

Mr. BROWN. Honorable members of the committee, these are comments and answers by me to eight questions:

Question 1. To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department and that of the War Department? How can this best be achieved?

Answer. Better coordination between the Navy Department and the War Department on cut-backs is absolutely essential if we are to prevent unemployment and secure maximum utilization of facilities. Production of aircraft during this war has been scheduled and controlled through the Joint Aircraft Committee, consisting of Army and Navy representatives. A great degree of integration has been achieved between the Army Air Forces and the Navy Bureau of Aeronautics. This procedure enabled the manufacturers to integrate production with the flow of materials, planning of manpower requirements, flow of component parts, and the proper organization of their subcontractors. This coordination has resulted in a remarkable record of production in spite of the failure to meet all original production schedules which, in many cases, was due to an unrealistic and inequitable program for the industry.

Now that we are facing, and, in some areas, already in the midst of a period of declining manpower requirements and cut-backs in the aircraft industry, it is even more essential to plan for the better coordination of Army and Navy on their procurement policies. In order to do this, I suggest the following:

(*a*) The procurement agencies should plan, wherever possible, to reduce the huge contract backlogs in some companies by transferring work to plants which are facing cut-backs or contract run-outs.

(*b*) Whenever a procurement agency intends to release a contractor from the aircraft program, there should be some attempt to retain this contractor, either as a sub or prime, in another expanding program. For example, in the Brewster Aircraft situation, it would be sensible to secure work for the Brewster Co. on some Army Air Corps contract when the Navy had no further need of the Brewster facilities and manpower.

(*c*) In order to achieve this coordination and readjustment of schedules, I propose that the newly created cut-back and reconversion committee of the War Production Board, composed of the Services and the War Production Board representatives (known as the Production Executive Committee Staff), be empowered to work out such an arrangement whereby joint procurement agency planning can be instituted before cut-backs and cancelations are even contemplated.

(*d*) In addition to coordination between Departments, it is absolutely advisable to achieve such coordination within the individual procurement agencies themselves so that when one company is being eliminated from any specific program, definite consideration shall be given to the use of these facilities and manpower for other comparable work in the agency's program.

Question 2. Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

Answer. The following criteria should be used:

(*a*) Cuts should be made in companies and areas where the release of facilities and manpower can be readily adapted to other production uses.

(*b*) Definite consideration should be given to those companies who have done the best job on subcontracting, and the cut should be so made that the least amount of burden falls upon those companies who have gone in for a large-scale program of subcontracting. When instituting a cut-back, some stipulation should be made to prevent prime contractors from distributing a disproportionate burden on the subcontractors.

(*c*) The labor area should definitely be considered, attempting to relieve tight manpower areas through reduction in war contracts. (However, I do not wish to be interpreted as endorsing any policy which contemplates using this as the only criterion, and which ignores the tremendous waste involved in breaking up companies or teams of workers already within a factory. I have always been in support of the idea of bringing the work to the workers in these plants, rather than blacking out establishments indiscriminately, on the theory that these workers will eventually drift to the proper jobs.)

(*d*) The community affected by a cut-back must definitely be taken into consideration whenever there is a choice of where a cut-back should be made. It appears to me to be logical to avoid making ghost cities out of thriving industrial communities.

At this point, I should like to introduce a consideration which answers also, in part, question No. 4. The threefold responsibility of the Government concerning workers who have migrated to war production centers is: (1) To aid in the removal of surplus workers from overcrowded and depressed areas; (2) insofar as possible, to relocate them in areas where jobs are available; and (3) to curtail the out-migration movement occurring in essential war production areas at the present time. Formulation of a plan which would adequately handle these three aspects of the matter would involve payment of transportation expenses under two sets of conditions: (1) Transfer of workers to employment or training in other localities upon referral by the employment service; and (2) return of workers to their previous surroundings when the employment service cannot find jobs for them. Thus workers who have been encouraged to leave their homes to seek war employment will either be assisted in finding jobs, or will be enabled to return to a familiar environment.

(*e*) The cuts should be made in such a way as to provide the greatest possibility for securing other war work in these plants, or the adoption of these facilities for essential civilian production, or other civilian production which does not interfere with war work.

(*f*) Whenever possible, I strongly urge the maintenance of work in privately owned facilities as against Government-owned facilities. However, I do not wish to be interpreted as advocating the complete

disregard of the use of such facilities. This involves a much broader program. At this stage of the war, some protection should be given to the original plants and investments of private companies. Later, the eventual disposal of Government facilities should be geared to the maintenance of full employment.

Question No. 3. What should be the policy governing advance notice of cut-backs for (*a*) the company; (*b*) the subcontractors; (*c*) the employees; and (*d*) other Government agencies?

Answer. There should be a definite advance notice of cut-backs. The prime contractor, subcontractors, and employees should be notified at one and the same time. One of the greatest fallacies in the minds of certain procurement officers—from top to bottom—is that they can notify the contractor at an early date while the employees are informed through dismissal slips or, at best, a few days before being laid off. Workers should not be considered second-class citizens. Failure to treat workers on some kind of an equal basis with their employers leads to loss of morale and misinformation. Generals Marshall and Arnold and Admiral King are going to discover that workers will leave war work in even greater numbers if, through false rumor or improper passing of information, these workers get the idea that the need for war production is over and do not see any well-thought-out plans and programs being adopted for the planning of civilian production. I think that there must be a better integration of the representatives of organized labor in the handling of cut-back procedures. This is not being done at present in any effective manner.

The procurement agencies and the War Production Board should take these people into their confidence and plan the handling of cut-backs in such a way that the workers of this country won't get the false impressions which are mounting in many communities concerning the coming of large scale cut-backs. Brewster is an excellent example. The released workers have been reluctant to take other war jobs since they feel that, in a very short time, the new jobs will disappear. Our records indicate that in many of these cut-backs, workers, especially women, have drifted out of war work and, in some cases, out of the labor market because of failure to properly inform the workers of the reasons for the cut-back, and the complete absence of any sound planning for post-war economic security.

Questions 4 and 5. What provisions should be made for employees who are released from wartime aircraft production; through unemployment compensation; through retraining; through transportation to other localities; through other methods?

How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of war production or of civilan production?

Answer. I should like to answer questions 4 and 5 as a joint proposition, since I feel that the real problem which we face, not only in the aircraft industry but in the entire economy, is the problem of transition from war production back to peacetime civilian production:

(*a*) The lack of long-range planning is especially appalling. I am convinced that if the German war should end tomorrow there would be chaos and confusion in American industry, since there has been no organization set up with authority and power to organize the economy for peace as we have organized for war.

(*b*) In the aircraft industry, the failure to permit many concerns to secure a minimum of material and facilities to develop experimental models for post-war production acts as a brake upon the future of the American aircraft industry. Certain companies have obtained an advantageous, competitive position because, in the performance of their war contracts, they have been permitted to do certain experimental work which, in essence, can be used in the post-war years (especially in the manufacture of war transport and cargo planes which are counterparts to peacetime commercial passenger planes). At the same time, there are many companies completely engaged in combat-plane production and will continue until the end of the war. Then, there are others who have already suffered severe cut-backs but have been denied the right to secure certain materials for post-war experimentation.

(*c*) The Government should create an experimental research committee, composed of America's best aeronautical engineers and technicians, to work out a program on how these aircraft facilities can best be utilized in the manufacture of civilian items. It is very clear that if we are to achieve full employment, it will become necessary to utilize many of these facilities, in addition to the facilities and companies of pre-war status whose interests must be considered and protected but not to the exclusion of public interest which must be predominant.

(*d*) The creation of an over-all national reconversion committee, composed of management, labor, farmer, and Government is necessary to coordinate the various programs of Government agencies and of private companies in the field of planning the transition to civilian production.

If we can achieve some real planning on the transition to peacetime civilian production, then, the secondary questions can be more readily answered:

1. Employees who are released from wartime aircraft production should be utilized first locally or in nearby vicinities in other war work or civilian production.

2. If, in spite of these efforts, the workers must be released from their present employment, war jobs should be found for them through the United States Employment Service. If this means transfer to some other area, the Government or the prime contractor should provide for travel expenses for the individual and family.

3. If we accept the fact that we may face a period of unemployment, there should not only be unemployment compensation, but there should be an improved form of unemployment compensation as provided for in the Wagner-Murray-Dingell bill. The unemployment compensation laws of the various States and private dismissal compensation plans are not adequate to meet the problems that will arise in connection with the demobilization of war industry. Workers are right in feeling that a special situation will exist for which no special program has been adopted. A guaranty to war workers of some form of adequate emergency unemployment compensation is necessary as a war measure to prevent the lowering of the workers' wartime morale and the accompanying manifestations of lowered productivity and increased job shifting.

98534—44—pt. 9——6

Question 6. What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production?

Answer. (*a*) Immediately permit the development of experimental aircraft models for cargo and passenger use.

(*b*) Government should plan to maintain certain plants throughout the country as the Army and Navy have done in the maintenance of arsenals. This would permit the Government to engage in necessary experimental functions and have, in the interest of national defense, sufficient facilities, and trained manpower to maintain the best potential air force in the world.

(*c*) Labor, management, and Goveremnnt should create a planning commission to study our national and international needs in the sphere of civilian aircraft transportation. This commission should be charged with the responsibility of formulating a program for the development of—

1. Air lines and airfields, inclusive of State and municipal projects, to increase feeder-line services.
2. An air force in the interests of national military security.
3. An international policy on aircraft transportation.
4. International air bases, both military and commercial.
5. An estimation of the production needs for such a national and international aircraft program.
6. Special attention should be given to the South American market, as a customer both for our surplus and new aircraft in the development of commercial air lines to cover South America, which is in many respects, inaccessible to us through overland routes.

Question 7. What principles should be followed in handling Government-owned aircraft factories, aircraft, and airfields?

Anser. (*a*) The interests of American national defense should be foremost, which means, as I have already indicated, that the Government should plan to retain a number of aircraft factories and airfields for experimental and preparation purposes. In addition, the post-war location of plants should be based upon some concept of military security.

(*b*) Government-owned factories established during this war should be cut back before privately owned factories in any aircraft cut-back programs. However, these facilities should not be sold down the river at a small percentage of cost to any individual manufacturer. Sale of Government facilities should be made with definite stipulations as to the economic uses to which the plants will be put. We should be guided by our desire to prevent monopoly; prevent scarcity or excess surpluses on the market; deny the uses of these facilities to companies who wish to move industrial plants from present locations in order to avoid high wages and union conditions; and foster the sale of these facilities wherever it helps to achieve the objectives of a full employment program.

(*c*) Defense Plants Corporation should be surveying these facilities to determine how many can be used in a post-war civilian production program which will require production over and above the pre-war capacity limits of the original companies and factories. As the Department of Commerce has pointed out in one of their studies, Markets After the War, by S. Morris Livingston, it will be necessary to increase production almost 70 percent above 1940, the last pre-war year. This means a constantly expanding production program, which, in turn, depends upon the future use of these facilities.

Question 8. What plans should be made for a post-war national defense program for the aircraft industry; through stand-by capacity; through other methods?

Answer. I think it is clear that my answers to the other seven questions cover the points raised in this last question. I think it is obvious, from experiences of the last 25 years, that our Government cannot permit the aircraft industry to go to seed. We cannot permit the security of the Nation to be jeopardized by any of the whims of commerical objectives or of any individual company. Nor can we gracefully bow out of the aircraft picture and hope to regain air supremacy at the eleventh hour, as we did during this war. The Government must retain a sufficient number of plant facilities, equipment, and trained personnel, and must also keep certain private contractors at its disposal in order to maintain a fully developed aircraft program which remains in advance of the rest of the world's developments. To accomplish these goals, the Government needs the support of aircraft manufacturers and workers. From labor's standpoint, this can best be done as follows:

(*a*) In the handling of aircraft cut-backs, the workers should be consulted through their representatives.

(*b*) The workers' needs as human beings and as producers should be given due and fair consideration—as to maintenance of high wages, proper relocation of migrant workers, a comprehensive unemployment compensation system, and so forth.

(*c*) The workers should be brought into the planning of the industry's future, especially in relation to the Government's national and international responsibilities.

(*d*) Planning the future of aircraft must be fully integrated with the planning of our future national and international economy. It is, therefore, more important than ever to have Congress immediately legislate in this direction so that whatever is done in aircraft can be integrated into our over-all planning efforts. This requires, as a first step, the creation of an over-all national reconversion committee, composed of management, labor, farmer, and Government, to integrate the work of Government agencies, planning our post-war economy, and to secure wide democratic participation of the major groups of society in the program.

Senator MURRAY. Thank you very much for your statement, Mr. Brown. I congratulate you on its conciseness and on its being right to the point.

Mr. BROWN. I thank you.

Senator MURRAY. Mr. Thomas Burtch.

STATEMENT OF THOMAS BURTCH, WESTERN REPRESENTATIVE, ARMY AIR FORCES BRANCH, SMALLER WAR PLANTS CORPORATION

Mr. BURTCH. Mr. Chairman, in offering my statement, I would like to express first the interest I have had in the statements that have been presented here this morning. It is gratifying to me to see the interest that is being taken in this very important subject.

May I please preface my remarks to your committee by saying to you that I was summoned from Los Angeles on Saturday, and that the

subject matter of this hearing was not known until my arrival yesterday. Because of this, the remarks I offer have not been coordinated with the Chairman of the Smaller War Plants Corporation, nor with anyone else; hence, they are offered as my individual opinions, for whatever they may be worth.

The war need for material continues, and I have no data upon which to appraise that need volumetrically. I know only that the need is very great and any remarks I make regarding cut-backs and terminations recognizes the priority of war needs, for so long as that need is permanent.

It is very obvious that supply requirements of the armed forces have changed and will continue to change in order to accommodate new items for war and to prevent excessive surpluses of items less acutely needed, or needed not at all.

On account of changes in requirement, many contracts will be, and have been, cut back or completely terminated, and the dollar volume of such cut-backs and terminations is increasing.

At some happy time all will be terminated. But before then, one problem predominates, and that problem is the administration of cut-backs and terminations in such a manner that all of our production facilities may continue to be useful, either for war, or for essential civilian supplies, as warranted.

Where I have been working, in the 11 Western States, but principally in southern California, there are very obvious reasons for concern over administration of cut-backs and terminations. There are over 6,000 plants in southern California predominantly engaged in the war effort.

Most of these are relatively small plants. Principally they service the large air-frame factories. A majority of them are admittedly new. Typically they have neither pre-war product experience and few, if any, of the Western plants have any pre-war cash reserves.

But to man the large air-frame plants and the smaller service plants, and to accommodate the needs of snip construction, immigrant workers by the hundreds of thousands have been employed, and no very great proportion of them intend to return from whence they came of their own volition.

We comprehend that we will win the war definitely, and that adjustments in the airplane and shipbuilding industries will be necessary. We realize that an acute situation will exist, and we are planning every way to lessen the impact.

For this reason, because the west coast must accommodate now, and for a time at least after the war, these very large accretions of people, war induced, there is real concern, principally about the criteria that will be the basis for determinations to terminate or cut back a single contractor, where the items made are the same as being made by other contractors.

The criterion is established by the Army that priority of retention of procurement will be given to plants not situated in group I and II labor areas. This is alarming, because so much of our industrial area, western industrial area, is classified in group I. Areawise, more of it is group I classification than in any other portion of the United States.

Our large and small plants are showing continuingly remarkable increases in efficiency. Our workers have upped their production per man capacity, remarkably. Maybe it is too soon to say that many of our areas are entitled to be reclassified as less than critically acute, but it is now obvious that they will be entitled to reclassification before very long.

If we are going to receive the major share of cut-backs, because of this criterion, then, before very long, it is going to be difficult to sustain satisfactory employment levels, and even then few of our in-migrant workers will leave.

Before the issuance of the Baruch report, I prepared and submitted certain criteria, based upon the west coast point of view and these criteria were:

(*a*) No decision to terminate a contractor shall be based solely upon an allegation of an area manpower shortage, unless the specific contractor may agree that the termination will relieve a manpower situation in his own plant or those of his subcontractors.

(*b*) Attributing only slight, if any, weight to comparative prices.

(*c*) Retention preferences for contractors whose sole usefulness is the continuation of production for war, as compared to contractors, ready, willing, and anxious to reconvert to peacetime production, and for which peacetime production there is available material.

(*d*) Specific retention preference for communities in which war induced population shifts are apt to create the most acute burdens.

Although this was last year's thinking, to me, these criteria still have considerable merit in determining preference retentions.

Mr. Baruch, in his report, suggests:

> Where there have been war expansions, far beyond any possible post-war future, it will be better to cancel war contracts earlier, and begin reducing the bloat, than to wait until it has to be done all at once.

With this we agree. We want to insist, however, that while we have many plants, commenced since the war began, that it cannot yet be said, with any degree of certainty, that there is not a possible post-war future for each of them.

We on the west coast believe in the future of aviation—passenger, cargo, and personal flying. We submit that each era of world prosperity has followed some advance in distribution methods, or routes, and we believe aviation is a new advance in distribution methods, or routes, and that it creates new trade routes, and we firmly envisage a vast aeroplane business after the war and a prosperity to support it. We cannot say, therefore, that the 2,500 plants that exclusively service the air-frame industry may be determined now to be bloat.

Naturally we who believe in small plants like the criterion that extends retention preference to plants employing less than 500 people. That would be fine, for us, if our smaller plants were predominantly prime contractors, but they are not. We, therefore, urge in determining retention preference, a thorough examination of the subcontracting program of the prime contractor.

One air frame termination reacted adversely on four hundred subs and sub-subs, traced geographically to fourteen States. Suppose that two prime contractors were each making this plane, and that the determination to terminate one was based upon location in a group I area. Could this have been sound without first examining the subcontractors, and their locations? Candidly, the Army and Navy appear to be sympathetic to these considerations and I find much to gratify me in their wise considerations.

So much for retention preference. There are other matters, one or two, which I would like to call to your attention.

The first is financing. Mr. Baruch asserts that—

> the lending authority of the Smaller War Plants Corporation, at present restricted to purposes of war production, be extended to permit short-term loans to assist small business in the change-over from war to peace—

and further—

> as a permanent source of credit for small and medium-sized enterprises, on a basis of broader risks than banks can be expected to assume, that the Federal Reserve System's authority to make industrial loans be expanded.

From a grass-roots study of many small west-coast plants, the suggestion that Smaller War Plants Corporation authority be extended to permit short-term loans appears inadequate to the evident needs. Small business, now engaged in war work and intending to convert, needs long-term credits, in which risk to the lender, and to the borrower, declines as the terms of repayment are made easier. Mr. Baruch specifically refers to "a basis of broader risk than banks can be expected to assume." Cannot we segregate this risk and take off the degree of risk that is regarded as excessive by creating a national system of industrial credit insurance that would permit S. W. P. C. to absorb the excessive degree of risk, and let the banks, who understand local conditions and are in a position to service, make these long term industrial loans, much as they made title I, F. H. A. loans? I have talked to some of the large west-coast banks who think industrial credit insurance could very well be the answer.

We are relying upon a wise coordination of all cut-backs and we think it may best be achieved by a concert of procurement agency—S. W. P. C., W. P. B., R. F. C. and W. M. P. C.—action.

We have mentioned both negative and positive criteria, and discussed them, to be used in retention preferences.

Policy relative to advance notices should be calculated to stretch the notice interval as long as possible and should be discussed with the prime and principal subs in advance of notice, and consideration should be given to all other Government agencies whose activities may be effected thereby.

If the smaller plants are enabled to carry through to their peacetime destinies, they will care for many of residual aircraft employees and their skills and arts can be utilized. There will need be unemployment compensation and some retraining, but give the small plants financial backing and much of the need for population reshifting will be mitigated.

Many think and so do I, that production cut-backs in aircraft will occur, except for trainers, only near the end of the war, and it is not considered that occasion will arise to integrate aircraft production into other production for war. Some of the aircraft companies have peacetime items in contemplation and will execute the change-over, when the war pressure is past.

But the world needs air frames, and our production technique and design achievements are superior. If we have to rebuild many of our war-fatigued planes, then give them free to other nations, it would be worth while, from a long-range point of view, in that we would thus capture the airplane-servicing business of the world for many years to come, and the rebuilding operation would support employment levels during the slack period.

The sustaining of the job level in aircraft factories, through this means, would greatly enhance the strength of the industry—they will take care of the growth and development of civil aviation.

Some Government-owned aircraft plants will be needed for excess military airplane storage depots. I think most all of the modification centers can eventually be fully utilized by the air lines for operational bases.

There is not a great deal of doubt about the continuing need for air defense after the war. Some sections of the air frame and engine plants must inevitably be retained for research and development, and, this being surely necessary, the portion of the cost to Government for research and development will decline in the measure that the industry is made strong by other means.

The Army, Navy, and Maritime Commission have been good to our small west coast plants, and we appreciate it and hope that they will continue to be equally considerate. Our small plants are going to need every possible type of help if they are going to fully play their part in job opportunity in the future.

Senator MURRAY. I thank you for your statement, Mr. Burtch. This, of course, will be supplemented and improved upon, I suppose, when you get back to the coast?

Mr. BURTCH. Perhaps.

Senator MURRAY. You will go into it more in detail?

Mr. BURTCH. That is right.

Senator MURRAY. I am very glad to have it now in connection with our present hearing. It is very helpful to us, and I thank you.

(The supplement to Mr. Burtch's statement is as follows:)

(1) Are any war plants on the Pacific coast now out of work as a result of terminations or inability to secure new contracts because of being located in critical labor areas?

A very considerable number of small plants on the Pacific coast are either out of work or have increased open capacity directly attributable to terminations and/or cutbacks. The curtailment of allocations of new procurements to the west coast is making it increasingly difficult for the concerns situated in No. 1 critical labor areas to secure new production items.

(2) Is there labor available for these plants that are shut down or plants having open capacity? Where do they obtain their labor?

In nearly every case of the plants closed down or with open capacity, particularly the smaller ones, an ample supply of labor is available, principally because most of the smaller plants are in the category of neighborhood plants. That is, they obtain their labor directly in the neighborhood in which they are situated, and generally remotely so, so far as principal industrial plants are concerned. There is a great deal of labor which will not work outside of its own immediate neighborhood, particularly so because of the difficulty with and the time consumed in transportation.

(3) Are plants with less than full capacity increasing in number?

The number of plants with less than full capacity continue to increase in number. On November 1, 1943, plants with less than 500 employees used 46 percent of the industrial power load of metropolitan Los Angeles. On May 30, 1944, plants with less than 500 employees were using 26 percent of the industrial power load. The power load over-all showed some increase between these dates. Hence, the idleness and lack of power consumption appears to be altogether within plants of less than 500 employees.

(4) Do these plants with idle facilities and available labor desire to return to essential civilian production?

Plants having idle facilities and available labor are anxious to return to civilian production. The question refers to essential civilian production. The answer explicitly states civilian production. A further answer is that these plants want to return to production, whether essential civilian, civilian, or production for war.

(5) What becomes of the labor employed by small plants when these plants are cut back or terminated?

Much has been said about the evaporation of labor. In many cases, it is alleged that as employment declines in small plants the labor evaporates. Factually, the workers, no longer needed, in a majority of cases, simply stay home. Always they think the plant in which they worked will have need for them again, and habitually most of them were occasional workers only. This type of worker will not go to the United States Employment Service and request referral. He knows that in all likelihood he will receive a referral to one of the large plants, and that he will have transportation problems which are distasteful to him and burdensome, because he has been accustomed in his lifetime to interruptions in work. He would prefer to stay home a month or 2 or 3, in the hope that his original plant will reopen, rather than seek work elsewhere. Typically, he probably has more money in his pocket than he ever had before in his experience.

(6) What is the financial position of these plants?

Of the more than 6,000 plants in southern California, in excess of 2,500 were originated since Pearl Harbor. Perhaps 80 percent of the others have expanded, some many times. Except for the very large concerns with wise and prudent management, most of the plants originated since Pearl Harbor and expanded, and those which existed before Pearl Harbor and have since expanded have done so solely on capital contributed by the stockholders or proprietors, with the exception that nearly every one of them which has expanded has plowed some of the income from sales into new facilities. They have done this with little realistic comprehension of the impact of renegotiation and taxes. The result is that most of them have paid renegotiation refunds and taxes out of earnings for the year subsequent to that in which the renegotiation and taxes were levied. The result is extremely frequent impairment of working capital, and few, if any, cases exist where reserves for taxes and renegotiations were adequate to pay the bill. The over-all picture of small plants is that they are dangerously short of current working capital, and typically, ratios between current assets and current liabilities are unfavorable.

(7) What problems will need to be met to accomplish conversion with the least interruption in employment?

Under the order of first things first, long-term credits must be avilable to the typical small plant if conversion is to be accomplished with minimum interruption. With impaired working capital conditions facing them, long-range planning is out of the question. Most conversion must relate to long-range planning. Conversion to short-range planning is generally a very temporary subterfuge and simply postpones, the principal matter of conversion. The second factor that tends to delay planning for reconversion and reconversion in fact, is the inability to schedule deliveries of machine tools and production equipment and to determine the approximate time that materials will be available for other than necessary war production. Two remedies are needed forthwith: First, available long-term credits based upon economically sound plans for long-range conversion; and second, some basis for a confident prediction as to dates of availability for machine tools, production items, and materials.

(8) You used the term "industrial credit insurance." Will you explain that further?

Appended hereto is a memorandum dated May 21, 1944, from Orville S. McPherson, Director, Readjustment and Contract Termination Staff, to Dr. H. P. Seidemann, special assistant to Maury Maverick, Chairman, Smaller War Plants Corporation, relating to the subject of loan insurance. This proposal by Mr. McPherson has been categorically examined as to feasibility and is regarded as an approach proposal from which could be developed a thorough workable plan to provide long term credits for small business.

MAY 21 1944.

HENRY P. SEIDEMANN,
ORVILLE S. MCPHERSON,

Loan insurance.

The following is the idea which I expressed to you briefly over the telephone on the subject of capital loan insurance by Smaller War Plants Corporation for small business concerns. I will be glad to discuss it more in detail with you if you wish.

1. Small business needs long term credits for the interval after the war and for reestablishment in peacetime production.

2. Banks may not lend their funds upon sufficiently long terms, nor upon the type of risks that are characteristic of small businesses.

3. The appropriately patterned loan for small business is apt to fall within the category of "capital loan," not favorably regarded by bankers.

4. If loan insurance could be offered banks the risk of small business loans could be reasonably apportioned between such an insurer and the banks.

5. Because of the diminished risk this class of loan might become desirable to banks and be declared eligible for Federal Reserve collateral, and be standardized to the degree that they would be fluid as between banks.

6. Because banks are best able to service such loans constructively, and because banks in the aggregate comprise a ready-made vehicle for channeling money into small businesses, the following suggestions have been contrived to provoke thought on the subject of insured small business loans.

7. It is proposed that Congress duly constitute Smaller War Plants Corporation as an insurer and appropriate $25,000,000 as a nucleous insurance reserve, untouchable except in the event of losses.

8. It is proposed that Smaller War Plants Corporation then proffer to Federal Deposit Insurance Corporation members insurance against losses on long-term loans to small businesses in an accumulative amount equal to 15 percent of the principal amount of each loan preexamined and declared eligible by Smaller War Plants Corporation, these accumulated percentages to become blanket insurance to each bank to protect it against all losses sustained from loans made in any one calendar year, the Smaller War Plants Corporation to have the right to limit the rate of interest charged and to exclude organization fees for such loans, and provided that the net accretion to the banks cumulative insurance should not exceed $15,000 on account of any one loan.

9. Insurance against losses to be paid by Smaller War Plants Corporation to be payable in 5-year debentures at 2½ percent interest, warranted as to payment by the United States Treasury.

10. Smaller War Plants Corporation to be paid an insurance premium annually in advance equal to 1 percent of the unpaid amount of each insured loan, computed and due upon each anniversary of the loan.

11. It must be understood that only the reserve, initially acquired during one calendar year, shall be applicable to losses only upon those loans made during that same calendar year.

The next witness will be Mr. Cohu, of the Northrop Aircraft Corporation.

STATEMENT OF HENRY W. COHU, VICE PRESIDENT, NORTHROP AIRCRAFT CORPORATION

Mr. COHU. I will not take up the time of the committee now except to submit a copy of the plan which we have in operation at Northrop at present. In substance, it is the cataloging or inventorying of the scales of the different people employed in the plant, with the location of the part of the country that they came from; and then we get in touch with the different industries which would need that type of individual in the post-war situation.

Senator MURRAY. How long has that been in operation in your plant?

Mr. COHU. That has been in operation about a month and a half. It may not be the answer, but it is a contribution.

Senator MURRAY. This will be incorporated in the record.

(The plan referred to is as follows:)

NORTHROP'S PLAN FOR POST-WAR EMPLOYEE RE-LOCATION

(By LaMotte T. Cohu, chairman of board and general manager, Northrop Aircraft, Inc.)

Relocation of employees whose services cannot be retained for peacetime operations presents the gravest problem now confronting aircraft manufacturers. It is a problem which will grow even more grave when Germany surrenders and war production begins to be tapered off.

Unless manufacturers set up machinery to help these employees find work, the job will be done by others, and probably in ways inconsistent with the principles that have made America great.

Northrop Aircraft believes so firmly in this view that it has already inaugurated a program, unique in the annals of American business, to find a solution to the problem. In effect, the Northrop plan is much like the company's hiring program in reverse. Instead of combing the Nation for personnel, the company's industrial relations department will be combing it for jobs in peacetime industry to which employees can transfer when their skills will no longer be needed to produce the Northrop P–61 Black Widow night fighter, one of the Army Air Forces' newest combat-class aircraft.

The Northrop company, like all others in the aircraft industry, fully expects its plane production to be curtailed as the war draws near an end. Post-war plans anticipate a production volume approximately 10 percent as large as the wartime peak. But, while production will undoubtedly be curtailed before the war ends, it is expected that the armed forces will demand a high rate of production right up to the time of the armistice. To meet schedules in conformance with these demands then, it will be necessary to prevent any general labor exodus from the aircraft industry when peace appears to be in sight.

If, before the war is won, any appreciable number of workers do quit their aircraft jobs to find peacetime employment, the ensuing production slump might easily prolong the war, needlessly cost the lives of thousands of American fighting men, and bring about widespread disruption of our economic system, all at a time when victory will be in the balance. Disastrous as such conditions could be, employees could not be blamed entirely for seeking to protect their futures by "jumping while the jumping is good" if we, as employers, fail to take the lead and do all within our power to bridge the gap between their present jobs and the future.

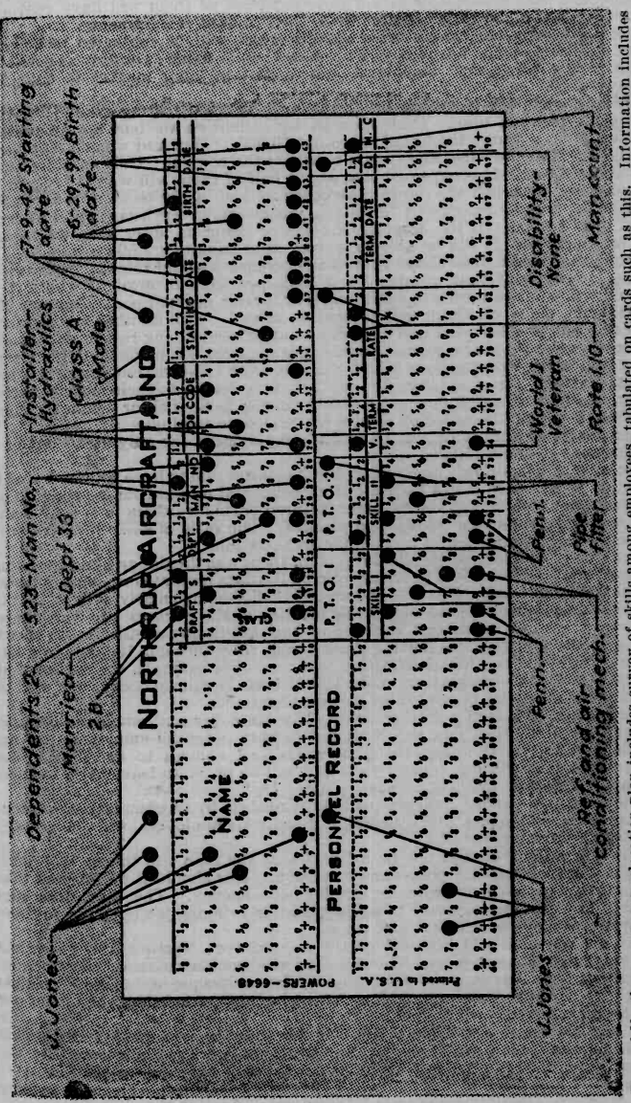
So exacting and all-encompassing have been the demands for warplanes few aircraft companies will have even the designs for post-war planes ready to go into immediate production for peacetime markets. Without designs, without distributors, dealers, or customers, and without reserves that might have been accumulated as "seed money" with which to launch peacetime production, it will be impossible for Northrop and others in the industry to continue employing many thousands of their present personnel. It would, of course, be easy to cut back our organizations to a size commensurate with the volume of business we will be able to secure after the war. But that does not answer the question of the individual worker who must find a place in productive work if American freedom is to survive. It seems to us that all industries—not alone the aircraft—should consider themselves obligated to seek jobs for those who cannot be employed, and just as energetically as the employees themselves were sought in the first place.

We in the aircraft industry scoured the Nation for workers, convinced them it was their patriotic duty to help win the war by building warplanes; we now rely upon them to continue their work as long as our fighting men need their help. It is, therefore, our duty to get ready to assist them in relocating themselves when we have to release them to post-war employment.

The Northrop plan faces this problem realistically and, we believe, humanely. We are already preparing an inventory of skills and trades possessed by our employees. Then when the time comes that other industries are seeking personnel, we will be able to bring these prospective employers and thousands of our employees together for their mutual benefit. We hope that, through our help, the transition for many will be but a week-end affair—that they will finish with us on a Saturday and start their new jobs the following Monday.

Studies made to date indicate that the employee relocation problem will not be as great as it might first appear, for employment applications and other company records provide most of the required information on the individual employee. Nor will locating jobs be as difficult as might first be thought. The Committee for Economic Development, for example, is gathering data on post-war employment and has already found that a surprisingly large number of the varied industries under study will have to increase their employment far beyond their pre-war requirements in order to meet post-war demands for consumer goods.

Northrop subcontractors, too, will provide a large and widely varied group of contacts from, and through, whom personnel requests can be anticipated. Most of these organizations were in business prior to the war and took on subcontracts because the war had killed their former business. As a matter of fact, many present Northrop employees came from such organizations, and it is expected that as the subcontractors go back to peacetime production, the workers will go back to "the old stand."



Part of Northrop employee relocation plan includes survey of skills among employees, tabulated on cards such as this. Information includes second, as well as first, skill; present employment data, worker's former home, and other pertinent data. When time comes, Northrop will provide office space and help for personnel directors seeking workers.

INTENTIONAL SECOND EXPOSURE

Northrop Aircraft believes so firmly in this view that it has already inaugurated a program, unique in the annals of American business, to find a solution to the problem. In effect, the Northrop plan is much like the company's hiring program in reverse. Instead of combing the Nation for personnel, the company's industrial relations department will be combing it for jobs in peacetime industry to which employees can transfer when their skills will no longer be needed to produce the Northrop P–61 Black Widow night fighter, one of the Army Air Forces' newest combat-class aircraft.

The Northrop company, like all others in the aircraft industry, fully expects its plane production to be curtailed as the war draws near an end. Post-war plans anticipate a production volume approximately 10 percent as large as the wartime peak. But, while production will undoubtedly be curtailed before the war ends, it is expected that the armed forces will demand a high rate of production right up to the time of the armistice. To meet schedules in conformance with these demands then, it will be necessary to prevent any general labor exodus from the aircraft industry when peace appears to be in sight.

If, before the war is won, any appreciable number of workers do quit their aircraft jobs to find peacetime employment, the ensuing production slump might easily prolong the war, needlessly cost the lives of thousands of American fighting men, and bring about widespread disruption of our economic system, all at a time when victory will be in the balance. Disastrous as such conditions could be, employees could not be blamed entirely for seeking to protect their futures by "jumping while the jumping is good" if we, as employers, fail to take the lead and do all within our power to bridge the gap between their present jobs and the future.

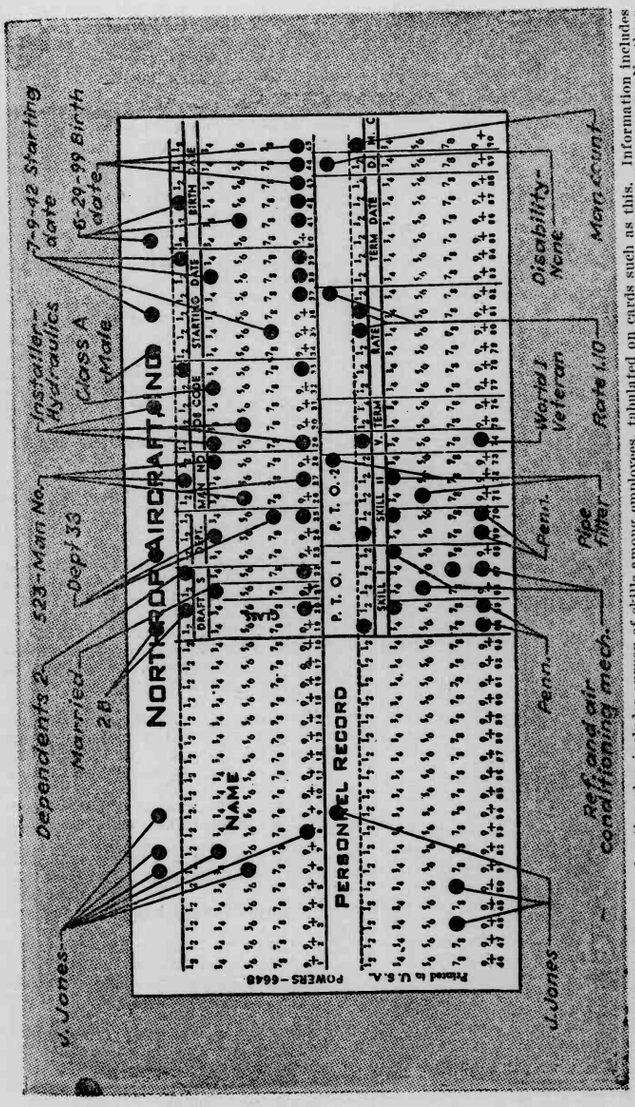
So exacting and all-encompassing have been the demands for warplanes few aircraft companies will have even the designs for post-war planes ready to go into immediate production for peacetime markets. Without designs, without distributors, dealers, or customers, and without reserves that might have been accumulated as "seed money" with which to launch peacetime production, it will be impossible for Northrop and others in the industry to continue employing many thousands of their present personnel. It would, of course, be easy to cut back our organizations to a size commensurate with the volume of business we will be able to secure after the war. But that does not answer the question of the individual worker who must find a place in productive work if American freedom is to survive. It seems to us that all industries—not alone the aircraft—should consider themselves obligated to seek jobs for those who cannot be employed, and just as energetically as the employees themselves were sought in the first place.

We in the aircraft industry scoured the Nation for workers, convinced them it was their patriotic duty to help win the war by building warplanes; we now rely upon them to continue their work as long as our fighting men need their help. It is, therefore, our duty to get ready to assist them in relocating themselves when we have to release them to post-war employment.

The Northrop plan faces this problem realistically and, we believe, humanely. We are already preparing an inventory of skills and trades possessed by our employees. Then when the time comes that other industries are seeking personnel, we will be able to bring these prospective employers and thousands of our employees together for their mutual benefit. We hope that, through our help, the transition for many will be but a week-end affair—that they will finish with us on a Saturday and start their new jobs the following Monday.

Studies made to date indicate that the employee relocation problem will not be as great as it might first appear, for employment applications and other company records provide most of the required information on the individual employee. Nor will locating jobs be as difficult as might first be thought. The Committee for Economic Development, for example, is gathering data on post-war employment and has already found that a surprisingly large number of the varied industries under study will have to increase their employment far beyond their pre-war requirements in order to meet post-war demands for consumer goods.

Northrop subcontractors, too, will provide a large and widely varied group of contacts from, and through, whom personnel requests can be anticipated. Most of these organizations were in business prior to the war and took on subcontracts because the war had killed their former business. As a matter of fact, many present Northrop employees came from such organizations, and it is expected that as the subcontractors go back to peacetime production, the workers will go back to "the old stand."



Part of Northrop employee relocation plan includes survey of skills among employees, tabulated on cards such as this. Information includes second, as well as first, skill; present employment data, worker's former home, and other pertinent data. When time comes, Northrop will provide office space and help for personnel directors seeking workers.

Still another source of job contacts comes from more than a thousand vendors from whom the company now purchases supplies, tools, stock, and equipment. Virtually all were established before the war; most of them will have post-war personnel needs equal to, or greater than, their present requirements.

There are, of course, many other sources which will be contacted and circularized regularly so that our release of personnel can be made as orderly as possible, thus avoiding "dumping" employees into a glutted labor market to shift for themselves.

In many ways the Northrop organization is an ideal testing ground for this employee relocation plan. Prior to wartime expansion we had approximately 2,500 employees; today the figure is around 10,000. Men and women who have gone into military service, and others to whom the company feels an obligation, total about 2,000. It is expected that about half of them will want to return to the company, although the figure may reach as high as 90 percent. Assuming it will be the first figure, present personnel, plus returning service men and women, would total 11,000. If the company's hopes of going no lower than its prewar level are borne out, it will be able to employ approximately 2,500 people.

Simple subtraction then shows that excess personnel would total approximately 8,500. However, of that number some 3,000 are women, most of whom it is believed will want to return to their homes or former occupations. Another 250 are students, many of whom will go back to school. Still another 900 are men who came out of retirement and who will want or need a long rest or permanent retirement when the war is won. Another group of 2,500 is made up of men from selling and service occupations which did not offer full-time employment when the war started. Most of these men will probably return to their more lucrative former positions, bringing down to 6,650 the excess personnel for whom the company feels it will not be called on to provide peacetime employment.

Thus machinery must be set up to find employment for only 1,850 out of a wartime peak of some 11,000.

Like most other aircraft companies, the Northrop plants have required a wide variety of skills, since it has turned out experimental designs, mass-produced its own and other companies' planes, manufactured parts for others to assemble and worked in several metals, woods, and plastics. The ratio of skills involved will, it is believed, be paralleled in most other organizations.

First step in developing the Northrop plan, then, was the design of a tabulating machine form to which could be transferred all the data required on each employee. Special attention was paid to first and seconds skills—particularly with respect to peacetime employment—and geographic location of the workers' pre-war homes.

One of the most significant features of this tabulating system is its speed, for the modern mechanical sorting devices can riffle through 10,000 cards and collate given skills and locations within an hour. For example, the names of all employees skilled in bricklaying regardless of their Northrop occupation can be picked out of the entire personnel list in some 25 minutes.

This matter of speedily getting prospective employer and employee together is important for unless jobs can be found quickly potential employers will not use the system. And unless the plan works fast enough to avert expensive delays employees will not depend on it and will be prone to leave their wartime jobs earlier than they might otherwise.

Under the plan office quarters will be furnished to representatives of concerns seeking employees and releasable Northrop employees will be granted opportunities to apply for jobs.

By listing skills it should not be inferred that the plan will in any way limit the employee's choice of a post-war occupation. Nor should it be inferred that the company plans to operate an employment agency. The plan does contemplate however giving every possible service in bringing job openings to those Northrop workers who will find it of value.

We hope the plan will help bridge the gap between wartime and peacetime employment for thousands who will want and need such assistance. By bridging that gap we hope we can remove uncertainty for our people and make it possible for them to continue building, right up to the last day of fighting, the planes our air forces must have to win the war.

Just how serious this problem of assuring war industry personnel of all possible help in a quick transition from war to peace time work is underscored by the growing number of totally unfounded rumors which have recently swept west coast aircraft and shipbuilding plants. Fanned by irresponsible elements seeking to capitalize on unrest, some rumors gained such circulation that it was necessary for management to recognize and deny them.

Cancelation of some contracts—largely of a minor nature and due to dwindling need for certain products being replaced by newer materials—have brought about some layoffs. These instances were such a reversal of usual wartime employment conditions that they "made news" and were widely publicized. Coming on the heels of the rumors, these stories provoked considerable uneasiness among war plant employees. More such announcements are bound to appear, and it is entirely possible they may precipitate new waves of job severances—severances that may seriously impede aircraft production and disrupt long-planned military operations. This in turn could easily cause military upsets and prolong the war.

It is to counteract such uncertainty that the Northrop plan has been developed, and it is presented here in the hope that other organizations—both in and out of aviation—may thus be influenced to develop similar programs aimed at achieving an orderly release of excess personnel to post-war employment.

Senator MURRAY. Mr. Callery.

STATEMENT OF FRANCIS A. CALLERY, VICE PRESIDENT IN CHARGE OF FINANCE, CONSOLIDATED VULTEE AIRCRAFT CORPORATION

Mr. CALLERY. Senator Murray, I have a statement that I would like to submit for the record, on behalf of the Aeronautical Chamber of Commerce of America, in connection with aircraft profits which we think have been erroneously stated on various occasions.

Senator MURRAY. Do you wish to supplement your statement by any observations?

Mr. CALLERY. Only that in Mr. Frankensteen's statement this morning he said aircraft stockholders had got back in 1943 about half of their investment. We do not think that accurately tells the story by any means.

Senator MURRAY. Briefly, what is the truth of the matter in regard to the profits made by the airplane industry?

Mr. CALLERY. We look at profits in aircraft as illusions up until the time of the final settlement of the war.

Senator MURRAY. When you come to the final settlement of the war, you are at the end of your string.

Mr. CALLERY. That is right.

Senator MURRAY. If you don't make profits during the few years that you are in operation, you are going to be in a very serious situation.

Mr. CALLERY. That is correct; yes, sir.

Senator MURRAY. Do you wish to make a complete statement on that, or do you wish to submit some statement for the record on it at some time in the future?

If you do, you may send it to us and it will be incorporated in the record.

Mr. CALLERY. Thank you very much. I appreciate it.

(The statement submitted by Mr. Callery is as follows:)

Figures on the aircraft industry which show profits in relation to invested capital give an erroneous impression. A much more equitable way is to show profits in relation to sales or volume of business done. Risks are commensurate with volume. The higher the volume the greater the risk, particularly if capital does not increase proportionately.

The aircraft industry has been expanded to fantastic levels in relation to capital. For one of the largest and strongest air-frame manufacturers, a loss of 4 percent on its 1943 business would have wiped out working capital.

The rate of net profits on sales volume in aircraft is the lowest of any industry engaged in war production. In 1943, the percentage of net income to sales for 24 major aircraft and parts manufacturers was 1.8 percent, according to a survey by the National City Bank of New York. Other industries, such as nonferrous

metals earned 9 percent; petroleum products 6.8 percent; automobiles 3.2 percent; and iron and steel 2.8 percent.

The profits of the aircraft manufacturers during the war period are to a large extent bookkeeping figures. The ultimate profits, if any, can only be determined when all final settlements have been made.

A very substantial part of the bookkeeping profits are still in the business, largely in the form of inventories and other properties which will be subject to drastic shrinkage in values.

Only a small part has been paid out in dividends. In spite of this conservative practice, working capital is meager in relation to the obligations of the business. It is safe to say that the entire net current assets of the industry would not equal 1 month's operating costs at present production rates.

Figures introduced by the Congress of Industrial Organizations on aircraft profits are arranged to make it appear that stockholders and management have been vastly overpaid in relation to the wages paid to aircraft employees. While their approach is an interesting one, it is merely a curiosity, when viewed in perspective. The purpose apparently is to show that management and the stockholders are getting something which belongs to the workers.

As an illustration, using the figures of one of the largest companies in the industry, if all of the salaries paid to all officers and directors during 1943 should be paid to the workers instead, the result would be that each payment of $10 to workers would be increased by 1 cent to $10.01. If all of the net profits to stockholders were to be similarly paid over to the workers, each payment of $10 would be increased by 35 cents to $10.35.

The total payments to all of the officers and directors of this company in the entire year of 1943 amounted to only $2.71 for each employee. In perspective, it is clear that stockholders are not benefiting at the expense of the workers.

Aircraft stockholders have not profited from the war. In fact, they are not as well off now as they were a year or so before Pearl Harbor. There are only two known ways for stockholders to benefit: by increased market value of their stock or by dividends. Aircraft stockholders are no better off today than they were in 1940.

The stockholders of 6 of the largest airframe manufacturers have lost 26 percent in market value from the lowest point reached in 1940. Their dividends have increased 13 percent since 1940. The net result is that the average stockholder lost $6.62 in market value and gained 54 cents in dividends in 4 years. Average weekly wages of aircraft workers, using the figures in the Congress of Industrial Organizations report, increased 47 percent from 1940 to 1942.

Senator MURRAY. I also ask to have incorporated in the record at this time the report of the National Housing Agency on the project at Brewster—at Johnsville, Pa.

(The statement referred to is as follows:)

STATEMENT FURNISHED BY THE NATIONAL HOUSING AGENCY TO THE WAR CONTRACTS SUBCOMMITTEE OF THE SENATE COMMITTEE ON MILITARY AFFAIRS CONCERNING PUBLICLY FINANCED WAR HOUSING AT JOHNSVILLE, PA.

1. *War housing originally programed.*—This plant was constructed in 1941 at Johnsville, Pa., a small rural community located about 12 miles north of the Philadelphia city line. The need for housing for workers to be brought into the community to work in the new plant soon became evident and in May 1941 a publicly financed war-housing project of 300 permanent units (PA–36251) was approved. About a year later when aircraft production at the Johnsville plant commenced, a publicly financed war-housing project of 200 temporary family units (PA–36258) was approved.

2. *Navy requests for additional permanent housing.*—The subcommittee is undoubtedly familiar with the production difficulties of the Brewster Corporation. Shortly after the management of the corporation was assumed by Mr. Kaiser, it was determined to expand operations at the Johnsville plant. In the spring of 1943, Mr. Kaiser and Mr. Frederick Riebel, Jr., president of the corporation, indicated that the proposed expansion would require a minimum of 3,600 additional employees within the next 6 months and that additional housing was required for these workers. The Navy assigned Lt. John W. Kendall, of the senior naval advisor's office in Philadelphia, to work with the Brewster Corporation, National Housing Agency, the War Manpower Commission, and other interested Federal agencies in connection with the problems of housing, transportation, and community facilities required in connection with the operations

scheduled for the Johnsville plant. On April 29, 1943, Lieutenant Kendall met with representatives of the National Housing Agency and the War Manpower Commission to discuss the manpower and housing requirements for the Johnsville plant and requested that 2,000 family dwelling units be provided.

Shortly after this meeting, it was indicated Navy orders would require the Brewster Corporation to produce one-sixth of the Navy's total requirements of certain types of planes. The operations of the Brewster Corporation at its Long Island City (New York) plant were distributed through a group of plants originally designed to manufacture coaches and automobiles. The Long Island City plant was overtaxed at the then level of operations. On the other hand, the Johnsville plant was not then operating at capacity.

In order to meet the production schedules for the Navy, plans were developed by the Brewster Corporation to utilize the full capacity of the Johnsville plant by inducing substantially all of the trained personnel at the Long Island City plant to transfer to the Johnsville plant. At the same time certain types of operations were, according to our understanding, to be transferred from the Long Island City plant to the Johnsville plant. Representations were made to the effect that this shift in operations and personnel from the Long Island City plant to the Johnsville plant was vitally necessary to meet the production schedules of the Navy for planes; that the shift of personnel would have to be accomplished as a large-scale, simultaneous transfer of all personnel involved; and that the shift would have to be effected by September 30, 1943. Brewster and Navy officials were insistent that housing must be provided in time to meet the proposed transfer; that the standard type of temporary construction would not be sufficiently attractive to induce necessary executive personnel, supervisors, foremen, and skilled workers with average annual incomes in the neighborhood of $4,220 to move from metropolitan New York to Johnsville, Pa. These representations were formalized in a letter dated May 24, 1943, from Rear Admiral Ralph Davidson, Acting Chief of the Bureau of Aeronautics, to Charles E. Wilson, Executive Vice Chairman of the War Production Board, and in the letter, dated June 1, 1943, Admiral Davidson sent to the Federal Public Housing Authority. Copies of these letters are attached. Following the receipt of these letters, representatives of the Bureau of Aeronautics, the Federal Public Housing Authority, and the War Production Board met in order to determine the type of construction to be employed. At the request of the Navy, the dwellings were designed for permanent construction, with the understanding that the War Production Board requirements would not be exceeded.

On May 18 the War Manpower Commission certified that there would be an in-migration of 1,600 workers by September 30, 1943, as a result of the proposed transfer of employees from the Long Island City plant to the Johnsville plant. On the following day, the National Housing Agency was advised by Mr. Riebel and by Lt. D. B. Gillies, of the Bureau of Aeronautics, that the Brewster production schedule might be revised to require doubling the number of in-migrant workers and that this should be considered in the programing of additional housing facilities.

On the basis of these certifications and the representations of the Navy and of Brewster officials as to the character of the housing required to meet the special circumstances involved at the Brewster plants, a war-housing program of 1,200 family units was approved by the National Housing Agency early in June 1943. Of these 1,200 units, 500 units were scheduled to be privately financed with insurance provided under title VI of the National Housing Act, as amended, and the remaining 700 units were scheduled to be publicly financed. Subsequently, it was determined to be inadvisable to insure any additional privately financed units in Johnsville, but that it might be feasible to insure approximately 250 privately financed units at Willow Grove, a community located about 6 miles from the Johnsville plant. Lieutenant Kendall advised that the Bureau of Aeronautics, and Mr. Riebel of the Brewster Corporation had indicated, that they would not regard the provision of housing at Willow Grove as satisfactory for meeting the needs of Johnsville plant. As a result, the 500 units scheduled to be privately financed with mortgage insurance provided under title VI of the National Housing Act, as amended, were rescheduled for construction with public funds, thus making the program for Johnsville 1,200 publicly financed family units.

3. *Construction—Size and cost.*—The 1,200 family units thus programmed consisted of two projects—PA–36434 of 700 units and PA–36435 of 500 units—constructed on contiguous sites and served by common utility systems and community facilities. Both projects included one- and two-story structures at an average ratio of 23 percent two-story and 77 percent one-story. The 700-unit

project has exterior walls of masonry construction, wood floors, and pitched roofs. The 500-unit project is similar except for exterior walls of frame construction and asbestos siding.

Construction was undertaken in two stages. PA–36434 (700 units) was started on July 5 under a 90-day completion schedule and PA–36435 was started on August 30 also under a 90-day completion schedule.

Since the two projects are on contiguous sites and are served by common utility systems and nondwelling and other community facilities, it is felt that composite unit costs are more informative than the individual project costs. However, the individual project costs for dwellings is also noted because of the masonry versus frame exterior wall construction which accounts for the difference of approximately $250 per dwelling unit, with the cheaper figure representing the frame construction:

Development costs based on latest regional estimate

	700 dwelling unit, masonry	500 dwelling unit, frame	Composite cost
Total cost	$3,837,165	$2,251,476	$6,088,641
Total cost per dwelling unit	5,482	4,503	5,074
Land per dwelling unit	116	50	88
Dwellings per dwelling unit	3,874	3,623	3,770
Site improvements per dwelling unit	1,029	702	893
Nondwellings per dwelling unit	346	----------	202
Architecture and engineering per dwelling unit	117	128	121

4. *Rents.*—All but 300 of the 1,200 units have been placed in stand-by status. Of the 300 units now in active status, the following rent schedule has been established: One-bedroom units, $34 per month; two-bedroom units, $37 per month; and three-bedroom units, $40 per month.

5. *Occupancy.*—Initial occupancy began on March 11, 1944. On May 29, 1944, there were 1,174 of the 1,200 units available for occupancy. Of the 300 units now in active status, 159 were occupied as of May 30, 1944. Only 53 of these 159 occupied units were tenanted by employees of the Brewster Corporation.

6. *Cut-backs.*—On October 7, 1943, the Navy recalled Mr. Frederick Riebel, Jr. as president of the Brewster Aeronautical Corporation. It was announced that Mr. Henry Kaiser himself was stepping into active direction of the company; specifically Mr. Henry Kaiser, Jr., to be in charge of the Brewster operations at Long Island City and Johnsville.

Several attempts were made by officials of this Agency to find out what changes in programming would result from the change in management but informal inquiries suggested that the terrific labor relations problems that the new management faced so preoccupied them that they could not be expected to have any firm statement to make about housing.

On November 12, 1943, our field representative for eastern Pennsylvania being in the office of our regional representative in New York joined in a telephone conversation with Mr. Henry Kaiser, Jr. Mr. Kaiser assured them that his father and he valued the warm cooperation that they had always received from the National Housing Agency and were eager to be as cooperative with us. He recognized how important it was for us to know as promptly as possible any change in plans that would affect the necessity of going forward with the housing project then under construction.

Mr. Kaiser indicated that they were frankly abandoning the plan to move 400 to 500 administrative personnel from Long Island City, and stated that he and his father were developing a general over-all plan for the future of the plant, which he hoped would be approved by the Navy within a week or two. At the time, 86 percent of the assembly work on Corsair planes was being done in Long Island City, and only 14 percent in Johnsville. He hoped to move all the assembly work to Johnsville. He said that a manpower study was then under way to determine just what the change meant in personnel. He conceded that the contract for planes for the British and the Navy bombers was being canceled, but said they had in consideration an increased program for fighter planes that would more than

make up for the cancelations. Even at this late date, Mr. Kaiser expressed every conviction that every house under construction would be used and assured us that he would let us know promptly of any change in their plans that would affect the need for the housing.

Because there was definite lag in the in-migration of workers for the Brewster plant in Johnsville, our field officials again made inquiry regarding the Johnsville situation. On December 31, 1943, our regional representative in New York interviewed Mr. Kaiser and other officials of the company and at that time, we were informed that they could make no claim upon us to ask for reservation of houses at Johnsville for the Brewster Co., and that if we could find tenants elsewhere, we were welcome to do so. He stated at that time that it would be impossible for the Kaiser interests to keep the Johnsville plant operating under the then-existing contracts.

On February 12, 1944, we received a latter from the War Manpower Commission officially notifying us of the sharp reduction in Brewster employment. This letter came after a month or more of continuous oral discussions between our field representative in Philadelphia and the housing and transportation consultant of the War Manpower Commission regional office in Philadelphia, and regional officials of the Federal Works Agency. In this letter, we were advised that employment at the Brewster plant at that time was less than 4,600, and it was indicated that the number of employees would be reduced to 3,500 during the same month. When the original program for housing was approved early in June 1943, the War Manpower Commission reported a peak employment of 9,000 employees was expected for the Brewster Johnsville plant by March 1944.

By this time the entire project had been practically completed, and it seemed better judgment to finish the job and utilize the housing for workers in the Budd plant in northeastern Philadelphia, which was at that time under consideration for a large contract for cargo planes.

7. *Disposition.*—In view of the change in recruitment plans and the declining employment at the Brewster plant, the National Housing Agency immediately took steps to adjust the locality's war-housing program. On February 26, 1944, the project of 200 public temporary family units (PA–36258) was terminated. The occupants of this project were to be rehoused in vacant units in the other projects. Also the 500 permanent units in PA–36435 were placed in stand-by status on February 28 and 400 of the 700 permanent units in PA–36434 were placed in stand-by status on March 1.

Plans for the disposition of the 200 terminated temporary family units are now being formulated. Contracts have just been awarded for the transfer of 54 of the temporary units to Aberdeen, Md., and 104 of the temporary units to Front Royal, Va. No plans have yet been made for the disposition of the remaining 42 temporary units.

No final plans have been made for the disposition of the 900 permanent family units now in stand-by status. As indicated above, it was believed that there would be a demand for such housing from employees of the Budd Co. While the Budd Co.'s contract for the manufacture of cargo planes has been canceled, some of the units in these projects may still be required for workers in the Budd Co.'s plant which has just been awarded a large contract for the manufacture of military shells by the Army. It is reported that C. Jared Ingersoll, chief of the Philadelphia ordinance district, stated that between 3,000 and 3,500 workers will be required for these operations at the Budd Co. plant. If needed for this purpose additional units may be transferred from stand-by status to active status.

As you know, under the Lanham Act, the Congress has declared the policy that housing built under that act shall be sold and disposed of as expeditiously as possible at its full market value but that such housing or any part thereof shall not, unless specifically authorized by Congress, be conveyed to any public or private agency organized for slum clearance or to provide subsidized housing for persons of low income. Further, under regulation No. 1 of the Surplus War Property Administration, the National Housing Agency has been designated as a disposal agency for all property of the class of housing property (including community facilities built by the Federal Works Agency on the sites of such projects) except housing under the control or jurisdiction of the War and Navy Departments. Under this regulation, disposal agencies are required to first ascertain if any surplus property can be used by other Government agencies. It is possible that some other Government agency, such as the Veterans' Bureau, might have some need for the project.

NAVY DEPARTMENT,
BUREAU OF AERONAUTICS,
Washington, May 24, 1943.

MY DEAR MR. WILSON: The Brewster Aeronautical Corporation has recently completed a survey to determine how existing schedules on the production of British and Navy dive bombers and Navy fighters can be met. This survey has been closely followed by the Bureau of Aeronautics.

The results in general show that most of the obstacles in the way of meeting present schedules can be overcome through the application of vigorous, corrective measures by the contractor. This Bureau feels that Brewster Aeronautical Corporation, under the recently installed management of Mr. Henry Kaiser and Mr. Frederick Riebel, is proceeding satisfactorily in applying such measures.

There is, however, one problem brought to light by the Brewster survey which cannot be corrected entirely by the contractor himself. This is the problem of providing housing at or near the Johnsville plant of the corporation, adequate to take care of the increased personnel which is needed here if schedules are to be maintained.

Brewster Aeronautical Corporation feels that 1,400 new homes of the better type must be started at once in order to be ready in time to assist them materially in meeting their commitments for 1943. They feel that 600 of these homes should be of such a type as will be attractive to executive personnel, while the remaining 800 should be of a type which are attractive to supervisors, foremen, and skilled workmen, whose average annual income is in the neighborhood of $4,220.

Exhaustive, exploratory discussions with the National Housing Agency, Federal Public Housing Authority, and the Federal Housing Authority, have led all concerned to believe that the 600 executive type homes can best be built by private contractors, working under Federal Housing Administrative agreements. It is believed that such homes would cost between $5,000 and $6,000. On the other hand, all concerned, agreed that the remaining 800 homes should be constructed as a Government project under the Federal Public Housing Authority. Brewster Aeronautical Corporation, however, feels that it is essential to have homes for supervisory personnel of a better quality than is provided for by the stereotyped Federal Public Housing Authority permissible plans. After inspection of housing projects currently progressing under the Federal Public Housing Authority program the Bureau of Aeronautics is in hearty agreement with Brewster's contention.

All possible speed is necessary in providing Brewster with adequate housing at Johnsville, if the Bureau is to obtain the scheduled number of airplanes. Accordingly, this Bureau requests that the War Production Board waive the rigid requirements of the Federal Public Housing Authority permissible plans in this instance, so long as such housing is kept within full price limitations of the Lanham Act of Congress.

Yours very truly,

RALPH DAVIDSON,
Rear Admiral, United States Navy,
Acting Chief of Bureau.

NAVY DEPARTMENT,
BUREAU OF AERONAUTICS,
Washington, June 1, 1943.

MY DEAR MR. EMMERICH: It was a great satisfaction to learn this morning that as a result of investigations made under your supervision in conjunction with representatives of the National Housing Agency and of this Bureau, it has been decided to build 500 privately financed houses and 700 publicly financed family units to meet the urgent requirements of the Brewster Aeronautical Corporation for additional housing facilities at Johnsville, Pa.

I am considerably concerned, however, in view of the unusual circumstances resulting from the necessity of housing exceptionally high-grade employees, that you have not been able to relax further the current construction limitations on the 700 publicly financed houses. I do not feel that houses of the design and construction now specified for this group of 700 will in any way help solve Brewster's problem.

Brewster must do more than merely make living quarters available to its employees. To build the Corsair airplane in the quantities demanded by the Navy, the new management must induce its skilled mechanics, engineers, draftsmen, foremen, supervisors, administrative personnel—employees in the higher salaried brackets—to move from their present relatively convenient and comfortable homes on Long Island to rural Bucks County, Pa. They will not do this if PA-36258 homes (Fulmore Heights No. 2) are offered them. This is proven by the fact that out of 145 Brewster employees shown these homes, not a single person has been persuaded to take one. You will agree, I am sure, that it would appear to be a tragic waste of public funds to build these 700 additional homes, now approved, in this fashion when, in view of the reaction of the prospective tenants approached to date, it is doubtful whether it would in any way solve the peculiar problem involved.

I urgently request that you reconsider Brewster's original proposal that the 700 publicly financed houses be of the PA-36251 type as in the case of Fulmore Heights No. 1. I believe that this type of dwelling represents the minimum in spaciousness and comfort, which Brewster will be able to offer with any success as an inducement to its employees to move themselves and their families to Bucks County, Pa.

I am informed that regional officials of the Federal Public Housing Authority, the National Housing agency, and the War Production Board have indicated that homes of the type requested can be built for this project by the Federal Public Housing Authority and that materials sufficient for this number are available. The Bureau of Aeronautics stands ready to assist in this by extending AA-2X and AA-1 priority ratings, where necessary, under its War Production Board program determination 220.

If Brewster is to build Corsair fighters in the quantities required by the Navy, additional high grade production and management personnel must be made available in Johnsville. To do this housing of the PA-36251 type (Fulmore Heights No. 1) is necessary, and it appears that providing satisfactory housing is the only way we can solve this critical war production problem.

I cannot stress too strongly the importance of public housing of the better type to meet the unusual requirements at Johnsville, and I will greatly appreciate your usual cooperation in assisting us to make this available.

Yours very truly,

RALPH DAVIDSON,
Rear Admiral, Bureau of Aeronautics,
Navy Department.

Senator MURRAY. That will end the hearings today.

We will meet again tomorrow morning at the same hour, 10:30, to hear Mr. Wilson, vice chairman, War Production Board, the Honorable Robert P. Patterson, Under Secretary of War, and Artemus L. Gates, Assistant Secretary of the Navy for Air.

We will now adjourn.

(Whereupon, at 12:55 p. m., an adjournement was taken until 10:30 a. m., of the following day, Wednesday, July 12, 1944.)

MOBILIZATION AND DEMOBILIZATION PROBLEMS

WEDNESDAY, JULY 12, 1944

UNITED STATES SENATE,
WAR CONTRACTS SUBCOMMITTEE OF THE
COMMITTEE ON MILITARY AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10:30 a. m. in room 457, Senate Office Building, Senator James E. Murray (chairman) presiding.

Present: Senator Murray.

Also present: Charles A. Murray, Bertram M. Gross, Kurt Borchardt, and Scott Russell, counsel to the Senate Post-war Planning Committee.

Senator MURRAY. The hearing will come to order. Hon. Robert P. Patterson, Under Secretary of War, will address us this morning.

STATEMENT OF HON. ROBERT P. PATTERSON, UNDER SECRETARY OF WAR (ACCOMPANIED BY MAJ. GEN. OLIVER P. ECHOLS, ASSISTANT CHIEF OF AIR STAFF, MATÉRIEL AND DISTRIBUTION)

Senator MURRAY. Are you prepared to go ahead?

Mr. PATTERSON. Yes, I am, Mr. Chairman.

Senator MURRAY. You are Acting Secretary of War today?

Mr. PATTERSON. I am Acting Secretary of War today, yes, sir. I have a short prepared statement that I would be glad to go over and then, of course, do my best to answer any questions.

Senator MURRAY. You may proceed.

Mr. PATTERSON. It is well recognized that the tremendous expansion of the aircraft industry during the war, as compared to industry in general, has placed it in an exceedingly vulnerable position with respect to contraction to peacetime operations upon termination of the war. The resulting financial problems, unless properly met, could result in seriously and permanently crippling the aircraft industry.

The aircraft industry is of vital importance to our long-range national defense. Only through its preservation in sound health can we be assured of maintaining world leadership in aviation. It is for this reason that special attention and special consideration must be given to the problems presently under discussion before this committee.

I am glad to give you the current thought of the War Department with respect to these problems. In presenting our views, I shall devote myself to the questions which accompanied your invitation to appear before you today. Those questions all pertain to the aircraft industry and our aircraft program.

Question No. 1: To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department

and that of the War Department? How can this best be achieved?

It is my opinion that no measures designed to achieve better coordination between cut-backs of the War and Navy Departments are now necessary.

Adequate machinery for such coordination as it applies to aircraft is now provided by the Joint Aircraft Committee and two agencies of the War Production Board, to wit, the Aircraft Production Board and the Production Executive Committee.

The Joint Aircraft Committee, with representatives from the operating and matériel agencies of the Army and Navy, the British, and the Aircraft Resources Control Office, is charged with the coordination of the aircraft programs of the two services, including lend-lease, and the submission of the programs for approval to the Aircraft Production Board, of which Mr. C. E. Wilson is chairman.

In addition to these two coordinating agencies, each playing its part, a third has been established as a result of the directive recently issued to the services by the Office of War Mobilization. That was the directive following the happening of the Brewster case.

Senator MURRAY. Yes.

Mr. PATTERSON. The directive provides that no production cut-backs are to be made before clearance has been obtained from the Production Executive Committee. The Army Air Forces and the Navy Bureau of Aeronautics are represented on that committee and on the committee's staff. The functions of this W. P. B. agency with respect to cut-backs will be outlined at a later point in this discussion.

I might add at this point that I believe that machinery to be adequate on cut-backs between the War Department and the Navy Department. The Joint Aircraft Committee, which is primarily military and an agency of the War Department and Navy Department, decides on the requirements and schedulings. If they indicate a cut-back, the case is then taken to the Aircraft Production Board of the War Production Board, of which Mr. Wilson is chairman, with the Army and Navy represented; and, then, like any other case of a cut-back not merely in the aircraft program but any case of a military cut-back, it goes to the Production Executive Committee of the War Production Board, of which Mr. Wilson is also chairman, which has a staff and is supposed to see whether new work can be put into that plant which has suffered the cut-back, or what is the best disposition to be made of it in view of the total requirements of the war program. That is a summation of it. I think, so far as measures for control and coordination are concerned, they are adequate. That system has only been in effect for about a month and a half, and so far as we can see at the present time, experience seems to show that it will serve the purpose.

Senator MURRAY. What you have described appears to me to be fully adequate to take care of the situation.

Mr. PATTERSON. We believe so, Mr. Chairman. If it proves not to be, we will have to do something else.

Question No. 2: Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

The criteria to be used within the War Department in deciding how a particular cut-back should be allotted as between several producers of the item in question are as follows:

1. The procuring agency will retain until final victory those contractors which it has found from experience to be capable of producing required items at the scheduled rates. The contractor retained in war production until the end of the war must be the best qualified, and all other rules of selection are applicable only among those so qualified.

2. As between qualified contractors, the following factors will be considered in selecting facilities to accomplish the necessary readjustment and curtailment of production:

(*a*) Privately owned plants, not normally engaged in production of a military character, will be given first priority of release from war production in order to facilitate their reconversion to civilian production, due consideration being given to the wishes of the contractors.

(*b*) Government-owned plants will be kept in operation or stand-by until their productive capacity is clearly no longer required for military needs.

(*c*) Insofar as practicable, the release to civilian production of competing units of the same industry should be simultaneous. Many of the consumer durable industries, such as the refrigerator, washing machine, and automotive industries, are in peacetime largely final assembly units. Therefore, in scheduling the release of such facilities, every effort should be made to synchronize with the release of the prime contractors, the release of the normal (peacetime) subcontractors.

I mean by that the feeders to that same plant; if it is a final assembly plant engaged in the washing machine or radio business, very little in the way of return to civilian production will be achieved unless it has recourse also to its normal sources of supply from its subcontractors.

Senator MURRAY. Would that mean that civilian production in any given industry would be held up until all the competing corporations for that particular industry were able to resume civilian production?

Mr. PATTERSON. No, sir. As I understand this—General Echols can correct me if I am wrong—it has to do with integrated reconversion. As I mentioned a moment ago, if the concern that is now engaged in aircraft production is in normal times the producer of some civilian items, largely of an assembled character where it draws its parts and pieces from subcontractors, the thought here is that efforts should be made, if that concern is to be released from aircraft production, to let it have access to the subcontractors that would normally supply it in making its peacetime product. Isn't that right, General?

General ECHOLS. Yes, sir.

Mr. PATTERSON. Otherwise, if it is not synchronized, it probably would be futile to let the main plant cut loose because, if we still were holding the subcontractors on the production of aircraft, nothing would happen.

(*d*) In scheduling the release of plants and industries, full consideration is to be given to cushioning the shock of unemployment. Where other factors permit, priority of release should be given to a plant located in an area or region where displaced labor can be most readily reemployed. Tight labor areas can thus be relieved.

(*e*) In scheduling the release of plants or industries, due consideration is to be given to (1) Security considerations; (2) considerations affecting public transportation, such as accessibility to the sources of labor, raw materials, components, depots or storage facilities, and ultimate destination; (3) the relative unit cost to the Government.

(*f*) In scheduling the release of plants or industries, due consideration will be given to the welfare of small business.

(*g*) Where practical considerations make it possible, companies responsible for the development and engineering of specialized products should be retained in their manufacture in preference to those companies which are merely licensed for their manufacture.

Again, in connection with these yardsticks, I should call attention to the fact that the Production Executive Committee has been empowered by Mr. Byrnes as the agency to clear all proposed cut-backs by the procurement services.

Question No. 3: What should be the policy governing advance notice of cut-backs for (*a*) the company; (*b*) the subcontractors; (*c*) the employees; and (*d*) other Government agencies?

Mr. Byrnes' directive with reference to cut-backs provides that the Production Executive Committee should, as he said—

> * * * adopt uniform policies for the future cancelation of contracts giving reasonable notice to management and labor of such cancelations—

and directs the procurement agencies

> * * * to take prompt action to clear their proposed contract cut-backs and terminations wtih the committee * * * and such cut-backs and terminations shall not be made effective until such clearance is obtained.

The question of advance notice of cut-backs to all parties concerned is one for determination by the Production Executive Committee or its staff, on both of which the War Department has representatives. The definite answer to the question has not yet been made by this agency, since its first few meetings have necessarily been concerned largely with procedures for reporting current cut-backs and with the details associated with cut-backs decided upon before the Byrnes directive.

Prior to the vesting of this function in the Production Executive Committee—and that is before the Byrnes directive—we in the War Department had proceeded as follows:

1. It was considered important that certain other Government agencies should receive notice of any proposed cut-back in an aircraft item which might result in a release of employees or plant, or both, and that such notice be received practically simultaneously with the decision of the procuring service to make the cut. Such advance notice contributes to the most efficient prosecution of the war by speedy reabsorption of the released resources of personnel, plant and materials in some other part of the national economy, either for munitions output or for essential civilian production. In no other way can cut-backs be planned so as to avoid disruption of morale and wasteful periods of unemployment of workers and plant. Consequently, it was our practice to see to it that our plans in such cases were made known promptly, not only throughout the War Department but also to the Navy, the War Production Board, the War Manpower Commission and the United States Employment Service. In addition notice would also be given in appropriate cases to the Smaller War Plants Corporation, the Office of War Information, and others as the occasion might arise.

2. The company was notified of the proposed cut-back as far in advance as possible, and before anyone else outside the Government, in order that it might plan ahead for the smooth execution of the cut-back.

3. The employees received notice from their employers, but not before there had been time to expend every effort to develop adequate plans for their proper and prompt reemployment through the joint efforts of the War Department, the company, and the appropriate Government agencies among those I have mentioned. It is important that public announcement be made of the reasons for the change in program and of the plans being made for other imployment where possible.

4. The subcontractors also received their notice from the prime contractor. Many prime contractors have thousands of subcontractors. Not all of these subcontractors are affected by a cut-back, and the farther a subcontractor is removed from the prime contractor in the successive tiers of subcontracts, the less will he normally be affected by any specific military cut-back.

Senator MURRAY. Isn't it going to be difficult for the prime contractor to give any notice to his subcontractors? For instance, where the prime contractor has on hand a several months' supply of the things that he is securing from the subcontractor, he would have to terminate the subcontractor, would he not?

Mr. PATTERSON. That is true.

Senator MURRAY. He might have a 90 days' notice from the services and yet have to immediately terminate the subcontract.

Mr. PATTERSON. That is true. And yet it seems to us—of course, I am talking now of the system that we had prevalent before the Byrnes directive, placing the machinery in the Production Executive Committee—and yet it seems clear that we are not sufficiently familiar and cannot be with the method of operation of the prime contractor to give direct notice to his subcontractors. Take the Air Force: they may have a contract with, say, the Fisher Co., and the Ordnance has some also, and the Fisher Co. handles those contracts in the way that best integrates their business. I do not think the Air Force could safely give a direct notice to the subcontractors if they were cutting back their contract with the Fisher Co. without being in danger of affecting the operation of the Fisher Co. on other war business or on business of its own. It is more or less the same thing, Senator, when we get into the termination of contracts which we have discussed a great deal. We do not yet see our way clear to handling the termination of contracts with a view, say, to the liquidation or termination of plants, other than on a vertical basis viewing the subcontractor as an appendage of the prime contractor. That is the way all of our contractual relations run, and that is the way all of our production planning is carried on.

Senator MURRAY. Should the Government assume any responsibility in advising or consulting the prime contractor with regard to which subcontracts should be terminated?

Mr. PATTERSON. Well, perhaps we could. I will have to ask General Echols if that has been the practice.

General ECHOLS. I think in certain cases we should and do. From the viewpoint of the aeronautical set-up entirely, we are interested in

keeping, to the extent we can, under the criteria established here. The aeronautical people in the aeronautics business and the people who design, develop, and invent certain items of equipment should be the last to go out, we feel; whereas these people whom we have brought in as licensees and who can go back to civilian industry rather easily should be the first to go out. That should be true all the way down from top to bottom. There are many small subcontractors making some particular piece or part of an aeronautical instrument, we will say, who should be continued in the business.

Senator MURRAY. In order to accomplish that the Government would have to be familiar with the subcontractors and the character of their plants, and so forth?

General ECHOLS. Well, we try to keep familiar with that and we are to some extent, but, as Judge Patterson has stated, there are certain items made by subcontractors which the manufacturer has no prime interest in. He was just given the job to do by the prime contractor, and it is the kind of a job that most anybody can do, that many people could do. We haven't gone too far into that. It is just the special items of equipment that we have watched very carefully.

Senator MURRAY. You may proceed, Judge Patterson.

Mr. PATTERSON. There is always the danger of leaks. A premature leak can be of incalculable harm and can effectually nullify all the efforts for the orderly carrying out of the cut-back, particularly in regard to the adjustment of personnel. Premature disclosure, or disclosure without full statement of the reasons therefor, undermines the morale both of labor and management and can lead to a public impression that the cut-back is due to inefficient management or to unsatisfactory work by the employees displaced. In tight labor areas, personnel quite naturally take the first opportunity to seek other jobs, thereby delaying completion of supplies needed by our troops. Accordingly, we have felt that no fixed rule can be established for advance notification, other than that it should be given as early as may be prudent and practicable.

Question No. 4: What provisions should be made for employees who are released from wartime aircraft production? Through unemployment compensation? Through retraining? Through transportation to other localities? Through other methods?

This question poses problems which to a large extent are beyond War Department jurisdiction. The War Department is in accord with the principle of unemployment compensation for wartime workers released from their jobs as a result of cut-backs and terminations of contracts. I have not made a study of the methods proposed for supplying such compensation or supplementing State unemployment insurance laws. I believe others are better qualified than the War Department to discuss the making of retraining available to war workers and having the Government provide for transportation of such workers to those localities where new jobs exist. Of course, I take it this is not peculiar to aircraft production, but precisely the same problem will be faced with a great deal of other war production.

Question No. 5: How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of war production or of civilian production?

In order to synchronize and integrate concurrent developments, it is essential, first, that there be a central agency charged with that

responsibility; and, second, that this central agency have before it the essential facts.

The creation on May 25, 1944, of the Production Executive Committee Staff fulfills the first of these two requirements, at least until such time as the Congress may pass specific legislation. Administrative Order No. 2–157 of the War Production Board, which created this staff, gave it very broad functions, providing that it shall—

* * * inquire into any feature of production, including its scheduling and the scheduling of components, and make available all pertinent information with respect to coordinated adjustments for the resumption, expansion, or curtailment of production * * *.

The Director of the Office of War Mobilization, Mr. Byrnes, contributed greatly to the powers of this agency by his directive of June 5, 1944, to which I have referred. The result is that we actually have in full operation within the War Production Board an agency charged with the responsibility of synchronizing and integrating production developments.

The next requirement, as I said, is that the agency have before it the essential facts—facts with regard not only to the cut-backs proposed, but also to other types of war production or essential civilian production which it might be possible to place in the facilities where the cut-back is to take place. I think that the membership of the Production Executive Committee Staff will best indicate how these other facts will be developed. The armed services have representatives for: Army Service Forces; Army Air Forces; Office of Procurement and Material, Navy Department; Bureau of Aeronautics, Navy Department; Maritime Commission.

The War Production Board has representatives for: Program Vice Chairman; Operations Vice Chairman; Civilian Requirements Vice Chairman; Labor Production Vice Chairman; Manpower Requirements Vice Chairman; Metals and Minerals Vice Chairman; Smaller War Plants Corporation. Other agencies also are represented, including the War Manpower Commission and the Office of War Information.

A subcommittee, I understand, is being established within this staff, including the staff representatives of the armed services, to deal with the question of interservice exchange of facilities released through cut-backs of military production. Plainly such needs receive first priority. In the absence of military need for facilities released by cut-backs these facilities will become available for essential civilian production to the extent manpower can be supplied. Such cut-backs will become increasingly important as the war draws to a close, and it may well be that the Production Executive Committee Staff can in certain cases suggest regroupings and consolidation of military production in the interest of more orderly reconversion of the economy to a peacetime basis.

Question No. 6: What are the important steps that Government and industry can take now to promote the rapid development of civilian aircraft production?

The Government and industry mutually desire to promote the rapid development of civilian aircraft production. The War Department has devoted much time and thought to the subject with the result that certain important steps have been outlined. This subject covers a large field. I will touch only on that part which pertains to the military.

A most important step is to solve the problem of disposal of surplus Government-owned aircraft and avoid the retarding effect on the aircraft industry which an ill-advised disposal program might have. This is now the responsibility of the Surplus War Property Administrator, Mr. Clayton, who is advised on surplus aircraft disposal matters by a subcommittee on which the War Department is represented. Fundamental disposal policies have been advocated by the War Department to the end that positive encouragement will be given to experimentation and new production by the aircraft industry. I will discuss this problem in more detail later in this statement.

Proper steps are now being taken, in coordination with the War Production Board, to assure that all future cut-backs in aircraft production will be arranged to permit production of civilian aircraft as soon as military requirements are met and to the extent that labor may be available.

Every effort must be mafe to encourage civilian air transport development and civilian flying. The War Department feels that it can best support flying development by making flying available to officers of reserve components of the Army. We are working on plans toward this end. The Civil Air Patrol, which is under the supervision of the Army Air Forces, is also assisting in this development. It has a large number of members who are gaining flying experience and training by performing flying missions in the interest of the war effort. In addition, the Civil Air Patrol has a cadet program which should result in interesting large numbers of boys and girls, 15 to 17 years of age, in flying.

The Congress, it is hoped, will appropriate sufficient funds to maintain a strong post-war Air Force, with a policy of prompt replacement of obsolete military aircraft by the latest types. Such a policy will make possible the development of new types. A comprehensive research program is now in preparation and is essential to the maintenance of American leadership in military aviation. In addition, this policy would go far toward stabilizing the industry and putting it on a sound competitive basis in world markets. Experience has shown that improved military models usually foreshadow improved civilian models.

The future of the aircraft industry is thus bound inseparably to the granting of adequate appropriations for the post-war Air Force. Without the demand created by a progressive Air Force for large numbers of the best airplanes of the latest types, our aircraft industry will unquestionably lag behind that of other nations, our research and development on all types of planes will be retarded, our aircraft, military and civil, will become outmoded and our Nation will lose its air supremacy.

Question No. 7, first part: What principles should be followed in handling Government-owned aircraft factories?

In establishing the principles to be followed in handling these factories, consideration must be given to certain basic factors pertaining to the relationship of the aircraft industry to the national defense. They may be briefly stated:

1. The post-war Military Establishment, with its necessary industrial support, must be maintained on the assumption that this country will not again be given such a period of grace between the start of war and the necessity for full-scale military effort as was provided it by France, England, and Russia in the present war.

2. The protective isolation of our war plants cannot be taken for granted in another war because of the almost certain development of heavy bombers capable of reaching any objective in this country from overseas bases.

3. Security considerations with respect to location dictate an aircraft industry with widely scattered plants. Prior to this war, the location of the aircraft industry violated such considerations as it was well known to be concentrated on the Atlantic seaboard and Pacific seaboard. In view of the factors I have just mentioned, it seems obvious that it should not be allowed to drift back entirely to pre-war locations. It is probable that the normal desires of management would lead to such a trend because of climatic, labor, and community considerations.

It is unquestionably a fact that a post-war aircraft industry of sufficient size to serve this country in another war cannot be supported by probable military appropriations and foreseeable commercial business. For that reason, it will be necessary for the Government to maintain a ready nucleous of reserve plant facilities that will permit rapid acceleration of aircraft output in a future emergency. The following principles regarding disposition of Government-owned aircraft plants are set forth in that light:

1. Title to the eight large Government-owned bomber plants should be retained by the Army Air Forces. These plants are strategically located and are of a size sufficient to permit important expansion of any existing aircraft production. To insure a maximum of maintenance with a minimum of cost to the Government, they should be leased to private enterprise wherever possible. Wherever these plants cannot be leased, they should be retained in stand-by by the Army Air Forces, or used for the storage of essential tools, other production equipment and strategic reserves of matériel, or maintained as A. A. F. Air Service Command depots.

2. In the interest of operating the most modern and efficient plants, the aircraft industry should be encouraged to take over Defense Plant Corporation facilities now in use.

3. Such Defense Plant Corporation plants as are not taken over by the industry should then receive Army Air Forces consideration for emergency stand-by retention. The remaining plants should next receive attention by the Air Forces for the storage of production equipment and matériel. All other plants should be disposed of in accordance with policies to be established by the Surplus War Property Administrator and the directions of the Congress.

Senator MURRAY. Is that considered to be a continuing policy or perpetual policy, or is it just for the period of the war?

Mr. PATTERSON. No; we think of that as a policy with some permanence. We have these large Government-owned plants, bomber plants. It is, I think, inconceivable that current needs of the Army, say 5 or 10 years from now, plus commercial production, will require the use of those plants, and we believe that they should essentially be in a stand-by condition for future emergency, with these temporary uses in the interim that might be possible.

Senator MURRAY. If that same policy is followed by all the other countries in the world, it would mean the beginning of another armament race, would it not?

Mr. PATTERSON. Well, I do not think so. All of this is contingent upon what international arrangements we may have at the conclusion of the war.

Senator MURRAY. Yes. That is what I was thinking. It seems to me that it will be a tremendous burden on the people of the country if they are compelled to maintain these tremendous armaments in the post-war period. It seems to me it should be contemplated that the peace settlement would bring about a situation where these matters would be controlled in the future.

Mr. PATTERSON. Well, it is hoped so, but I don't think there would be a tremendous expense, Senator, in keeping them in a stand-by condition.

Senator MURRAY. You would continue technological experimentation and development of new ideas in these airships continually, would you not?

Mr. PATTERSON. Yes, sir; that is right. I do not think we can afford to take any risks at all on our maintenance of aircraft supremacy. We have it now and I do not think it should be surrendered, with a view to the national defense. Those ideas are all subject to qualification, depending on the kind of peace we have and the outlook after that.

Question No. 7—second part: What principles should be followed in handling Government-owned aircraft?

No aircraft will be declared surplus by the War Department unless they are determined to be in excess of military requirements, but it seems certain that there will be large numbers of such aircraft, and the problem of their proper disposal will be a substantial one. Well, I will go further and say a most critical one.

Under Executive Order 9425, the Surplus War Property Administration was established. Once aircraft have been declared surplus to the needs of the War Department, the responsibility for their disposition shifts from the War Department to the Surplus War Property Administration. The Administrator, Mr. Clayton, has appointed a Surplus Aircraft Advisory Committee charged with the duty of recommending a disposal program. The War Department has a representative on this committee.

I understand that there is presently under consideration the establishment within the S. W. P. A. of an Aviation Division with a Director who would be specifically responsible for the allocation of aircraft to both domestic and foreign customers, and for the establishment of broad selling policies to be followed by the disposal agencies.

Although, as has been stated, the responsibility for the disposition of surplus aircraft rests with the Surplus War Property Administration, the War Department has a vital interest in the problem because of the concern of our armed forces with the aircraft industry and with the comparative strengths of the air forces of this and other nations.

A determination of certain basic considerations and methods in regard to disposal of Government-owned aircraft has resulted from a careful study of the problems involved, from consultation with representative members of the aircraft industry and others qualified in aviation, and from the experience gained from the handling of surplus aircraft after World War I. The background to the development of these principles is provided by the recently completed report prepared

by the Graduate School of Business Administration, Harvard University, at the request of the Army Air Forces and the War Department. I believe, Senator, your committee already has a copy of that report made by the Harvard University.

Senator MURRAY. Yes.

Mr. PATTERSON. In dealing with this problem three objectives are considered of prime importance, viz:

1. The maintenance of a sound permanent military establishment with full public support, adequate skilled personnel and adequate up-to-date equipment, and backed by a strong and technically aggressive aircraft industry capable of rapid expansion. Through this and through the constant replacement of obsolete military equipment by the latest models from production, the effectiveness of the Army Air Forces will be preserved and the leadership of the United States in the design and manufacture of combat aircraft will be maintained.

2. The use of disposal of surplus aircraft as a positive instrument to create sound foreign relations and future trade.

3. To the extent consistent with the above objectives, the maximum dollar return to the Government from surplus disposal.

The rapid rate of obsolescence of aircraft makes timing the key to a sound disposal policy and the sooner surplus aircraft are made available to foreign and domestic markets, the more completely the objectives I have stated can be attained. That subject, I know, is dealt with at considerable length in this report of the Harvard Graduate School. In the light of these considerations, the following two points are of major importance:

(*a*) During the war surpluses of aircraft and components should be made available to the civilian economy as soon as they are declared surplus to the needs of the armed forces.

(*b*) After the war, but only when new and improved equipment becomes available, the distribution of surplus aircraft and components should cease in order to encourage experimentation and new production, and relieve the aircraft manufacturers of the fear of the dumping of surpluses over an unlimited period of time. An example of the contrary policy is furnished by the story of the Liberty engine following World War I. Until as late as 1932, surplus Liberty engines remained available and engine manufacturers could never be sure that this surplus would not be dumped on the market, breaking engine prices. Furthermore, until 1928 airplanes designed to be equipped with the Liberty motor were being procured by the Air Corps, in order that the surplus of engines might be used. Unquestionably, this had a retarding effect on the aircraft industry in this country. It was a mistake which must not be repeated if we are to retain world leadership in aviation. Of course, it also tends to saddle the armed forces with a lot of obsolescent equipment.

A comprehensive aircraft disposal program is now being formulated for presentation to the Surplus War Property Administrator. Obviously, I cannot say what the approved program will be nor is it appropriate for me to discuss the proposals, pending decision upon them by the S. W. P. A. I can assure you, however, that a great amount of good, hard, and realistic thought has gone into this planning, and we have reason to hope that it will bear fruit.

Question No. 7—third part: What principles should be stated in handling Government-owned airfields?

At the present time the War Department is studying the mission, size, and composition of the post-war air force necessary for the protection of this country. It is improbable that definite conclusions can be reached before the end of hostilities.

The study will list fields to be kept in active status and those to be held in stand-by status. In making this determination, consideration will be given to the adequacy of facilities and the strategic and training needs of the post-war air force. Those fields which are not classified in either of these lists will be declared surplus to the needs of the Army Air Forces. Care should be taken, however, by the surplus-disposal agency of the Government that, wherever possible, surplus fields which are not wholly undesirable be disposed of for uses which will interfere as little as possible with their rehabilitation as airfields in any future emergency.

Question No. 8: What plans should be made for a post-war national defense program for the aircraft industry; through research and development; through stand-by capacity; through other methods?

Plans for the post-war aircraft industry require the integration of a great number of considerations that have not yet been fully developed. The problem is under continual study by the Army Air Forces and it is hoped that a definitive plan will be prepared within the next several months.

I shall outline certain of the basic considerations which enter into that study and such preliminary thought as has developed.

To begin with, there seem to be two major aims involved in any plan for the post-war aircraft industry. The first, to insure maximum technical development. The second, to provide the industry with the means of rapid expansion in a period of emergency.

The necessity for the greatest possible technical advance in aircraft is obvious. This country entered the present war with some good airplanes, but they could have been better, and our tactical advantages greater, had we not been handicapped in the pre-war years by the inadequacy of funds available for research and development.

That must not happen again. We have expended a vast amount of research effort on the improvement of our airplanes, and there can be little question but that we will emerge from this war with the best in the world. That advantage must not be lost.

At the termination of hostilities there will be a great number of research projects in various stages of development. Some of them, like jet-propelled airplanes, will be of major significance to our future security. To make any drastic reduction in the amount of research expenditures in the early post-war years would mean losing the benefits of a large number of the in-process projects. It will be essential to continue to expend substantial sums on research and development for 2 or 3 years following the end of the war before such sums can be tapered off significantly. The money spent in later-post-war years, however, must be far above that available immediately prior to this war if we are to maintain our technical superiority in designing and building military airplanes. At all times expenditures must be sufficient to insure the competitive development by the aircraft industry of advanced airplanes, engines, and other components; to promote new tooling and production technology; and to permit production of all successful items on a scale that will bring manufacturing "know-how" and allow adequate service testing of the equipment.

The Army Air Forces Matériel Command is now planning a comprehensive post-war research and development program for military aircraft that will be designed to insure our continued superiority in the air. Based on past performance, there can be little doubt of our ability to achieve that end if we are willing to spend the money necessary to insure the application of our best aircraft minds to the problem.

Turning now to the second of the two aims I mentioned, we find that the discovery of the best means of providing the aircraft industry with the ability to expand its output rapidly on a major scale presents a most complex problem. I have stated earlier that the foreseeable commercial business and the probable appropriations for military aircraft will not be adequate to support an industry capable of providing all the airplanes we would need in another war. It is vitally important to set up the industry on as large a scale as possible, however, and certain salient points can be made in that respect.

1. Surplus aircraft must be disposed of in the post-war period in a way that will not have a bad effect on the markets of the aircraft industry.

2. The greatest encouragement should be provided commercial and civil aviation.

3. The third point is again the one of Federal funds. We must have adequate military appropriations in this field to keep the industry well beyond its pre-war size and to maintain a corresponding output of planes developed and sold through normal competitive methods.

Beyond the establishment of a large, healthy aircraft industry, there must be reserve capacity and a plan for quick expansion. Retention of the eight Government-owned aircraft assembly plants by the Army Air Forces has already been advocated in this statement as a facilities reserve. It may be desirable to add several Defense Plant Corporation aircraft and aircraft engine plants to that list. Special tooling becomes obsolete too rapidly to make it advisable to hold any important quantities of it in reserve, but such general-purpose tools as are not subject to rapid obsolescence should be retained by the Army Air Forces for installation in stand-by plants and privately owned plants as they are needed.

A further factor, requisite to post-war air supremacy, is a plan for the industrial mobilization of another huge aircraft industry. It must be far more comprehensive than anything we had at the outset of this war. It should encompass the details of assigning in advance definite products to individual industries and plants and maintaining production knowledge of those products at the plants concerned through the submission of designs as they are developed and, in some cases, through the maintenance of pilot-line production. Such planning is a large undertaking, but it must be done if we are to be in a position to expand aircraft production quickly to the scale on which it is being carried on today.

In concluding, I want to emphasize, first, that although the questions we have discussed are serious and difficult ones, I am confident they can be solved—they must be; second, that the War Department is giving them constant study and developing plans for their solution; and third, that I an happy that this committee scheduled these hearings and is giving the matter such thorough consideration. I should like also to reemphasize the fact that although adequate plans may be made to provide what we need for our national defense, we cannot

remain the dominant power in the air unless Congress provides the funds necessary to carry out those plans.

The particular work in this respect that I have mentioned here as being carried on by the War Department is under the direction of Colonel Davison, who is here and who represents the Special Projects Branch of the Army Air Forces, which is devoting its entire time to this matter covered by my statement today. Rather than try to handle any detailed information personally, which I would not be able to do with the care that the committee deserves, I have summoned Colonel Davison to my assistance, who is devoting his entire time to these matters.

Senator MURRAY. Mr. Secretary, it has been suggested by witnesses before our committee a day or two ago that a National Aircraft Production Council should be set up similar to the Production Council which you now have. What would you have to say about that?

Mr. PATTERSON. With members of the industry?

Senator MURRAY. I think some witness testified to that. I think it was Mr. Frankensteen, representing labor. He said he would like to urge the formation of a National Aircraft Consultant Council. The purpose of the council would be to follow the development of the aviation industry, with particular reference to civilian use. Of course, the Army and Navy would be interested in that work and I was wondering if you felt it necessary, in addition to that, to have a national council set up; a National Aircraft Development Council, he called it.

Mr. PATTERSON. Well, if they get the blessing of the Department of Justice—you could not run afoul of the Sherman Act—I think it would be a good thing to do.

Senator MURRAY. You think there might be a danger of a little monopoly developing if such council were set up?

Mr. PATTERSON. That is the reason I put in the qualification of the Department of Justice. I do not think there would be any risk if they gave it their approval. They are pretty alert to monopolistic tendencies.

Senator MURRAY. Thank you for your very excellent statement.

Mr. PATTERSON. Thank you.

Senator MURRAY. Mr. Gates.

STATEMENT OF HON. ARTEMUS L. GATES, ASSISTANT SECRETARY OF THE NAVY FOR AIR

Senator MURRAY. Mr. Gates, will you give your name to the reporter, and the Department you represent?

Mr. GATES. My name is Artemus L. Gates. I am Assistant Secretary of the Navy for Air. I have a very brief statement here.

Senator MURRAY. You may proceed.

Mr. GATES. Senator Murray's letter of June 7 to the Secretary of the Navy, inviting him to testify at today's hearing, made it clear that the matters under examination chiefly concerned aviation and, accordingly, he asked me to represent him. The Navy is, of course, pleased to cooperate in such studies as your committee has in mind. Capt. Lewis L. Strauss, of the Secretary's office, has been closely associated with the program and machinery for terminations and cut-backs. He is here with a statement and is ready to answer questions on the technical phases of these problems.

There are a few questions of policy and generalities that I should like to touch upon first.

The Navy is now studying a program to transfer certain air frame and engine production over a period of time from those present producers which are not primarily aviation companies back to the aviation manufacturers proper. This is no reflection on the job the nonaviation companies have been doing; many of them have made excellent records both in meeting production schedules and in holding down costs. But plane manufacture is not their peacetime business, and they should be put in position to resume their regular production when the whistle blows.

It is my belief that the Government should not try to operate, in competition with the aircraft manufacturers, the plants it now owns. Those plants which are regarded as essential stand-bys for future reserve production should be "put on ice" and the others should be sold to private industry. The soundness of the policy of leaving aircraft production in private hands has been proved by the record of the industry in this war.

It is also my belief that the air lines need not fear any competition from the Naval Air Transport Service. As soon after the termination of hostilities as the commercial air lines can take over the load, I foresee reduction by the Naval Air Transport Service of its operations to a point where it will not be competing. The Navy will always need to maintain a fleet of cargo and transport planes to carry unusual loads, to reach out-of-the-way bases where the commercial air lines will not operate, and to make emergency transfers of cargo and personnel for military purposes. There will be no occasion to duplicate service where facilities are adequate.

As to national policy with regard to maintenance of air power, the Navy endorses the resolution adopted by the Board of Governors of the Aeronautical Chamber of Commerce of America at Los Angeles last April, unanimously recommending formulation of an American airpower policy on the following principles:

The United States should maintain an air power sufficient (in conjunction with other forces) not only to win this war but also to keep the peace:

1. By maintaining adequate air forces at such strength and in such state of readiness as to preclude a successful assault upon our country or its possessions.
2. By acquiring and maintaining air bases essential to our security and that of overseas trade.
3. By facilitating the orderly and economic expansion of domestic and international air transport and of private flying.
4. By preserving a strong aircraft-manufacturing industry.

Reference has previously been made to the work of the Morrow Board, created by President Coolidge in 1925. Legislation resulting from the Board's study brought about remarkable growth in naval aviation. The Navy would favor a new examination of the relationships of the service and industry by a new Morrow Board representing Congress, the armed forces, the aviation industry, labor, and other interested groups. I am confident that such a study would be extremely valuable.

Since Congress naturally desires to make a real contribution to the solution of the aircraft industry's post-war problems, I suggest a declaration now for a strong post-war Navy with its closely integrated air

components. This would be reassuring to industry and labor. It would enable industry to go ahead with its plans and its experimental work for the Navy. We must keep our naval air force the best in the world. The war has demonstrated that it is the spearhead of the Navy.

Your committee's work has a highly important bearing on the future, but I am chiefly concerned with its immediate effect upon the industry because, as our military and naval leaders have warned, we have long and bitter fighting ahead. The settlement of post-war policies at this time will enable the aircraft manufacturers to concentrate on completing their job so that we will have the weapons to finish our job.

Senator MURRAY. Mr. Gates, do you favor the expansion of the civilian pilot-training program, the R. O. T. C., and the proper machinery for post-war training?

Mr. GATES. You mean, Mr. Chairman, in connection with establishing a reserve of military pilots or civilian pilots?

Senator MURRAY. Well, of course, both; the idea being to develop the industry in the country by having a training system which will develop fliers, pilots.

Mr. GATES. I would favor dividing it into two classifications. I would favor a national service act and, through the national service act, I would expect the Army and Navy to take care of its reserve requirements of pilots and train them through their own system. I certainly would favor a civilian pilot-training program to permit civilians to learn how to fly and get that many more people air-minded.

Senator MURRAY. What is being done now with the helicopter for military and naval uses?

Mr. GATES. I asked Admiral Ramsey, who is Chief of the Bureau of Aeronautics, to accompany me here. He is more familiar with that than I. If possible, may he testify on that point?

Senator MURRAY. Yes.

STATEMENT OF REAR ADMIRAL D. C. RAMSEY, UNITED STATES, NAVY, CHIEF, BUREAU OF AERONAUTICS

Admiral RAMSEY. Mr. Chairman, we have a considerable number of helicopters on order through Army sources of production, primarily at Sikorsky. We have at the present time 176 helicopters of different types—training, tactical, and so-called liaison—only five of which so far in the training category have been delivered. We have embarked on a training program for personnel, including our own and British, at a training institution that we have at Floyd Bennett Field.

In addition to the helicopter that we ultimately expect to get from Army sources, we have two highly important experimental projects of our own which are being handled by McDonnell at St. Louis and P. V. Engineering Forum at Philadelphia. So I can say the Navy is giving this subject of the development of rotary-wing aircraft careful and continuous attention.

Senator MURRAY. You anticipate it will become a very important factor?

Admiral RAMSEY. I do not think so, sir, in the military field.

Senator MURRAY. In the military field?

Admiral RAMSEY. I do not think so. Primarily they have a value for antisubmarine operations, perhaps, when they can develop one

that can carry a sufficient depth charge load, but they certainly have a definite utility in the rescue field, Mr Chairman, and that is, in my opinion, one of the greatest potential assets.

Senator MURRAY. I would like to ask Mr. Gates what is the present status of the Brewster termination situation?

Mr. GATES. I have a few facts on the present status. Would it be all right if I read this memorandum, Mr. Chairman?

Senator MURRAY. Yes.

Mr. GATES. 1. Corsair contract: The termination of the Navy's contract with Brewster for Corsairs became effective on July 1, 1944. Seven hundred and thirty-four planes have been accepted with one more to be accepted shortly, making a total of 735 for the contract.

2. Johnsville: The Navy took over the Johnsville plant, which was Government-owned, at the close of business on July 1 as an adjunct of the Naval Air Material Center, Philadelphia. Brewster is still doing some work there, such as packing and crating spares, cleaning out materials, finishing up the last plane, and so forth.

Brewster still has approximately 800 employees at the plant. The Navy has requested a total complement of 3,500 (of which 2,500 are production workers) for its work at Johnsville. The Navy estimates that it can use 3,000 of the Brewster employees at Johnsville, although it is not anticipating that it will get more than 2,000. As of July 8, 1944, over 100 former Brewster employees had been taken on, and the balance will be taken on within 45 days, providing such employees desire to accept jobs with the Navy. An employment officer is at the plant with authority to hire, and it is possible for an employee of Brewster to terminate his employment on one day and go to work for the Navy the next morning. One difficulty in the Navy's recruitment program is the fact that most Brewster employees are on vacation and cannot be contacted. Production worker rates paid by the Navy are comparable to Brewster, but engineering rates are below what employees earned at Brewster.

Practically every employee of Brewster at Johnsville can be utilized by the Navy.

3. Long Island City: The work being done at this plant consists of inventorying and handling material and settling contract termination claims. So far as is known, Brewster has no other business of any importance. It is contemplated that the Navy will take over the Ford Building lease—which Brewster leased—for storing of materials, and so forth, pending their disposition.

There were approximately 9,000 employees at the Long Island City plant, and there are still approximately 900 there, although this number will get smaller. We have tried to find out from the War Manpower Commission what happened to the other employees, but the Commission's figures are still being compiled, and we understand will be submitted to this committee.

Five or six days prior to the termination of the contract in May, Navy officers and the W. M. C. regional office in New York had thoroughly discussed the mater and had made arrangements for the U. S. Employment Service to install interviewers at the Brewster plant to refer workers to other jobs. W. M. C. had also interviewed other companies in the area to acquaint them with the availability of some of the Brewster workers and to arrange for them to hire these workers at the plant. This arrangement was in effect carried out.

At that same time, it was understood by the Navy Department from the W. M. C. regional office in New York that there were two to three jobs for every worker in the Brewster plant in other important war work in the New York area and that these jobs were at comparable rates of pay.

Senator MURRAY. What is the status of the Navy's program on the utilization of the Johnsville plant?

Mr. GATES. You mean what are they doing?

Senator MURRAY. What are they doing with reference to using the Johnsville plant?

Mr. GATES. Your question, I assume, is what type of work do they propose to do there.

Senator MURRAY. Yes.

Mr. GATES. The Navy proposes doing certain modification work there which is necessary in the Navy program. This will take over a considerable part of the load from the Naval Air Materials Center at the Naval Aircraft Factory, Philadelphia, where it is already overloaded.

Senator MURRAY. Is that a suitable program that will utilize the facilities completely, or is it small?

Mr. GATES. I think it will utilize the facilities completely. As far as employment is concerned, it will take all the employment that was there. Yes; it will utilize all the facilities.

Senator MURRAY. Thank you. You have a Captain Strauss with you here, have you?

Mr. GATES. He is right here.

Senator MURRAY. He has a statement that he wishes to make for the record.

STATEMENT OF CAPT. LEWIS L. STRAUSS, UNITED STATES NAVAL RESERVE, SPECIAL ASSISTANT TO THE SECRETARY OF THE NAVY AND ASSISTANT CHIEF OF PROCUREMENT AND MATERIAL

Captain STRAUSS. The Navy Department is glad to have an opportunity of appearing before your committee to present its views on the subject of curtailments in wartime aircraft production. The problems presented by the aircraft industry are unique by reason of its relative youth; its very great expansion to meet the needs of the armed services; its capital position, which from an over-all viewpoint is not strong; the large numbers of workers presently employed who may be dislocated by cut-backs and terminations in the procurement programs; and, finally, by the obvious necessity of maintaining a strong position in this field in the interest of national security.

The questions for discussion which were appended to the letter from Senator Murray, by which we were invited to this hearing, covered a number of the pertinent aspects of the subject and they are dealt with in the order in which they were presented, with the exception of questions 7 and 8, which have been dealt with by Assistant Secretary Gates in his statement.

Question No. 1: To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department and that of the War Department? How can this best be achieved?

Coordination between cut-backs of the production programs of the Navy Department and the War Department are obviously essential. Machinery for accomplishing this coordination has been established through the staff of the Production Executive Committee of the War Production Board on which both the War and Navy Departments are represented, as well as the Army Air Forces and the Navy's Bureau of Aeronautics, both of which have separate, independent representation at the present time.

By directive dated June 5, 1944, from the Director of the Office of War Mobilization, Mr. Justice Byrnes, the services are instructed to clear all proposed cut-backs and terminations with a committee to be set up by the Executive Vice Chairman of the War Production Board. This committee has been functioning now for some 5 weeks. It has established operating procedures and is currently engaged in the actual consideration of specific cut-backs as proposed by the services.

Present coordination between the War and Navy Departments in respect of cut-back programs in the aircraft industry is, I therefore confidently believe, as close as could be desired.

Question No. 2: Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

The Navy Department has operated for some time on the basis of a contract termination directive reciting the factors to be considered in terminating contracts. The directive might be briefly summarized as follows:

Substantial cut-backs in particular segments of the Navy procurement program are now being made, even though the program as a whole has not yet reached its peak. Such cut-backs result both from revised operational demands and from new technical developments. When a procurement program cut-back requires the termination of fewer than all outstanding contracts relating to the program, the selection of particular contracts for termination should be made in the light of all applicable factors within the knowledge of the bureau concerned. While all factors will not necessarily be applicable to each case, consideration should be given to all that are pertinent. Such readily determinable factors as relative cost and basic performance should not be overemphasized to the exclusion of things of a less tangible nature. To the fullest extent possible, the bearing of all pertinent criteria upon subcontractors should be taken into account as well. The location of a prime contractor may be of lesser importance than the location of principal subcontractors in regard to critical labor areas, or the use of the transportation facilities which may be affected by a contract termination. The following factors, without order of their mention indicating relative weight, are to be considered as they may be applicable.

(a) Ability to convert to civilian production: Contractors not required for other war production or for essential civilian production, who are able to reconvert to other civilian production for which materials and labor are available, should be preferred on termination to contractors for whom reconversion will not yet be possible. This consideration may be of particular importance in the case of a contractor located in a single-industry community which is dependent upon the business of that contractor.

(*b*) Costs: Contracts affording lower unit costs to the Government should be retained where other factors are equal, but the obvious importance of this factor and the ease with which it can be applied must not result in disregarding other pertinent factors. As in the case of initial procurement, the payment of higher prices under contracts retained than would be required under contracts terminated is authorized to the extent necessary to give due weight to other factors. The cost factor will, however, grow in importance as manpower, transportation and other shortages are overcome.

(*c*) Use of facilities for other war production: Facilities which can be utilized for other war production or for essential civilian production should be released in preference to termination of contracts at plants not readily adaptable for other such production. In addition to physical facilities, the availability of engineering and other technical staffs able to effect speedy change-over should be considered in this regard.

(*d*) Financial condition: Material obtained from contractors requiring Government financial assistance at substantial credit risk may ultimately be of greater unit cost to the Government than similar material from contractors with a higher original contract price per unit.

(*e*) Location in critical labor areas: Manpower shortage in critical labor areas designated by the War Manpower Commission as group I or group II areas should be relieved by termination of contracts for materials being produced in such areas to the greatest extent possible. Particular attention should be given to the location of principal subcontractors as well as prime contractors.

(*f*) Dependability of performance: Records of contractors for meeting or anticipating required schedules should be reviewed.

(*g*) Quality of product: Reports of material inspectors and other data indicating quality of product should be weighed.

(*h*) Production efficiency: Contractors with a record of economic use of critical materials, machinery and equipment, and efficient utilization of labor should be retained in preference to those with a record of overordering or waste, or of labor hoarding, rapid labor turn-over or excessive absenteeism.

(*i*) Pro rata partial terminations: Where all other factors are in substantial balance, a program cut-back may be spread pro rata over all affected contracts by partial terminations. The possibility that the operations of some plants may be reduced below an economic production rate must, however, be taken into account in this connection.

(*j*) Smaller war plants: Independent small concerns within the scope of the Smaller War Plants Act, Public Law No. 603, Seventy-seventh Congress, should be retained to the fullest extent possible, except where the contractor would elect termination in order to be released for permitted civilian production. Similar preference should be accorded prime contractors with a large number of subcontractors in the Smaller War Plants category.

(*k*) Stage of completion: Contracts not yet in production or in earlier stages of production should be terminated in preference to contracts nearing completion in order to avoid waste in scrapping work in process and high termination claims.

(*l*) Stand-by facilities: Safeguarding of future requirements normally will require maintenance in operation of more than one source of supply for any important nonstock item.

(*m*) Minimum use of transportation: The burden of transportation facilities should be minimized by retention of contractors accessible to raw materials, purchased components and destination in preference to contractors requiring cross hauls or long distance deliveries.

(*n*) Type of contract: Fixed-price contracts should be retained in preference to cost-plus-fixed-fee contracts, other factors being equal, where both types of contracts are outstanding under a procurement program.

Question No. 3: What should be the policy governing advance notice of cut-backs for (*a*) the company? (*b*) the subcontractors? (*c*) the employees? (*d*) other Government agencies?

We have provided that when production in individual plants will have to be substantially reduced as the result of a procurement program cutback, the Bureau concerned shall arrange for informing the contractor and the employees. To what extent advance notice of cut-backs should be given depends upon whether the cutback is a result of long-range planning or of a military decision of immediate character. In some cases, advance notices of cut-backs may result in a slow down and a loss of manpower. With a few unscrupulous contractors, advance notice might result in excessive processing of raw material and consequent greater termination claims against the Government. The most efficient method is to determine each case upon its merits and special circumstances. That is to be done by the Production Executive Committee of the War Production Board. On that body, in addition to the military services, there are representatives of the War Manpower Commission, Smaller War Plants Corporation, organized labor, and the Office of War Information. A procedure is now in process of formulation which, it is hoped, will provide adequate advance notice without too much risk of impairing the war effort. As early as August 1943, the Chief of the Office of Procurement and Material had established a procedure within the Navy Department for informing the employees of contractors in case of cut-backs. This practice will be continued until such time as the procedure of the Production Executive Committee, to which I have just referred, is made effective.

Question No. 4. What provisions should be made for employees who are released from wartime aircraft production? Through unemployment compensation? Through retraining? Through transportation to other localities? Through other methods?

This question raises an issue of interest to us individually as citizens, but is beyond the jurisdiction of the Navy Department, as a combatant service, to deal with. Representatives of the Department have at various times appeared before congressional committees and have voiced their independent opinions that some form of unemployment compensation for workers dislocated from war production was appropriate. Whether this should take the form of separation pay or be handled through social security legislation is a matter for the determination of the Congress, and clearly beyond the jurisdiction of the Navy Department as well as are questions of retraining, transportation of workers, etc. Separation pay as an allowable item of claim in contract settlements, however, would be only a solution for

a part of the problems. It would be inequitable in that it would not apply to labor not directly engaged in war contracts and it would therefore breed discrimination and resentment.

Question No. 5: How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of war production or of civilian production?

I think this question has been substantially answered in my response to question No. 2. The membership of the Production Executive Committee of W. P. B. is wide enough to accomplish the desired result, and such committee should be able to develop procedures to assure the necessary degree of integration and synchronization of war and civilian production.

Question No. 6: What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production?

It is, as I have said before, important to the national defense that civilian aircraft production should be firmly established upon a healthy basis following the war. The extraordinary manner in which producers of civilian aircraft converted to the production of military aircraft in unprecedented numbers points up the need for the preservation of an industry which will continue to lead the world in the development of this art. Congress should appropriate adequate funds to the War and Navy Departments annually after the war to enable the Services to constantly modernize their air arms, and we should never be content to maintain obsolesent material in a field where change is so rapid and fundamental. Encouragement of civilian air transportation by all proper means should be pursued. Research in aerodynamics and related sciences which will be continued by industry should also be liberally financed and conducted under Government auspices, and the results made available to private industry to the extent compatible with security. No better example can be found of the interdependence of military and civilian use of the same item than the benefits which have resulted to naval aviation from civil aircraft development. And the reverse is equally true.

Senator MURRAY. Thank you for the statement. Does Mr. Russell desire to ask any questions?

Mr. RUSSELL. No questions.

Senator MURRAY. Mr. C. E. Wilson, of the War Production Board, was to appear this morning as a witness but he found it was impossible. I will request him to submit a statement at some later time. This will close the hearing. We have no other witnesses for the present.

STATEMENT OF C. E. WILSON, EXECUTIVE VICE CHAIRMAN OF THE WAR PRODUCTION BOARD

Question 1: To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department and that of the War Department? How can this best be achieved?

It is my conviction that adequate machinery exists for the coordination of program cut-backs of the Army and the Navy Air Forces.

Having learned a lesson from former inept procedures, intended cut-backs are now reported by both services to the Production Executive Committee as soon as the services reach their decision to reduce the production of certain models of airplanes. It is then among the duties of the staff of Production Executive Committee to see that the cuts are adequately coordinated, in the sense that they are so distributed among contractors, industrial areas, and industries as to facilitate reconversion and minimize unemployment of resources as far as that is possible.

Coordination between the aircraft programs of the Army and Navy on a somewhat broader level is effected by the Aircraft Production Board that exercises a considerable degree of control over the entire aircraft program—and not only the current cut-backs—of the two services.

The coordinating activities of both the Aircraft Production Board and Production Executive Committee, however, are limited to the sphere of production. These two agencies treat the aircraft requirements of the two Services communicated to them, as given data and try to make sure that they are executed as expeditiously and as efficiently as possible. The basic war and post-war aircraft plans are drawn up by the services, the Joint Aircraft Committee, and the Joint Chiefs of Staff.

Question 2: Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

I shall try to set forth some of the criteria which, in our consideration to date, have seemed to us to be applicable to cut-backs in aircraft programs. In stating these, however, I should like to stress my conviction that more important than any set of yardstick rules is the intelligence with which they may be applied. It will be evident from the outline below that there are a number of important and sometimes conflicting principles to be taken into account in integrating cut-backs with the resumption of civilian production. General rules can only serve as a background for the discriminating analysis and judgment that must be applied to each case.

At best, Government-devised plans for reconversion will be of far less validity than those developed for the marshalling of war production where the letting of Government contracts largely determines what our industrial establishment would do. Production for peacetime needs will be determined essentially by the free decisions of American industry and it is our firm intention and part of our planned procedure to make full use of the plans developed by our aircraft companies and by the representatives of aircraft workers as a guide to any plans we make for the readjustment of their activities.

In deciding how the impact of cut-backs in the aircraft program is to be distributed, first consideration will, of course, be given to military needs. This means that, in general, those firms will be kept in aircraft production that are best adapted to munitions production. When program cut-backs occur, and a choice of plants is possible, cuts will be made first in plants that can be used effectively in other military programs. Among Government-owned establishments, they will generally come last in plants that either the Army Air Forces or the Navy's Bureau of Aeronautics may require for post-war production stand-by or storage purposes.

After due weight is given to military needs, there will, in most cases, still exist a margin of military indifference within which cuts can, and should, be made that are most favorable to reconversion to civilian use and to the minimization of unemployment of recources.

(1) Resources that complement each other in production should, as far as possible, be released together. There would, for example, be no point in releasing a pre-war washing-machine facility from aircraft production if the suppliers of indispensable washing-machine components remain tied up in war work. We should, therefore, attempt a simultaneous release of the required component capacity. If that is not feasible, we should give precedence either to plants that can themselves fabricate the components they may need or that manufacture products that do not require tight components.

(2) Since it will generally be easier to reconvert a pre-war plant to the production of its civilian product than to convert a specialized munitions facility to the production of some civilian product, pre-war facilities which were engaged in other than aircraft production should generally be released first and remaining munitions production should be increasingly concentrated in specialized aircraft plants.

Since the termination of a prime aircraft contract ordinarily means that subcontracts are also terminated, and since most aircraft subcontracctors were pre-war producers of a variety of durable goods for which there will be urgent demand, plants with a relatively high degree of subcontracting should generally be released ahead of those with little or no subcontracting.

(3) As far as military considerations permit, cuts should be made first in communities where released workers can be most readily and usefully reabsorbed. This means that, in general, contract terminations should come first in tight labor areas. Within these areas, precedence should be given to communities that can

use the released labor in other military or essential civilian programs. Communities that can use the released labor in civilian production that ranks relatively high in the list of consumer preferences and industry's needs will also be given precedence.

Special problems are raised by communities swollen much beyond their pre-war size, and probably beyond their post-war size as well. It would be undesirable to delay the exodus of war workers from such communities until opportunities to return to their pre-war occupations have been closed to them. Such workers should, therefore, be released by prior termination of the contracts on which they are engaged, unless there are prospects for employment later in the reconversion period if cuts can be held off for a while. Communities that cannot resume until rather late in reconversion should be kept in war production as long as possible.

Military and employment needs will be our most important considerations in determining the distribution of contract terminations. But there are other considerations that deserve serious attention. For instance, as far as military and employment considerations permit, priority in cut-backs will be given to plants that can produce the most urgently needed civilian commodities, as determined by consumer surveys of the Office of Civilian Requirements and by industrial surveys of the War Production Board's industry divisions.

Question 3: What should be the policy governing advance notice of cut-backs for (*a*) the company? (*b*) the subcontractors? (*c*) the employees? (*d*) other Government agencies?

The Production Executive Committee staff has given careful consideration to the problem of providing adequate notice of cut-backs to the company, its employees, the subcontractors, and other Government agencies. It has incorporated in its procedures a definite plan to this end, which plan is now in effective operation.

In all cases in which a cut-back has been determined upon which will result in a substantial release of manpower or facility resources, complete information about the reasons for the cut, the considerations which dictated applying the cut to the particular contractor, the possibilities of placing other military or nonmilitary work in the establishment affected, etc., is furnished to the appropriate War Production Board regional director, the War Manpower Commission State director, and the field representative of the Procuring Service before official notification of the cut-back is sent to the company management. These officials, under the coordinating direction of the War Production Board regional director, are charged with responsibility for approaching the contractor, for explaining the situation to him in detail, and for arranging through him to place the full story before the representatives of the workers in the establishment, in order to insure that they are fully informed of the circumstances of the case rather than being left to receive notice through newspaper announcements.

If, as has been true in all but a small fraction of the cases processed to date, substitute work upon other military programs may be offered to the plant. A representative of the procurement agency which has such alternative work to offer is attached to the group to explain what the possibilities are and to negotiate for the new contracts. The representative of the War Manpower Commission is responsible for explaining what opportunities there are in the area in the event that the readjustment entails a temporary or permanent curtailment of the working force in the establishment in question, and for setting up recruitment machinery within the plant for directing released workers to jobs.

Habitually, of course, the procurement agency has preliminary discussions with the several contractors working upon a program that is to be curtailed, for the purpose of determining which contracts can be cut with a minimum of dislocation. In the case of ammunition contracts, where normally there are a relatively large number of vendors, Army Ordnance has adopted a procedure of calling a special meeting of all of the contractors upon a given program that is to be cut, placing the complete problem before them, and working out with them the most reasonable adjustment of future schedules in terms of the particular problems of all those concerned. Representatives of the War Production Board, its field officers, and the War Manpower Commission attend these meetings and participate in the negotiations.

In the case of each cut-back that substantially affects an establishment or a community, a public release of the circumstances surrounding the case is prepared in Washington, is furnished to the field representatives who approach the companies affected, and, with such supplementation as they may be in a position to add from their particularized knowledge of the case, is given local release at the time when the announcement of the cut-back is made.

Representatives of the Smaller War Plants Corporation and of the Labor Vice Chairman of the War Production Board are represented upon the Production Executive Committee staff and participate fully in the determination of the placement of cut-backs and in the field negotiations that have been described above.

The question of notification of subcontractors is a difficult one and has not yet been completely or satisfactorily resolved. By its very nature it is a problem that is not susceptible of as orderly handling as has been developed for prime contract cases. Our information about subcontracts is not comparably detailed to that which we have upon prime contracts and, even if it were available, there is no comparable control which Government agencies can exercise. In all cases where cut-backs are being considered, the Production Executive Committee requires the procuring agency to give as full information as it is able to gather about subcontracts related to their prime contracts, and the probable effect upon such subcontractors is given consideration in determining the pattern of cut-backs. However, there is no way in which we can control the final decisions of the prime contractor as to the rearrangement of his subcontract commitments, since the matter is one of his own free election. If a prime contractor is cut 50 percent, he may elect immediately or at some later period to curtail his several subcontractors by the same percentage, or to eliminate one or more of them and to keep others fully occupied; or he may elect to cut his subcontractors by more than the percentage of his own cut and to pull some of their work back into his own establishment. The most that we can do is to charge the regional War Production Board and War Manpower Commission representatives with responsibility for determining what the impact upon subcontractors will be, and for seeing that all possible steps are taken to make effective use of released resources within their own jurisdictions or by the regional offices in which the affected subcontractors are located.

Question 4: What provisions should be made for employees who are released from wartime aircraft production? Through unemployment compensation? Through retraining? Through transportation to other localities? Through other methods?

This question is but a part of the much broader one of demobilization of the labor force, the primary responsibility for which rests with the Retraining and Reemployment Administration, the War Manpower Commission, the Social Security Board, the Department of Labor, and other agencies of the Government rather than with the War Production Board.

It is my feeling that employees released from wartime aircraft production, or for that matter from any war plant, should not be treated differently from any worker that becomes unemployed. In our complex industrial civilization the individual employee has so little control over the loss or the retention of his job that there is no reason to treat workers who lose their jobs directly as the result of cut-backs in war production schedules differently from others that may lose them as an indirect effect of such cut-backs or as a result of an over-all decline in national production that may be caused by the curtailment of war production.

In all these cases adequate provision should be made to permit the discharged worker and his family to continue to live at a minimum standard of decency and to prevent a disastrous shrinkage of mass purchasing power. If the provisions now governing unemployment compensation do not achieve these ends, and I do not have enough knowledge to say whether they do, appropriate changes should be made. In particular, care should be taken that neither the coverage of unemployment compensation or its duration are too severely limited. In other words, the answer to cut-back lay-off is not special privilege in the form of dismissal pay but a broadly conceived system of unemployment compensation.

The fact that war workers have often been recruited from areas far removed from their place of work may justify some special assistance in the form of payment of transportation expenses, in case of need, to their home communities or to localities where employment opportunities exist.

As millions of workers in war plants have never been trained for other trades and as many branches of the war industries—and the aircraft industry among them—cannot employ as many workers during peacetime as they now do, a large-scale retraining program is essential. Participation in such a program, however, should be open to every person who becomes unemployed, irespective, of whether or not unemployment is directly due to a cut-back in war production and might most profitably be organized within the industries and plants which offer work opportunities beyond the availability of qualified workers.

Question 5: How can further cuts in aircraft best be integrated and synchronized with the development of other types of war production or of civilian production?

In the Production Executive Committee and its staff, we have the central mechanism for shifting a cut-back plant to other war production and for meshing the resources released from war programs with the expansion of civilian production. The Production Executive Committee staff consists of representatives of the procuring agencies, Vice Chairman of the War Production Board, representatives of the Smaller War Plants Corporation, Manpower Commission, and the Office of War Information. Through this central orga. ization, we are channeling all the information regarding current cut-backs, X-day programs, and programs for the reexpansion of civilian production.

For example, the Army Air Forces has transmitted to the Production Executive Committee staff detailed plans for the adjustment of the aircraft program after the defeat of Germany. The plans for selecting plants to be retained in military production or in stand-by are now being reviewed. Because of the variety of factors that must be taken into account this is a task of great complexity. Insofar as there is a choice, we are trying to get the best balance among the following main considerations: Military security and post-war military utilization of the plant, efficiency in aircraft production, maximum civilian output, possibilities for reemployment on a geographic basis, and the elimination of bottle necks in the reexpansion of civilian production. The Air Forces data in conjunction with similar data from the other agencies will provide the basis for estimates, in general terms, of the amount of various types of civilian goods that can be produced following the defeat of Germany. This basic information will enable us to develop workable and equitable plans for guiding the reconversion process.

We intend to rework these plans in order to continuously improve them and to take account of changes in military programs so that when the defeat of Germany occurs we shall be in a position to have an orderly partial reconversion of industry that will minimize hardships and maximize the output of essential civilian goods. No blueprint drawn in advance can be expected to furnish a satisfactory solution for each of the multitude of decisions that will face us with the end of the European phase of the war. But our advance planning should make it possible for us to handle this formidable work load with a minimum of fumbling and delay.

Question 6. What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production?

As soon as possible within the limits of continued on-schedule war output, manufacturers should be allowed (and encouraged) to begin development work on civilian aircraft.

(*a*) Plants whose schedules have been cut back to less-than-capacity output should be permitted to begin work on post-war planes.

(*b*) Plants producing military planes of relatively stable design should be granted the same prerogatives if (1) war output is proceeding on schedule; (2) no major design revisions are in prospect; (3) engineering man-hours are restricted to a level that will not interfere with war-plane production. If it becomes apparent that civilian development work is causing war output to lag behind requirements, the services should order the plant to restrict the proportion of its resources devoted to development.

(*c*) Plants producing the newest and most-wanted tactical planes (e. g., the Superfortress) will be pushed to the utmost for some time if military requirements are to be met. No diversion of resources to civilian developmental work can be permitted in such plants for some time. These plants will, of course, be perfecting their tactical models which may give them an advantage in the post-war military aircraft field. And, in many cases, companies building these models are operating other plants where post-war development can be carried on (e. g., Martin, Omaha, must devote its every effort to meeting its B–29 schedule; but Martin, Baltimore, should have sufficient resources to do civilian development work).

Air lines will constitute one of the most important post-war markets. Immediate development of sound and forward-thinking national air-lines policies will assist manufacturers in determining the number and types of planes which will be needed. National policy should be formulated to deal with such problems as—

(*a*) The extent of United States participation in international air transportation.

(*b*) The proposal that all first-class mail (and parcel post) move by air.

(*c*) The extension of domestic air transport to smaller communities.

(*d*) Disposal of war surplus planes.

Foreign markets for commercial airplanes can be fully as important, if not more important, than the domestic market for this type of aircraft. The large parts of the world, such as China and Latin America, which have shown intention of rapid industrial development after the war, may depend on aircraft in large measure for the development of their internal transportation systems. This means a market not only for United States airplanes, but also a field of activity for United States pilots and ground crews, for branch facilities of United States companies to service American-built planes used abroad, and at a later date for United States participation in the development of foreign aircraft manufacturing. The Government has an important responsibility in this regard.

Post-war military and commercial production will provide employment to only a fraction of the more than 2,000,000 workers now engaged in aircraft production. The best insurance against future aggression is a strong and healthy aircraft industry based on vastly expanded private plane sales. And the private plane industry might eventually approach the employment dimensions of the automobile industry. The following suggestions may serve to stimulate private plane use—

(*a*) Pilot training should be continued in colleges to insure an adequate supply of military pilot material and to stimulate demand for private planes.

(*b*) Disposal of surplus military planes suitable for private use and equipment should be so handled as to encourage, rather than repress, post-war demand.

(*c*) Development of airfields, airstrips, and approach roads should be encouraged, with Federal aid if necessary, and construction should begin as soon as possible after V Day. Just as large scale use of automobiles awaited highway development, private flying awaits airport development.

The Army and Navy should place military development orders with competent manufacturers released from war-plane production; such orders will insure the continuance of engineering improvements which are essential to both military and civil aviation and will help manufacturers over the transition to peacetime production. Also the Services should inform manufacturers of the probable scale of military orders during the post-war period.

Question 7: What principles should be followed in handling Government-owned aircraft factories, aircraft, and airfields?

A. AIRCRAFT FACTORIES

The Government is today the sole owner of facilities which account for half of all airframe and engine production. In addition the Government has a very substantial interest in most of the other airframe and engine facilities. The problem with respect to the wholly Government-owned facilities has two parts—first, policy for the period of cut-backs in production while the war continues—this has been discussed in the answer to question 2; and second, long-range policy after the war.

Our long-range policies toward the Government-owned airplane plants arise from the fact that most of these plants are located in areas which have never before been centers of metal-working industry. Dallas, Fort Worth, Wichita, Atlanta, to mention a few are new centers of industry created by the war. There are the large airplane plants, newly trained industrial management and labor, and the community's trade and services built up at least partially in scale to the increased population and income. The future growth of our country will be aided by the transfer of these new industrial facilities and skills to peacetime pursuits. The democratic development of our country will be aided if we can find peacetime industries for these new centers and we will avoid the harmful effects of creating ghost cities.

Therefore, our policy should be to work with and encourage those interests which desire to create new enterprises to continue the activity now being carried on by the Government-owned airplane factories. We should cooperate with chambers of commerce in these communities, with committees for economic development, with established firms in other regions which want to extend their production to these communities. Naturally, this cannot be handled by the War Production Board alone or even in major part. It involves credit arrangements, transport facilities, raw material supplies, and many other factors which concern a number of Government agencies. I do, however, recommend a positive Government policy in this regard and promise full cooperation by the War Production Board.

This policy would coincide with the interests of the Air Forces. As I understand it, the Army Air Forces wishes to retain ownership to the great Government-owned bomber plants because they are strategic in maintaining preparedness

after the war. In some cases, the Army will wish to keep these plants in partial production. In every case, the Army will wish to lease all or part of the facilities to responsible private enterprise. This will serve the purpose of keeping in the community the industrial know-how and skilled labor force which have been built up during the war—the main requirements for a speedy resumption of mass aircraft production when required by the Army. Even if in some cases the Army may require keeping the plant intact, thus making it impossible to convert to non-aircraft production, it will be desirable to develop other industries in these areas in order to retain in the community the industrial basis required to bring the war plants into operation quickly and speedily.

B. AIRCRAFT

I have little to add to Mr. Patterson's comments on the disposal of Government-owned aircraft. I think that one of the important phases of post-war air transport will be the large-scale use of planes by business firms and Government agencies for speedy liaison required for the most efficient prosecution of industry. The disposal of Government-owned aircraft will give an impetus to this development, which once established will create an important permanent market for the peace-time airplane industry. In addition, the disposal of suitable smaller military airplanes for private pleasure use and for use in training civilians to fly can help to make the whole people at home in the air. I have found the report you published prepared by the Harvard Graduate School of Business an excellent guide in this field.

I would like in particular to call attention to the desirability of having used planes and equipment returned to manufacturers for repair and overhaul before ultimate disposal. With the existing Office of Price Administration price ceilings, this could be done in such a way as to protect the consumer financially while avoiding speculation in airplanes and protecting the public against dangerous and unworkable aircraft. It would immediately help the manufacturers of light transports and trainers whose contracts have been severely reduced and in some cases eliminated. They could do the work right away, keep their personnel together, and begin to build a distribution apparatus for the post-war period.

C. AIRFIELDS

Development of civil aviation on a large scale after the war requires a large network of smaller airfields and landing strips tying into larger commercial fields to the extent that the services wish to dispose of their airfields. They should be sold to municipalities and other local Governments with the coordination and review of the Civil Aeronautics Administration to insure their most intelligent linking with a system of civilian airfields.

Question 8: What plans should be made for a post-war national defense program for the aircraft industry; through research and development; through stand-by capacity; through other methods?

This question is of major concern to the Army and Navy and, I understand, that their plans are in a fairly advanced state. First, both agencies are selecting the plants that they desire to keep in military production after the war, and in stand-by condition. This information is being used in the forward plans for reducing the output of aircraft after the defeat of Germany. Second, they are making plans for continuing in the post-war period research and development in the field of aircraft. It would be most unfortunate to discontinue these activities after spending huge sums on projects which at the end of the war will presumably be in various stages of completion. It seems to me, therefore, most important to provide funds so that the technical superiority in military aircraft that the United States now enjoys will not be lost. Third, a war-mobilization plan for the aircraft industry should be prepared. With the experience that we have had, I am sure that this plan, both in its over-all size, and in its detail, will be far superior to anything we had at the outset of this war.

(Whereupon at 11:55 a. m., the committee adjourned.)

APPENDIXES

APPENDIX I

AIRCRAFT OWNERS AND PILOTS ASSOCIATION,
Washington, D. C., July 14, 1944.

Hon. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
Committee on Military Affairs, United States Senate,
Washington, D. C.

DEAR SENATOR MURRAY: Your letter of July 3 to Mr. Ludington has been forwarded to me, but not in time to get a reply to you by July 12.

Government and other studies indicate that of the order of 300,000 new small planes of the type used by private fliers, and of the order of 3,000 transport planes will be in the air a few years after the war.

We believe this 300,000 figure will be reached only if considerably better small planes are available post-war than were available pre-war. The available pre-war plane owner remained a plane owner only 2.4 years (average) due mainly to insufficient usefulness to him of the plane. Hence, to build a large and sound industry we must have better planes as well as more landing fields.

We believe that your committee should view the matter from two standpoints. Manufacturers of planes should be got into production as soon as possible—

(*a*) On a basis where they can make small planes, engines, and accessories with maximum manufacturing efficiency so that a new era of low costs will replace the pre-war era of high costs for most aviation equipment.

(*b*) On a basis where new models of greatly increased usefulness will come onto the market with utmost rapidity. For instance, we urgently need planes with much lower landing speeds, we need planes with much higher cruising speeds, and we need good amphibious planes, and all of these at popular prices.

As examples of conditions we must change are the following. A pre-war private plane to cruise 200 miles per hour cost of the order of $15,000, a figure totally out of the question for 99 percent of the prospective customers. An amphibian to cruise at three-quarters of that speed cost over $20,000. Radios, engines, speed indicators, etc., cost of the order of 10 times what one is accustomed to paying for automotive equipment.

It is true that pre-war planes could be bought at popular prices, namely in the range of $1,200 to $2,000, but what we need post-war is planes at those prices that are much more useful.

Hence, we urge you to do those things which will result in much better planes at popular prices coming on the market promptly.

Sincerely yours,

L. P. SHARPLES,
Chairman of the Board.

AIRCRAFT SALES CO.,
Fort Worth Tex., July 10, 1944.

Mr. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
United States Senate, Committee on Military Affairs,
Washington, D. C.

DEAR MR. MURRAY: Your letter of July 3d addressed to me as president of the National Aviation Training Association in Kansas City just reached my office here in Fort Worth. After reading over your questions quite thoroughly it seems that questions 6, 7, and 8 of your questionnaire are the only ones our association can answer or reply to at all. But those three questions cover a lot of territory, and for that reason I have this minute put in a call to Col. Roscoe Turner, who is president of the National Aviation Trades Association this year.

98534—44—pt. 9——9

I will give him the details of these questions and ask him to contact you direct. The writer was one of the two main organizers of the National Aviation Training Association, which is now the National Aviation Trades Association. For 2 years I was vice president of that association, president last year, and this year chairman of board of directors. Mr. William A. Ong, of Kansas City, and former president for 2 years, is also being sent a copy of your questionnaire with the request that he answer directly to you.

We, the fixed base operator, know full well the scope of our part in post-war aviation, the part we have played in wartime aviation and that of pre-war aviation. We know that the Army and Navy's place in this affair today was made possible through the nucleus that had been built up in pre-war times by this little bunch of pioneers who struck to aviation because they liked it and not because there was money in it.

Through Civilian Pilot Training and War Training Service a tremendously large job has been fulfilled by these operators for the Government in the training of hundreds of thousands of pilots in the United States Army and Navy, for the various Air Transport Commands and the various training fields, to say nothing of the replacements for the air lines which were taken away by the armed forces.

Much credit has been given to labor for its part in building airplanes, ammunition, et cetera; little has been or may ever be given to the various operators, pilots, and mechanics who worked unstintingly for the last 4 years from the very crack of dawn to late at night instructing students Saturdays, Sundays, holidays and all. I say that they can look back on the last 4 years with a great deal of price and with the knowledge that they have done their bit to help their country when it was most needed.

Several hundred operators were employed this way. They, like the manufacturers of airplanes and other things, increased their business in like ratio to take care of the necessary numbers that were given to them. They borrowed capital or got capital to go in with them and now that they are through with this training as of August 1, they have exceptionally large investments which they cannot use if some further encouragement is not given to them. They do not look for subsidies or money help. They look for help in promoting post war aviation and keeping things going that are now started. Things that are so thoroughly needed by the Government to keep its background and backbone of aviation in case it is needed again and in order not to let it get in the same rut that it was before the war started.

The past 4 years have been a period of tremendous educational value to the public in general as far as aviation is concerned. Some 5 years ago the writer recalls that he asked the president and dean of Texas Christian University here to allow him to put a poster in the assembly hall advertising flight courses. This was refused on the basis that if they did so, the parents of the kids at this school would immediately take them out saying that they would not have them in a college that was so slack as to allow youngsters to fly. Today if even a small sponsored flight course of any kind is inaugurated by a school or college, these same parents go to their Senators and Congressmen and raise the very dickens unless their boys or their girls are allowed to participate in this aviation training program. Also, at various gatherings such as at Rotary Club luncheons it was the writer's habit to offer to take whole groups for an airplane ride to acquaint them with aviation. Usually the majority of them refused to go, saying that they had rather keep one foot on the ground. Now, unless one is fully prepared to take everybody at the gathering for a ride, it is a foolish thing to offer to take them because the long beards and all will immediatelyaccept. Four or five years ago one air line accident in the United States would immediately curtail flying on all the air lines for periods of from 2 weeks to a month sometimes. Today, and I have seen this very thing happen; if an air liner crashed on the field while several airplanes were loading for departure, the people would look and remark how terrible it was, but when their trip was called for loading they would board the air liner and continue on their journey. It is about the same principle as a family having someone that they love very much killed in an automobile accident. They climb in a car and go to the funeral—they do not put the car in the garage and never ride in it again. These points are mentioned to try to exemplify the educational value and achievement that we have made in the past 3 or 4 years.

War Training Service recently sold for the Defense Plant Corporation most all of the large airplanes that they have bought from the private owner and the operator for this training program. They are amazed at the tremendous demand for airplanes in the country today. If they had but looked at the number of pilots that are available now and the people that have learned to fly and use airplanes for

transportation, they would have known this demand existed even though they were selling old airplanes. Some 4 or 5 years ago we had a total of 26,000 pilots in the United States. Today there are several times that many pilots outside of the armed forces. These include doctors, lawyers, businessmen, women, and girls who have learned to fly in the last 4 years and does not include nearly 1,000,000 pilots that have been trained by and for the armed forces. The major fields throughout the Nation have been improved and better shops and hangars have been built, but we still need thousands and thousands of airports at smaller towns to make flying popular. The automobile increased in numbers due to an education along that line such as we have had the past 4 years in aviation, and also due to the fact that roads were put in for the automobile. If the roads were not here, the automobile would be of no use, and so it is with flying. We must have many thousands of small airports—not huge investments at just a few centers but small fields scattered throughout the Nation in all the little towns and villages where there can be landing strips. We talk about having the boys come back from overseas to jobs that are ready for them. As far as aviation is concerned there is no better way that I know of or a more proper time to start this as now with the hundreds of operators who have nothing further to do in a military manner. I do not mean for the Government to subsidize these operators or give them money to go ahead with, but to encourage them in going ahead with commercial aviation developments and give them some assistance along that line.

Question 6: What are the most important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production? The personal views of the writer are as follows:

Leaving air line and feeder air line aircraft apart, both of which are actually civilian aircraft, and taking other civil aircraft used for business and pleasure into consideration, first encourage and allow the development and the building of prototype airplanes by the various companies which are now being put out of aircraft production for the Government. The building of a new airplane and the development of new ideas and the testing of them take time. Let that be started now. We realize that there are a lot of things that we need right at the present that are far more important than new airplanes for the private owner. However, building the new prototypes is not satisfying the private owners demand; it is merely preparing and paving the way for the future. Also, in order to keep up the process of education that we have already begun we must set up ways and means of selling the present surplus of army aircraft back to the private owner allowing him to use it if it does not in any way interfere with the war effort such as gasoline production, et cetera. Thousands and thousands of light aircraft or what we call the puddle-jumper class are now standing idle throughout the country. Most of these airplanes need work before they are sold; they need conditioning to make them safe to turn over to people who might buy them. Devise a way of selling these airplanes so that they are handled through legitimate aircraft distributors or through the factories themselves. There are enough approved shops throughout the country to absorb and recondition these airplanes and merchandise some of them. Do not sell those airplanes straight to the customer in the condition they are now. You do not sell trucks to individuals when you are disposing of surplus quantities of those nor do you sell liquor to the individual consumer. Those various commodities are sold to authorized dealers and distributors of the commodity in question. Selling these airplanes on a bid basis is all right, and putting them out in bunches will relieve the Government of a lot of paper work. If they are sold in lots of 25, 50, or 100, it would relieve the pressure of the necessary work of disposing of them through Government channels.

The operators in the field who are now prepared to do such work with approved shops standing idle are also distributors of aircraft whose business was taken away from them through the normal couse of war. It will give them a chance to go ahead and recondition these airplanes and resell them to the public just the same as you do the trucks and the various other surplus equipment. First, the safety of the people who buy these airplanes can best be looked after by selling them to legitimate dealers. Second, it will keep these idle shops going and create work and give an incentive to the men to not close their places. Then another reason and a very important one which we feel cannot be overlooked is this: The majority of light airplanes are sold on the time-payment plan. We do not expect airplanes to be cheaper in the immediate post war era than they were before the war started. In fact, due to labor and all other things combined we expect them to be somewhat higher. The down payment on those airplanes whether it is in the form of a trade-in or by cash will necessarily be a little higher than it used to be. Thousands and thousands of people today have more money than they have ever had before. They are able to buy airplanes such as this

surplus equipment that the Government is offering for sale now and at least they will wind up about the time new airplanes are allowed to be built with an airplane which will form the down payment on a new one.

The writer has been an airplane distributor for many years and I would look toward the sale of these surplus airplanes as an excellent help toward the sale of new airplanes when this war is over rather than a detriment. I have talked to the various finance people throughout the country and they all feel the same way. We all feel that it would be bad to hold that surplus of airplanes too long. Get them in the field and let the people have the use of them and the education that might be occasioned by the use of those airplanes. Let them wear them out and then if the manufacturer cannot build a plane that is more desirable or more economical and better, then manufacturers should not be in business. I have talked to the various manufacturers about this particular thing and all of them without exception were in complete accord. They are not afraid of competing with these airplanes when they start building the new ones.

Further, on the same question: Promote the immediate start or development of small airports. We have always talked of million-dollar airports around large cities. Money is poured into these large fields in huge quantities, but we cannot exist on just the flying that is done around the larger cities. It is a strange thing but it is very true that for population considered there is much more flying done in the average small town than in the bigger city. There are too many other things to occupy the people in the larger cities. I have seen little towns with 25 or 50 private airplanes and in a large town 50 times that size not very far away there would be only half as many privately owned ships. Lots of little towns have some encouragement toward building these fields. Thousands of salesmen for different concerns who would use airplanes in the course of their business do not do so because the only towns they can contact are the large ones with airports and they must cover the small ones also. We do not need fancy paved runways and all the various other facilities of a large airline airport at these smaller places, but they do need enough acreage to form good landing strips into the prevailing wind and as close to town as is practical, and if possible, close to a highway.

Question 7: What principles should be followed in handling Government-owned aircraft factories, aircraft and airfields?

Part of the above question is covered in answering No. 6. As far as aircraft factories are concerned, that is completely out of the category of questions that can be answered by our group. I would say that it might be well to turn the larger Government airfields that are not being used and which are located around larger cities over to the city. Move the hangars away that are not necessary. That can be decided through some expert board that might be set up. Let the city have time to pay for the other hangars and then turn the maintenance of the field back to the city.

Question 8: What plans should be made for a post-war national defense program for the aircraft industry? through research and development? through standby capacity? through other methods?

The above question can be partially answered here, and toward that point that pertains to the National Aviation Trades Association by what might be called a Reserve Officers Training Corps high school and college aviation training program. It can be headed and strengthened by the voting of a strong national civil aviation group and by the education of our people in general and the use of airplanes both for business and for pleasure and by the incorporating of technical development schools into our national school system. By that I mean the training of aviation mechanics and engineers. Along this line, I am going to have Mr. John Wilson, executive director of the National Aviation Trades Association, and Mr. Clarence Mooney, our former national secretary, both of whom are highly posted along this line, to write you in detail regarding their viewpoint.

I want to thank you for your invitation for our association to cooperate with you and to promise you that we will do anything possible along that line. We will be willing to testify any time you might need us or to furnish further information by mail. We feel very thankful that we have a Congress who works with the people on these affairs, and it is truly one of the things that makes the United States a swell place to live in.

Yours very truly,

LESLIE H. BOWMAN, *President.*

AIR TRANSPORT ASSOCIATION OF AMERICA,
Washington, D. C., July 11, 1944.

Hon. JAMES E. MURRAY,
United States Senate, Washington, D. C.

MY DEAR SENATOR: This is in further response to your letter of June 28, 1944, inviting the Air Transport Association to participate in hearings before the War Contract Subcommittee of the Committee on Military Affairs on July 10, 11, and 12, 1944, by filing a written statement covering such of the issues before your subcommittee at these hearings as concern the air-transport industry. Most of the questions before your subcommittee concern this industry only indirectly, and therefore we will confine our comments to the problem of the disposal of surplus aircraft and its effect upon the development of this Nation's air transportation system and aircraft manufacturing industry. On May 3, 1944, we presented to the Surplus Aircraft Advisory Committee of the Surplus War Property Administration testimony on this subject setting out in some detail the views of the industry. Attached are several copies of this testimony for the use of your committee. However, I will take the liberty of expanding some of the thoughts contained in this statement.

A reading of the attached statement will reveal that the air-transport industry is of the opinion that all of the interests involved in the disposition of transport aircraft could best be protected if the Government would follow a general policy of leasing the transports to those who desire to acquire them. We proposed a lease of 5 years' duration with a total rental payment to the Government of 80 percent of the value of the aircraft, payable in equal monthly installments. The value of the aircraft would in general be determined by reducing the original cost of the aircraft to the Government (adjusted to exclude any effect of high wartime construction costs) by depreciation on a straight-line basis of 5 years with a 20 percent residual value. Thus our proposal does not involve the establishment of purely nominal values which might be expected in view of the enormous surplus of transports which will become available, but envisages a value determined with due regard for the actual cost of this equipment to the Government. The lease we propose would be terminable by the Government at any time in the event of an emergency, but would only be terminable by the lessee prior to its expiration if he was able to show that he had purchased new and more modern aircraft of a substantially equivalent capacity. The major advantages of this proposal are that it avoids overburdening the market with aircraft to the extent that our aircraft-manufacturing industry is destroyed and so draining the resources of the air-transport companies by the purchase of obsolete aircraft that they will not be able to give normal support to the aircraft-manufacturing industry through the replacement of these aircraft with new and more modern ones.

In developing the proposals contained in the attached statement the air-transport industry gave careful consideration to their effect upon the financial return to the Government for the disposal of surplus transports. We concluded that the lease of these aircraft at a fair rental would in all probability return to the Government more money than could be realized by the sale of the aircraft outright. We will develop this element a little more fully.

The major factors involved in reaching a conclusion on this point are the size of the market for surplus transports as compared with the probable surplus and the characteristics of that market. We will discuss these factors in terms of the Army C–47 because this is the type now used by the air lines, it is a tried and tested model, and it will vastly predominate in the number of surplus transports that will become available.

It is impossible, of course, to predict with sureness the number of C–47's which will be available when the war is over, but it appears conservative to estimate that a total of 8,000 of these aircraft will become surplus at that time. In the report of the Harvard Graduate School of Business Administration on the disposal of surplus aircraft which was printed by your subcommittee as Senate Subcommittee Print No. 6, the authors of the report estimated that the maximum demand for all types of twin-engine transports over 20,000 pounds would be 1,975, a large portion of which would be C–47's. It certainly does not appear that the authors of the report underestimated the demand for this type of aircraft, particularly when it is considered that the entire air-transport system of the United States, the most extensive in the world, operated prior to the war with a little more than 400 units of flying equipment. Thus when the surplus is to be disposed of the supply of C–47 transports will be about 8,000 and the maximum demand will be about 1,500.

Now as to the characteristics of that limited market for C–47's—a vast majority of those persons interested in acquiring surplus C–47's will be persons engaged or proposing to engage in the transportation of goods, or passengers, or both. There will be sharp competition in the air-transport field both between the air-transport operators themselves, and between them and the surface carriers. Competition among air-transport operators has always been keen and it can be expected that such competition will increase in intensity as air transportation expands, particularly since the contract carriage of cargo by air will begin its development after the war. Large blocks of cargo will turn upon a fraction of a cent per ton-mile of operating cost and the carriage of great numbers of passengers will depend upon fractional differences in passenger rates. Under these circumstances all transport operators, big and little, will be interested in operating the type of equipment which will produce the minimum of operating cost. The DC–3 type airplane, of which the C–47 is one, is a relatively high-cost airplane when compared with those which will be developed within a very few years after the war. Consequently, the persons forming the entire market for surplus C–47 aircraft must consider that they are acquiring the airplane for purely temporary use until aircraft of lower operating cost can be provided.

This characteristic of the market for C–47's will have a strong bearing upon disposal if the aircraft are to be sold outright. In the first place it will be necessary to dispose of the aircraft rapidly for as soon as more modern aircraft are developed the value of the C–47 will be very limited. In addition, the price offered will be very low not only because the number of aircraft available so far exceeds the possible demand, but also because as businessmen, the purchasers will not be willing to risk a large amount of capital funds which may have to be completely written off when a new airplane becomes available. The Government would in effect be requiring the operators, big and little, to gamble on the time new and better aircraft would be produced and it can be expected that the operators would take a very conservative view of the useful life of the equipment they would buy. In addition, it is possible that the actual number of airplanes disposed of might be reduced by any policy which required operators to undertake such a gamble. In many cases it might make the difference between going into the air-transportation business or not going into it, or of expanding an existing operation or not expanding it.

By reason of these characteristics of the market for surplus airplanes, the air-transport industry's lease proposal is calculated to provide the Government with a better financial return than it would expect from outright sales. It eliminates the necessity for the transport operator to gamble upon the time when new and better aircraft will become available, thereby reducing the risks involved in launching a new venture or expanding an old venture, and increasing the number of aircraft to be sold. In addition, operators would be willing to make a higher total outlay for the equipment.

The lease proposal providing for a fair rental to the Government will permit the establishment of small air-transport operations by veterans. If it be assumed that the annual rental on a C–47 is approximately $18,000, the figure used in the Harvard Business School Report referred to above, this will amount to an equipment cost per day of about $50. If the new operator is unable to pay this sum for the use of an aircraft in his business, it is unlikely that he could enter the business under any circumstances for adequate financing will be required in order to pay the relatively high operating cost of this type of equipment. For example, if the operator flies 1,000 miles per day his direct flying cost on the basis of past experience will be approximately $300 per day. This type of transport operation cannot be inaugurated on a shoestring even if these aircraft were distributed at extremely low prices. In addition, as has been pointed out previously, the small operator who intends to remain in the business must contemplate the necessity of purchasing a new and more modern aircraft with lower operating cost as soon as such aircraft become available in order to meet the competition which will be intense in the field. The small operator will be least able to undertake the risk of having to write off the original cost of his equipment in a short time and will be the least likely to enter the air-transportation business if he must contemplate doing so.

While it appears from the foregoing that the air-transport industry's lease proposal will protect the Government's financial interest in the surplus aircraft, we do not wish to indicate that we think it would be a wise policy for the Congress and the executive branch of the Government to be guided solely by a desire to realize as much money as possible from the available stock of surplus. In the report of the Harvard School of Business Administration, which has been referred

to previously, there is set forth on pages 3 and 4 the objectives which the authors of the report feel should guide the disposition of surplus aircraft. These objectives are as follows:

"1. In establishing policies for the disposal of surplus military aircraft and components, the Army Air Forces have certain major objectives which are of prime importance to the permanent Military Establishment:

"(1) The maximum possible technical development in aeronautics.

"(2) Aircraft production facilities and organizations rapidly expansible and easily convertible in time of emergency.

"(3) A reservoir of service pilots, instructors, mechanics, radiomen, and other skilled ground and flight personnel.

"(4) Strong aircraft-manufacturing and air-transport industries, with the maximum practicable employment and capacity.

"(5) Public support of United States air power adequate for future security.

"2. The War, Navy, and State Departments should have the objective of using surplus disposal as a positive instrument to create sound foreign relations and future trade, especially export trade which may expand United States aircraft productive capacity.

"3. To the extent consistent with the above objectives, the maximum dollar return to the Government should be obtained from surplus disposal. Such return is, however, of secondary importance compared with the vital need for military preparedness and international accord."

We regard this as a sound approach to the problem of surplus aircraft disposal and we recommend that in any legislation standards similar to these be inserted in order to guide and control the administrative agency charged with the execution of the law. The attached statement contains a discussion of the possible effects upon the development of air transportation and the aircraft-manufacturing industry of hasty and unwise disposition of surplus aircraft guided solely by the desire to reap the maximum financial benefit for the Government. We will not repeat this discussion here. It should be pointed out, however, that an unwise disposal policy applied to transport aircraft might well in the long run deprive us of our present position as the builders of the world's finest transport aircraft and deprive the traveling and shipping public of the benefits flowing from the rapid development and improvement of such aircraft. This arises from a natural tendency of businessmen to avoid writing off an investment which has not been amortized. If an air-transport company has a large fleet of obsolete aircraft they may not be so active as they have been in the past in working with our aircraft manufacturers in the development of more comfortable, more economical, and safer aircraft. It was this drive toward constant improvement of air transports that has placed us in our present predominant position and if that drive does not prevail, we will lose our position to foreign competitors. This is just one illustration—albeit a very important one—of the soundness of the policy recommended in the above-quoted report and the unwisdom of any policy which would require those in charge of surplus disposal to secure the maximum financial return, whatever might be the cost to the national interest.

Very truly yours,

E. S. GORRELL, *President.*

DISPOSITION OF SURPLUS AIRCRAFT

(Testimony before the Surplus Aircraft Advisory Subcommittee of the Surplus War Property Administration, by Edgar S. Gorrell, president of the Air Transport Association)

In attempting to decide upon the best way to handle the anticipated surplus of aircraft and related equipment it is necessary first to determine the major objectives. The Government has invested a large amount of public funds in this equipment and as high a percentage of that investment as possible should be recovered. It would also be desirable to have the large stock of surplus aircraft disposed of as soon as possible so that the Government organization or machinery necessary to deal with it could be dispersed and those expenditures saved. It is necessary that international relationships not be disturbed by dumping these aircraft on foreign markets. It is also essential that the air-transport industry not be ruined by the unhealthy development of commercial operations for which there is no public need. The aircraft-engineering development and the aircraft-manufacturing industry must be maintained in a condition properly to expand in the event of another national emergency.

All of these objectives are important and, in disposing of the aircraft surplus, all of them should be kept in mind. But a very brief study of this problem indicates quite clearly that it will not be possible to accomplish them all. Therefore in making plans for disposing of these aircraft and related equipment a determination must be made at the outset as to which of these objectives are most important from the standpoint of the national interest.

Air power is essential for national security. It cannot be maintained unless this country has the engineers, designers, plants, and facilities that go to make up an active, vigorous, and progressive manufacturing industry. A strong air-transportation system is also necessary for national security and to place this country in a predominent position in national and international trade. Here again an active, vigorous, and progressive manufacturing industry is a prime essential. United States air lines cannot expect to outdo their foreign competitors in the air-transportation business if equipment must be bought abroad.

Therefore, in considering all of the problems involved in the disposition of transport aircraft the maintenance of the manufacturing and air-transport industries should be regarded as the primary consideration. The War Department as early as 1934 established as a cardinal principle the maintenance of an adequate manufacturing industry. The Congress in the Civil Aeronautics Act of 1938 recognized the need for a strong air-transport industry in the interest of national security.

In 1940 the War and Navy Departments jointly laid down the policy that the air-transport industry is a necessary adjunct to the national defense second in importance only to the armed forces. Also, the President has said:

"Civil aviation is clearly recognized as the backlog of national defense. * * * The country's welfare in time of peace and its safety in time of war rests upon the existence of a stabilized aircraft production—an economically and technically sound air transportation system, both domestic and overseas. * * *"

The remainder of this discussion will relate primarily to transport aircraft and related equipment because it is with this phase of the problem with which the air-transport industry is especially familiar and with which it is particularly concerned. Many of the same questions to be outlined in discussing transports will probably arise in connection with the disposition of other aircraft and it is possible that they should be dealt with in the same way.

It seems clear that the first thing to be done is to establish a fairly accurate listing of transport airplanes and related equipment. This should be started immediately, because otherwise it is necessary to deal with anticipated problems of disposition without really knowing their full proportions. The inventory should be taken now from military and manufacturers' records and should be maintained currently until the job of disposition is completed. It should include as transports only those types of aircraft which will be economically useful in air-transport service. It is obvious that it will be impossible to reduce such inventory to exact terms but in all probability it can be done with sufficient accuracy to provide a basis upon which to work.

It is also necessary to consider some of the factors which will influence the numbers of aircraft to be considered as surplus.

The age and condition of the aircraft should be carefully considered. If an airplane were found to be so old in terms of hours operated, or in such condition, that it would be difficult thereafter to maintain airworthy, it should be condemned.

The extent to which the military services will continue to use transports will have an important bearing upon the size of the surplus.

When hostilities have ceased in theaters of war the military and naval air-transport operations should not be terminated but should be continued through the use of civilian air-line facilities made available under contracts with the military services. These contract services should be continued pending a determination by this Government and the various other governments concerned as to the permanent disposition of the routes. This would release military personnel to other theaters and permit the civilian operator to begin or continue the accumulation of familiarity with the problems of operating the route.

Another related problem in determining the probable surplus is the extent to which the Army and Navy will conduct air-transport services as part of their permanent establishments. The military services should maintain a fleet of modern transport aircraft sufficient to take care of their day-to-day needs as an integral part of combat units. They should not operate military "air lines" but should rely upon civilian operators to meet their needs. This will have the effect

of reducing military expenditures substantially and at the same time will serve to build up the civilian system so that it can serve as an adequate auxiliary in the time of national emergency.

The possibility of retaining indefinitely a large part of the air-transport fleet now in the hands of the military service as a laid-up reserve has also been considered and found to be subject to serious objection. To do so over the long period which would probably elapse before any future war would be an unwarranted expense because of the high cost of storage, protection, and maintenance in airworthy condition and because the developments in aeronautics will be so extensive in the next few years that, by the time it was needed, the reserve would be so obsolete as to be virtually useless. In any event if efficient and vigorous manufacturing and air-transport industries can be maintained, such a reserve will not be necessary.

These are some of the general principles which should govern in deciding what is surplus. In determining what should be done with the surplus one of the easiest alternatives would be to sell the airplanes at auction to the highest bidder. That plan would accomplish the early termination of Government responsibility for handling the disposition of such aircraft but would in all likelihood result in the Government's failure to realize any substantial amount on its investment. It would damage the air transport industry severely and would destroy the manufacturer. Brokers might buy large quantities of the surplus equipment and dump them abroad. This plan was adopted at the end of the last war and the market was flooded with surplus aircraft and equipment. The manufacturing industry was practically ruined. In many cases the Government realized practically nothing for the equipment. In addition, since the airplanes would probably be sold under these circumstances "as is," the safety of airplane operation in the country would be threatened and the reputation of the manufacturers of the aircraft might be damaged. In view of the volume of aircraft released Government inspection would be difficult. For all these reasons there should be no hesitation in ruling out this alternative.

Another alternative is to turn the surplus aircraft back to the manufacturers who built them for reconditioning, conversion, and sale by them as they see fit. This procedure would eliminate the possibility of flooding the market with damaged and unsafe airplanes for the manufacturers would see to it that any airplane released from the factory was in airworthy condition. However, it would not be possible to turn the whole problem over to the manufacturers without Government control and assistance. If the aircraft were merely delivered on "consignment" the manufacturer would have little incentive to dispose of them. On the other hand, if the manufacturer were required to buy them from the Government it would be necessary for him immediately to flood the market with the surplus aircraft in order to secure the return of his investment.

The air lines favor a proposal for application in the case of domestic users which appears to carry with it the greatest advantages. The Government should retain title to all transport aircraft and lease them to proposed users. For a period of 3 years after the war any financially responsible person wishing to operate an aircraft from the surplus pool could enter into an agreement with the Government by which he would lease the aircraft for a period of not to exceed 5 years. The lessee would be reimbursed for any necessary repairs and desired initial conversion through credits against rent. The maximum rental payment would be equal to 80 percent of the value of the airplane at the time the lease is entered into payable in equal monthly installments. The proposed method of determining the value of the airplane is set forth in some detail in the attached exhibit describing the terms of the lease. In general, the value would be determined on the basis of original cost less depreciation, although provisions are suggested by which lessees would be protected against the effect of any excess cost resulting from wartime purchase by the Government. The lease would be terminable by the Government on grounds of military necessity upon reimbursement of any prepaid rentals. It would be terminable by the lessee on payment of the unpaid portion of the rental or on proof of delivery to him of a new airplane or airplanes of United States manufacture of a capacity at least approximately equivalent to that covered by the lease. If the lessee acquired an airplane of larger capacity he would be permitted to terminate the leases of an appropriate number of other aircraft. In the event of termination upon purchase of a new aircraft the lessee would be entitled to recover prepaid rent. The lessee would be required at his expense to maintain the airplane in airworthy condition and to maintain appropriate insurance to protect the Government.

From the standpoint of national interest many advantages would flow from the adoption of this plan. It is designed to return to the Government a higher percentage of the cost of equipment than any other. At the close of the last war the aeronautical surpluses, as well as others, were disposed of as rapidly as possible at auction or on the basis of sealed bids. Part of the material was bought up by brokers at ridiculously low prices and later resold many times, each purchaser taking a profit before he passed it on to another. This would indicate that the low percentage of return on the Government's investment resulted to a large extent from an effort to dispose of the material as quickly as possible without regard for its original cost. The air lines' proposal contemplates a far more orderly system of disposition and one which will place the equipment in the hands of responsible people who will actually operate it. In other words, the air lines suggest disposition direct to the ultimate consumer with the Government taking the middleman's profit.

The manufacturing industry which is so vital to national defense would be protected in two ways:

First. The interim period between the completion of war contracts and the beginning of new production could be occupied with the repair and reconversion of the surplus aircraft. While lessees would not be required to have this work done by the manufacturer and could utilize any responsible organization for that purpose, the manufacturers would undoubtedly be employed to do a substantial amount of this work.

Second. The lease arrangement is calculated to encourage the purchase of new and more modern equipment. The new equipment undoubtedly will be superior in performance and operating economy, and thus it will be the natural desire of aircraft users to secure modern types. If they are forced to purchase old equipment the purchasing of new will be impeded while if they merely lease the equipment, as we propose, that impediment will be removed. In addition, the lessee will be able to terminate the lease without any monetary loss if he buys a new and comparable airplane. It is not anticipated, of course, that the manufacturing industry would thus be maintained at its present level. But the plan would help the industry to readjust gradually to its peacetime size ready to expand again if another national emergency required it so to do.

It is unlikely that this plan can be used in all cases exactly as it has been described. In some few cases it may be necessary to make exceptions.

The plan should certainly be applied to the disposition of aircraft to United States flag air lines. The air lines have attempted to forecast the number of airplanes that they could take under this plan, but a variety of factors makes any prediction very uncertain. The training of personnel to commercial standards, the rapidity with which new aircraft are developed and the extent to which foreign travel is developed or restricted are some of the factors which make prediction difficult.

Whatever may be the number of aircraft that the air lines can take from the surplus the air carriers should be permitted to take the surplus airplanes as they become available until they have expanded their fleets to the point where they can satisfy public convenience and necessity. So long as there is a shortage of transport equipment the units should be distributed among the various air lines in accordance with determinations by the Civil Aeronautics Board. In reaching such determinations the Board should give full consideration to maintaining the relationship which existed between the fleets of the various air lines, including aircraft on firm orders as well as in operation, when production and delivery of commercial transport aircraft were restricted prior to the war. When a group of airplanes becomes available, each air line should have an opportunity to take the number of airplanes which bears the same relationship to the entire group being distributed as the number of airplanes on firm order and in operation it contributed to the United States and its allies bears to the total number of such aircraft so contributed by all the air lines. It will not, of course, be possible to follow this formula with mathematical accuracy with respect to each group being distributed but as other groups become available adjustments may be made to keep the air-line fleets in proper balance.

Another substantial market for the surplus aircraft will be the nonscheduled operators, including both the common and contract carriers. These enterprises will have to be reestablished or inaugurated with aircraft from the surplus pool, to be replaced thereafter with new aircraft from the factory. There appears to be no reason why this proposal should not be applied to them. Nor does there appear to be any reason for not applying the plan to noncommercial operators, private carriers, and companies who propose to acquire aircraft for the transportation of officials and company material.

Aviation schools should also constitute a substantial market for aircraft and accessory equipment. This is particularly true of schools giving advance flying courses in multiengine equipment and aviation mechanic, instrument, and radio schools. In the case of the acquisition of aircraft by such schools for flight training, this proposal should be applied. They should not be required to invest their capital in obsolete equipment and the sale to them of outmoded aircraft should not be permitted to reduce the market available to the manufacturer.

The lease proposal should be applied to acquisitions by governmental units for use by them but the equipment should be leased at a nominal rental or without charge by the disposal authority. Government agencies may be able to use an appreciable part of this equipment. Federal Government agencies such as the Civil Aeronautics Board, the Civil Aeronautics Administration, the Weather Bureau, the National Advisory Committee for Aeronautics, and the Forest Service have never had enough aircraft to engage in many activities which would contribute to the advancement of aviation or otherwise benefit the public. In addition, State agencies can use aircraft for police work, mapping, and other similar activities. Also it seems likely that a substantial amount of this equipment can be distributed to public and private organizations for educational or exhibition purposes. Every effort should be made after the war to continue and expand the aviation educational program which has already been inaugurated. Every high school should provide facilities for teaching elementary aviation subjects and the surplus aeronautical equipment can be used very effectively in furthering this program.

In view of the fact that this country has been outstanding in the development of transport airplanes it will be in possession of a major portion of the world's air transports when the war is over. It is possible, therefore, that the surplus transports and related equipment can be employed to equip or reequip a large part of the world's air-transportation system. The foreign market under properly regulated conditions will provide an excellent outlet for surplus aircraft and the United States manufacturers will have an unparalleled opportunity to establish themselves in the foreign field. In disposing of aircraft to foreign governments or operators the lease proposal should be altered. No lease should be entered into unless the lessee has placed an order with an appropriate deposit with an American manufacturer for an airplane of comparable and more modern type. If a nation anticipates the immediate establishment of a manufacturing industry of its own, it may turn out to be impossible to impose these conditions upon the purchasers but there will be a great number of nations who will not have any such aspirations. In those cases the manufacturers, by receiving orders for new aircraft, will be able to establish themselves in these markets.

In any case our stock of transports should be used as an instrument in international bargaining. The representatives of this Government can certainly take the position that the release of aircraft to foreign governments or operators would have the effect of permitting them to compete more effectively with United States flag air lines operating abroad. Consequently they can urge that substantial concessions should be given in return for giving up this competitive advantage.

These are possibilities which should be given the most careful consideration by those in charge of the disposition of aircraft and those participating in international air-transport negotiations.

This possibility of disposing of our surplus aircraft in foreign markets is one which will require the most careful and detailed advance planning. Other nations have been building some transports during the war and they will also be anxious to dispose of whatever surplus they have and to establish themselves in the available markets. Consequently, every effort should be made to act with the greatest possible speed when a surplus of aircraft becomes available for disposition abroad. Careful study should be made of available foreign markets and detailed plans established for securing them. Particular attention should be given to studies relating to the development of the air-transport systems of nations which do not have adequate transport systems at the present time. It might be possible in such countries to make a very substantial contribution to the development of the country and at the same time dispose of a large portion of the surpluses. Such a plan would envisage not only the disposition of aircraft but also related ground and flight equipment.

These are the markets for the disposition of aircraft and aeronautical equipment. There may be others not considered and others may appear as time passes, but it should be recognized at the outset that when these markets are

all exhausted a number of aircraft may remain. In addition, when the manufacturing facilities have again established peacetime production, the leased airplanes will be returned. When that time comes the airplanes should be dismantled and the materials which went into their construction should be preserved as a part of the country's normal future stock pile in order that this country's ability to meet a national emergency will not again be impeded by the acute material shortages that were being experienced not long ago.

The disposition of spare equipment and spare parts has not been specifically covered. The Civil Aeronautics Board has established in the Uniform System of Accounts a fairly definite line of demarcation between spare equipment on the one hand and spare parts on the other, spare equipment including the larger units. Spare equipment should be treated in accordance with the same general principles as aircraft although the details will not necessarily be applicable. Spare parts should be disposed of in any way considered appropriate by the agency disposing of the material.

One further point should be mentioned. The problems of disposing of surplus aircraft are at hand and are not merely to be anticipated in the far-distant future. Whatever organization is to be established and whatever legislation is to be recommended should be acted upon as promptly as possible for this reason. The air lines have already received a few aircraft and it is possible that additional ones will be released for their use in increasing number as time passes. Whenever an aircraft is released to an air line the air line must buy it outright at a price fixed by the Army and Navy. Every dollar the air lines invest in the obsolete equipment they are now receiving, is a dollar which cannot be spent in buying the more modern, efficient types which will become available later. It is possible that the air lines would find it difficult financially to embark on a reequipment program if their reserves have been used in the purchase of outmoded airplanes. The public is entitled to the best and cheapest transportation, and the air lines can provide it only if they take advantage of aircraft developments as soon as they become available. In addition, the ability of the air lines to buy new equipment is a major factor in supporting the manufacturing industry. For these reasons it should be possible right now for the air lines to follow the plan which has been recommended. In this way they could lease the obsolete aircraft which are being returned to them at a fair rental and undertake to purchase new aircraft from the manufacturer at the proper time. In fact, the plan should be made retroactive to cover aircraft already acquired from the Government by the air lines.

By the way of summary: Where aircraft and equipment are being or have been acquired for commercial or private purposes they should be leased to the person desiring to acquire them and the full rental payment should be required. Where the equipment is being acquired for governmental purposes, instruction, exhibition, or for other noncommercial public uses, it should be leased for a nominal rental or without charge. In the latter case appropriate provisions should be inserted in the leases to make certain that the lessee does not use the equipment for commercial purposes, or in competition with private enterprise.

Suggested Conditions Governing Lease of Aircraft

1. *Period of availability.*—This shall be 3 years after war's close.
2. *Term of lease.*—Original term of the lease not to exceed 5 years from date of delivery.
3. *Delivery.*—Airplanes to be delivered to point designated by lessee.
4. *Airworthiness and conversion.*—Lessor will be responsible for the expense of overhaul, restoration to airworthy condition (Civil Aeronautics Board standards) and conversion (from military use to commercial use) to the lessee's initial intended use. If the lessee advances the cost or performs the work the cost shall be allowed as a prepayment of rent.
5. *Monthly rent.*—Eighty percent of valuation of aircraft divided by number of months in term of lease (extension one-sixtieth on 5 years).
6. *Valuation.*—Original cost to the Government at the time of its purchase by the Government, except that such cost shall not exceed the contract price or other reasonable price of a comparable airplane produced under pre-war, peacetime conditions, such original cost to be reduced by due allowance for depreciation for any use prior to acquisition by the Government; (*a*) less cost of equipment removed and returned to or retained by the Government; (*b*) less depreciation since purchase by the Government computed on a straight line basis of 5-year life with 20 percent residual value.

7. *Termination (domestic user and United States flag operator).*—By lessor for military necessity only, on payment of unamortized portion of conversion cost and reimbursement of any prepaid rentals. By lessee on payment of the unpaid portion of the rent or on proof of delivery of new airplane or airplanes of United States manufacture of at least approximately equivalent capacity. If the lessee receives an aircraft of larger capacity than the one under lease, he may terminate the leases of such number of aircraft as may be approximately equivalent in capacity to the one delivered. In the event of termination on delivery of new aircraft the lessee is entitled to recover prepaid rent.
8. *Termination (all others).*—Same as paragraph 7 except that the lease may be terminated at the discretion of the United States Government.
9. *Maintenance.*—Must be maintained by lessee in airworthy condition (Civil Aeronautics Board standards) at all times with suitable provision permitting substitution of accessories or equipment and alterations for use.
10. *Insurance.*—Adequate insurance must be carried by lessee to protect the Government's interest or, on proof of financial responsibility, approved self-insurance may be carried.
11. *Financial responsibility.*—The lessee must give evidence of financial responsibility.

Lease of Spare Equipment

The general principles of aircraft lease should be followed although detailed provisions would not in all cases be applicable.

Kellett Aircraft Corporation,
Upper Darby, Pa., July 19, 1944.

Statement Re Rotary-Wing Aircraft

(By W. Wallace Kellett)

Rotary-wing aircraft at present are in an extremely crude state of development as compared with the airplane.

It is not often realized that, whereas the conventional airplane as we know it today is an engineering development representing several million man-hours of engineering over a period of many years, the present types of rotary-wing aircraft are not fully engineered and represent only a few hunderd thousand engineering man-hours.

The further development of rotary-wing aircraft for military and commercial purposes is a question of first, engineering, and secondly, of broad testing in actual use of the types of aircraft which present engineering can produce.

The potential military and naval uses of such aircraft have been adequately expressed by many competent military, naval, and Coast Guard authorities and, I believe, are a matter of record in many quarters.

The potential commercial uses are indicated by the many applications of transportation companies now on file in Washington for the establishment of passenger and cargo helicopter services and, also, by the expressed interest in this type of aircraft by Government and civilian authorities for forest patrol, geological survey, emergency rescue work, development of oil fields, and as means of transport for the private individual.

As I see it, Government interest in the continuance of a strong, healthy American aircraft industry must be based upon, first, our national defense; secondly, the economic well-being of our own people; and thirdly, the position we desire to maintain for our products in the markets of the world. I presume our Government will do everything possible to assure an aircraft industry which can and will maintain the position of our Nation in these respects.

It is the opinion of many competent military, naval, Government, and civilian personnel that rotary-wing aircraft when further developed will play a very important part in the achievement of the three above-mentioned factors. Obviously, therefore, we should plan a program for rotary-wing aircraft development in proportion to the program which we undertake for the development of conventional aircraft.

In other words, if we plan to devote a billion dollars to conventional aircraft development, it would be inappropriate to devote only a million dollars to rotary-wing aircraft development. If and when we recognize this fact and devote a proportionate amount of development funds and efforts to rotary-wing aircraft

in all its phases, including research, development, and field testing by obtaining reasonable production quantities of these aircraft, then I believe development of this type will proceed with much nearer the same speed that development of our conventional aircraft proceeds. Also, we may be surprised then by the rapidity with which rotary-wing aircraft will expand its field of practical utility for all military and commercial purposes.

Kellett Aircraft Corporation has devoted itself unremittingly to this field for the past 15 years and is the Nation's oldest rotary-wing manufacturer. In this time, through the use of our own resources and the assistance of the United States Army Air Forces we have been able to devote a few hundred thousand man-hours of engineering time to the problems of developing practical rotary-wing aircraft. This has not been enough. In 15 years, we have been able to manufacture hardly more than 50 of these aircraft in all.

I have read in the aviation press that there have been fewer than 100 helicopters produced in the United States to date.

The quicker five or ten million more engineering man-hours can be applied to rotary-wing aircraft, and the sooner a few hundere various types can be produced and put to work, even in their present stage of development, the better the chances will be of fulfilling our military needs, creating employment, and establishing our position in world markets.

NATIONAL PIANO MANUFACTURERS ASSOCIATION OF AMERICA, INC.
Chicago, Ill., June 22, 1944.

Hon. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
United States Senate, Washington, D. C.

DEAR SIR: Your good letter of the 15th addressed to me as president of the Everett Piano Co., to which I am taking the liberty of replying as president of the National Piano Manufacturers Association, has not been answered earlier by reason of my absence. The copy of bill S. 1730, print 3, which was attached has been read with considerable interest and with the conclusion that this would be a very constructive piece of legislation. It is being passed along to our association and commented upon accordingly.

We welcome the opportunity to tell you briefly about the problems faced by the piano industry now and in the reconversion era. It can be said at the outset that our industry is very easy to reconvert; in fact, were certain matters such as price approval by Office of Price Administration handled more expeditiously, we would not today be subject to about an 80 percent shut-down and could be at least in partial production, doing our part to take up the slack of unemployment which is present over a great section of this country, whether or not it is admitted officially. War Production Board has already authorized a certain number of pianos to be manufactured for a limited usage, such as teaching and institutional purposes, and if today our industry were permitted to price the product produced by it on a realistic basis, taking into account authorized wage and material cost increases, we would be in production on a fairly high scale.

Our industry is a small one, but it is none the less vital since our product certainly fills a necessary place in our present-day standards of civilization, and of course any shut-down is of the utmost concern to those who depend upon the industry for a livelihood. We have about 35 assembly and supply units scattered over the country east of the Mississippi River employing in normal times about 8,000 workers. Many of these units are located in group 2 and 3 areas. In the retail end, which must secure its product from the manufacturers, there are probably 8,000 more persons employed, and perhaps what is more important this group is composed largely of small retail units which do not have large accumulations of working capital.

The skill of our industry which among other things must produce highest-grade wood fabrication was utilized to a considerable extent in carrying out the wooden aircraft program. As you probably know, this program is now largely suspended, and if we are to keep together a business nucleus which will furnish employment in the future, relief must be forthcoming, and soon, this because as an industry we do not have the financial strength to go through any extended period of idleness and still have remaining sufficient working capital to build up a future operation on anything like the required scale.

As we see it, the reconversion problems of our industry are relatively easy, if they do not become lost in a maze of irrelevant discussion and misconception. Lumber is the only critical material, and many of our plants have a sufficient

stock of this on hand to at least make a start and probably continue production until the situation is relieved by the slackening off of war needs. We have the help and plants available and certainly tremendous pent up demand for our product. It is estimated that it will take us a year to stock up our retail dealers with normal inventories.

The hitch is now with Office of Price Administration, who so far have not conceded that pianos must be sold at a higher price than the one established in March 1942. Certainly prices must be increased, unless we can induce suppliers to lower the cost of raw materials and reduce the wages of labor to the scale prevailing at the base period. It is manifestly impossible to reduce raw materials, and it would seem to be against public interest to attempt to reduce the wages of labor.

In other words, given cooperation we can soon be back in production and take up our share of the slack in employment. In fact, we should be able to increase our pay roll at least 25 percent ahead of where it was in August 1942 when our industry was suspended.

If there is any further information you desire, we will be glad, indeed, to cooperate. Should you wish one of our members to appear before your committee, we can arrange to have one of our eastern associates on hand on short notice.

Very truly yours,

GEORGE H. STAPELY, *President.*

WRITTEN TESTIMONY OF W. LAURENCE LEPAGE, PRESIDENT, HAVILAND H. PLATT, VICE PRESIDENT, PLATT-LEPAGE AIRCRAFT CO., EDDYSTONE, PA.

JULY 19, 1944.

The Platt-LePage Aircraft Co. was organized in 1938 by Haviland H. Platt and W. Laurence LePage, aeronautical engineers who, individually and together, had been devoting most of their time to the development of rotary-wing aircraft over a period of some 15 years prior to the creation of the manufacturing and development company which bears their two names.

In 1940 the Platt-LePage Aircraft Co. won the Army helicopter design competition with its model PL–3 helicopter which later became the Army Air Forces model XR–1, a two-place observation-type machine with a Wasp, Junior, 450-horsepower engine. Characteristic of our Platt-LePage helicopters, this machine and its subsequent revision, the XR–1A, has twin rotors laterally disposed, and needs no tail rotor for torque neutralization. The Platt-LePage machines are, therefore, in many respects similar in general outline appearance to the conventional airplane.

The XR–1A helicopter, currently undergoing tests in the hands of the Army Air Forces, Matériel Command, Wright Field, Dayton, Ohio, is a smooth-flying aircraft with substantial lifting capacity and satisfactory high-speed performance in comparison with similar-size helicopters currently undergoing development.

These witnesses do not wish to pose as experts on military and naval uses and applications of an aircraft of the helicopter type. Such facts concerning the performance of Platt-LePage helicopters as have been gathered over the past 3 years of actual flight testing do, however, point to obvious and inevitable active-service possibilities.

The ability of the XR–1A-type helicopter to take off and climb vertically from areas less than 100 feet square with over one-half ton of useful load, indicates innumerable tactical and emergency uses. Rescue work on land and sea is immediately suggested. The installation of one or two externally mounted litters or stretchers would enable the speedy removal of wounded or injured from confined jungle areas or the sea. An aircraft carrier with one or more such machines on hand would be in a position to retrieve flight crews of planes shot down at sea far more expeditiously than with motor launches. Such helicopters would be equipped with pontoons for water landings, and if the surface were too rough, injured personnel could clamber aboard the hovering aircraft without necessity for an actual alighting. Similar circumstances would, of course, pertain in heavily wooded jungle regions. Other evident military uses of aircraft of the XR–1A type are the laying of telephone cable, the landing and retrieving of secret agents, and, with larger machines, the secret landing of crews to plot and plan invasion tactics. Aerial reconnaissance, spotting, and liaison services also come within the range of inevitable helicopter application.

In the field of post-war civilian services, the helicopter with a substantial lifting capacity would have immediate air-transport possibilities of great value to the community. These witnesses are of the considered and conservative opinion that

the small private helicopter for family use will be delayed some years while simplicity of operation, manufacturing costs, and service problems are solved to the point where the inevitable "rough and ready" handling by the private owner will no longer seriously damage either his person or his pocketbook.

Furthermore, individual flying for the masses is still a serious problem of great magnitude, and the "man in the street" will buy a ticket to fly from here to there long before he is ready to own himself the machine in which he is to make the trip.

These witnesses are prepared to go on record as being of the strong and considered opinion that the transport helicopter will be a twin-rotor machine, similar to the Army's XR–1 and XR–1A types, rather than a single-rotor helicopter with torque and control tail rotor. This opinion is based upon vital aerodynamic and mechanical reasoning, the details of which will no doubt be considered by the committee as outside the scope of present testimony.

A transport helicopter meeting the requirements is within reach of present helicopter design and construction knowledge. In fact, a 10-place prototype twin-engine helicopter is already in the preliminary stages of design.

Large transport airplanes, designed and built after the war from our big-bomber prototypes, will need very much larger airports and longer runways than the great majority of those at present available. Such airports of the present and post-war era are of necessity being located at points removed considerable distances from the centers of our principal cities.

Thus, in spite of the ever-increasing speeds of air-transport services, the traveler is becoming more and more inconvenienced and his total travel time greatly increased by that portion of his air-travel schedule which must, at present, be allocated to slow ground transportation between city centers and airports.

The helicopter argument is, of course, not new to the members of the committee. Small downtown landing areas for transport helicopters will permit air shuttle services to speed up over-all air-travel time by large percentages and will pull into the air-transportation map communities, towns, and even cities which otherwise could not economically be served.

We desire to make clear to the committee our confidence that these forecasts for the helicopter in civilian service are real and practical but will be realized only as a result of an aggressive pursuit of present development programs. Helicopter design and development to date has called for an application of the most advanced mathematical, aeronautical, and mechanical abilities. Truly remarkable strides have been made and the helicopter, as a practical aircraft, has at last been established, but the development costs have been tremendous and will continue at a high level if the early future, as outlined, is to be realized. Our company has spent large sums of its own funds in this development during the past 5½ years and has enjoyed some considerable financial support from its development contracts with the Army Air Forces. Nevertheless substantial losses have been and are being sustained in our company operation. These burdens are worth while only if the continuity of the work is to be maintained.

COMPOSITE ANSWERS SUBMITTED BY AVIATION SECTION, NEW YORK BOARD OF TRADE, TO QUESTIONS FOR DISCUSSION ON AIRCRAFT INDUSTRY IN RESPONSE TO REQUEST OF SENATOR MURRAY, CHAIRMAN OF WAR CONTRACTS COMMITTEE, AS COMPILED AT A MEETING OF THE SECTION'S EXECUTIVE BOARD ON JULY 14, 1944

Question No. 1: To what extent is it necessary to achieve better coordination between the cut-back program of the Navy Department and that of the War Department? How can this best be achieved?

We believe that Joint Chiefs of Staff should appoint a committee, in case one does not already exist, to coordinate cut-back programs between the Navy Department and War Department with the view of accomplishing the following:

(*a*) Avoiding impairment of facilities necessary to the post-war national defense.

(*b*) Avoiding widespread unemployment.

Question No. 2: Once it is decided to cut back a given program by a given amount, what yardsticks should be used in deciding which companies are cut and how much each company is cut?

In the cut-back of a given program, utmost consideration should be given:

(*a*) To the convertibility of the plant involved.

(*b*) Avoiding unemployment.

Question No. 3: What should the policy governing advance notice of cut-backs for (*a*) the company? (*b*) the subcontractors? (*c*) the employees? and (*d*) other Government agencies?

It is our recommendation that the Government observe the utmost frankness in giving maximum advance notice on cut-backs to the prime contractor and to the subcontractor.

Both the foregoing have interest in advising their employees as soon as definite information regarding cut-backs is received. Insofar as other Government agencies are concerned, advance notice to such agencies should be given when they are concerned in the matter from the standpoint of finance, manpower, facilities, etc.

There will be certain advantages both to corporations and to companies to cut back on the basis of tapering off rather than complete terminations. It is suggested that upon cancelation of the balance of a contract, it affect a stoppage of 25 percent of the work immediately, an additional stoppage of 25 percent in 30 days, a further 25 percent in 60 days, and the balance in 90 days. This would not only ease the labor situation but would have the advantage from the Government standpoint of tapering off on the production line instead of immediately turning it down, so that if conditions changed within 3 months, production could easily be resumed.

Question No. 4: What provision should be made for employees who are released from wartime aircraft production? through unemployment compensation? through retraining? through transportation to other localities?

The most important provision that can be made for employees who are released from wartime aircraft production is the expediting of production work on civilian requirements. Severance pay should be provided. It is not thought that retraining is especially necessary. In cases where employees have been removed from their original homes, transportation back to their original homes or to a point equidistant where work is available, should be provided to them.

Question No. 5: How can production cut-backs in aircraft best be integrated and synchronized with the development of other types of war production?

This might be achieved by assigning the problem to the committee suggested under paragraph I.

Question No. 6: What are the important steps that the Government and industry can take now to promote the rapid development of civilian aircraft production?

The Government should cooperate with industry now to permit the rapid development of civilian aircraft production by—

(*a*) Releasing when possible additional engineering for civilian aircraft design.

(*b*) Allocating materials now for the fabrication of prototypes.

(*c*) In certain cases ordering service test quantities of new devices calculated to add to safety, economy, and ease of operation of civilian aircraft.

(*d*) A general policy regarding international aviation must be decided upon and the necessary steps taken to arrange for the use of foreign bases, etc. A definite policy as to the carrying of all mail by air and the clarification of the granting of new air routes will do much to promote the industry. A 5- or 10-year program for production of new aircraft should be determined upon, probably on some percentage of present business, say 10 to 20 percent, in order to keep our air force adequate and modern and to keep our industry going. A definite training program should be scheduled, something along the lines of the civilian pilot training program, utilizing the colleges and the high schools, together with the local operator, and making available training equipment which will be on hand at the end of the war. We can think of no better way to promote aviation in general than to train one, two, three, or five million boys and girls over the next few years. There should be a definite and coordinated program of instruction in aviation starting in the grade schools and schools and continuing through levels. A certain amount of military training, both pilots, mechanics, and technicians should be handled through the civilian industries, even if it is only in token amounts. All of our research facilities, such as the N. A. T. A. should be continued, and should be augmented through the engineering departments of the industry.

Question No. 7: What principles should be followed in handling Government-owned aircraft factories, aircraft, and airfields?

Aircraft factories should be offered for sale or lease to aircraft companies. Such factories as are not disposed of in this manner should be maintained in stand-by condition for future use, provided the Joint Chiefs of Staff consider such a program necessary to the national defense. Such plants as are not sold, leased, or maintained as stand-by should be closed or scrapped. Government-owned airfields should be offered for sale or lease to communities needing them for feeder operation, fixed-base operation, or current usage for civil purposes. Such fields as are not disposable according to the foregoing formula should be declared surplus and dismantled, the land being sold as land and not as airfields.

98534—44—pt. 9——10

PROPOSALS RESPECTING DISPOSAL OF GOVERNMENT'S DECLARED SURPLUS (AIRCRAFT, POST-WAR)

1. That a principle be established of "regional disposal." This means that such United States owned aircraft and accessories as are declared surplus by the Army and Navy be disposed of in the district (country or territorial region) where it is physically located at the cessation of hostilities.

2. That no part of such surplus aircraft or accessories be returned to the United States for disposal.

3. That no such surplus aircraft or accessories be disposed of in any country, for resale in another country.

4. That any of such surplus aircraft or accessories sold to any given country be used exclusively in that country, except where a sale to air lines domiciled in the country is concerned.

5. That all surplus aircraft and accessories not disposed of according to the preceding formula be dismantled and rendered useless and the materials therein disposed of as materials and not as products, the proceeds of such sale of materials to be covered into the Treasury of the United States.

6. That such surplus aircraft and accessories located in the United States or its possessions upon the cessation of hostilities be disposed of as follows:

(*a*) By sale to air lines, aircraft manufacturers, and other users for conversion into craft utilizable for civil purposes.

(*b*) By gift to accredited colleges, technical schools, museums, etc., for the purposes of aiding in studies.

(*c*) By gift of suitable craft to cities and other municipalities for police usage.

(*d*) By gift to accredited organizations (Red Cross, etc.) for transport usage.

(*e*) By assignment to National Guard units throughout the United States.

7. That any and all remaining surplus aircraft and accessories be disposed of in a manner identical to that proposed in paragraph 5, in conformity with the policy of "regional disposal."

COMMENTS

The prime objective of the foregoing plan is to prevent disruption of normal trade. By utilizing as much as possible normal trade channels for the disposal of surplus aircraft material, the aeronautical industry will be aided greatly in its return to normal status. No surplus aircraft or accessories must be allowed to fall into the hands of speculators, national or international trades unauthorized converters, etc. Whenever possible surplus equipment to be resold, reconditioned, or salvaged, should be channeled through existing established manufacturers and similar agencies. There should be no "throwing on the market" of surplus equipment.

Any arguments against the scrapping of surplus material which has been purchased by the taxpayers money, can be offset by the argument that such a practice would be less harmful to the national economy than dumping on the market. Dumping would result in serious impairment of our manufacturing and engineering facilities. Such impairment would not only create unemployment, but would prejudice engineering and research development necessary to national defense.

Without attempting to forecast the size of the Government's stock of aircraft and accessories at the close of the war, here is an example of possible disposition under the foregoing program.

Suppose on hand (in all parts of the world)

	Planes
American-owned aircraft	100, 000
Squadron and trainer requirements, Army and Navy	30, 000
Contributed to—	
International Police Force	5, 000
U. S. National Guard	5, 000
Technical schools, etc	20, 000
Municipalities	2, 500
Institutions, organizations, and museums	2, 500
Dismantled, rendered unusable, sold for materials	30, 000
Total	100, 000

Along with the above, after reserving a suitable stock pile of up-to-date instruments and accessories for emergency use, the declared surplus of such instruments and accessories is to be allocated proportionately to the above recipients. Means are to be provided that no such surplus instruments and accessories be resold by any of the recipients of such material. Any quantities remaining after this allocation are to be rendered useless and disposed of as materials, the proceeds of such sale being covered into the Treasury of the United States.

Question No. 8: What plans should be made for a post-war national defense program for the aircraft industry? through research and development? through stand-by capacity? through other methods?

The aircraft industry requires for post war national defense the following:

(*a*) A sound manufacturing and engineering industry.

(*b*) Legislation to provide separate budgets for general procurement and the procurement of service test quantities on aircraft and equipment.

(*c*) Fullest encouragement should be given to research and developments by providing funds for the purpose of advanced engineering developments in all phases of aviation both commercial and military. For stand by capacity, see paragraph 7.

(*d*) Domestic air transport should be expanded now so that it can be ready to absorb the vast army of returning pilots, mechanics, and other specialists.

APPENDIX II

DEPARTMENT OF COMMERCE,
CIVIL AERONAUTICS ADMINISTRATION,
Washington, July 10, 1944.

Hon. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
United States Senate, Washington, D. C.

MY DEAR SENATOR MURRAY: In reply to your letter of June 28, we are not conversant enough with the Army and Navy program to express an opinion on questions 1, 2, 3, and 4 of those submitted with your letter.

Commenting on question 5, it appears that this could be best accomplished by cutting back, first, if possible, the manufacturers of civil air transport aircraft, such as Douglas, Beech, Lockheed, etc., and let them deliver some of their Army and Navy cargo models to domestic and foreign air lines. Also, cut back on manufacturers of personal civil aircraft, such as the Aeronca, Piper, Taylor, Cessna, Waco, etc., and let them start producing civil types.

With reference to question 6, we should immediately decide on a post-war civil airport policy, as to whether or not Federal aid should be given, and, if given, on what basis it will be distributed. We should also allow companies to complete and test prototypes of new civil aircraft, and to build a reasonable number for demonstration purposes with which to line up dealers and interest potential customers.

With reference to question 7, aircraft factories should be sold, if possible, to aviation concerns at low prices and on long-term credit.

Our recommendations for the disposition of aircraft are to utilize as many of the cargo types as possible in demobilization work, scrap the well-worn ones, and sell those not needed in military service to commercial operators, domestic and foreign, on an installment purchase basis. Liaison types that will meet the requirements for commercial certificate and are in airworthy condition should be sold to civil purchasers, domestic and foreign. Trainer and combat types, excess to the military needs for active and reserve training, should either be scrapped or sold at low cost to friendly nations whom we should like to have build up their air forces, or develop their civil aviation. Some of these can also be distributed to educational institutions for shop training.

Airfields should be made available to States, cities, or counties for civil use, so far as practical, keeping those that appear desirable in a stand-by status and selling the remainder, in whole or in part, to anyone who will purchase them.

Under question 8, this should be done through research and development, and the purchase of newly developed aircraft yearly, retiring obsolescent types, even though little used.

It is our opinion that stand-by capacity should be maintained at a minimum, because the moment this war is over the type of combat aircraft now in use will rapidly become obsolete; therefore, to maintain stand-by capacity for planes which no longer are combat worthy is a waste of money.

We believe that the most effective program for National Defense would be one emphasizing the continued development of civil aviation through widespread use of the airplane by the public. The familiarity of our boys in the military forces with automobiles and mechanics in general has been a great factor in our present successful prosecution of the war, and so undoubtedly will success in future conflicts be measured in direct proportion to aviation knowledge and superiority.

Very truly yours,

J. E. SOMMERS, *Deputy Administrator.*

UNITED STATES MARITIME COMMISSION,
Washington, D. C., June 26, 1944.

Hon. JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
Committee on Military Affairs,
United States Senate.

DEAR SENATOR MURRAY: This will acknowledge your letter of June 15, 1944, relative to the termination of certain work under contracts between the Commission and MacEvoy Shipbuilding Corporation.

This was a case of partial termination of work under the contract, the contractor being notified of such partial termination on August 3, 1943, or approximately 10 months prior to the date on which the unterminated portion of the contract was completed. When the partial termination was decided upon, the contractor was asked to come to Washington and a revision of his contract was agreed to whereunder a lesser number of concrete barges would be constructed.

In September of 1943 I wrote to the Secretary of Navy and Secretary of War stating that the Government-owned shipyard at which MacEvoy Shipbuilding Corporation had been performing contract work would probably be available for use in connection with other Government work in the late spring of 1944. Both Secretaries replied to my letter stating that their Departments had no use for such shipyard. The War Production Board was advised of the change in the concrete program.

The partial termination of the contract effected in August of 1943 did not have the effect of requiring any reduction in employment in the shipyard at such time, nor was any substantial reduction made in the number of employees in the shipyard for several months thereafter. The regional office of the War Manpower Commission was advised that no further work would be available for the shipyard and was furnishied with schedules showing anticipated reductions in employment.

Sincerely yours,

E. S. LAND, *Chairman.*

WAR PRODUCTION BOARD,
Washington, D. C., June 30, 1944.

Senator JAMES E. MURRAY,
Chairman, War Contracts Subcommittee,
Committee on Military Affairs,
United States Senate, Washington, D. C.

DEAR SENATOR MURRAY: I am writing in reply to your letter of June 15 in which you request certain information about the closing down of the MacEvoy shipyards at Savannah, Ga., for the use of the War Contracts Subcommittee.

The MacEvoy Shipbuilding Corporation is completing its contracts. They were awarded a contract for 5 concrete barges in November 1941 and an additional contract for 18 concrete barges in May 1942. Performance under the contracts was unsatisfactory to the Maritime Commission and the progress in completing them so slow that on August 3, 1943, the Maritime Commission canceled 16 of the 18 barges in the second contract. At that date, no barges had been delivered. I am informed that at that time letters were sent to the Secretary of War and the Secretary of the Navy advising them of the anticipated availability of the facilities. The War Production Board and the War Manpower Commission have been currently informed of the situation at the MacEvoy shipyards through regular reports on the progress of construction and prospective manpower requirements.

The last of the concrete barges remaining in the two contracts after the cancelation of August 3, 1943, is scheduled to be delivered this month. The MacEvoy Shipbuilding Corporation has been aware since August of the prospective completion of its contracts. I am informed by the War Manpower Commission that the peak employment at the MacEvoy shipyards was approximately 1,500 workers and that already approximately half of this number have been placed in other employment. The yards are located in an area classified as an area of critical labor shortage. The War Manpower Commission anticipates no difficulty in placing the remaining workers when they are released.

The Senate Committee on Investigation of the National Defense Program made an investigation of the MacEvoy Shipbuilding Corporation, the summary of which was published as appendix III of its report on Shipbuilding and Shipping (Rept. No. 10, pt. 8).

If you have further questions that you wish to put to the War Production Board with reference to this case, we shall be glad to answer them.

Sincerely,

C. E. WILSON, *Chairman.*

APPENDIX III

AIR POWER

AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, INC.

RESOLUTION ADOPTED BY THE BOARD OF GOVERNORS OF THE AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, LOS ANGELES, APRIL 26, 1944

The board of governors of the Aeronautical Chamber of Commerce of America, in order to "provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," and in order to insure that the airplane which America created shall be used to maintain peace and secure the blessings of peace to mankind, does unanimously recommend the early formulation of an American air power policy under the following guiding principles:

The United States should maintain an air power sufficient (in conjunction with other forces) not only to win this war but also to keep the peace:

1. By maintaining adequate air forces at such strength and in such state of readiness as to preclude a successful assault upon our country or its possessions.

II. By acquiring and maintaining air bases essential to our security and that of overseas trade.

III. By facilitating the orderly and economic expansion of domestic and international air transport and of private flying.

IV. By preserving a strong aircraft-manufacturing industry.

AN ESTIMATE OF AMERICAN AIR POWER—THE RECORD TO DATE

Let us quickly review the past as the first step toward an estimate of the future. No matter how well known the record may be to some of us, it is worth while to restate it here.

We recall that upon the outbreak of World War I, the United States was wholly unprepared. This was particularly true in aviation, for whereas Europeans had looked upon the airplane as an instrument of war, we Americans saw it as a new vehicle of peace. Thus, we entered the war with no military airplane designs and no military engines of our own. We sought to overcome this disadvantage by adapting foreign designs to automotive mass production, and belatedly trying to create new ones of our own. And though a valiant effort was made, the brief 19 months of our participation was not enough to bring American designed aircraft into combat.

The sudden unexpected armistice of November 11, 1918, found us as unprepared for peace as April 6, 1917, had found us unprepared for war. We had neither adequate policy, program, or organization for terminating war contracts or for the custody, storage, or disposal of surplus goods or plants. As a result, there was vacillation, confusion and hardship. "War profits" proved illusory. Companies without adequate reserves or surplus failed. Automotive companies

went back to automobiles. What little remained of the aircraft industry floundered in the doldrums. Some even thought the Army and Navy should design and build their own aircraft.

The Army, the Navy, and the Congress took some cognizance of this situation. A number of committees and boards made recommendations. But nothing came of them. Then, in 1925, in response to outspoken charges by Brig. Gen. William E. Mitchell, and to an aroused public opinion, President Coolidge appointed the "Morrow Board."

This Board was requested by the Secretaries of War and Navy. These requests were in turn the result of representations by the aircraft industry whose importance to the Army and Navy was pointed out.

The Morrow Board consisted of nine members appointed by the President of the United States. Their number included a retired general, a retired admiral, two outstanding engineers qualified in aeronautics, a member of the Senate Committee on Military Affairs, a member of the House Committee on Naval Affairs (the Hon. Carl Vinson), the chairman of the House Committee on Interstate and Foreign Commerce, a judge of the circuit court of appeals, and a prominent lawyer and banker, Dwight Morrow.

The Board was nonpartisan and nonpolitical, and no member was directly interested in commercial or military aviation. The character and integrity of its members were such as to assure public confidence in their findings.

It heard nearly 100 witnesses and many conflicting opinions. At that time, the state of the aeronautical art was such that little could be drawn from experience, yet the public had strong confidence in the future of aviation. After a short but active inquiry, the Board submitted a unanimous report.

Against the background of charge and countercharge incident to the Mitchell controversy, the Board's findings were unexciting. Yet they were so sound in principle that the report (not out of print), deserves reading and rereading today even by those familiar with it. Congress accepted its recommendations and embodies them in the Air Corps Act of 1926. It created the office of Assistant Secretary for Air in the Departments of War, Navy, and Commerce.

The Board held, in effect, that a strong air force is vital to national security, that the backbone of this air force must be a strong, private industry, and that a long-term, continuing program of procurement is essential to the creation of adequate engineering staffs and the acceleration of the new technology. Thus, the Board fixed responsibility for American air power jointly upon Government and private industry.

We take pride in the fact that the aircraft industry has fully discharged its responsibilities, even though at times the people's desire for peace caused them to falter in support of the Morrow Board's policy. Whereas in World War I we borrowed aircraft from our allies, in World War II, we supplied them.

The Board realized the vital strategic importance of advanced engineering. It recognized the handicaps inherent in Government design and appreciated the need of private competition for the development of creative design staffs. It also stressed the impracticability of maintaining a peacetime industry adequate to the requirements of war. It emphasized the need for rapid expansion in emergency and visualized it taking place around a small but potent aircraft industry. This forced aircraft designers to conceive an entirely new theory of quantity production, one that relieved it of the need for freezing designs, and permitted it to expand phenomenally while introducing new and better models.

As contemplated by the Morrow Board, the Post Office initiated the development of air transport through contract air mail under private operation. Regulation and airways development were centered in the Department of Commerce. Technical improvements were encouraged by keen, constructive performance competition. Destructive rate competition was avoided.

Simultaneously, technological development was encouraged through healthy rivalry between the armed services—a great force for progress. Intercompany competition has continued in war, though aircraft manufacturers have shared their experience freely through their war production councils. They have cooperated in this crisis as effectively as they once competed in normal times.

The benefits of competition were also shared between the armed services and the air-transport operators to the over-all advancement of both. Aircraft was able to achieve its present dominance because, in the years before the war, this development was permitted by a long-range program evolved by the Morrow Board in 1925.

Men have long realized the vital importance to peace and prosperity of free communication by land, but it was not until 1889 that the decisive character of

overwater communication became apparent. Then, Capt. A. T. Mahan, in his classic treatise, The Influence of Sea Power Upon History, proved conclusively that since the dawn of marine transport, victory in war and prosperity in peace have rested with the nation which exercised control of communication by sea.

During the nineteenth century, the world enjoyed unexampled prosperity coupled with spiritual and material progress never before experienced. The combined British and American sea power swept piracy from the high seas and guaranteed the right of innocent passage to all who proceeded on their lawful occasions. With this power in the hands of a free people, the play of natural competitive forces accelerated the development of the arts and sciences.

In the twentieth century, this freedom of the seas has been challenged twice in the lifetime of the pioneers of the aircraft industry. In World War I, the Germans challenged with the submarine. The Japanese at first found it expedient to ally themselves with us to obtain German and other Pacific bases. Then, when the Germans tried again with the submarine (their air force being military), the Japanese challenged with naval air power. Thus, twice in the first half of this century, the beneficent sea power of free people has been challenged by autocratic powers seeking to dominate and enslave.

We have met this latest challenge by a rapid expansion of land, sea, and air power. Today, our air power is supreme: The combined military and naval air forces of the United States now constitute the world's largest air force. Our aircraft-manufacturing establishment is recognized as the world's No. 1 industrial giant. As to air transport, our private domestic and international systems, already the world's largest and best before the war, have expanded by leaps and bounds.

At strategic points along the air lanes of the world, we have built a powerful network of air bases. They are as vital to air power as are naval bases to sea power. With these stepping stones, the Army and Navy air transport commands have rushed men and materials to distant points in support of far-flung operations. Keymen, on the spot, and face to face, have made decisions that insured success in complex operations which would otherwise have failed. The delivery of critical materials at the right place at the right time produced results that would otherwise have been denied. We simply could not have fought this war successfully without air transport.

We have extended air lanes in all directions. Though we look at these now as outward flowing streams, we must not forget that they are channels leading to the very heart of the country. Mahan, discussing the decisive influence of sea power upon our Civil War, and referring to the tightening of the northern blockade, said, "The stream that carried the wealth and supported the trade of the Southern States turned against them and admitted their enemies to their hearts."

This sea power comprised five basic elements: The merchant marine; strategic bases; the Navy; the shipbuilding industry; and a seafaring tradition. The cost of the Navy was accepted as a proper charge against the cost of water transport—yes, even as an investment in world prosperity.

Similarly, we see air power comprising the same elements: An expanding commercial air transport; strategic air bases; military and naval air forces; a sound aircraft manufacturing industry; and an air-minded public.

The precise influence upon history of air power is now in the process of determination, but air power's influence upon land and sea communications has been made abundantly clear. Fundamentally, the isolation once enjoyed behind land or sea frontiers is forever gone.

The aircraft manufacturing industry operates today on a high plateau, having passed successively through three crises. The first crisis involved a shortage of machine tools, the second, a shortage of materials, and the third, a shortage of manpower. Within the latter there is an element of grave danger. Competent management and competent engineering are items whose importance cannot be overstressed. We have brought in management of proven competence from other industries through licensing and subcontracting. We have trained new production management from our own ranks. We have cooperated through the war production councils to increase the efficiency of our own management.

But the ability, even the willingness to take responsibility for management is a rare and precious quality. In a highly specialized engineering art like aviation, even men of real aptitude or competence must acquire experience before they are useful. Even then a special quality is necessary for men who must conceive and create new art.

Ours is the responsibility to provide combat crews with aircraft of advanced design. We must take care that no adversary surprises us with some secret weapon. A technological advantage once lost is not likely to be recovered.

Aviation is a young industry. Most of its personnel is young. Thus, we are certain that the public interest requires the maintenance of the integrity of management and engineering in the aircraft industry. Removal of young engineers from private industry or interruption of a steady flow of them into it is fraught with grave dangers. A design staff once lost is not likely to be restored.

Turning now to production schedules, it is apparent that the very magnitude of the expansion of the aircraft industry makes it especially vulnerable to changes and cut-backs. Since renegotiation of contracts precludes the accumulation of reserves adequate to any contract termination that is not orderly and swift, the Government must accept its responsibilities in termination for all costs, including separation wages, lest important elements of the industry fail to survive. Until the completion of the cycle "war profits" are wholly illusory.

Our sistuation differs markedly from that of the automobile industry. Every day that passes, more automobiles wear out and the demand for new cars increases. Similarly, every day that passes, automobile companies contribute to the surplus of aircraft and aircraft parts. At termination, automotive companies can reconvert, while aircraft companies must cut back to whatever remains.

While the airplane and automobile both date from the beginning of this century, and while forty-odd years later the automotive and aircraft industries are collaborating in the production of aircraft industry designs for the war effort, the two industries are fundamentally different. The automobile has had wide private use. The airplane on the other hand has been used principally in public service. The industry is almost wholly dependent upon Government policy.

The problem of surplus war products is thus of peculiar concern to aircraft manufacturers. We note with satisfaction the steps being taken to provide necessary legislation to permit terminating contracts speedily and disposing of war surpluses in an orderly manner. We are impressed with the magnitude of this task and the need for courageous administration and control.

The factor of obsolescence is vitally important in aviation. Equipment is frequently made obsolete by technical improvement long before it has worn out in use. This factor should be given full consideration in controlling production. The flow of material must not run too far ahead of requirements, lest the latest service changes and improvements be not incorporated in combat aircraft.

Thus, the conduct of the war and plans for the future combine to dictate the first step in surplus control. To the fullest extent consistent with meeting every need of the armed services, the tightest rein should be held on current production to avoid unnecessary accumulation of inventories in the hands of suppliers and of finished products and spares in reserve.

Surplus aircraft material should not be viewed as excess inventory to be liquidated like commercial products, but rather in the nature of a reserve. It is public property. It should be administered with broad regard for the public interest. The public interest demands the maintenance of a reasonable level of employment. Dumping surpluses could so unbalance the aircraft industry and the whole national economy that the cost of unemployment compensation, or relief, could quickly exceed any recovery through sale of surplus. War surplus must be considered in the light of other goods expended in the war effort. Good business judgment demands "no dumping."

Surplus aircraft will fall into two categories: those restricted to war purposes and those capable of conversion to commercial uses. The most modern surplus military aircraft should be stored in reserve. This will help employ available excess facilities. Convertible types should be used to promote air transport and private flying.

The rapid rate of obsolescence of aircraft makes timing the key to a sound disposal policy. The sooner surplus planes are made available for commercial purposes the more completely will desirable objectives be achieved. The immediate use commercially of surplus equipment before new improved models are generally available will aid in creating demand for improved equipment.

The vital principle here is that surplus aircraft must not be permitted to destroy the aircraft manufacturing industry. On the contrary, they must be so utilized as to nourish it. The public interest requires that the aircraft manufacturing industry operate at the rate necessary to promote the creation of new designs and to facilitate rapid expansion in emergency. This must be accomplished through a continuing, orderly program of competitive procurement for the

Army and Navy Air Forces as well as expanding private purchases for domestic and foreign transport. The whole should be supported by direct expenditures with the industry for research and experimental development.

In the matter of Government-owned facilities, we are gratified by the steps being taken. Here, too, the controlling principle is the public interest. It must always be kept in mind that until the industry can develop a private market, the Government is directly or indirectly its chief customer. It is axiomatic that no seller can compete successfully with his customer and that the private aircraft industry could not survive Government competition.

The record to date clearly shows the wisdom of having depended entirely upon private industry for aircraft production. Industry has met every requirement as to quantity and quality. The stimulus of private competition has produced great benefits. Technology has advanced. Costs have been dramatically reduced. The whole management of aircraft production this war under the principles enunciated in the Morrow report has been so successful as to indicate clearly the wisdom of continuing these policies. In fact, the whole relationship of Government and industry in the aircraft program sets a sound pattern for other lines for the future.

When the time comes for major cut-backs, the aircraft industry will face problems at least as difficult, if not more difficult, than those incident to expansion. There has been no opportunity to develop other new products. It would seem that the "minute men" of this war, who have served the Nation best technically and productionwise, should survive. Today, aircraft production represents a substantial proportion of the national economy, and every opportunity should be afforded the industry to maintain itself at a reasonable level.

Continued manufacture of unneeded war goods would serve no useful purpose. We would simply be borrowing from future demand. This emphasizes the point made in the reports of the Vinson and Truman committees, that Government departments should begin planning now for long-term needs. Military and naval plans could approximate furure requirements for several reasonable assumptions, and knowledge of these would assist private companies in their planning.

We also believe that the key lies in the field of air transport. Our domestic air lines are carrying a heavy war load with greatly reduced equipment. It seems unrealistic that at a time when other war activities have greatly expanded their plants, the air lines have been contracted. It would seem in the public interest to step up their operations to a maximum, thus relieving the overburdened surface transport and speeding the conduct of war business.

The vital importance of international commercial air transport emphasizes the need for its expansion. This should be taken in hand now as an immediate contribution to the war effort and a wise provision for future needs. Expansion of air mail offers a profitable method.

The successful creation of the air forces under the War and Navy Departments suggests the need for lodging responsibility for commercial air transport in an executive department. This department, in collaboration with the State, War, and Navy Departments, should operate under the American air power policy and in support of it. The office of Assistant Secretary for Air in the Department of Commerce should be reestablished.

As in the case of the air forces, the key to progress in commercial air transport is technological development. Competition is essential in order that economic factors may direct technical progress along sound lines. A prerequisite to the progress of the war effort and to the future of American air transport is the continued development of transport aircraft.

Today, American transport planes embody technical developments which grew out of air-line competition and competitive purchases by the Army and Navy from private manufacturers. These manufacturers reinvested their earnings in improved technology and low-cost manufacturing, so that prior to the war, both American commercial and military aircraft dominated foreign markets because of low cost and superior performances.

It is a noteworthy fact that at a time when certain established American industries needed a protective tariff, the self-reliant young American aircraft industry, maintaining a high level of wages and salaries, was able to undersell all foreign competition even though some of this was subsidized.

Our experience leads us to certain conclusions as to the elementary economics of air power. Our people have long been persuaded that expenditures in preparation for war are an out-of-pocket expense, and a burden tending to depress the standards of living. A free people seldom understands that an investment in protection against war may prove far more economical in the long run. Beyond

this, money intelligently invested in an air power, adequate to keep the land, air, and sea lanes open to commerce, will pay dividends through increased trade and the creation of new wealth. This is the history of each new form of transport.

One example is our own domestic air transport. It has been able to establish itself in direct competition with highly developed forms of surface transport by selling faster travel at competitive rates. It has furnished fast mail at premium rates high enough to return to the Post Office Department substantially more than the amount paid for transporting the mail. Thus, the post office has fostered a valuable public service with a profit to itself.

From the economic point of view, we could credit the air mail profit back against the cost of military and naval aircraft. We might also credit income from export sales. But a strict accounting isn't necessary to prove that providing for the common security is not necessarily a burden upon the people. Done through private industry, it can be an investment. The benefits of judicious purchases to further new technology are obvious. They create new opportunities for private investment, new enterprises, and new employment. Expanded air transport offers jobs for trained aviation technicians discharged from the Air Forces.

Another example of the profound influence of new forms of transport is the rapid expansion of transcontinental railways after the Civil War. This expansion took place under strong support from the Government, and while some evils attended it, the over-all result was the opening up of vast new resources. No evils have attended the development of American air transport to date. The possibilities of the future development can scarcely be estimated.

The public character of aviation imposes upon it a dual role. Commercial companies, to advance their private interests and stimulate technical progress, must compete in the realm of operations. At the same time, they must collaborate in the realm of policy to promote the public interest. If any law or interpretation precludes such collaboration, it should be revoked.

International, domestic, and private air transport offers a source of new wealth and employment. Rapid development is dependent upon improved technology stemming from a strong competitive private manufacturing industry. A dominant military and naval Air Force supported by air bases is a prerequisite of free communication by land, sea, and air. Only an air-minded people can provide that controlling air power which, in the hands of free men, is the hope of lasting peace and prosperity.

Ours is the dominant air power. Ours, too, the responsibility for a sound policy, courageously administered. The American air power policy derives directly from our own experience.

(Following are (A) the text of a letter on the problem of unemployment compensation, which was addressed by the War Contracts Subcommittee to various industry and labor groups; and (B) a list of addressees:)

(A) Unemployment Compensation Letter

April 1944.

Various industry and labor groups have requested that provision be made for dismissal wages to be paid to workmen rendered unemployed on account of termination of war contracts, and that employers be reimbursed by the Government for any such payments.

In this connection several requests have been received to include a provision to that effect in S. 1718, the contract-termination bill introduced by Senator George and myself. In answer to those requests, my staff prepared and distributed some time ago a preliminary draft of a dismissal wage provision for insertion into S. 1718.

After careful consideration of the comments received on the staff proposal for dismissal wages, I have come to the conclusion that the medium of dismissal wages is inadequate for the purpose of providing financial aid to those who will become unemployed as a result of war-contract termination. I believe that the only satisfactory way of coping with that problem is through unemployment compensation. It is my opinion that it will be necessary for the Federal Government to assist the States in providing more adequate unemployment compensation and to strengthen the financial resources of State unemployment funds. I have come to this conclusion for the following reasons:

(1) The problem of unemployment resulting from war-contract termination is one of the Nation's many war problems. In part at least, therefore, the cost of coping with that problem ought to be considered a cost of the war, and like other war costs be paid from the United States Treasury. Without Federal aid, however, the increased burden would have to be borne by State unemployment funds, and many employers may have to be taxed more heavily under experience rating provisions in order to meet increased drain on the State funds.

(2) To a large extent, unemployment compensation during the period of reconversion should be considered in the nature of a stand-by wage payable while many plants are being reconverted to peacetime production. Under many present State plans, unemployment compensation is inadequate in amount and duration for this purpose. Without adequate stand-by wages many employers would be compelled to continue workmen on their pay rolls at their own expense, although having no work for them, in order to maintain their labor force in readiness when reconversion is completed. Many employers—especially those operating with limited financial resources—will be financially unable to bear such an additional reconversion expense, and such employers should not be placed at a competitive disadvantage by comparison with employers who can afford this expense.

(3) Adequate unemployment compensation is essential for the maintenance of the purchasing power of the masses of our people during any period of large-scale unemployment. Without maintaining mass purchasing power, civilian production may be discouraged, because sufficient markets may be lacking.

In support of these views I would like to refer you to a recent speech by Mr. James F. Byrnes, Director of War Mobilization, given before the Academy of Political Science, entitled "Preparation for Peace on the Home Front." After discussing the inadequacy of dismissal wages, he stated as follows:

"The existing State unemployment insurance laws were framed to meet local conditions of temporary unemployment and are not adequate to deal with the Nation-wide problem of reemployment. Demobilization must be regarded as a national problem and it costs as part of the costs of the war.

"I think the most constructive approach to this problem is to supplement existing State unemployment benefits to the extent necessary to give workers, during the transition from war to peace, suitable unemployment benefits to be prescribed in a Federal demobilization law."

I am giving consideration to two plans:

(1) The Federal Government would pay one-half of the unemployment compensation paid under State unemployment compensation laws. This proposal would not provide for any Federal standards as to amount or duration of benefits and would leave all action with respect to liberalization of present unemployment benefits to the initiative of the States. For that reason it might not bring about the desired results. However, if the States wished to act, the money would be available.

(2) Under the second plan, Federal financial aid to any State would be conditioned upon the State meeting certain Federal standards as to amount, duration, coverage, etc., of unemployment benefits. Any State which would meet the standards established by Congress could elect to receive Federal financial aid in either of the two following ways: (*a*) 50 percent Federal reimbursement for all unemployment benefit payments made by the State; or (*b*) 100 percent Federal reimbursement for unemployment payments in excess of those which would otherwise have been paid under State law.

I should greatly appreciate your comments on the proposed program of emergency Federal financial aid to State unemployment funds and the two preliminary plans suggested for carrying out such a program.

Sincerely,

James E. Murray,
Chairman, War Contracts Subcommittee.

NEWSPAPER COMMENT ON THE CONTRACT TERMINATION AT THE BREWSTER AERONAUTICAL CORPORATION

[Times, Kansas City, Mo., May 24, 1944]

When War Contracts Go

While it does not appear that sudden cancelation of war contrcts will be throwing any considerable number of people out of jobs any time soon, a clear understanding to that effect would be wholesome. Workers who now are urgently needed in many of these plants, in the Kansas City area notably, are entitled to assurance that the jobs will hold for a reasonable time.

The question arises in connection with the Navy's cancelation of plane contracts with the Brewster Aeronautical Corporation, which operates plants at Long Island City, N. Y., and Johnsville, Pa. Henry J. Kaiser, former president of the corporation, has criticized the Navy's action as precipitate, saying it would mean the loss of jobs by more than 12,000 employees and losses also to the 3,000 stockholders of the corporation. On its part, the Navy explains that the cancelation is simply a part of an over-all cut-back in fighter plane production, and that the shift could be more easily made at these plants than at others.

Yet it is apparent that serious results may follow such cancelations, more so with many other plants than these two which, it is shown, may obtain other war contracts. That kind of adjustment has been made in numerous other instances, the cancelations thus being largely or wholly neutralized. But a spokesman for the Navy explained the other day that the time was coming when this kind of adjustment would not be possible because the additional war materials would not be needed.

Mr. Kaiser holds that the Brewster company's position "is comparable to what many companies" will face and that Congress should "act immediately to take care of those companies which will be affected by sudden termination, reconversions, and lack of finance resulting from their all-out effort for the war."

This had been thought of before and the subject had been fully covered in the Baruch-Hancock Report. A good part of this program is concerned with problems of contract termination and the reconversion of plants. Extensive recommendations were made as to the proper handling of the entire business. They were designed to offer full protection to the Government, to the plants, and to workers. They require legislation and the grant of authority from Congress. It is here that Congress needs to act and with greater speed than so far has been evident.

[Press, Evansville, Ind., May 27, 1944]

A Test Case for Reconversion

The checkered career of the Brewster Aeronautical Corporation is in for some further checkering.

The Navy announced the other day that it was cutting back production of Corsair fighters—because of unexpectedly light losses and a commendable reluctance to build up excessive reserves. Of three companies manufacturing the Corsair, Brewster has the highest production costs. So the Navy has told Brewster to make no more after the end of next month.

No doubt the almost fabulously inefficient operation of the Brewster plants—prior to the wielding of a new broom by Henry J. Kaiser, whom the Navy brought in temporarily as a house cleaner—was a factor in the decision to let Brewster walk the plank. Labor and management (pre Kaiser) share the blame for that unfortunate record.

Nevertheless, the prospective displacement of some 12,500 workers is no matter to dismiss with an "I told you so."

Perhaps the Army or the Navy can utilize the machines and skills available at Brewster to produce other aircraft or aircraft parts. Only recently General Arnold was protesting that the loss of 250 Mustangs, due to the foremen's strike at Detroit, might dangerously affect second-front operations.

Or, if the job of adapting the Brewster plants to other war products appears too formidable, at least every effort should be made by the United States Employment Service to salvage Brewster manpower for service in active aircraft plants, which have suffered from manpower shortages and high turn-over rates.

Then the Navy should act with the greatest speed in settling up with Brewster so that the company can proceed, if possible, with conversion to the production of needed civilian goods.

The Truman committee has recommended that surplus materials not required for munitions should be made available to manufacturers of civilian goods without delay, in order to avert unemployment where war plants shut down. This is just such a situation. The Brewster cut-back provides an opportunity for useful experiment in reconversion.

[Herald Tribune, New York City, May 30, 1944]

The Brewster Case

With the termination of Navy contracts with the Brewster Aeronautical Corporation, this region is confronted with a foretaste of what will be the gravest post-war economic problem. The Navy has dealt with this problem, in the Brewster case, summarily. It is reducing its fighter-plane program. The Brewster Corporation, the Navy asserts, is the smallest producer of Corsair planes; it has no additional Navy contracts, and its production costs are higher than those of the other two firms making Corsairs. Consequently Brewster will make no more Corsairs; 4,500 workers have been given notices of discharge at the Long Island City plants and are organizing a "sit-in" in protest.

From the standpoint of the workers, the contract termination will mean inconvenience and possibly the necessity of taking work at lower rates of pay. Work is available, however, and it would seem that the workers laid off could be reabsorbed without undue hardship at this time. The stockholders of the corporation will have to depend on the chances of new contracts, converting to other types of work or the like—not very bright at this stage of the war. But quite aside from the merits of this particular case, it is obvious that more thought will have to be devoted to contract termination and its effects.

The Navy has taken a strictly economic approach. It could not do otherwise, since its duty is to fight, and to fight without waste of funds appropriated for its use. Any alleviation of the situation which costs money will have to be authorized by Congress—which has already scheduled an investigation of Government demobilization programs. It is to be hoped that action will follow speedily on investigation, since the prospect of the Brewster case. multiplied a thousandfold, is one which the Nation cannot view without alarm.

[News, Wilmington, Del., May 31, 1944]

And Now "Stay Ins"

Workers in two plants operated by the Brewster Aeronautical Corporation have brought the reconversion problem into sharp focus by their "stay-in" demonstrations in protest against the Navy's action in terminating its contract with the company for the production of Corsair fighters. To emphasize their "willingness to stay on the job" they have even offered to work for nothing while the plants are changed over for other war work.

The offer is probably meaningless, since the company is bound by the wage-hour law. Moreover, the management is perfectly willing to pay its employees if it has work to keep them busy and it cannot pay them if it has no work for them. As for the workers' charge that the Navy has been "obviously unfair," it must be placed against the official explanation that fewer fighters are needed because losses have been unexpectedly low and requirements can be met by other and more efficient plants.

Nevertheless, the resentment of the workers is understandable even if the Navy's position is equally understandable. It is true that the need for maintaining arms production has not passed and the Brewster plants are capable of more contributions to the war effort. Even if there is no place for them in the plane program, their capacity should be useful elsewhere.

Doubtless there will be similar cases as goals are met, and it must be borne in mind that it will not be possible to effect a perfectly smooth transition from war- to peace-time industry when that time comes. But it is plain that we have seen a portent of what can happen if the Government's reconversion program is not effective. The investigation begun by a subcommittee of the Senate Military Affairs Committee is certainly in order and it is to be hoped that it will throw further light on this important question.

[Christian Science Monitor, Boston, Mass., May 31, 1944]

Brewster Lessons

The "sit in" or "stay in" at Brewster Aeronautical suggests serious implications. It suggests that after a decade of work relief, to which has been added the de luxe works projects of the war, the American worker now looks first to his Federal Government for a job. It suggests that something more ponderable than an advertising campaign is going to be required to win his eyes back to dependency on "private enterprise."

Public sympathies are not likely to weigh heavily in favor of the workers. That workers in the Brewster plant were able to double their normal daily production when striving to make a good showing is only likely to cause people to wonder what they were doing with their time before.

Since the Navy does not need more Corsair planes from the Brewster plants it quite logically and correctly canceled the contract in order not to waste money, materials and manpower. It is not the job of the Navy and the Army to cushion the termination of their contracts, or to supervise the transition of the national economy back to peacetimes, any more than it was their job to cushion the issuing of contracts or to superintend the conversion to war production.

That conversion was the responsibility of a third Government agency, the War Production Board. It is going to require a similar gency and comparable planning and effort to effect the reconversion. And an incalculable portion of the Nation's, even of the world's, economic and social future hinges upon how well this job is done. In a democracy, labor has every right to insist on such Government activity.

This was all admirably brought out and intelligently provided for in the Baruch-Hancock report, which further emphasized that restrictions on private enterprise, especially as to tools and materials, must be relaxed as war contracts are terminated so that private jobs can be provided. For example, is the Government now willing that Brewster should turn to production of planes for civilians?

The problem of war contract termination and the orderly transition to peace-time production with a minimum of lost man-hours is one requiring the benefit of all past experience and present intelligence. The Brewster incident at least usefully tells us (*a*) that the machinery for the transition is not yet functioning very effectively; (*b*) that the sands of time for getting this machinery are thinning.

[New York Times, New York City, May 31, 1944]

The Brewster Workers

On the authority of Mrs. Anna M. Rosenberg, speaking as regional director of the War Manpower Commission, there is no lack of jobs for the 8,000 workers who have been thrown out of employment by the Navy's termination of its contract with the Brewster Aeronautical Corporation. According to Mrs. Rosenberg, "Both men and women are needed badly to continue production in top priority industries. This lay-off at Brewster does not mean that the war is over. It does not mean that total manpower demands have decreased."

The presence of representatives of 17 high priority war plants at the Brewster factory on Monday, all seeking to recruit manpower for their own production lines, fully supports Mrs. Rosenberg's contention. The problem is not jobs. It is rather pay. For, as against the average of $1.06 an hour which they say has been paid at Brewster, the employees are told by Mr. Frankensteen, vice president of their union, that they will now "be met with offers of jobs paying 60 and 70 cents an hour." The "sit in" demonstration at the Brewster factory, therefore, is not a protest against lack of employment opportunities, or against the loss of a chance to do war work. It is a protest against loss of a chance to do war work at an assured $1.06 an hour.

We do not question the patriotism of the Brewster employees. Under present methods of employment in the war industries it is natural that they should try, as everyone else does, to do as well for themselves as they can. It is rather the system itself which is at fault: the system which leaves entirely to personal discretion and the caprice of competitive wage-bidding the decision how the war manpower of this Nation shall be employed at the very crisis of a life-or-death struggle for our national existence. It is these conditions which create the attitude, now displayed at Brewster, of men and women reluctant to take war jobs unless they pay "top" wages. It is the same conditions, the conditions which foster a perpetual chase of top-paying jobs, from one war industry to another, that are responsible for the shockingly high labor turn-over of 72 percent which now prevails in the war industries as a whole, with consequent losses in the production of weapons needed by our soldiers.

The present experience at Brewster is another argument for a national war service act under which decisions of this kind, in wartime, would no longer be left entirely to personal judgment. Certainly if it is fair and proper and wholly in the spirit of democracy for the Government to draft a man for military duty and send him across the seas for an indefinite period to endure hardship and danger, then it is no less fair and proper and in the spirit of democracy to require him to do war work at home, in comfort and security, when the Nation's needs demand it.

The only good argument against a national service act is that the war is so nearly won that we do not need it. He is a reckless man who makes that argument today, in the face of the tasks that still confront us.

[Post, Washington, D. C., May 31, 1944]

Striking for Work

The sit-in "strike" at the Brewster aircraft plants, unlike the sit-down strikes that plagued the country a few years ago, is not a demonstration against the company or an effort to bar workers from the plant. In fact, it is not a strike at all, it is an organized demonstration of disapproval directed against the action of the Navy in suddenly canceling its contract with Brewster and thus forcing the company to dismiss most of its employees. Although the "sit ins" are clamoring for work (that is, for a return to their old jobs), they are, notwithstanding, hampering the war effort by obstructing and delaying efforts to place them in new jobs where they are greatly needed.

The dismissed Brewster employees have no reason to fear prolonged idleness, since acute labor shortages exist in many parts of the country. The United States Employment Service, in cooperation with local War Manpower Commission management-labor committees, has undertaken to bring idle men into contact with essential jobs. Of course that may compel shifts of residence to strange cities and acceptance of lower-paid work. But the employees of war contractors surely realize that the making of weapons must cease when the needs of the armed forces have been met, and that other jobs will have to be found through reconversion of the plant or transfer of workers to other industries. Moreover, dismissed war workers cannot always obtain the same high rates of pay obtained in war plants, regardless of the nature of the alternative jobs offered them.

The "sit in" at Brewster has accomplished one good result, however, by dramatizing the labor difficulties arising out of sudden cancelation of war contracts. Apparently the Navy's decision to terminate the Brewster contract was based on sound grounds. But the method of procedure raised the question whether production for the Navy might not have been tapered off more gradually. About these matters we are in no position to express an opinion. But we do know that one of the prime purposes of planned demobilization is to avoid just the sort of unexpected labor dislocation that has produced the Brewster sit-in "strikes."

[Star, Washington, D. C., May 31, 1944]

The Brewster "Stay In"

The "stay-in" demonstration by some 13,000 employees of the Brewster Aeronautical Corporation, having accomplished its purpose of focusing attention on the problem raised by the sudden termination of war contracts, has been called off. But the problem remains with us.

On the basis of known facts, the Navy seems to have had entirely valid reasons for canceling the Brewster contract for the manufacture of Corsair fighters. Because of early labor troubles and poor management, the Brewster production costs were higher than those of two other plants making Corsairs. Hence, when the Navy found that it did not need as many planes as had been anticipated, largely because combat losses have been unexpectedly small, the decision to cancel the Brewster contract was undoubtedly the proper one.

Nor does it appear that the workers in this instance were exposed to avoidable hardships. Mrs. Anna Rosenberg, regional War Manpower Commission director, has said that other jobs were available, and representatives of 17 war plants were on hand to sign up Brewster employees seeking other work. Apparently, however, the substitute jobs paid less money, and the great majority of the workers, encouraged by their union leaders, refused on the first day of the stay-in to apply for them. This reluctance to take jobs paying less money is understandable enough, but it is difficult to see how the Navy or any other agency is going to be able to guarantee that every worker in a shut-down plant will be able to find another job at the same rate of pay. This simply cannot be done, and if the union demonstration was aimed at that objective the union is only misleading its own members.

It does seem, however, that the Brewster management should have been given more notice that their contract was to be canceled. It was not until May 19 that officials of the firm learned that their contract was to be terminated as of July 1, and that in the meantime they could make only 150 of the 400 planes remaining on order. Whether this was entirely the fault of the Navy is not clear, but it seems quite evident that the responsibility rests somewhere with the Government.

In the case of Brewster, those workers who want other jobs can find them. But as the war progresses toward its close, and plant shut-downs become more numerous, many thousands of workers and their employers are going to be subjected to serious hardship if contracts are to be canceled and jobs lost with only a few days of notice. It is this prospect which is really at the bottom of the concern manifested in this instance, and if the Brewster demonstration serves to prod the Government into overhauling its inadequate contract-termination machinery, it will have been well worth while.

[Courier-Journal, Louisville, Ky., May 31, 1944]

Brewster Workers Haven't Reformed

Never did I expect to see in America such a picture of managerial chaos, such a complete break-down of worker morale, as this factory presents. Right and left were men and women idling, laughing, talking or just sitting inert at empty benches. Some work was going on here and there in a half-hearted kind of way * * * Exactly the same sabotage of our war effort, the same kind of break-down which in France was the prelude to defeat is taking place in the Brewster factories.

This quotation is from a long study of labor-management relations at the Brewster Aeronautical Corporation last October by Mrs. Agnes E. Meyer, wife of the publisher of the Washington Post. Mrs. Meyer is a thorouhgly competent reporter with prolabor sympathies. She found that the Brewster plant, notorious for having the worst production record of any aviation plant in the United States, was completely dominated by the most arbitrary and restrictive union contract this Nation seems yet to have produced. The company's naval contracts were so hopelessly bogged down that the Navy insisted upon a complete change of management last fall, a year after it had reorganized the management itself without any notable benefit.

One of the first acts of the new president, Henry J. Kaiser, who went in under a truce arrangement with the up-to-then militantly successful union, was to beg the Navy to cancel its contract with Brewster for bombers, so that the factory could be converted entirely to fighter-plane production. It is the contract for fighter planes that the Navy has now canceled, explaining that, "In addition to having no other work of importance to the war effort which would be affected by the termination of its contract for Corsairs, Brewster has in the past represented to the Navy that it would have great difficulty in completing that contract if it did not receive additional orders for these palnes." The Navy also cut back, as part of a $180,000,000 reduction in its fighter plane program, Corsair production now under way at the Goodyear Aircraft Corporation and United Aircraft Corporation.

But Brewster members of the United Automobile Workers' local, in addition to having helped build an almost unredeemed record of inefficient production at a cost of millions of dollars, have staged their version of a sit-down strike on the company's premises because their dismissals began Monday though the union's contract does not expire until July 1. In addition to the decision to continue working without pay, although at what the union has not explained, Richard L. Frankensteen, a vice president of the United Automobile Workers, has written and made public an impertinent letter suggesting that the Navy has political motives for canceling its contract.

There is no indication that the discharged workers would suffer long unemployment through the plant's closing. The War Manpower Commission has had its interviewers on the ground since the Navy 's announcement was made and has signed up more than 2,000 workers for other jobs. Neither does it seem, in spite of the union's claims, that the Navy has violated the law or customary procedure in canceling a contract for goods it no longer needs. But, most assuredly, nothing in the record of Brewster's workers justified them in assuming an arrogant attitude toward a contract cancelation.

How About Jobs?

Strong sentiment is reported among the Governors meeting at Hershey, Pa., for a prompt return of employment service agencies to control by the States. At the same time, in Washington, proposals that would tend to federalize the State unemployment compensation systems are being hotly argued.

Labor leaders and many Congressmen contend that the Federal Government will have to help the States carry a heavy and "inevitable" unemployment load, during post-war industrial readjustment. The Congress of Industrial Organizations demands action, for instance, on the Kilgore bill. This bill, among other things, would establish a Federal unemployment benefit system, with weekly payments larger than the States provide. Former servicemen and all civilian workers would be eligible, for 2 years after the war , to receive these payments during any periods in which the United States Employment Service could not place them in "suitable jobs."

On the other hand, spokesmen for various State governments assert that reserves accumulated by the States during the war are large anough to meet any probable unemployment situation in early post-war years: that Federal funds and Federal encroachments on the States' responsibilities are not necessary: that such benefits as the Kilgore bill proposes would invite many people to live in idleness instead of hunting jobs.

Now, if a long period of extensive unemployment is, in fact, "inevitable" during post-war readjustment, we suspect that the unemployment-compensation reserves of some States—large as they are—may prove inadequate. For example, those States where hundreds of thousands of people are now working in shipyards and aircraft plants that are bound to shrink to a fraction of their present size for a long time after peace returns—those States will face a special problem. They may have to be given some sort of Federal aid, though the Federal Treasury will have load enough without that.

But we believe that word "inevitable" is being overworked in this connection. It certainly is not necessary, as the Baruch-Hancock Report made clear, for most industries to spend many months getting changed over from war work to peace work, meanwhile leaving great numbers of their present employees idle and dependent on either State or Federal aid.

It's important to consider the probable or possible need for unemployment benefits. But the unquestioned need for employment is much more important, and not nearly enough is being done about that. More than 3 months after the Baruch-Hancock Report was submitted, for instance, the vital legislation for prompt, fair settlement of canceled war contracts, though passed by the Senate, is still awaiting action in the House. Government plans to enable the automobile industry and others to reconvert quickly, and to provide peacetime jobs when their war work is done, are moving too sluggishly.

Yet war-contract cancelations and cut-backs are increasing almost daily. And if the invasion of Europe goes as well as we hope, the need for perfected plans to provide a vast number of peacetime jobs with utmost speed may be upon us in a few months.

Again, the Crisis Technique

Through the personal intervention of the President the sit-in demonstration of Brewster Aeronautical Corporation workers begun on Monday has been terminated, although the problems facing management and workers are yet to be adjusted. The President decided, on the basis of a hasty report by James F. Byrnes, Director of the Office of War Mobilization, that the Navy's cutting of contracts for Corsair fighters was economically necessary, but that possibly sufficient forewarning has not been given the Brewster company. These would seem to be inescapable conclusions. Yet, it required the sit-in dramatization by the union, for once making common cause with their employer, to set in motion machinery for dealing with such an economic necessity, and avoiding for the future similar swift and frightening dislocations of men and industrial capacity.

The problem of demobilization of war industry has been facing us for some time; it was dealt with in outline in the Baruch-Hancock Report 3½ months ago. It could not help, therefore, but be disturbing to public confidence that the first instance of large-scale war contract cancelation found the administration follow-in the 12-year-old pattern of crisis, dramatization, personal appeal to the President, workers, or management persuaded (or forced) by the President to resume the status quo while steps were improvised. Brewster workers went home on the promise that the Joint Contract Termination Board will meet at once to consider new contracts for Brewster and to devise a procedure for handling such cases in the future.

Obviously, such a procedure should be working now, a procedure whereby the Navy or the Army, faced with the necessity to cancel contracts must first consult with a proper authority capable of coordinating the allotment of other contracts and providing for orderly disposition of manpower and materials. Such a procedure must insure adequate notice so that the plants and workers affected may have time to meet their individual emergencies. The elements of organization for orderly industrial demobilization are available in Washington. In the interests of unity and of public confidence, we should have no more dramas, no more on-the-spot guinea-pig experiments, no more personal intervention of the President to avert what might easily be a series of unseemly crises, before such an organization goes into operation.

The Brewster Incident Offers Another Preview

Those 5,500 employes of the Brewster Aeronautical Corporation who staged a stay-in-work-without-pay protest against cancelation of the company's contract for Navy planes did more than develop an interesting inversion of the sit-down strike technique. They focused attention on one aspect of the contract-termination problem that has been rather generally neglected to date.

Both the Baruch-Hancock reconversion report and the statements released by the Senate Post-War Planning Committee, probably the two most detailed official discussions of the problem, have much to say about rapid and equitable financial settlements for canceled contracts. They advocate numerous means of encouraging industries to speed up the reconversion process and provide jobs for returning servicemen. But they have remarkably little to say about the reemployment of workers deprived of their existing jobs by contract cancelations.

The Baruch Report merely recommends that the procurement agencies notify the War Production Board of possible cancelations "as soon as they begin to think of them" and that these be carried out after consultation with "the War Manpower Commission and other interested agencies." The omnibus reconversion bill prepared by the Post-War Planning Committee simply provides on this point that war contractors be notified "of termination of any war contract at least 30 days in advance of the cessation of work thereunder."

What the Brewster case seems to have demonstrated is that advance notice and consultation with other agencies is not enough. The company was notified more than 30 days before the cancelation was to become effective. Spokesmen for both the Navy and the Army have stated that they have no need at this time for the Brewster facilities. At best, apparently, only one of the company's plants might be used for production of heavy artillery, and this would require extensive retooling. The result is that some thousands of workers face the loss of their present jobs—and no effective method is being invoked to see to it that they are shifted into other still necessary war jobs. The official response to their unprecedented protest is nothing more than a general promise that an attempt will be made to find new work for the plants.

Not that there are no other jobs available for Brewster employees. Representatives of some 17 other companies were on hand the other day to offer jobs to the Brewster stay-in demonstrators. Their efforts were unsuccessful, because in every case a shift of employment meant less pay, moving, loss of seniority, or some other disadvantage.

What will be the situation when the war has been won and contract after contract is being canceled all over the country? The experience at the Brewster plant is a dramatic preview of what may be expected. However carefully plans are laid, there is at the very best going to be confusion, disadvantage, and interruption for hundreds of thousands, even millions, of war workers. All the more reason for working now on plans to deal with a difficult situation.

[Free Press, Detroit, Mich., June 1, 1944]

Brewster as Capsule

The short "stay in" demonstration by workers at the Brewster Aeronautical Corporation's Long Island City plant is a capsule sample of one of the toughest problems that will face the country in the months to come. The Navy had abruptly terminated Brewster's Corsair fighter plane contract. Employees stayed in at the plant in protest until they received Presidential assurance that a search for new jobs would be made.

Well and good this time, but what of the next? What of the time when cutbacks will come in increasing volume? And of the point when whole factories will become idle all over the country? Then one of the most basic meanings of the word "post war" will become only too clear.

Michigan's deep concern is plain and Governor Kelly did a bit of high lighting the fact at the Harrisburg Governors' Conference. As he quite correctly stresses, the problem is by no means one for the individual States alone. Ever since war production conversion began, direction and output have been primarily the province of the Federal Government. The auto industry has been at the country's service, from highest management to the last part-time worker.

It is of the essence that the moment the need for war goods tapers off, plans be ready for reconversion to the products of peace.

[Evening Post, New York City, June 1, 1944

A Test We Failed

Talk has also been the dominant note in another great problem, that of converting industry from war to peace production without depressions and unemployment.

The one great test so far, the shut-down of production at the Brewster Aeronautical Corporation on Long Island City, found workers bewildered, with no jobs to go to, and the company in a daze and wondering what to do next.

The "we want work" sit-in, to which the desperate workers resorted, was finally settled by the President's personal intervention. But the President's sporadic intervention cannot take the place of a well-ordered plan of contract cancelations and reconversion to peace production. Nor of the systematic execution of such a plan.
